In 1940 the American Bar Association issued a statement on mob rule which is still applicable today. The statement said, in part: "Illegal violence in any circumstances cannot be justified upon grounds of supposed necessity. Orderly methods exist under our Constitution and law which are fully adequate to protect the legitimate interests of all groups. There is no place in this country for mob rule. Individual liberty cannot long endure in a society which allows violence to supersede the law."

Many otherwise respectable citizens continually flout laws they consider unjust. The high rate of traffic fatalities alone bears testimony to this condition.

In return for the law's protection, a free citizen has certain obligations to meet. Although he may feel that a certain law is unjust, the free citizen has a moral responsibility to obey all laws. It is far better for him to urge his legislators to change the unjust law than to determine for himself which laws he will observe. The free citizen conforms to the law, yet retains his individuality, doing what the law commands and conscience demands. While many shirk from jury duty, and although many plans have been advanced to abolish the jury trial, the facts remain that the jury is one of the most important planks in the platform of freedom. It is a free citizen's right and duty to serve on a jury when called. As noted attorney Melvin Belli has remarked, "If one man could infallibly tell the truth we would be ready for trial by him." Since such a human Solomon doesn't exist, we shall keep and treasure jury trial.

When a free citizen is in need of legal advice, he should exercise his right to an attorney. It has been said that the person who tries to be his own lawyer usually has a fool for a client. This is not to imply that a little knowledge is not a very valuable thing. Since he is presumed to know the law, ignorance is no excuse in the eyes of the law.

The free citizen, having the privilege of suffrage, has an obligation to vote for responsible officials. The law does not apply itself, but requires good men to make, apply, and interpret it.

Throwing aside apathy and laziness, all loyal free citizens should become informed and take a part in our government of law, remembering the words of that great Roman statesman, Cicero: "Only in states in which the power of the people is supreme has liberty an abode."

The Man in the Glass Cage

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Herald American and the Daily Republican of Monongahela, Pa., on Tuesday, May 2. This thoughtful editorial on the Eichmann case merits the widest possible dissemination and for that purpose, I am placing it in the Appendix of the RECORD and commend it to all Members for careful reading.

THE MAN IN THE GLASS CAGE

In the issue of Life magazine of November 28, 1960, Adolph Eichmann, now on trial in the State of Israel for crimes against the Jewish people and others during the Hitler regime, stated: "My first assignment there (in 1935 in Berlin) had been extremely dull, sorting what ultimately became a huge card index of Jews, Freemasons, members of various secret societies and other subversive elements in the Reich." This revelation explains more than anything else the underlying purpose in bringing to historic justice the notorious defendant.

Israel regards Eichmann as the symbol of a wholly different concept of society for the Western World. This refers to the totalitarian state, for it is only in the monolithic world as envisioned by Hitler that Jewry and organizations like Freemasonry, Knights of Columbus, YMCA, Kiwanis, Rotary, and others are not permitted to exist. The Soviet Union is a typical example of a regime where such groups would be considered subversive within the meaning indicated by Eichmann. Red China is another glaring example. Accordingly, such organizations, because of their essential character in adhering to democratic principles, do not fit into the

authoritarian scheme. Jews and Christians, as far as dictators are concerned, are therefore in the same boat. Their concepts on substantive rights of the individual are identical.

We should note, incidentally, as Eichmann's trial unfolds, the application of the self-evident truth of Lord Acton's declaration: Power corrupts; absolute power corrupts absolutely.

For awhile, Germany, like Russia and Red China, had become a totalitarian state. Hitler was the head and exercised unbridled power having invested in himself dictatorial authority. Eichmann was one of many millions in Germany who submitted to an unmitigated despotism. The extent of his commitment to the hooked cross was clearly established during his interrogation in Israel. "I would have killed my own father," he said, "if I had been told that he was a traitor." Eichmann made no reply when it was suggested that such a charge against his father should be supported by competent evidence.

Countless Eichmanns had become creatures of the Nazi monstrosity, an evil that did not die when Hitler committed suicide in his Berlin bunker. They were the completely valid examples of the actual criminals in Hitler's Reich. It is because of a certain degree of depravity reflected in his obedience that Eichmann is now being tried. He had taken a leading part in history's most ghastly massacre.

The purpose of the trial of the man in the glass cage, it should be emphasized further, is to show that the unceasing struggle against the causes of deterioration in human relations is continuing with unabated zeal. The administration of justice by the Nuremberg International Tribunal constitutes the pattern for the Eichmann trial. And now as then, the sole purpose is to demonstrate the basic proposition that society has the right to protect itself against destructive elements in its midst.

It is hoped, too, that Israeli justice will point the way, through the trial of one unspeakably foul creature, to the promotion of virtue and intelligence of people everywhere.

Law Enforcement Speaks to Youth

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. TOLL. Mr. Speaker, last Monday, May 8, the second annual law observance exhibit was dedicated at the Philadelphia National Bank, Broad and Chestnut Streets, at 12:30 p.m. It was again sponsored by the Philadelphia Chapter of the Federal Bar Association, law observance committee. This exhibit was entitled "Law Enforcement Speaks to Youth."

The Attorney General of the United States, Robert F. Kennedy, in writing to the chairman of the committee about the exhibit, said:

Many persons who will see your exhibit will gain a new insight into the high caliber of law enforcement in our country.

He also remarked in a letter attached to these remarks:

The vigor, dedication, and skill of the Philadelphia Chapter in making this unique contribution sets a high standard and an excellent example which I hope other public-spirited organizations will see fit to emulate.

I have included a copy of the splendid remarks by Harry D. Shargel, Esq., the indefatigable chairman of the law observance committee, as well as a memorandum on the highlights of the exhibit and the personnel who participated.

This type of program may well be a factor in the effort to reduce crime by encouraging the people to observe, respect, and obey the law:

REMARKS BY HARRY D. SHARGEL, CHAIRMAN, LAW OBSERVANCE COMMITTEE, MAY 8, 1961

The Federal Bar Association (Philadelphia chapter) through its law observance committee is engaged in a year-round program to promote respect for law and those who enforce it.

Our activities are designed to educate the public in the functions of the Federal, State, and local law enforcement agencies; to urge the public to respect and uphold the law; and to improve the morale of law enforcement personnel, broaden their training, enhance the prestige of law enforcement as a career and help attract the highest caliber of personnel to this field. We have promoted coordination among law enforcement agencies, prosecuting attorneys, the judiciary, penologists and welfare organizations.

As part of our endeavors we have caused posters to be displayed bearing the slogan, "The Law Protects You, Respect It, Uphold It, Obey It"; published a directory of law enforcement agencies; sponsored television programs designed to educate the public concerning the fine work of law enforcement agencies; organized coordination conferences among those concerned with crime and delinquency; arranged the distribution to teachers, parents and students of relevant literature; established a speakers' bureau which furnishes speakers in furtherance of our program; arranged for the establishment of a degree course in police science and administration at Temple University and organized exhibits.

Today we inaugurate our second annual law observance exhibit under the theme of "Law Enforcement Speaks To Youth." We have chosen to emphasize the message to youth because we live in a period of an ever-mounting crime rate among our young people. It is important that they realize the importance of law observance—that respect for law and law observance are essential to the preservation of America's freedoms. They and all of us should become familiar with the fine work of each law enforcement agency and realize that the law enforcement agent, whether a local policeman, State official, or Federal agent, is a friend dedicated to public service and the protection of each of us.

We want to make parents and children alike, aware of the fine career opportunities in the law enforcement field and to attract the best of our youth to seek this field as a career. The higher educational facilities available in this area through the degree course of police science and administration offered by the Community College of Temple University, and the courses in public administration offered by the Fels Institute of the University of Pennsylvania, emphasize the high professional opportunities available to those who have the ambition, ability, and willingness to dedicate themselves to the public service. The opportunities for advancement are unlimited.

I want to express my appreciation to the Philadelphia National Bank for making this space available and to especially commend the bank's Vice President Charles Hoeflich and Federal Bureau of Investigation Field Supervisor Norris Harzenstein for organizing and coordinating this exhibit.

MESSAGE FROM ATTORNEY GENERAL OF THE UNITED STATES, READ AT DEDICATION CEREMONIES, MAY 8, 1961

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., April 28, 1961.

MR. HARRY D. SHARGEL,
Federal Bar Association,
Philadelphia, Pa.

DEAR MR. SHARGEL: The law observance committee of the Philadelphia Chapter of the Federal Bar Association, in promoting respect for the law and those who enforce it, is making an outstanding contribution to law enforcement.

I wish to express my appreciation and best wishes to the Philadelphia chapter in its latest endeavor to aid and assist law enforcement. Many persons who will see your exhibit will gain a new insight into the high caliber of law enforcement in our country. The vigor, dedication, and skill of the Philadelphia chapter in making this unique contribution sets a high standard and an excellent example which I hope other public spirited organizations will see fit to emulate.

I wish you all success.

Sincerely,

ROBERT F. KENNEDY,
Attorney General.

HIGHLIGHTS OF THE LAW OBSERVANCE EXHIBIT, "LAW ENFORCEMENT SPEAKS TO YOUTH"

District attorney's office: The display of the district attorney's office focuses upon the problem of juvenile delinquency in Philadelphia and specifically the relationship of the courts and the district attorney's office in the handling and supervising of juveniles who find themselves in trouble with the law.

Federal Bureau of Investigation: Extensive and dramatic exhibit depicting the training of special agents, identification through finger prints and scientific solution of a bank robbery. Portrays career opportunities for young people at various tasks at headquarters in Washington and at local office. Shows samples of educational materials furnished to schools, young people and parents, industry and police. Many of these will be available to the public at the bank. The exhibit is keynoted by quotation from J. Edgar Hoover, "The American people can solve any problem they want if they wake up to the facts, and go into action." This applies whether the problem is that of the mounting rate of crime or the dangers from communism.

Fairmount Park guard: Feature canine corps with live dogs and trainers to depict their remarkable record in holding down crime and delinquency in park areas. Portray area of jurisdiction including 7,700 acres of park area, 60 miles of bridle paths, recreation centers, playground and swimming areas. Also 85 miles of parkways and drives which carry a large amount of auto traffic in Philadelphia.

Police department: The Philadelphia Police Department's exhibits depict several facets of interest: the variety of civilian career opportunities in the department all the way from clerk-typist to administrative analyst; the new adjutant group, which was established to recruit and train promising young men for police work; additional education available to police of all ranks through the board of education, Community College of Temple University and Fels Institute of the University of Pennsylvania; the application of electronic data processing to police work in analyzing the time, place, etc., of crime as well as anticipating where accidents are prone to happen; how to keep a business burglary proof; and an analysis of the occurrence of accidents by day of the week. Pamphlets on how to aid police in preventing burglaries and on how to guard against shoplifters will be distributed to the public. Literature relative to educational opportunities for police will also be made available.

Postal inspector: An exhibit furnished by the Bureau of the Chief Inspector, Post Office Department portrays the history of the postal inspection service beginning with its inception in 1737 when Benjamin Franklin was first appointed by the British Colonial Postmaster General as postmaster of Philadelphia and given the additional duties of regulating the several post offices and bringing the postmasters to account. The display shows an outline of functions and graphically portrays the general areas of investigation: Post office burglaries, holdups of mail custodians, poisons and bombs sent through the mail, extensive direct mail selling of pornography, and fraudulent schemes by unscrupulous promoters.

U.S. TREASURY ENFORCEMENT AGENCIES

Alcohol and tobacco tax: Will have photographs of illicit alcohol and "moonshine" stills and contraband firearms.

Coast Guard: Display depicts their enforcement activities with relation to the safety and security of the port of Philadelphia.

Customs Bureau: Official photographs will show the smuggling of contraband into the United States by various schemes and devices.

Secret Service: Will display genuine and counterfeit currency and photographs depicting their work in the fields of counterfeiting and the protection of the President.

WHYY–TV and radio: The exhibit depicts the use of educational television and radio as a weapon in the fight against delinquency and crime.

DEDICATION OF THE LAW OBSERVANCE EXHIBIT, "LAW ENFORCEMENT SPEAKS TO YOUTH"

HOST

Philadelphia National Bank, Frederick A. Potts, president; Charles Hoeflich, vice president.

EXHIBITORS

District attorney's office: James C. Crumlish, Jr., district attorney; Paul M. Chalfin, first assistant district attorney.

Fairmount park guard: Francis C. Deegan, sueprintendent; Philip J. Cella, inspector.

Federal Bureau of Investigation: Fred A. Frohbose, special agent in charge, Philadelphia.

Police department (Philadelphia): Albert N. Brown, commissioner; Howard R. Leary, deputy commissioner.

Post Office Department: A. J. Harkins, postal inspector in charge, Philadelphia.

Treasury Department: Alva M. Meyers, regional commissioner. Alcohol and Tobacco Tax: Louis DeCarlo, assistant regional commissioner. Coast Guard: Henry U. Scholl, captain of the port of Philadelphia. Customs Bureau: Charles Beiswinger, customs agent in charge. Secret Service: Joseph P. Jordan, special agent in charge.

WHYY–TV and Radio: Richard S. Burdick, managing director.

Temple University Community College: Dr. William A. Schrag, dean.

University of Pennsylvania Fels Institute: Dr. Stephen B. Sweeney, director; Dr. Thomas J. Davy, assistant director.

SPONSOR

Federal Bar Association: Thomas G. Meeker, national president; A. S. Harzenstein, national vice president, third district.

Federal Bar Association (Philadelphia chapter): President, Congressman Herman Toll; first vice president, Harry D. Shargel; second vice president, Judge Earl Chudoff; third vice president, Russell J. Borden; treasurer, Herman R. Testan.

Law observance committee: chairman, Harry D. Shargel, special assistant to general counsel; Military Clothing and Textile Supply Agency. Members: David Berger, city solicitor; Paul M. Chalfin, first assistant district attorney, Philadelphia; Earl Chudoff, judge, court of common pleas, Philadelphia; Louis DeCarlo, district coordinator of Treasury enforcement agencies; Ephraim Gomberg, executive vice president, Philadelphia Crime Commission; Norris S. Harzenstein, Federal Bureau of Investigation, field supervisor; James McGirr Kelly, assistant U.S. Attorney; Herman Toll, Member of U.S. House of Representatives; Harold K. Wood, judge, U.S. District Court.

Community relations adviser; Milton A. Eisenberg, director of public relations, Yellow Cab Co., of Philadelphia.

Adviser on radio and television: Martha A. Gable, director of radio and television, Philadelphia public schools.

Adviser on municipal police problems: Howard R. Leary, deputy police commissioner, Police Department of Philadelphia.

An Unfair Tax Proposal

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DERWINSKI. Mr. Speaker, the Ways and Means Committee is conducting hearings on the President's tax proposals. The Chicago Daily News' editorial on Monday, May 1, 1961, discussed these same proposals with the following editorial entitled "An Unfair Tax Proposal." I believe this analysis is an accurate appraisal of the issue involved:

AN UNFAIR TAX PROPOSAL

Canada has carried wealth-leveling pretty far, but never so far as the United States in the double taxation of corporate earnings. Even Socialist Britain did not exact the harsh bite imposed here.

In 1954, Congress passed a token acknowledgment of the injustice of the U.S. treatment of income from dividends. President Kennedy now recommends that this be canceled.

The 1954 law excludes $50 of dividends from taxation and allows a taxpayer to deduct from total taxes 4 percent of his income from dividends. This was a miniature recognition of the fact that the earnings from which the dividends were paid to the corporation's owners were already taxed at 52 percent.

Canada allows a 20 percent individual tax credit, in contrast to the United States 4 percent.

The case was made for the token exemption that it would be useful in attracting capital for productive enterprise, and promote a desirable broadening of the base of industry ownership. That may have been a debater's argument; the ground for the credit was quite good enough on a simple basis of equity.

The President says the dividend credit has been found to favor taxpayers in high brackets more than those in low. Naturally; and why shouldn't it? The allowable deduction for medical expenses is of more benefit to the cancer patient than to the man who has a wart removed. It should be.

The President's proposal for withholding tax on dividends and interest seems to us only slightly less dubious.

He said that $3 billion a year in interest and dividend payments are not being reported. But it does not follow that all of this income is taxable at the withholding rate—or even taxable at all.

Failure to report taxable income cannot be condoned, but it is a drastic remedy to withhold taxes on the earnings of small savings accounts and the few dollars of dividends going to any thousands of small stockholders. They would be entitled to rebates, of course, but that involves trouble, perhaps an acutely inconvenient loss of time, and heavy expense to the Government.

In attempting to justify the President's recommendations, Treasury Secretary Dillon asserted that, anyway, the dividend tax credit was "only a token" toward easing the double taxation of dividends. That is to concede its inequity, but to contend that the relief is so slight that it might as well be removed.

If Mr. Dillon had been candid, he would simply have said that the Government needs all the money it can extract, and it can probably get more with the fewest and most easily disregarded squawks from the owners of securities.

This seems to us to be pandering to the popular itch to soak the rich and the thrifty on the ground that they can survive it, and haven't much right, anyhow, to be better off than the rest of us. It is not a creditable motive for taxation.

Publisher William Dwight Welcomed to New Hampshire

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial from the May 8 Nashua Telegraph welcoming William Dwight, of Holyoke, Mass., to New Hampshire. Mr. Dwight recently purchased the Concord Daily Monitor, published at Concord, N.H., from Mr. James Langley, who has served New Hampshire and the Nation with distinction. Mr. Langley was recently our Ambassador to Pakistan, and since 1923 has published the Concord Monitor. Associated with Mr. Dwight in the new Concord Monitor management are two young men familiar to the House, his son Bill, who served as assistant to the gentleman from Massachusetts [Mr. CONTE], and the general manager of the Monitor, Tom Gerber, for many years an able and respected member of our press gallery. We wish them all success:

[From the Nashua Telegraph, May 8, 1961]

WELCOME TO NEW HAMPSHIRE

The Nashua Telegraph welcomes the new owner of the Concord Daily Monitor, William Dwight, of Holyoke, Mass., to New Hampshire.

The Monitor, a long-established and responsible daily newspaper in our State for more than a hundred years, will remain in good hands under the control of Mr. Dwight, who has operated a family newspaper in Holyoke, Mass., for many years and who recently bought a newspaper in Illinois and is part owner of a daily in Greenfield, Mass.

The change in ownership means partial retirement of the longtime owner of the Monitor, James M. Langley, from the newspaper field in this State after some 40 years as guiding director of the only daily newspaper in our State capital. We are sorry to see Mr. Langley retiring from the publishing field—but it is to a reward he richly deserves. The lanky publisher of the paper,

a familiar figure to most newspapermen in the State, will serve as consultant to the new management and, we expect, write some of his pungent, hard-hitting editorials.

Mr. Langley purchased the Monitor in 1923 and combined it with the ailing Patriot—in those days there were two daily papers in the capital city—and under his management the paper has prospered and has won the respect of its readers.

Bill Dwight is well qualified to carry on the high traditions set by the retiring owner of the Monitor. He has been in the newspaper business since cradle days, figuratively speaking, through family ownership of the Holyoke paper. His mother, the late Minnie Dwight, was one of the great figures in New England journalism and ran the newspaper up until her death at an advanced age several years ago.

On his own he brought credit to that newspaper and to the newspaper business in general. He is a past president of the American Newspaper Publishers Association, the New England Daily Newspaper Association and last week at the annual meetings in New York he was elected a director of the Associated Press, which serves this newspaper and hundreds of others throughout the world.

His known abilities in this important form of communications can only augur well for the people of Concord and for all of New Hampshire.

Welcome to New Hampshire, Bill.

Dangerous Tax Ideas

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, yesterday I addressed the House of Representatives with respect to the administration's tax message. I made specific reference to three aspects of that message which I believe would be damaging to our American free enterprise economy if they were adopted. One of these aspects on which I commented pertained to the suggestions for changes in the tax treatment accorded foreign income. I stated that this proposal constituted an "economic Pearl Harbor" and embraced the slogan "Yankee Come Home." The Journal of Commerce of May 10, 1961, contains an editorial captioned "Dangerous Tax Ideas," which discusses the administration's proposals for taxing foreign corporations in which American investors have an interest. As a part of my remarks, I will include that editorial in the RECORD at this point:

DANGEROUS TAX IDEAS

Congress may soon receive draft legislation from the administration providing for immediate and heavier taxation of earnings of foreign subsidiaries of American corporations.

This action, recommended by President Kennedy and Treasury Secretary Douglas Dillon for balance of payments and revenue purposes, would tax parent companies on the earnings of subsidiaries in "economically advanced countries" (industrial nations such as the West European countries and Canada).

It has been estimated by officials that this move, combined with proposed different tax treatment of the so-called tax haven corporations and compensation of Americans working abroad, would net the Treasury around $250 million in 1963 and improve the balance of payments by about twice that amount.

Currently, parent U.S. companies are taxed on earnings when received (dividends) of foreign subsidiaries.

We believe that the administration proposal to tax earnings of foreign subsidiaries located in these industrialized countries would be most ill advised, on policy grounds. Furthermore, it would ultimately weaken our balance of payments position and also would not automatically lead to heavier investment in the less developed nations, as some assume.

At a time when the best possible relations with the other industrialized nations (many of them our NATO allies), are so obviously imperative to our future well-being, such taxation could impose an undesirable strain.

Consider such taxation from the host country's point of view. Foreign subsidiaries controlled by U.S. parent companies are nonetheless domestic corporations that must and should act as good citizens or residents of the country where they operate and earn their way.

Decisions regarding what to do with income after payment of local taxes, accordingly, should give due consideration to the needs of the host country. Of course, a reasonable host country expects that the parent company which took the risk and utilized its funds and skills in setting up the subsidiary should be recompensed. Once a subsidiary has got well under way, it frequently has remitted a bit more than half of earnings to the parent, the remainder being ploughed back to finance growth.

On the other hand, if parent companies have to pay taxes on the entire earnings of subsidiaries in countries with lower corporate tax rates so that U.S. tax credits would not offset the proposed new U.S. taxation, the former will be under pressure to push for remission of a greater proportion of subsidiary earnings.

Transfer of a larger proportion of subsidiary earnings could help our balance of payments on short-term, perhaps by $500 million in the first year in which the proposed new tax measures were fully effective. But, in the long run, the effect would be the opposite.

American companies have been investing abroad on a generally raising scale since the forties and our balance of payments has been benefiting from this. Last year the return on private direct investment abroad probably amounted to around $2.4 billion, while the outflow of funds for direct investment ran around $1.5 billion. Thus, direct investment provided a clear net of nearly $1 billion.

Basic correction of our balance of payments, which last year showed a huge deficit of $3.8 billion, is absolutely essential, but by means that do not threaten to be self defeating in the end as would this tax proposal.

The less developed and developing nations are in urgent need of more capital to enable them to step up production and to raise standards of living. Private foreign investment that carries with it managerial and technical skills can help importantly in achieving these aims, but decisions to do so, to invest in less developed countries, are not made becaus U.S. capital must move.

Capital can always stay at home. Or it can be invested in foreign interest and dividend-paying securities as it was in the latter half of last year when the payments deficit rose to record proportions in spite of an extremely large export surplus in our merchandise trade.

If and as opportunities develop in the nonindustralized countries and the latter provide an attractive climate for private direct investment, U.S. corporations can be expected to establish subsidiaries if this does not hamper expansion plans at home and also if the companies are not deterred by fears of betrayal by the U.S. Government.

In our broad interest, Congress should refuse to accept the administration's proposals for taxation of earnings of foreign subsidiaries in the economically advanced countries before such earnings are received here.

The House Ways and Means Committee should not approve legislation carrying out the administration's proposal, without modifying it drastically. The proposals appear clearly contrary to this country's longstanding principle of taxing income only as the U.S. corporation earns or receives it.

The Lincoln Enigma

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. CURTIN. Mr. Speaker, the Lehigh County Republican Committee, in the district that I have the honor to represent, annually sponsors two essay contests on the "Life and Ideals of Abraham Lincoln" as a part of the Lincoln Day celebrations, one being for senior high school students and the other for junior high school students of Lehigh County. The winning selections are made by a board of distinguished educators from several hundred essays submitted. I am very proud of the fine students and the essays they submit. This year, the contest for the senior high school students was won by Terry Lee Eck, a Parkland High School sophomore.

Under leave to extend my remarks, I would like to include the winning essay of this young man, entitled "The Lincoln Enigma":

THE LINCOLN ENIGMA

Millions of words have been written about Abraham Lincoln and countless books about his life, career, and death can be found on almost every library shelf. Almost every phase of his life, career, and untimely death have been explored by dramatists, authors, and historians. Little has been written, however, about the Lincoln that might have been, the Lincoln that may have lived, the Lincoln America lost. Much of Lincoln is an enigma, in this I am interested; it is in this phase I am concerned.

Let us flash back to the year 1865. Suppose that on the evening of April 14, 1865, Lincoln had not visited Ford Theater; suppose Abe Lincoln had lived. What would the course of American history have been like in the next decade, for the rest of the century, today?

There never was a darker period in our history than the years following the close of the Civil War called the reconstruction era. This was a period marked by selfishness, corruption, political ambitions, and greed. All these horrible things fixed themselves upon our people—particularly upon

our Southern brothers. Due to the death of Lincoln, the mantle of responsibility fell upon President Johnson who by circumstances was forced to face the reconstruction era. Congress vehemently opposed Johnson because they hated his Southern birth and felt that his reconstruction methods were too lenient toward the rebellious South.

These became the ingredients of a conflict destined to last a decade. The failure to resolve it led to the crimes so well known and so shamefully a part of the history of the era. What about Lincoln had he lived? Might there not have been a brighter hope?

The basic philosophies of Lincoln and Johnson were generally the same. Both believed fundamentally in the equality of all men. Both men pondered in their hearts the theory that the South had never left the Union, and that the South had received more than sufficient punishment through the dreadful battles that made up the history of the Civil War.

The difference, then, does not lie in the philosophies of these two men as it does in the way each practiced his belief. Lincoln possessed many qualities so essential to good character. He was sympathetic, slow to anger, self-educated in the formal arts, and a master of human nature. He knew the right time to be firm, and the moment it was necessary to be kind. In his simple homespun manner he was humble, but confident in that what he knew, he knew well. Lincoln was very much a humanitarian in that he was deeply concerned with people, their fortunes, their problems, and their rights. Lincoln believed that no man should rule another man without that man's consent. His whole attitude toward the postwar South and its problems can be capsuled in these few words from his second inaugural address:

"With malice toward none, with charity for all,

With firmness in the right, as God gives us to see the right, let us strive on * * * to do all which may achieve and cherish, a just and lasting peace among ourselves and with all Nations."

There are explainable reasons why Lincoln and Johnson while having the same views as to the reconstruction theory often pursued different courses in achieving their ends. Among these reasons lies the basic idea that the personalities and approaches of these two men were vastly different. Johnson was a crude, quick-tempered man. He was undiplomatic, drab, and colorless. He had little self-confidence. It would be unfair to say that his conduct stemmed from the fact that he was not a humanitarian. Johnson followed closely and even patterned his reconstruction policies with slight variation after those of Lincoln. At all times he kept the welfare and the few remaining rights of the southerners foremost in his mind. The lack of tact, so evident in Johnson, was soon to ruin his career, wreck reconstruction, and disgrace the pages of American history. Congressional leadership was determined to crush him.

We must recognize that even possessing these outstanding qualities of sympathy, understanding, and honesty, Lincoln would have met opposition in the likes of Thaddeus Stevens and Charles Sumner. These men were committed to the exact opposite theory to that expressed by Lincoln and Johnson, namely, that the South must be punished for their inhuman crime of rebellion. The war they said had subdued them, reconstruction must punish them.

The political polish and personal finesse possessed by these leaders of Congress, Stevens and Sumner, were too much for Johnson; but Lincoln, with his simple, direct, and understanding manner most definitely would have been more than equal to the challenge these men afforded. His cleverness, shrewdness, and political know-how would have given Lincoln a decided political edge over these men. Had Lincoln lived, these men would not have been able to control reconstruction like one who merely pulls a string to move the hands of a puppet. Johnson, although a sincere and honest politician, was too quick to act. He lacked the ability to attract support to his cause and this was so much a necessity if the Congress was to be brought around to the presidential way of thinking. Johnson was therefore not able to handle the men through whose hands his policies would have to pass. Lincoln knew how to manipulate the intricacies of politics that would have built the machine in Congress so necessary to put a program through.

Assuming then that Lincoln had lived—bearing in mind his keen political sense and his virtuous patience—let us take a candid look at what the United States today might have been like. Let us consider our present national status if "Honest Abe" had been at the helm throughout the Reconstruction Era.

Consider the integration crisis in the South. Would the Little Rock incident have ever occurred? The problem would not have been nearly so acute. Lincoln's mild policies would have led to a gradual absorption of the Negro into the southern society and at present color would not be a serious barrier. Bitterness and hatred caused by the harsh reconstruction policy that was eventually fixed upon the South would not have developed. It is very probable that the Negro would have achieved economic, political, and social status slowly but progressively as the facilities for better education were opened to him.

Ever since the war, bitterness has existed between the North and the South. Terms such as "damn Yankee" and "dirty rebel" can still be heard occasionally. Surely the policies of Lincoln would have led to a healing of all the Nation's wounds and these phrases would not have become part of our national vocabulary.

Under the plan which went into effect in 1865, the South was plunged into economic turmoil. Little progress toward rehabilitation was made and hunger existed everywhere throughout the South. The foreign trade of the South was cut to nothing. All of these horrors could have been spared had Lincoln lived. His plan called for a simple economic transition built upon a quick restoration of southern white economy.

Another horrible page in American history could have been spared if the scalawags and carpetbaggers, who were political opportunists, had never gained power in the South. Lincoln's plan had no place for these men as he firmly believed in a restoration of the dignity of the southern white.

Many people cringe at the mention of the Civil War because it meant "brother against brother." After this terrible event, however, insult was heaped upon injury when "brother was used to guard brother" in the unnatural circumstances of martial law. Martial law is generally regarded as being contrary to the democratic spirit of the free people. The South would have been spared this suffering had Lincoln lived because there was no place in the Lincoln plan for armies of occupation. Much of the hatred bred in the South by the use of these armies might never have developed.

It is difficult to comprehend, but true that the facts of history would have been vastly different. There would have been no disputed election of 1876. Without martial law two sets of election returns would never have been submitted by the Southern States. The existence of an Election Count Act of 1877 would not have been necessary. The impeachment of President Johnson would not have blotted our history and the Tenure of Office Act would never have been passed or repealed.

Probably the greatest change one would notice, had Lincoln lived, would be the stronger unity of purpose existing between the sections of the country. Assuming that things would have been pretty much as we have described them, it is proper to assume that the whole nation would be, today, displaying much stronger nationalism.

We can not prove that these things would have been this way, but we can not assume that they would not have been this way. We understand Lincoln well enough to know that these things (all of them) could have been. America might have been a better place in which to live and our national posture may have been more secure. Death, however, removed Abraham Lincoln from the mainstream of American life. Many of these mythical assumptions surrounding his career will, therefore, forever remain an enigma.

The Lillian Diebold Poling Year

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mrs. BOLTON. Mr. Speaker, next Sunday, May 14, is Mother's Day, founded over 40 years ago. For the past 27 years the American Mothers Committee, Inc., has had as one of its major functions the selection of an outstanding mother to be honored annually. This committee is dedicated to the development and strengthening of the moral and spiritual foundations of the American home and to give to the observance of Mother's Day a spiritual quality which highlights the standards of ideal motherhood in the significant role of the mother in the home, the community, the Nation, and the world. The committee, a nonprofit organization, is recognized by the U.S. Chamber of Commerce—and each year the Mother of the Year is graciously received at the White House. Mr. J. Edgar Hoover has said, "The fact that the American Mothers Committee, Inc., has indicated its determination to take action on a problem nationwide in scope and bearing the seeds of great danger to the future of our country is most encouraging."

With the cooperation of Governors, educators, civic leaders, and major organizations, each State selects from many worthy nominees its choice for the State mother. This is a fact of which each Member of this body is personally aware because many of the wonderful women from each district have been so honored. From these fine women the American mother is chosen after prayerful consideration by a national jury. This year, in addition to the national mother just announced this week, the committee will pay tribute to the president, Mrs. Daniel A. Poling, naming her their first honorary president. Nineteen hundred and sixty-one has been declared the Lillian Diebold Poling Year. Numerous tributes will be paid to this remarkable 81-year-old mother. As a fellow Ohioan, it gives me great pleasure to call attention to her achievements.

Four score years and one. And all but her very young childhood years have been dedicated to the service of humanity. Lillian Diebold Poling was born on May 7, 1880, in Canton, Ohio, and educated in the schools of that city. She received her certificate for teaching in home economics from the University of Ohio, in Columbus. At a very early age her interest was centered upon the home and the great need for improving the living conditions of the underprivileged. In Canton, Ohio, with this thought uppermost in her mind, she became chairman of an Americanization committee, organized a nursery during the flu epidemic of World War I, and as a teacher of home economics in a school district with 14 nationalities she founded the Little Nell House. Here young girls were given instruction in homemaking and the boys were taught worthwhile trades—they helped build the Little Nell House. As this indomitable young woman went about her teaching, the need for adequate meals for little children drew her attention. She pioneered in the Middle West the program of serving milk to underprivileged children in the public schools. But it was to all humanity that she was devoted. From the neglected and undernourished children to the young girls in need of counseling and direction, and then to the older forgotten mothers—shutins in hospitals and institutions, no longer remembered by their families, with few pleasures in their daily lives—these were another concern of Lillian Poling.

In Philadelphia she founded the religion-in-life group, bringing together Catholic, Protestant, and Jewish women for the purpose of interfaith understanding. How for nearly a decade she has been president of the American Mothers Committee. To her determination to develop and strengthen the moral and spiritual foundation of the homes of America goes the major credit for the basic program of the committee—family life institutes and counselor motherhood services, reaching young mothers with preschool-age children, helping them with the problems of their new lives and in the rearing of their little ones—the future hope of America.

At the age of 81, this most remarkable woman, in addition to her duties as the wife of one of the world's most prominent ministers and editors, Dr. Daniel A. Poling, sustains a daily schedule of activities that would tax the stamina of a 60-year-old. Mrs. Poling's chief interests and activities have always centered in the church. She has organized and conducted prayer groups, taught Sunday school classes and for several years, served as president of the international and interdenominational Woman's Board of Home Missions. Her achievement with her own family is a beacon light for all, bringing to her the recognition of her State. In 1945 she was chosen the Pennsylvania mother of the year. Dr. and Mrs. Poling are the parents of eight wonderful children.

In 1955 Mrs. Poling was awarded the medallion of honor of the Women's International Exposition as a woman of achievement for that year. Already in 1961 Stetson University, of DeLand, Fla., has conferred upon Lillian Poling the university's distinguished service award. On November 2 a testimonial dinner will be given in her honor in the Sert Room of the Waldorf-Astoria, New York.

We salute this illustrious mother, Lillian Diebold Poling, president of the American Mothers Committee, Inc.:

GOD FASHIONED HER

He took the laughter of a child,
A naiad's grace; a spirit kind
And innocent; a voice as mild
As waters deep,
And whatsoe'er was undefiled
To have and keep.
All things soever pure and good
By mortals known or understood;
All charms of healthful solitude
And social grace;
He mingled in divinest mood
To light her face.
He took the softness of the dove
To make her gentle; looked above
As if to catch the glamor of angelic art,
And then He breathed a mother's love
Into her heart.

Safety of Southeast Asia Hinges on Firm United States

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SAFETY OF SOUTHEAST ASIA HINGES ON FIRM UNITED STATES

(By Edgar Ansel Mowrer)

Southeast Asia is being lost to communism not in the jungles of Laos, but in the jungle of Washington, D.C.

A more impenetrable thicket of interdepartmental and office squabbling, of political backing and filling, of silly boasts and pacifist bleating, can not be found.

As a result, almost everybody in the Capital now realizes that, regardless of the cease-fire and the coming peace conference in Geneva, Laos has slipped through our fingers into the Communist Sing Sing. Just imagine—out of the 14 participants in such a conference, the United States can count on the firm support of only two, the Philippines and Thailand.

The several Communist members will support their Pathet Lao stooges. Britain, France, and India will be conciliatory, presumably to the point of surrender. The Premier-designate of "neutral" Laos, Prince Souvanna Phouma, is a Communist agent and will deliver the country to his bosses as completely and rapidly as he can. Laos, short of a miracle, is gone.

In view of President Kennedy's rash vows not to permit such a loss, this event will make the Cuban humiliation seem like a minor setback. To save him from unpopularity, certain apologists of retreat are busy explaining that his were just "promises which our better judgment told us we should not keep." (Then why make them and repeat them?)

But whose better judgment is meant? Not the Defense Department's (which would have the responsibility for making good), not mine, and, I hope, not yours.

Many think that the prospects of a successful stand in Laos—given the readiness of Pakistan, the Philippines, Vietnam, and Thailand to send troops—were not at all poor, provided the decision was made early enough. They see in the renunciation of Laos just one more unhappy attempt to disguise faint-heartedness as sound strategy.

But their advice was neglected or scorned. Faced with bold Soviet brinkmanship and the possibility of a new Korea, the President's chief advisers, led by the ever trembling State Department, decided that retreat was the better part of valor.

Conveniently overlooking the military potential of our Asian allies, these apologists of defeat successfully insisted that the United States was "over-extended." They meant that we do not today possess large enough ground forces and specially trained guerrilla fighters to win all local wars without using atomic weapons. And they are afraid to use these weapons.

If they are right about the size of our conventional forces, whose fault it is? Kennedy supporters lay the blame on the defense saving of the Eisenhower administration. True enough. But since J.F.K. entered the White House, to what has he given his chief attention? To minor domestic problems entirely irrelevant to the major job of stopping communism here and now. Not to saving Laos.

His requests for additional defense funds have been insignificant. Some of his trusted servants even argue that no amount of additional spending would increase the security of the United States, which is a flat lie.

Would not shelters that could save the lives of over half of all Americans in case of major war increase the security of the United States? Woud not crash programs in bigger rockets, in antimissile missiles, in space and in new weapons that are going to upset the present balance of terror—would not these increase the security of the American people?

Every intelligent student knows that they would—and that Khrushchev and Mao could hardly afford to keep up with us in a race for them. Nothing but the inertia and cold feet of its leaders prevents the free world from reasserting military preponderance in every important field.

To add a touch of humor to a tragic situation, some Americans suggest that, as a substitute for defending unhappy Laos, the President should send a new solemn warning to Mr. K. telling him that our present and past retreats before Communist bluff do not mean that we shall retreat forever.

But why should Khrushchev or Mao believe the President? For 20 years the United States has, with a few splendid exceptions, talked big and acted small. I believe that Mr. K. is now convinced that American leaders lack the guts to call his bluff and fight, if necessary, either in Laos or Berlin.

As for atomic weapons, how can a government that is resigned (or says it is resigned) to their role in defending Vietnam complain of having to use them for Laos? It makes no sense.

Meanwhile, the stake has grown from Laos to all southeast Asia. It includes Cambodia (already compromised by its scared rulers), South Vietnam (whose loyal leaders State Department officials criticize as "mandarins"), Indonesia (whose playboy President plays footsie with Communists ready to eat him), Thailand (presumably forced to come to terms with communism if South Vietnam goes) and, finally, huge and flabby India. What a prize for Khrushchev and Mao.

Is it too late to thwart them? Top American military leaders do not think so. They believe we can win, provided the United States immediately, in the next few days and not after the opening of the coming

Geneva Conference, sends American troops to Thailand and Vietnam while inviting neighboring Asian states to do the same. But nothing short of some such tangible demonstration of determination can change the situation.

These are no days for rabbit men.

Legislative Views as to the Value of the Sentencing Institute

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address I made before the Sentencing Institute for the Fifth Circuit in New Orleans, La., Tuesday, May 9, 1961:

LEGISLATIVE VIEWS AS TO THE VALUE OF THE SENTENCING INSTITUTE

This is a particularly gratifying occasion for me—attending a sentencing institute in pursuance of the authorizing legislation which I sponsored in 1958. I am indebted to Judge Clayton for his kindness in inviting me and for the opportunity to renew so many old acquaintances among the judges.

It is a difficult but most worthwhile task that you have before you. We are living in troubled times. We are living in the midst of vast social changes, changes which have brought with them conflicting political philosophies and a rapidly developing technology that has uprooted old ways of life. Inevitably under these circumstances the traditional values of our society and particularly the administration of justice must struggle to maintain some semblance of stability.

But times of change are also times of challenge. I am confident that what we do today will eventually bring about a more orderly society, one that will enhance the moral values of the past and make them more meaningful in the future. As President Kennedy, in his historic and beautifully drafted inaugural address, said: "And if a beachhead of cooperation may push back the jungles of suspicion, let both sides join in creating a new endeavor—not a new balance of power, but a new world of law, where the strong are just and the weak secure and the peace preserved."

If we are to create that new world of law, we must, of course, look to our own laws and see to it that they are carried out firmly and fairly and with justice for all. In our system of government the judge inevitably occupies a central role in this all-important endeavor. On judgment day he is the one who speaks for society, and translates into his decisions the values and objectives of that society.

This central and difficult role of the judge is perhaps best illustrated in the realm of sentencing. As my good friend Judge Irving R. Kaufman wrote in the Atlantic Monthly last year: "If the hundreds of American judges who sit on criminal cases were polled as to what was the most trying facet of their jobs, the vast majority would almost certainly answer 'sentencing.' In no other judicial function is the judge more alone; no other act of his carries greater potentialities for good or evil than the determination of how society will treat its transgressors."

Apparently in recognition of the magnitude of this responsibility, the House Judiciary Committee has received over the years a number of proposals which would restrict a judge's discretion in imposing sentence or take that function out of his hands entirely. Every year there are introduced into the Congress a number of bills which would provide minimum mandatory penalties for certain types of crimes. We have had proposals to establish a method of sentence review, with the argument that at present the United States is the only nation in the Western World where, with the exception of a few states, one judge can determine with utter finality the minimum period of time which a convicted defendant must remain imprisoned. We also have had proposals to establish sentencing tribunals along the lines of the California plan which leaves the length of sentence and time of release on parole, to a State commission.

Personally I am convinced that sentencing is inherently a judicial function and that the judge, equipped with the necessary resources and advice, can carry out this function with more regard for principles of justice than persons untrained in the law and unfamiliar with the facts of a case. But a judge cannot, acting alone, be the end-all and the be-all as to whether the offender shall be incarcerated, and if so, for how long. He must and should take advice and counsel from various sources.

Judicial sentencing has been subject to considerable criticism, not without some justification. The inconsistencies that account for this criticism have stemmed from the fact that until relatively recently the judges have lacked the expertise, the resources and information that they have needed to accomplish the task of sentencing as skillfully as might be desired. Also, the courts themselves have not yet reconciled their individual viewpoints into a common sentencing philosophy. I emphasize that it is not exact mathematical uniformity that is important but rather an agreed upon approach to sentencing.

When eventually the courts have succeeded in working out the principles which underlie sound sentencing philosophy, I am sure it will be done through general acceptance of a set of values.

As you know there are different schools of thought as to the purpose of a sentence. Some believe that punishment of the offender is the primary objective of sentencing. And punishment does have its role in vigorously reaffirming the moral standards of our society.

Others believe that the sentence must be severe enough to scare potential criminals into compliance with the law. And I am not so sure that the deterrent purposes of the law have been adequately effective to keep down certain types of crimes. If the deterrent concept were absolutely true, there should really be no criminals. But as you know we have been punishing criminals for centuries and crime is still with us.

Still others believe that the offender should be kept in prison to immunize him physically, so to speak, from the commission of further crimes. None among us questions that there are criminals who must be treated in this fashion. They must be set aside as pariahs. Society must be shielded from them.

Then too there is the school which subscribes to the philosophy that the sentence must be adjusted mainly to the rehabilitative potentialities of the individual offender. This of course is most difficult to calculate but it is certainly one of growing importance in our search for civilized social justice.

But behind all of these purposes is the single objective—the protection of society. This is the judge's prime responsibility, and to fulfill that responsibility he must, in varying degrees apply each of these philosophies to the formulation of an equitable and fitting sentence. It is not a matter of choosing a rigid sentencing philosophy but a matter of finding a reasonable middle ground between competing considerations.

You are here today to search these considerations and to work toward a common meeting ground for the viewponts which you individually hold. No one expects that the formula for equitable sentencing will be found today or tomorrow, but your efforts here will contribute to an eventual solution to a problem which has existed as long as there have been judges.

You are here to give and take various opinions and viewpoints. You are here to discuss the various aspects of sentencing. On the anvil of discussion you may forge some helpful solutions of the vexatious problem.

The characters, personalities, mental makeup, education, experiences on and off the bench, differ with judges. Their philosophies, mental processes and judgments differ—hence their sentences differ. This is natural. Nonetheless patterns of sentencing can evolve that the judiciary will support.

You know there are 437 members of Congress, representing all sections of the United States having many differing points of view and attitudes. Somehow, in the legislative process, despite the varying attitudes, a common ground is found on which the majority can agree. With the exception of a very few bills, the acceptance of the common ground always is unanimous or nearly unanimous. So, too, I feel that the judges who come from as many sections of the country as do Congressmen, can agree upon a set of values and rules for their guidance in the sentencing of offenders.

The existence of sentence disparities has long been the subject of anxiety among those associated with the administration of justice. Every Attorney General since the Hoover administration has voiced his concern about it. Every Congress since the Roosevelt administration has considered bills to deal with it. And the Judicial Conference of the United States has had it under continuous study since 1938.

There still remains much basis for concern. Disparities are widespread and in many instances flagrant. For example, one of the last acts of President Eisenhower was to commute or reduce the sentence of a first offender to the time he had then spent in jail. This first offender was a combat veteran of two wars, who had been given a term of 18 years for forging six small checks. Only last year another first offender, out of work and desperate for funds to pay for the medical care of his sick wife, received a term of 15 years for cashing a check illegally for $58.40. At about the same time another defendant, whose background and crime were almost the same as the other man's, received a term of 30 days in Federal court for illegally cashing a check for $35.20.

At a Federal institution in the West a 47-year-old embezzler, with an unblemished past record, is serving 20 years, with 5 years probation to follow. This sentence was imposed despite experience which demonstrates that embezzlers are among the most hopeful prospects for rehabilitation and despite data indicating that across the Nation the Federal courts impose sentences averaging less than 2 years upon this type of offender.

Under appeal at the present moment is the case of a tax accountant who received a term of 31 years and 31 days on tax fraud charges last year. It was an extremely harsh sentence, and, of course, there is little the appellate court can do about the sentence directly. It cannot substitute its judgment for the trial judge. It can find some other ground, some technicality I suppose, to reverse the trial court and thus negate the sentence. In doing so, however, its own decision and opinion may be so strained as to handicap our legal system in future cases.

The sensivity of members of the Congress to disparity in sentencing is illustrated by a sentence that was imposed after my bill, the Celler sentencing law, was passed. A middle-aged bank clerk had embezzled approximately $70,000, much of which he used for the benefit of harassed debtors of the bank. This defendant was not motivated by personal gain, instead he manipulated the books of the bank to cover up the accounts of delinquent depositors. A judge, on assignment from another district, imposed a 12-year term without securing even as much information as could have been provided by a presentence report by the probation officer. One of my colleagues promptly introduced a bill which would make immediately eligible for parole any Federal offender who has been sentenced without the benefit of a presentence investigation report. This bill is again under consideration in the current session of the Congress.

In contrast to the excessively severe sentences I have cited, there are also the sentences which are excessively lenient. In 1960 a youth with a sex offense record was given 98 days for robbing a bank of $5,000. In another case an offender who was on probation on a robbery charge at the time of his crime received 1 year for holding up a bank at gun-point and obtaining $600. Again in the same court an offender with a similar background received a 1-year term for robbing a bank of $2,100 armed with a sawed-off shotgun. An eastern court imposed the so-called split-sentence on two defendants who also used a sawed-off shotgun in robbing a bank of more than $12,000. As you know, under split-sentencing, this amounted to only 6 months in jail.

From the data I have secured it appears that some courts are as prone to identify themselves with the plight of the defendant as other courts are prone to throw the book at him. Unduly lenient sentences fail to give the institutions sufficient time to re-educate and resocialize the offender. And they provide the basis for further doubt in the minds of the criminal element and the public alike that our laws are being administered impartially. It is this type of sentence, moreover, that lends so much strength to the group in the Congress who propose and favor minimum mandatory penalties for a growing number of offenses.

Thus it is that sentence disparities bring about both bad laws and bad interpretations of the law, as well as many other undesirable effects which undermine the purposes and prestige of the law.

I have heard the claim that such cases are rare, but they can be backed up by innumerable similar examples. Statistics tell the same story although, dealing as they do with averages, they tend to conceal the extremes in brevity and length of sentences. In the 1960 fiscal year the proportion of all types of convicted defendants placed on probation in Federal courts ranged from 69 percent in New Hampshire to 17 percent in eastern Lousiana. Forgers receive average terms of 63 months in western Oklahoma, but average terms of 9 months in southern New York. For auto theft, usually an offense involving the unauthorized use of an auto for a short-lived joyride, southern Iowa imposed terms averaging about 46 months, while western New York imposed terms averaging about 11 months.

The existence of marked disparities in sentences is undeniable. And I think it was to the credit of the Federal judiciary and a healthy augury for the future resolution of this problem that you acknowledged their existence and wanted to do something about it when, in 1958, I wrote you on the subject. Over 80 percent of the Federal judges who responded to my inquiry favored the establishment of these institutes as a means of finding some way to minimize these disparities. The proposal was also backed formally by the Judicial Conference of the United States.

It is also to the credit of the judiciary that they have acted promptly on the congressional authorization for these institutes. The first such institute, held on a national basis in Boulder, Colo., in 1959, did much to bring to light many of the issues which apparently account for disparities. I hope at this institute and at others scheduled for this year that further progress can be made on achieving the objective of the law, to formulate sentencing principles and criteria which will assist in promoting the equitable administration of the criminal laws of the United States.

The institute program assumes particular importance at this time. As you know, the Congress has under consideration a bill to authorize 70 or more new judgeships, and it is a measure which I strongly favor. However, many of the persons appointed to these offices will know little about sentencing philosophy when they reach the bench. Few, in any, will have had the awesome responsibility of imposing one. The institute program is ideally suited for their orientation in this difficult task which they will have to assume so abruptly.

Moreover, there is legislation pending in the Congress which will add substantially to the burden of their task. A number of bills have been introduced which, if enacted, will bring many new categories of offenders under Federal jurisdiction—gamblers, racketeers, almost anyone who might use some interstate facility in the commission of crime. The proposed broadening of the Fugitive Felon Act alone will bring thousands of offenders who have violated state laws under the purview of the Federal courts.

The courts may receive some badly needed assistance in the event the public defender bill which I have sponsored passes. For example, more than 80 percent of the defendants presently convicted in Federal courts have waived counsel and entered pleas of guilt. The public defender can insure that these actions are taken more intelligently and that worthy cases will have a competent defense. The role of the public defender in providing the court with a more balanced knowledge of the defendant should do much to help the court in its efforts to achieve an equitable and fitting sentence.

The sentencing institute also seems an ideal forum for more experienced judges, affording them an opportunity to exchange views and evaluate the rapidly accumulating knowledge in the field of sentencing. Some senior judges have reported to me that their participation in these seminars has given them new insights into sentencing problems and in some instances have changed viewpoints which they have long held.

Inherent in the statute authorizing the institutes is the desire that any accord and common agreement reached in these institutes be circulated to the entire Federal judiciary. An ideal instrument for the circulation of this information appears to me to be the sentencing Desk Book, first developed for the Boulder institute and now being extensively revised by the Administrative Office of the U.S. Courts and the Department of Justice. I have read this document. It is a comprehensive and concise treatment of the sentencing alternatives available to the courts in disposing of various types of cases. It should prove to be a valuable handbook for the individual judge, for it would otherwise take his law clerk many months to research and gather together any comparable material.

You will recall that the same statute which authorized these institutes also provided for an indeterminate method of sentencing by which the court could impose a minimum term up to one-third of the maximum imposed for parole eligibility or leave this determination to the board of parole. Unfortunately, this provision has not seen much use thus far. Last year, out of more than 8,600 commitments to which the law is applicable, only about 700 were sentenced under this indeterminate provision. It is my hope that a better understanding of this provision can be achieved through the institute program and the data contained in the Desk Book, and that this will lead to an increased use of the indeterminate sentencing procedure.

In my opinion, the indeterminate sentence offers one of the chief means by which the disparity problem can be minimized. It is difficult for the court—virtually impossible in many cases—to predict when a given offender will have been rehabilitated in prison to the point where he can safely be released. The judge loses jurisdiction over the sentence after 60 days, but through the indeterminate procedure the actual time to be spent in prison by the offender can be adjusted by the parole board in the light of later developments. The indeterminate sentence is a means by which the judge can make the original sentence a continuously fitting instrument in the treatment of the offender. It should also prove to be a most effective means of motivating the offender to work earnestly to demonstrate his fitness for parole and release.

Through the sentencing institute program, the judge can also learn more about the resources he has available to him in the sentencing process. In this respect, I am pleased to learn that the diagnostic and observation procedures of the new Federal Sentencing Act have proved extremely valuable to the courts. Mr. Bennett, of the Bureau of Prisons, informs me that he received at least one of these cases a day, on the average. Some of the individuals involved have turned out to be mentally ill and should have been handled under the competency procedures of the Criminal Code. I understand that practically all of the commitments under section 4208(b), the so-called presentence observation procedure, have been defendants whose problems were so profound that the courts were well advised in seeking the extended period of study for them that the statute authorizes.

I was particularly interested in the case of the offender who became involved in a minor Dyer Act automobile theft offense and who was committed to a Federal institution for study as John Doe, when he steadfastly refused to give his true name or any information about himself to the court, the probation officer, or his court-appointed attorney. The institution circularized identification data to various police departments and eventually succeeded in uncovering his true name and the fact that he had once been arrested for carrying a homemade bomb. Further, he had a history of mental illness, and the institution psychiatrists felt that he was currently psychotic. The case was further complicated by the circumstance that one of our States still wanted to prosecute him for carrying the bomb. With the assistance of this information from the Bureau of Prisons, the court worked out what appeared to me a wise solution. The court felt that the several months the defendant had already spent in the Federal institution was a sufficient penalty for the minor offense he had committed, and authorized his immediate release to the State authorities who wanted to prosecute him. The court at the same time expressed the hope that they would commit him to a State mental institution, where all the facts indicated he belonged. Through the Prison Bureau this was done. There are, I am sure, many others with equally interesting and perplexing problems which the new procedure makes possible of solution prior to final sentence.

I am hopeful too that the sentencing institute program will encourage and stimulate the individual judge to take it upon himself to learn more about the problems involved in sentencing. The social science disciplines, for example, are developing a large body of knowledge that has direct implications for sentencing. I commend to your attention in this connection the growing body of literature dealing with human behavior and also the many conferences and seminars now being held in various parts of the country by our social scientists. In this respect I note that a recent report of the Senate Judiciary Committee recommends that the Federal judges adopt as a part of the sentencing institute program the practice of visting the penal and correctional facilities of the Federal Government. Certainly a knowledge of the resources of these facilities is indispensable to the judge if he is to make his dispositions intelligently. A number of Federal judges, I am informed, have already embarked on an extensive program to familiarize themselves with these institutions.

It is further heartening to note that the institute program has encouraged other measures on the part of individual judges to achieve higher standards of consistency in sentencing. I am advised that Judge Theodore Levin, of Detroit, holds a weekly conference of the judges of his court for the purpose of discussing the appropriate dispositions of cases currently under sentencing consideration by each of them. Judge George H. Boldt of Tacoma, Wash., records the reasons behind his sentencing dispositions and explains their consistency with those he has previously imposed. Judge Emett C. Choate, of Miami, attempts to get the views of both the defense and the prosecution when considering his own dispositions. And Judge Wallace S. Gourley, of Pittsburgh, has developed a checklist of factors to be considered when formulating a sentence in an individual case.

I might add here one fairly old suggestion that every modern judge might follow. Sir Matthew Hale, Lord Chief Justice of the Kings Bench from 1665 to 1676, also had a checklist of factors to be considered in carrying out his own sentencing duties. The first item on the list was: "That in the execution of justice, I carefully lay aside my own passions, and not give way to them, however provoked."

The even-handed administration of our criminal laws remains a vital concern of the Congress and particularly my committee. In the report which accompanied my Federal sentencing bill to the floor in 1958 we commented: "The prevalence of such disparities weakens respect for the administration of justice, both on the part of the criminal element and on the part of the general public. Consequently, much of the potential for the prevention of crime inherent in a wholesome respect for the law is not realized." I am fully aware that the sentencing legislation that I sponsored holds within it the potential for bringing about more disparities rather than less if the expanded discretion it conferred upon the courts is not used knowledgeably. In the institute program lies our hope and our trust that the new discretion of the courts will be exercised in what might be termed a "common Federal sentencing philosophy."

As I have said, if we are to achieve the new world of law that President Kennedy described, we must retain in our own Nation unquestioned confidence in the fairness and justice of the law. The Congress has provided the statutory means through the institute program and sentencing discretion. But it is only you judges who can make these instruments work.

In conclusion, I would be very much interested in hearing from Judge Clayton, when the institute is over, as to the conclusions you may reach as to the causes and remedies for sentencing disparities. I have every confidence that this report will be encouraging and that we will continue to strengthen our procedures so as to make equal justice under law a reality for all our citizens.

Statement by Theodore Roosevelt III

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DAGUE. Mr. Speaker, at the urgent request of our distinguished former colleague, the Honorable Edward Lowber Stokes, I am pleased to include an article taken from a recent issue of the Philadelphia Inquirer which sets forth the considered views of Mr. Theodore Roosevelt III, a resident of my congressional district, who is presently the president of Americans for the Competitive Enterprise System, Inc., and speaks from the practical knowledge gained as a partner of Montgomery Scott & Co.

Mr. Roosevelt reviews some current misunderstanding relative to the net profits of corporations and the association which he heads is trying to help clear up some of the misconceptions presently held by many of our citizens in regards to the operation of the American competitive enterprise system. The full article entitled "Truth Is Weapon," follows and is commended to your careful perusal.

TRUTH IS WEAPON

Truth is the greatest weapon of the American competitive enterprise system, according to Theodore Roosevelt III, president of Americans for the Competitive Enterprise System, Inc.

"Our system does not need to be sold to Americans," he said. "It sells itself when it is understood."

He noted, however, that polls of high school students and other groups show that it is not understood, and that many students believe that companies make as much as 50 cents in profit on every dollar of sales.

"This misunderstanding," Roosevelt claimed, "is emphasized by headlines which read 'General Motors Earns $875 Million in Profits for Year.' The public gets the impression that a group of wealthy stockholders sit around a table to divide up this melon. What the headlines don't say is that General Motors spent $3,317 million in wages in 1959 for its 550,000 employees, $5,500 million for materials and supplies and paid $1,250 million in taxes. Of the $875 million profit, $575 million in dividends went to some 787 stockholders and the remainder was reinvested in the business. American industry at times appears to have a remarkable ability unwittingly to create the wrong impression about its finances."

Roosevelt, who is a partner of Montgomery Scott & Co., pointed out that ACES tries to help clear up such misconceptions by bringing to high school and college students and teachers, and clergymen a better understanding of the American competitive enterprise system.

"Too often," Roosevelt observed, "conservative groups in the field of economic education waste their efforts talking or writing to themselves or to people already on their side."

Since teachers and clergymen do not often receive economic education, Roosevelt contended their ideas on the economics of business are often vague.

"People are usually suspicious of things they don't understand," he said. "Teachers and clergymen are idealists and to them the profit motive has been made to seem selfish and sordid because they do not understand the legitimate function of profits as the sparkplug of our economy.

"When ACES," he continued, "gets across to them through its programs the concept that profits are really a cost item—the cost of using tools of production provided by the investments of stockholders—and that it is superior tools which enable us to outproduce the rest of the world, their views change."

Lock-Changing Time

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORSE. Mr. Speaker, Laos is another stark example of Communist tactics threatening world peace—Red infiltration, inspired rebellion, and a rebel force armed by the Communists. The Lowell Sun, an outstanding daily newspaper in the fifth district, has done a commendable job of pinpointing the complex and crucial problems facing the free world in this little nation which, as the Sun points out, frequently is called the key to southeast Asia.

The editorial follows:

LOCK-CHANGING TIME

The cease-fire will bring the problem of Laos into new phase, but will do nothing to solve it.

The Communist Pathet Lao forces hold sizable and crucial areas of that country. They cannot be expected to yield any of these at the conference table.

Indeed, they are certain to press for more. And it is a question whether the free nations have the bargaining position to resist all the Red demands.

Any effort to divide Laos between free and Communist sectors would be complicated by the facts that there is no clear battle line and that the Reds hold pockets of land deep within the free zone.

If the attempt is not to divide the nation but to create a neutral government, the rebels obviously have the bargaining cards to insist on strong, possibly commanding representation in such a government. The prospect for its continued neutralist character would not be bright.

In other words, no settlement reachable at the council table offers real hope now of blocking Communist domination of Laos. Red gains, pressed deliberately to the very end, will have gone too far.

The question of importance to the West is what can be done, if anything, to bar the Reds from the fruits of their gains.

Laos is not a country in any real sense. Its value to both sides in the cold war is strategic, resulting from the geography which gives it borders that touch still-free South Vietnam, Cambodia, Thailand, and Burma.

In a mood essentially defeatist, it has been said again and again that Communist control of Laos could lead to Red domination of all southeast Asia.

Political and military realists evidently do not doubt this possibility. Yet the only

same Western course would seem to be not to accept its inevitability.

In conjunction with our SEATO allies, we plainly must act to stiffen the defense of Thailand and South Vietnam, the latter already deeply undercut by infiltrating Reds.

Neutralist Cambodia and Burma constitute a separate and perhaps even more difficult problem. Cambodia especially could prove vulnerable unless it chooses to alter its posture to join in stern resistance to Red inroads.

No one dares pretend that holding the remainder of free southeast Asia has been made anything but harder by events in Laos. But any ceasefire should serve as the signal for the immediate undertaking of those harder tasks to secure what still remains free.

If Laos has been judged the key to southeast Asia, then we must somehow change the lock which bars the door to its vulnerable neighbors.

James Ford Bell

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MacGREGOR. Mr. Speaker, the founder of one of America's most respected business establishments passed away Sunday. Mr. James Ford Bell died at 81 years of age after a life of outstanding contribution not only to the business and agricultural life of our Nation but to the cultural progress of all of us.

I request that the following article be placed in the CONGRESSIONAL RECORD so that my colleagues may be further aware of Mr. Bell's valuable life. The article appeared in the Minneapolis Morning Tribune of May 8, 1961:

J. F. BELL, OF GENERAL MILLS, DIES—MILLING FIRM'S FOUNDER WAS 81 YEARS OLD

James Ford Bell, 81, founder of General Mills, Inc., died Sunday morning in Abbott Hospital.

He had been ill for several weeks with a respiratory ailment.

His death came just 12 days after that of his wife, who died in Honolulu, Hawaii, of a heart attack.

Mr. Bell's credo of "Think it big and keep it simple" guided him through a lifetime of bringing order to the milling industry, of pushing research in widely scattered fields and of pursuing a number of hobbies.

Even after he retired as chairman of the board of General Mills in 1948, "The Chief" continued to serve until 1959 as a director and as chairman of the firm's committee on finance and technological progress.

Gerald S. Kennedy, present chairman of the board, said of Mr. Bell yesterday:

"He was a man of insatiable intellectual curiosity. He was never satisfied with the present except as it prepared for the future. Research was his lodestar.

"No conflict of interest ever diverted him from his appointed task. He was single-minded in his determination to accept nothing but the best.

"The food industry, education, the arts, basic research and a wide circle of friends will keenly miss him now and in the years ahead."

Services for Mr. Bell will be at 3:30 p.m., Tuesday in the main church at Westminister Presbyterian Church. He will be buried in Lakewood Cemetery.

The family prefers memorials to medical research funds at the University of Minnesota.

Mr. Bell was born August 16, 1879, in Philadelphia, Pa. His father, James Stroud Bell, was one of the Nation's leading flour merchants. His mother was Sallie Montgomery Ford Bell.

The family moved to Minneapolis in 1888 when Mr. Bell was 9 years old. His father had accepted the presidency of Washburn-Crosby Co., with the assignment to expand the company and build national prestige.

Young Bell started at the Jefferson Public School, a few blocks from the West Hotel where the family lived for 2 years. They later moved to a house at 2215 Park Avenue, which now is Waite Neighborhood House.

Mr. Bell attended Lawrenceville Preparatory School in New Jersey. In 1901, he was graduated from the University of Minnesota with a major in chemistry.

While he was still a student under Prof. Harry Snyder, Mr. Bell created the first laboratory for testing flour.

Mr. Bell married Louise Heffelfinger of Minneapolis December 10, 1902. They had three sons and a daughter.

Son, Charles H., is president of General Mills. Ford Bell is chairman of the board of Red Owl Stores, Inc. Samuel H. is a rancher near Chandler, Ariz., and a sculptor whose work is displayed at the Museum of Natural History at the University. Sally is Mrs. Herbert O. Perry, who lives on a ranch in California.

After James Ford Bell finished college he took his first full-time job with Washburn-Crosby.

At the age of 30, Mr. Bell was elected a director of the Crosby company. Six years later, in 1915, he became a vice president following his father's death.

Recognition of Mr. Bell's rising importance in the milling industry came in 1916, when he was appointed chairman of the milling division of the U.S. food administration.

The committee was created to meet problems caused by World War I.

Mr. Bell resigned from Washburn-Crosby and devoted all his energies to making effective the slogan—"Food Will Win the War."

Mr. Bell spent nearly every night on trains between New York and Washington. In New York, about 2 million barrels of flour were shipped each month to the allies. In Washington, high policies were being made or changed.

In 1918 Mr. Bell was named treasurer and general manager of the Sugar Equalization Board. Not until March 1919 was he able to resign and return to his affairs in Minneapolis.

It has been estimated that Mr. Bell's contribution, along with the voluntary cooperation of the Nation's millers in helping to stabilize flour prices, saved the public half a billion dollars during World War I.

For his work, Mr. Bell was made a member of the Belgian Order of the Crown. The French Government awarded him the Cross of the Legion of Honor, later making him an officer in the legion.

Mr. Bell returned to Washburn-Crosby in 1919, inheriting a host of problems.

During the war, milling industry had increased its capacity tremendously to supply oversea nations. That market now was cut off. In addition, people had been taught to save wheat and to develop tastes for other foods. Now millers were shocked to find the per capita consumption of flour declining sharply.

Most important to the Minneapolis mills was that Minnesota farming was being diversified. Wheat growing was moving South and West.

In a bold plan of reorganization, Mr. Bell presented to his partners a project to invade the Southwest. His idea was to establish more plants close to the new centers of wheat production, to work closely with commercial bakers, to work just as closely with the new chainstores springing up across the Nation, and to create new food products bearing the firm's trademark.

On the death of John Washburn, John Crosby II became president and Mr. Bell, as vice president, assumed the duty of running the mills.

In the next few years, following his plan, he established the bakers service department and helped embark Betty Crocker on her famous career.

Meanwhile, bumper crops of wheat in 1919 and 1920 resulted in huge surpluses as flour consumption continued to decline. The Farm Bureau Federation started a wheat strike withholding the crop from the market, but the surplus grew and prices slumped.

Buyers canceled orders for flour in a panic and seized upon excuses to repudiate contracts.

What spared Washburn-Crosby in this disastrous period was that its operation always had been conservative and did not depend on speculation in the wheat market.

Although his company was safe on an island of security, Mr. Bell maintained an intense interest in the problems of agriculture and the milling industry.

From 1921 to 1923, he commuted between Minneapolis and Washington. He served on numerous committees and boards looking into various programs.

The "eat more wheat" campaign was launched by Mr. Bell in March 1923 with all the verve of a showman. He worked feverishly on the program for a year, promoting advertisements in newspapers and on billboards.

Mr. Bell was also instrumental in developing Wheaties in 1923.

A health clinician presented Mr. Bell with his idea of a wheat flake, which originated when he accidentally splattered some drops of whole wheat gruel on a hot stove.

Mr. Bell authorized the clinician to work on the project, but months later he gave up after experimenting without success.

Mr. Bell then assigned his head miller, George Cormack, to the project. Cormack tested almost every known variety of wheat and finally came up with a successful formula.

On July 22, 1925, John Crosby stepped down as president of Washburn-Crosby and Mr. Bell was named president.

During the next 3 years, Mr. Bell gradually evolved his plan for consolidation of the milling industry. He visited New York and studied financing.

He earned a reputation as a prophet by pointing out, 3 years ahead of the stock market crash, that such feverish financing could come to no good.

With the keen fascination that led him to tinker with gasoline engines and household gadgets, Mr. Bell began formulating his plan for the milling industry.

He started by putting down on paper an orderly analysis of the industry as it existed. Busy as he was on a dozen boards and running an office filled with business details, Mr. Bell found little time for his "magnum opus," as his associates jokingly called his blueprint for the industry.

His home, filled with four children, their friends, musical instruments and consequently noise, offered no retreat.

And so Mr. Bell retired to a bathroom to do his writing and locked the door.

The outline for forming General Mills was born in the Bell family bathroom.

Mr. Bell noted that milling wages were rising and prices were falling. Profits had shrunk dangerously. At the same time competition was increasing and the inefficient mills were being eliminated.

Consolidation was to be observed everywhere. "Horizontal integration" had given huge buying power to new elements in industry. Chain stores had sprung up, eliminat-

ing jobbers and wholesalers. Only the miller continued to act as an individual operator.

The decline in use of flour and the fact there were too many mills was now being aggravated by the growth in power of great chain retailers, Mr. Bell noted. The miller was at the mercy of these chains and also of large commercial bakery chains.

Within 5 months the firm obtained the Larrowe Milling Co., Detroit, Mich., a progressive seed firm, for $6½ million and 14,000 shares of General Mills' stock.

With the verbal backing of a New York banker, Mr. Bell visited mills around the country. In June 1928, General Mills was formed through a consolidation of Washburn-Crosby Co. of Minneapolis; Royal Milling Co., and Rocky Mountain Elevator Co., Great Falls, Mont.; Kalispell Flour Mill Co. of Montana; and Red Star Milling Co., Wichita, Kans.

A short time later there were added El Reno Mill and Elevator Co., El Reno, Okla.; Kell Milling and Elevator Co., Oklahoma and Texas; and Sperry Flour Co. of the far west. The formation created the largest flour milling concern in the world.

In setting up this combine, Mr. Bell worked toward broad geographical representation rather than seeking to unite the existing large milling firms in Minneapolis. His idea was to cut the costs of distribution and help pass along the savings already made in efficient production.

Mr. Bell was named president of the new $50 million corporation, General Mills.

So soundly was Mr. Bell's plan put together that when the stock market crash of 1929 brought collapse to many seemingly indestructible firms, General Mills entered a period of steady and solid growth.

On August 14, 1934, Mr. Bell resigned as president and became chairman of the board.

His belief that "one must follow where research leads" has guided General Mills into such diversified fields as vitamins, industrial chemicals, soybean products, starches, cellulose sponges, refrigerated foods, ready-mix cakes, precision instruments, defense machines, formula feeds, and polyethylene balloons.

Mr. Bell launched the informal stockholder meetings of General Mills. These meetings, held at intervals on a regional basis from coast to coast, keep the stockholders informed about the company's operations.

This is in keeping with Mr. Bell's idea that a business is a corporate citizen; that it must have a social conscience, and has a responsibility to the public.

Through the years, Mr. Bell had a variety of interests and hobbies. He traveled through Europe and the Americas in his explorations, hunting, and collecting.

One of his outstanding hobbies was the James Ford Bell book collection which he donated to the University of Minnesota. It deals with the early search through North America for trade routes to the Orient.

Later Mr. Bell broadened the theme to show how trade influenced exploration and development of the world. The collection contains about 700 volumes.

Mr. Bell also gathered one of the top collections of manuscripts and first edition books, stressing quality rather than numbers. Included are a first edition of Marco Polo (1477), a first Latin edition of Columbus' seven-page report after his 1492 voyage, and a first edition (1523) of Magellan's trip around the world.

Other interests included a collection of early American silver, much of which was given to the Minneapolis Institute of Arts.

He enjoyed cooking and collected many recipes. The scope of his interests also included music. He once composed a song sung by Galli-Curci.

Mr. Bell's father, James S., had a motto in his office: "You can catch more flies with sugar than with vinegar."

At an early age, Mr. Bell was impressed by this motto and he quoted it all his life.

Associates relate that Mr. Bell also took time to entertain children of employees or friends who visited General Mills offices. He would take the children up to the Betty Crocker kitchens and ply them with cookies.

His closest employees always referred to him as the chief.

A lover of the outdoors, Mr. Bell financed the major part of the university's museum of natural history and contributed many specimens and exhibits.

Hunting was his favorite sport. He shot mountain sheep in Alaska, caribou in Newfoundland, grouse in Scotland and Hungary, and fished for salmon in New Brunswick.

In 1931, Mr. Bell established and endowed the Delta waterfowl research station 60 miles north of Winnipeg to study the habits of ducks and geese. Biologists from all over the world carry on experiments at Delta.

Mr. Bell's fondness for quail hunting prompted him and 10 other Twin Cities men to buy the 1,700-acre Paulette plantation at Macon, Miss.

When this venture broke up, Mr. Bell bought a plantation at Thomasville, Ga.

During the Macon venture, Mr. Bell noted the pitiable condition of many of the Negroes. He converted a plantation building into a trade school, equipped it with tools and machinery, and hired a teacher to give the Negroes training so that they could find jobs.

Mr. Bell's Minneapolis home was Belford, a 39-acre estate at Ferndale, Lake Minnetonka. There he found time to be a scientist and mechanic, and could give the botanical name of every plant on the estate.

Mr. Bell had been a member of the University of Minnesota board of regents, a vice president and trustee of the Minneapolis Society of Fine Arts, trustee of the Carnegie Institution of Washington, and trustee of Dunwoody Industrial Institute. He belonged to the Minneapolis Club, Chicago Club, and Links (New York) Club.

Last fall Mr. Bell was honored by fellow University of Minnesota regents with a citation as a "builder, doer and originator" who "served his alma mater faithfully for 21 years as a regent."

Mr. Bell's parents were Quakers and he was brought up as a Quaker. During recent years, he attended the Wayzata Community Church, but still considered himself to be a Quaker.

Although Mr. Bell's wealth did not begin to compare with that of Texas oil zillionaires, it was no secret that he controlled a substantial fortune. During the years he headed General Mills, he received salaries of up to $100,000 a year, in addition to dividends from stock he held dating back to Washburn-Crosby days.

In addition to his duties at General Mills, Mr. Bell also was a director of American Telephone and Telegraph Co.; Pullman, Inc., and subsidiaries; Eastman Kodak Co.; Northwestern National Bank and Northwest Bancorporation.

She Sings for the Boys

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ANFUSO. Mr. Speaker, in the hurry and bustle of daily life we are sometimes prone to forget how important it is to maintain the morale of our Armed Forces, the guardians of the peace and the security of our Nation. Whether these young people are stationed at home or abroad, they are still away from their loved ones. It is, therefore, most important that their morale be kept high and that we give them all possible assurance of a strong, secure and free America.

I have written these words as I was listening to an album of favorite recordings by the popular singer, Jennie Thomas, who has made it a part of her career and duty to visit military installations all over the country and sing for the boys. She has selected 12 of the songs most frequently requested by the boys at the Army camps, the Air Force bases, the Navy installations, and these she has recorded for them. In fact, she calls her album "Jennie Thomas Sings for the Boys."

One really grows nostalgic listening to such well-known favorites as "Summertime," "Carolina in the Morning," "I'll See You in My Dreams," "Stardust," "Night Train," and others. Miss Thomas is not only popular at the military camps where thousands of the boys have heard her, but she has also appeared on radio and television. She can sing a hymn as inspiringly as a popular melody. Miss Thomas and all those associated with her in the production of this album deserve to be congratulated for a job "well done."

Cynical Politics in Wage Law

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DERWINSKI. Mr. Speaker, last week, almost 9 months after President Kennedy arbitrarily rejected a minimum wage bill in the closing days of the 86th Congress, we did approve the 1961 version of this bill.

This has been acclaimed as a great victory for the New Frontier and its revolutionary social philosophy, yet it is interesting to note that the substantial metropolitan newspapers of our Nation have for the most part condemned both the contents of the bill and the unethical procedure used to achieve passage.

An editorial in the Chicago Sun-Times, Friday, May 5, 1961, entitled "Cynical Politics in Wage Law," is typical of the editorial comment that greeted this New Frontier achievement:

CYNICAL POLITICS IN WAGE LAW

Seldom has there been so much agreement on the basic aims of legislation, and so much disagreement on how to achieve the aims, as there has been on the U.S. minimum wage law from its inception in the 1930's.

No one can properly quarrel with any step which has as its stated objective the raising of the living standards of American working men and women. The argument stems from the very real fears that imposition of an added burden on marginal busi-

nesses, by hiking the floor on wages, will have the opposite effect on countless workers who may be thrown out of their jobs.

For this reason we think the minimum wage measure which has now been passed by Congress is a bad bill.

It is bad because it was conceived at the height of a national presidential election campaign. To give it the widest possible mass appeal, President Kennedy, then Senator Kennedy, demanded that coverage be extended to more than 4 million new workers.

Most of these are not engaged in interstate commerce by the usual definition. Under this concept, there is no limit to the number or types of enterprises that can eventually be brought under Federal wage jurisdiction.

The compromise version which has been approved by the House and Senate calls for bringing 3,624,000 new workers under the act at $1 an hour to start, and $1.25 after 5 years.

Lopped off by the conference committee were 462,000 workers in laundry, auto agency and transit enterprises. They will not be covered, and herein lies an open admission of the political cynicism which has surrounded this measure from the onset.

The rights of these workers were bargained away at the conference table to secure the votes on the House floor necessary for the bill's passage.

The bill is bad because it commits the Government to enforce future boosts in the basic wage rate regardless of what the economic conditions may be at that time. Although advertised as a $1.25 minimum wage bill, minimum wages will not reach that point for 28 months.

A sounder procedure would have been to let future Congresses adjust the rate according to circumstances then prevailing.

At this time business is probably turning the corner from the recession. But an arbitrary increase in operating costs coming now will find a great number existing on a close margin. For many of these, a politically expedient wage bill could very well spell disaster.

Proposed KLM Airline Concession

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. FASCELL. Mr. Speaker, I should like to add a word to what has already been so ably said by the distinguished gentleman from Oklahoma [Mr. JARMAN] yesterday in the RECORD on page 7163, regarding the proposed approval by the United States of an airroute to Los Angeles for the Dutch-flag line KLM.

If the State Department justifies each fresh concession to Dutch diplomatic pressure on the ground that the concession will remove friction, I do not see how it can ever end. We cannot continue to reward the Dutch for creating the friction.

There is another element of the Dutch campaign for Los Angeles rights which I find deeply disturbing. It has been alleged that the Dutch have been in flagrant violation of the capacity and frequency clauses of the 1957 agreement, ever since that agreement was signed. I am advised that this is not a matter which is disputed on the United States side. I understand that even the State Department concedes that the Dutch are in violation of the 1957 agreement.

Under these circumstances, why do we not say—"The United States will not negotiate regarding Los Angeles until KLM comes into compliance with the capacity and frequency clauses of the 1957 agreement?" If KLM is operating more than four times as many flights to and from the United States as can be justified under the agreement, the State Department at the very least should certainly bring this situation under control before discussing the Los Angeles route for KLM.

A Patriot's Views

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. HOFFMAN of Michigan. Mr. Speaker, from a distinguished Republican, active and, in a constructive way, helpful Member of the House for 25 years, comes the following:

KENNEDY AND PEACE—HIS INVOLVEMENT IN A NUCLEAR WAR OVER LAOS DOUBTED

(The writer of the following letter was a Republican Member of Congress from 1920 to 1945.)

To the EDITOR OF THE NEW YORK TIMES:

Five months ago John F. Kennedy was elected President by one of the closest votes in American history. The slightest change in public sentiment and he would have run second best. His margin of victory was probably due to his personal attributes and not so much to the views he expressed in the campaign.

The political honeymoon is about over. The American people have been anxiously watching his Executive actions not based on campaign oratory but on deeds and achievements. It is still too early to give the final answers.

Based, however, on his 3 months' honeymoon certain facts are crystal clear. President Kennedy is the greatest peacetime spender in history, far beyond Franklin D. Roosevelt's spendomania. It is also clear that he is far more international, if that is possible, than F.D.R., and has already raised the $4 billion foreign-aid handouts by one-third and has created an interventionist Peace Corps outside the U.N.—a dangerous innovation that plays into the hands of the Communists.

The only policy left undetermined is that of peace, and this seems to be hanging in the balance—not like F. D. R., who, despite his promises to keep us out of war, did everything within his power to maneuver us in.

NO WINNING HAND

President Kennedy should be given the benefit of the doubt that he is not flirting or playing Russian roulette with war in Laos, but has been bluffing without holding a winning hand. President Kennedy is too smart to become involved in a war in the jungles and swamps of roadless, landlocked Laos, where we will be outnumbered 10 to 1 by the Chinese and doomed to defeat. He is also too intelligent to involve us in a nuclear war over Laos.

Every English and French newspaper realizes that we hold no high cards and consequently they are unanimously for peace. The Communists in Moscow and Peiping, unfortunately, know the precise situation in Laos far better than the American people. They still confuse Korea, where we had the support of Britain, France, the United Nations and the powerful use of our own Navy, with Laos, where we have no big nations with us and cannot use our Navy.

The American people by this time know President Kennedy as a monumental spender, as the foremost internationalist in a nationalistic world, and as the champion of the socialistic Americans for Democratic Action. But on the peace issue, the most important of all, they should wait further developments and reserve judgment. In my opinion President Kennedy, contrary to the war-provoking record of F. D. R., is not in favor of sowing the seeds of a nuclear war.

In view of the fact that the United States proclaimed the Monroe Doctrine, our relations with Cuba are on an entirely different basis than with jungle-infested Laos thousands of miles away.

HAMILTON FISH.

New York, April 21, 1961.

The Centre Daily Times, State College, Pa., Launches a Campaign as a Public Service To Revive the Grand Old American Custom of Displaying Old Glory

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. VAN ZANDT. Mr. Speaker, in the early part of this century the time-honored American custom of displaying the Stars and Stripes from homes and business establishments was observed with pride and fervor on many national holidays. In recent years the custom has been abandoned to the extent that it has prompted the burning question by Dr. Frederick Brown Harris, Chaplain of the U.S. Senate:

What has happened to the exultant surge of pride in the hearts of Americans when anywhere the Stars and Stripes are unfurled?

Dr. Harris' piercing question has been echoed by many Americans who deplore the lack of ardor for displaying our national emblem on various days of the year when a tribute to the American flag by every family would not only be highly appropriate but also warmly commended as further evidence of love of country.

Despite a negligent attitude regarding public display of Old Glory, there is none of us who lacks thrill in reading the following stanza from the stirring poem by Henry Holcomb Bennett titled "The Flag Goes By—Hats Off."

Along the streets there comes
A blare of bugles, a ruffle of drums,
A flash of color beneath the sky:
Hats Off!
The flag is passing by.

It is realized that on certain occasions such as parades or celebrations involving military units, the flag is displayed and heads uncovered as it passes by thus creating the impression that deep

reverence for Old Glory has never been at greater heights.

On the other hand, since the close of World War I, the custom of displaying our National emblem from homes and business establishments has vanished to the extent that our negligent attitude is an indictment on this generation. As a matter of fact, criticism is being voiced throughout the Nation over the abandonment of the grand old custom of unfurling the Stars and Stripes from nearly every American home on important national holidays.

In my congressional district the Centre Daily Times, State College, Pa., one of the prominent daily newspapers in central Pennsylvania has launched a campaign for what it terms "a chance for reviving a rich American custom."

Beginning its campaign with an editorial which appeared in the April 29, 1961 issue, the Centre Daily Times has made available to its readers at the cost of $3 postpaid, a flag kit which includes a 3- by 5-foot, 50-star flag with a 6-foot brass-jointed hardwood staff with top decoration, halyard, and metal window socket.

Reminding its readers on the handy order blank printed in the form of a coupon that "The Crusade for Freedom Starts Right at Your Door," the Centre Daily Times urges "Fly this flag which we offer you at cost as a public service." In addition, there is listed a total of 11 National holidays when the flag should fly from every home in the Nation.

In congratulating the publishers of the Centre Daily Times in its campaign to overcome complacency regarding public display of the flag, I hope that other newspapers and business firms in the Nation will conduct similar campaigns designed to revive the honored custom of publicly displaying our national emblem. Such concerted action can succeed in carrying the following message of the Centre Daily Times to every hamlet in our Nation:

Let none say America is losing the spirit of freedom, or that her people are growing soft and complacent. Fly the new 50-star flag at your home on every holiday. The more homes that fly our flag * * * the more the whole world will know that the Spirit of '76 is just as fresh in our hearts today as it was 185 years ago.

The editorial previously referred to follows:

[From the Centre Daily Times, Apr. 29, 1961]

A CHANCE FOR REVIVING A RICH AMERICAN CUSTOM

(An editorial)

It wasn't too many years ago that the American flag was flown proudly from virtually every home, every place of business in the United States.

And, in Centre County, it was particularly noticeable.

On every national holiday of importance, anyone traveling the streets was reminded of the occasion as flag after flag came into view, lined up, as it were, as emphasis on the rich traditions which it signified.

The most beautiful flag in the world—the Stars and Stripes—still flies proudly over military installations, Government and public buildings at all times. But it's just plain absent at most homes and most places of business.

We believe the flag should fly on every home in Centre County on, at least, our national holidays. We believe it's a patriotic duty for everyone to return to the heart-warming custom. It's one way our Nation, our county and the communities within it, through its citizens, can show our ideological opponents that the Spirit of '76 is just as strong in American hearts today as it was 185 years ago.

And we believe, too, that failure to fly the flag is due more to lack of opportunity to fly the proper flag than a lack of patriotism. Indeed, we'd guess few homes have available the 50-star flag.

That's why the Centre Daily Times has obtained a quantity of handsome 50-star flags. Their size is suitable for flying from front porch or window. We offer these 3- by 5-foot flags in kits which include flag, staff and metal socket for mounting. And we offer these kits to our readers at cost as a public service. The price of the complete kit is only $3.

We believe that the people of Centre County will respond to this wonderful chance to buy and fly the flag. We hope that all civic groups will encourage their members to respond.

No reward can be greater than to help bring about a revival of the old heart-warming custom of flying the Stars and Stripes proudly on all our national holidays and other days set aside to honor those who have died for it. Decoration Day on May 30, Flag Day on June 14 and Independence Day on July 4 provide early opportunities for "Long May It Wave" observances.

It's a timely move, too, in these times of tension when the press of selfish interests and unrest elsewhere may pressure us into forgetting the basic inspiration which we all need if we're to remain free and, indeed, if we're to strengthen that freedom.

Agriculture

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. WHARTON. Mr. Speaker, on the face of the matter, it would appear that this body stands in rather a ridiculous position of now considering the importation of Mexican farm labor. Last week we were engaged in assisting our unemployed in distressed areas and previously we were engaged in extending and raising unemployment benefits—all hailed in turn by this administration as emergency matters of the greatest importance. I can well appreciate that our colleagues now approach the subject with trepidation and apologies.

The subject of farm labor certainly deserves the consideration of the best Harvard minds in the White House and it would be well to include as much commonsense as possible. My own district, for instance, is one of the leading dairy areas of the New York City milkshed. We are operating under a marketing order that has effectively been maneuvered by the milk corporations in a manner that has all but eliminated the family farm. This situation, in my opinion, is extremely bad with 9 out of 10 of our family farms already added to the ranks of the unemployed at the present time. High costs have all but eliminated farm labor in the area and farm operators in many cases cannot even afford the necessary machinery to put themselves in a competitive position. There has been much talk of committees and do-it-yourself, but no positive action.

If this administration is sincere in its belief that unemployment should be curbed, the lot of the farmer improved and his economic position strengthened, I would respectfully suggest that we forget about committees, investigations, and do-it-yourself programs; and that the Secretary of Agriculture under the complete authority heretofore extended him in these matters, correct the evils which the farmers are operating under—I refer to Marketing Order No. 27 in the New York-New Jersey marketing area.

America Loses Ambassador Brosio to France

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. CONTE. Mr. Speaker, more than most professions or careers, diplomacy demands men of complete expertise to make it function at its best. Since February of 1955, this Nation has been fortunate to have one of the most accomplished diplomats of our age at the helm of Italy's delegation to the United States. Manlio Brosio, although not a career diplomat by explicit training, has exercised the techniques of diplomacy with great finesse here in Washington as he did in similar capacities in London and Moscow previously.

Now Ambassador Brosio is going to France to represent his Government there. The bonds between our two great nations have been strengthened; the mutual interest of both our nations has been extremely well served.

Personally, it has been a privilege to know Manlio Brosio and to be able to think of him as a friend. His stature as a human being is as tall as his diplomatic astuteness. America will miss him, and all Americans wish him well.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Wednesday, May 10, 1961, extending the city's good wishes to Ambassador Brosio:

[From the Washington Post, May 10, 1961]

GOODBY TO BROSIO

More than 5 years as Italian Ambassador in Washington have earned Manlio Brosio a wealth of respect and a wide circle of friends. This blue-eyed native of Turin, once described by a Londoner as having "the look of an austere minor saint from a medieval mural," has been anything but austere in his relations here. An expert on the Soviet Union in the Stalin era, he has been a warm friend of the United States and an alert and effective representative of the interests of Italy. As he and Signora Brosio leave for their new assignment in France they will take with them a host of good wishes.

Armed Forces Week

EXTENSION OF REMARKS
OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. BARRY. Mr. Speaker, next week is designated Armed Forces Week. At that time the country pays tribute to those devoted citizens who defend our land. They make possible our precious American way of life.

Doubly essential in this age of lightning attack are the Reserve forces.

A friend of mine, J. Spencer Gray, editor and publisher of the Herald of Westchester, has written a splendid editorial on the job being done by the Army Reserve. I believe that this description of the vital roll played by the Army Reserve will be of interest to the Congress:

ARMY READY RESERVE IS AMERICA'S FIRST LINE OF DEFENSE

(This is the first in a series of two articles which will appear prior to the local and national observance of Armed Forces Week, May 13 to 21.)

(By J. Spencer Gray)

He may be the man living down the block or next door. He may be the neighbor you nod to on the train. You might know him as an executive, a professional man or merely as a solid member of your community.

Just like you, he'd go to and from his daily work and on wekends relax and do that which you and so many other Americans do.

But, if war was to arrive, he'd suddenly vanish, for he is a selected reservist of the U.S. Army.

Enjoying little publicity and operating in some ways, under less-than-ideal conditions, the Nation's Ready Reserve stands by, prepared for instant mobilization if a national emergency should arise.

Army reservists are surrounded by little of the glamour that attaches to some units and members of the Armed Forces. But, their hard work and diligent preparation during the hours they regularly set aside for reserve training are one of the crucial ingredients to the United States of America's answer to aggression, limited or all-out, if it should come.

Most of the men in the Ready Reserve have either had full tours of duty in the armed services, or at least 6 months active duty training.

All of them know exactly how they fit into the overall table of command of the Nation's Reserve arm.

If they were called, they would know their missions instantly—and without further ado, go to it.

These citizens fill a vital role.

As Gen. Bruce C. Clarke, commanding general of the U.S. Army Continental Command recently put it, "no victory in American military history has ever been won by a single arm, service or component of the Army.

"Victory in the field has always been the product of the combined efforts of regulars, guardsmen, reservists, and army civilians with all arms and services working as a compact team."

This would hold just as true today as in the past—whether reservists should be called to aid in the Nation's resistance in a localized conflict, or whether the worst should happen and all-out nuclear warfare exploded.

But, there is a life and death difference between reservists of today and past years, as with all elements of the Armed Forces:

"Space, allies, and the pace of warfare granted years to activate unity and teamwork in the Army after war began," as General Clarke put it.

Today, the time is zero.

From the very outset of a shooting war, general or localized, all components and all arms and services would be involved.

"The unity of spirit and teamwork of performance so essential to combat readiness, must exist throughout the Army before the first shot is fired."

And today, our reserve forces are an integral part of this spirit and teamwork.

Has nuclear war, with its incredible technological advances and highly specialized demands, made the reservists obsolete?

Absolutely not, the Army replied. Says General Clarke:

"The focal point of all our efforts is the ground combat soldier." (Modern concept fo defense have not changed this, he emphasizes.)

Organizing, equipping, training, sustaining, and supporting the combat fighter so that he can perform his indispensable combat job is the Army's role.

"This role," he emphasizes, "is equally significant in any kind of war—hot or cold. It is just as important in general war as in limited war.

"For our Nation to entertain any notion to the contrary, would be dangerous."

George Fielding Eliot, regarded as among the Nation's foremost observers of military affairs, recently underlined the necessity for giving to both full-time and part-time combat manpower, whatever peacetime training it requires to meet its wartime responsibilities.

The Army has been training its reservists with ever-increasing effectiveness.

Said Eliot: "There has been a remarkable improvement in the combat-readiness of the Army's reservist components."

He stressed, however, that "much remains to be done, with time and the enemy still pressing on our remaining moments of opportunity."

Why the necessity for a reserve, when we are supporting today a fairly larger peacetime Active Army than ever before?

"With rising costs and a demand of other essential military expenditures," says Major Sliot, "It's neither politically nor economically possible to keep up an Active Army of sufficient size to deal with all foreseeable emergencies.

"The time limits being what they are, this simply means that the peacetime level of readiness of the reinforced citizen components of the Army must be such that the interval between M-day and their programed entry into action, will suffice to bring them to full combat readiness."

"Today, the Active Army alone cannot carry out the Army's mission of providing a well rounded defense capability.

"Today the reserve components—Army National Guard and Army Reserve—are essential elements of our ready forces.

"They are of greater importance now than ever before in our history.

"This new stature has come with a new requirement: Many of their units must be ready to fight now; other units must be ready within a matter of weeks or months."

Thus, does the Army itself describe the role of the reservist in the modern Army—an Army poised to reply within minutes to the threat of nuclear attack.

The reservist today is "no longer a man to be called upon only after an emergency has developed," the Army emphasizes. "He is part of our strength in being and our strength in depth. Without him, our military power would be damaged irremediably."

RESERVES MORE VITAL TODAY THAN EVER BEFORE, ARMY SAYS

(This is the second in a series of articles which will appear prior to the local and national observance of Armed Forces Week, May 13 to 21.)

(By J. Spencer Gray)

The Nation's Defense Establishment regards the training of reservists with deadly seriousness.

Only last year, for example, a conference called by Secretary of the Army Wilber M. Brucker devoted a great deal of time to the question of better integrating reservists with full-time forces in line with the "one army" theme of the modern organization of our defense.

Progressive ideas advanced at that conference included:

1. Elimination of the Reserve or Regular Army designation from the names of units to the extent permitted by law.

2. Joint utilization of training facilities by both Reserve and full-time soldiers.

3. Establishment of Army area schools to improve the training of critical specialists in both the Reserve and full-time forces.

4. Priority for reservists in attendance at Army service schools during certain periods to facilitate their attendance during vacation and slack-business periods.

5. The loan of such new and exotic weapons as the Honest John to Reserve components, along with sufficient instructor personnel, to assure the Reserves maximum training.

6. Establishment of quotas for participation by Reserve component commanders and staff in field exercises and maneuvers conducted by the Active Army.

Just what is the Army Reserve?

It consists of three aspects—the Ready Reserve, the Standby Reserve, and the Retired Reserve.

The Ready Reserve is made up of units and individuals.

The units are combat, combat support, supporting forces, special activities, and mobilization base units.

The Ready Reserve also includes some 750,000 reinforcements or nonunit members who would provide replacements for early combat losses and fill the full tables of organization strength in both the Active Army and mobilized Reserve units.

Citizen-soldiers assigned to a Reserve unit take part in both year-round training and annual active duty.

The former takes place at an Army Reserve center or National Guard armory near the reservist's home.

Annual duty is conducted for 15 to 17 days (including travel time; during the summer). Here, the reservist puts into practice what he learns in his year-round training.

If a unit isn't available for the reservist, he is assigned to the Ready Reserve Control Group and is required to take part in 15 days of active duty annually.

Ex-GI's who entered the service for the first time before August 1955, aren't required to train as reservists. Those who entered after that date may be required to train if they were under 26 when they were inducted.

Reserves who train actively may join a National Guard or Reserve unit actively. If they don't do this within 60 days of their release from active Army duty, they are ordered to report to a Reserve unit with vacancies in its table organization.

Such reservists continue as National Guard or Reserve unit members until their active-duty time and Reserve-unit time totals 4 years.

Numbers tell one aspect of the importance of the Ready Reserve.

Total strength of this Reserve is 1,448,000, including 700,000 in a paid drill status—400,000 in the Army National Guard and 300,000 in the Reserve.

The Army Reserve comprises 10 infantry divisions, 13 training divisions, two maneuver area commands and two engineer amphibious support commands.

During the last fiscal year, the Army Reserve trained 301,801 men on active duty for 6 months.

Another 60,000 Ready Reservists participated in 15-day annual training tours.

More than 660,000 individuals who did not participate in paid Reserve training were subject to recall to active duty in the event of mobilization or a national emergency.

These Army units are in addition to the Reservists of the Air Force, Navy, and Coast Guard.

The most elite Army Reserve unit is the scantily publicized Special Forces (airborne)—sometimes dubbed, in the armed services, the dirty-work outfit.

Special Forces' mission: Guerrilla warfare behind enemy lines.

Special Forces men are highly qualified parachutists, expert marksmen, sabotage, and communications experts.

Because they were physically fit as young people, in later years they achieved the distinction of being regarded as among the toughest in the world.

And they are rugged.

In recent hush-hush refresher training exercises, their maneuvers included:

A night jump into a thick forest, a day-and-night forced march through an alligator and snake infested swamp, a hand-over-hand climb up a sheer cliff, leaping from landing craft into turbulent surf of the Atlantic Ocean along the southeast coastline.

These men, who when on active duty wear the Special Forces' coveted sky-blue arrowhead sleeve insignia with gold lightning bolts, sign a unique contract which places them in Special Forces for 6 years under these conditions:

"Fully realizing that Special Forces teams will be deployed immediately on outbreak of hostilities deep behind enemy lines to organize, train, and exploit guerrilla forces, and to perform other missions."

Special Forces men must always be in top physical shape (they frequently work out on weekends), have outstanding Army intelligence test marks, and know or be willing to acquire several specialties, which usually includes an intimate knowledge of one or more foreign languages and advanced judo.

They are able to survive under hazardous conditions, withstand intense heat and cold, and act and live like a native of the land or area of their particular asssignment.

Courage, of course, is a must.

But brains count more than brawn.

Of scores of men of high character who periodically apply to serve their country in this unique way, only a few of each group are chosen. And they are likely to come from any city, county, and State in the United States.

The Reserve units (the first of which was activated at Fort Bragg, N.C., in May 1952) are divided into teams of about 12 to 18 men each, in charge of a captain.

Each team, in event of war, would be called upon to organize a command or regiment of underground freedom fighters—from 100 up to 1,000 guerrillas.

Armed Forces Reserve strength not on active duty, by component and by Reserve status [1]

	Total Reserve	Ready Reserve	Standby Reserve	Retired Reserve
Army National Guard	[2] 407,549	[2] 407,549	0	0
Army Reserve	2,217,472	1,024,549	1,118,393	74,530
Naval Reserve	672,227	503,020	120,530	48,677
Marine Corps Reserve	258,477	209,245	42,608	6,624
Air National Guard	70,820	70,820	0	0
Air Force Reserve	520,749	202,506	303,677	14,566
Coast Guard Reserve	32,073	29,662	1,930	481
Armed Forces Reserve	4,179,367	2,447,351	1,587,138	144,878

Men Who Dared To Be Different

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. YOUNGER. Mr. Speaker, on Sunday, May 7, 18 members of the Congressional Christian leadership breakfast group went to the Naval Academy to attend chapel and have lunch with our appointees.

It was a most satisfying experience, and we were all so impressed with the sermon by Chaplain Charles L. Greenwood that I asked for a copy to insert in the CONGRESSIONAL RECORD.

Chaplain Greenwood has had a most unusual career, having graduated from the U.S. Naval Academy in 1950 and commissioned an ensign in the U.S. Navy. In November 1951 he was designated a naval aviator—jet qualified.

From 1952 to 1954 he was a carrier pilot, resigning his commission in 1955 to enter Princeton Theological Seminary. In June 1957 he was commissioned a Navy chaplain and served from 1958 to 1960 as a chaplain aboard destroyers in the U.S. Pacific fleet. He is now chaplain at the Naval Academy.

I am privileged to insert his sermon:

MEN WHO DARED TO BE DIFFERENT

(Sermon preached at the U.S. Naval Academy Chapel on May 7, 1961, by Chaplain Charles L. Greenwood, U.S. Navy)

Scripture: Daniel 3.

This story of Shadrach, Meshach, and Abednego is a familiar one to all of you here this morning I am sure. If by any chance you missed learning it in your early church school days, you probably danced to it a few years ago when it was high on the popular music hit parade.

The story should be one that most of you can feel a great deal of identification with, as it is a story of three men who got fried for breaking a regulation. Form 2's had not yet been invented, so fiery furnaces were used instead (now you can be thankful for the invention of the form 2).

This story comes to us from that period of Israel's history called the exile. After the fall of Jerusalem to the Babylonians in 586 B.C., the cream of Jewish society was carried off to Babylon in exile. Among those exiles were our heroes of today—Shadrach, Meshach, and Abednego.

We read that the king of Babylon, King Nebuchadnezzar, made an image of gold and commanded that at a certain signal everyone would fall down and worship that image. It was soon brought to the attention of the King that there were certain Jews who were not obeying his command. The King had them brought before him, and he told them again, that at the sound of the musical instrument, they should bow down to his idol—and if they didn't, they would be thrown into the fiery furnace which would be heated seven times hotter than usual.

It would be an understatement to say that these men were on the spot. They were faithful Jews, and knew well God's command to them through Moses at Mount Sinai:

"I am the Lord your God. You shall have no other gods before me. You shall not make yourself a graven image, or any likeness of anything that is in the heaven above, or that is in the earth beneath, or that is in the water under the earth; you shall not bow down to them or serve them."

It boiled down to, "Shall we obey God or man?"

Listen carefully to the answer, as it plays an important part in our message today:

"O Nebuchadnezzar, we have no need to answer you in this matter. If it be so, our God whom we serve is able to deliver us from the burning fiery furnace; and he will deliver us out of your hand, O King. But if not, be it known to you, O King, that we will not serve your gods or worship the golden image which you have set up."

The King was furious, and had them bound and thrown into the fire. Our story ends with an amazed and astonished King, looking into the fire and seeing four men walking around where the three had been thrown, and the appearance of the fourth was, in the King's words, like a son of the gods.

In an age when conformity is so prevalent, it is refreshing to study about men who, for certain religious convictions, dared to be different.

These men dared stand up for what they knew was right even though they were a small minority, and even though it would have been easier and less costly to go along with the crowd. They were more concerned with being right, than being popular. They were more concerned with obedience to God's command, than conformity to the crowd's conduct. They were more concerned with what God saw in them, than what the crowd thought of them.

We have been accused in our age of being more concerned with what other people think—about being accepted by the gang—than being morally right.

Mr. Frank Pace, chairman of the board of General Dynamics, said in his lecture to the first class last week that we have a "great urge for conformity; a great urge for social correctness; a great urge to substitute being correct for being right and being courageous."

Perhaps the classic expression of this tendency in the American character has been described by David Riesman in his book entitled "The Lonely Crowd." This book is a study of the changing American character and it describes our present age as an "other-directed" generation. He pictures us as a people with radars protruding out of our heads which sweep the horizon to pick up the trends of the times. We are super-sensitive to the pulse of society—what others think about us—what others do and wear—what others would have us do—receiving our direction from the pressures of the crowd.

Over and against this is the rugged individualist of an earlier period of our history who the author calls an inner-directed man. This man's life is directed by an inner gyroscope which keeps him headed for his goal and makes him less dependent upon any external pressure. There is no need greater

today than for men of great spiritual convictions who know where they stand, know where they are going, and know why.

Men who are able to stand up and be counted for what they know is right, regardless of the pressure about them.

This is not a plea for beatniks. In their rebellion against conformity they have fallen into a society where conformity again plays a most important role—and this time in a less orthodox and less acceptable manner.

This is not a plea for rebels without a cause, or for nonconformity for the sake of nonconformity. This world has enough rebels, who though dissatisfied with things the way they are, have nothing better to offer.

In order to keep a sane balance as we think on this subject of nonconformity, it is well for us all to remember that we do not live in this world as isolated individuals, but as members of a society. As such, we have certain responsibilities to obey the laws of that society which have been made in order that this communal life can be carried on in an orderly fashion.

We of the military are keenly aware of the necessity of discipline and obedience to regulations. Without such discipline the military could not accomplish its mission.

But this does not detract from our earlier statement: There is no need greater today than for men of great spiritual convictions, who know where they stand, know where they are going, and know why.

You men of the class of 1961 will be entering a new phase of your lives exactly 1 month from today. You will be going out into the world—every corner of the world—and assuming new duties and new responsibilities as commissioned officers in the Armed Forces of your country. In fact, as we have seen in our first space probe 2 days ago, Naval Academy graduates are going farther then the corners of this earth. As you enter this new phase of your life, you will find at times that the cry of the "easy way," the cry of the "expedient," will be presented to you in all its appealing popularity. It will be accompanied by such remarks as:

"Don't be naive. Everyone does it. It's just life. It's the way things are. Don't be a fool."

"Why not bow down to the king's silly little idol? It won't hurt anything. It'll be much easier. Besides, everyone is doing it."

"Why not throw in a few extra figures in the monthly division officer's report on training? The captain will be happy when he reads it. And besides, everyone does it—why shouldn't I?"

The smooth sounding appeal to forget moral integrity is widespread.

In business: "Why not fix prices among competitors? Everyone does it and it's a necessary part of good business."

In sports: "Why not take a little cash to shave points in basketball? We'll still play to win. What's the difference how much we win by?"

Why not?

And so, with such appealing words, your moral integrity will be tested—perhaps as it has never been tested before. Before you too quickly take the easy way—before you too quickly take that way which seems so popular and follow the crowd—ask this question:

"Where is the crowd going? Is this where I want to go?"

Jesus said, "The gate is wide and the way easy that leads to destruction and those who enter are many."

What did Shadrach, Meshach, and Abednego have which enabled them to stand firm in their convictions regardless of cost? These men had a complete trust in God's ways.

They were willing to put their lives completely in His hands. They had absolute faith in God's ability to save. They knew that if God so desired, he could save them from the fire. But the real mark of the greatness of their faith is seen in those three words—"but if not." Even if God did not choose to save them from the fire—even if it was His will that they perish in the flames—they still would not worship the idol or bow down to the golden image. They knew that they still were in God's hands.

What we need in the Christian faith today is a fuller understanding of these three words—"but if not."

We too often play "trick or treat" with the Almighty.

"If you will do this for me, I'll do this for you."

"If you'll just save me from the hell of this battle, Lord, I'll serve you the rest of my life."

As if we could bargain with the Almighty God. We have nothing to offer but an I O U which, by the way, we so often fail to make good later. Compare this with our story today:

"Our God whom we serve is able to deliver us from the fire." Complete trust in God's power and ability to save. "But if not" even if it be His purpose not to save us, "we still will not serve your gods."

Here is a faith which defies defeat. Here is a faith which sees God, not as a jolly old man with a red suit and long white beard and team of reindeer, but as the Creator and Redeemer of men, and as the Lord of History. Here is a faith which can live victoriously and joyously no matter what life brings.

It's the kind of faith that Paul showed when on trial for his life he wrote, "For me to live is Christ, to die is gain." If it be God's will that I live, it means further service to Him. But if not, it means I'm with Him sooner. If it is life it's Christ, if death it's Christ even more. How can you beat such a faith? It defies defeat. It recognizes that wherever we go, whatever we face, whether we live or die, we are in God's hands and can put our trust in Him.

Our story ends today with the appearance of a fourth in the fiery furnace "like unto a son of the gods."

We who live on the resurrection side of the cross know more fully than the author of this book of Daniel just who this fourth person was. For the Son has become flesh and dwelt among us, full of grace and truth. Here is the gospel message even in this Old Testament story. Here is the good news which applies to every generation: Insofar as our lives are put completely in the hands of Almighty God, insofar as we have given ourselves to Him in Jesus Christ and have put our complete faith and trust in Him, we can be assured that we face no trial, no temptation, no sorrow, and no illness, alone.

Note that it was not said that we would never face these situations in life—only that we face no situation alone.

Jesus said, "Lo, I am with you always, even to the end of the age."

The psalmist said, "Yea, though I walk through the valley of the shadow of death, I will fear no evil, for Thou art with me."

Jesus said, "I will not leave you desolate. I will come to you."

The need of the hour is for men and women who are filled with the presence and the power of the Living Christ. Men and women who know whom they have believed, and know whereof they stand and are willing to stand up and be counted for Christ.

The need of the hour is for men and women who will let their Christian convictions be the basis of their action in life: Men and women who will let their lights shine before men.

God grant us such a faith; God grant us such a witness.

Woman Doctor, 85, Is Happy in Practice

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, even after 38 years of caring for the people of Arcadia, Wis., Dr. Elizabeth Comstock has no intention of retiring. The dedication of this 85-year-old physician is in our very finest tradition of the general practitioner and well-loved country doctor. Under leave to extend my remarks, I would like to include in the RECORD an article about Dr. Comstock which appeared in the April 30, 1961, Milwaukee Journal:

ELIZABETH COMSTOCK OF ARCADIA FINDS IT STIMULATING IN HER HOME TOWN

ARCADIA, WIS.—The visit was unscheduled and this town's 85-year-old woman physician was not enthusiastic. But she relented, agreeing to see the reporter after his lunch. And she added: "Better chew it well."

In her cluttered office, two dozen steps up and adjoining her apartment, Dr. Elizabeth Comstock laced her talk with more such down-to-earth remarks.

Farmers, she said, are healthier now because "they get their shots." Her happiest experiences were "confinement cases," she said, using the old-fashioned term for childbirth cases. Then she added, either with great naivete or wisdom:

"Babies always are wanted. There is such a good feeling when they come. The families are happy to see them."

RETURNED IN 1923

This is Dr. Comstock's hometown, from which she strayed a few years to get her medical education and work in New York City. She was born on a farm near here on September 2, 1875. She came back to stay in 1923, into the same office she now has. Her waiting room, which she shares with a dentist, is a wondrous little museum, with a hexagonal clock, spool legged table, a chair with a mirror in the back and a tremendous piano, which the doctor used to play years ago.

Her blue eyes sparkling behind glasses, her smooth hands folding and unfolding, Dr. Comstock rolls back the years. When a detail or a name eludes her, she says "Oh, shucks," in the manner of a million grandmothers—although she is a spinster.

A general practice such as hers is "the most stimulating, because you get tired of doing one thing," Dr. Comstock said. A great deal of her work has been in obstetrics and gynecology. Although she didn't keep track, she probably has delivered several thousand babies.

HONORED AT CENTENNIAL

Medicine had interested her from childhood, perhaps from the time her brother cut his finger and she couldn't stop the bleeding. She recalled her own childhood illnesses—a throat infection when she was 4 that made her very sick, and a skull fracture from a cutter accident when she was 16. Years later she diagnosed a temporary impairment to her mathematical ability as aphasia, loss of understanding caused by the head injury.

Arcadia honored Dr. Comstock at its centennial 5 years ago. She has been active in cancer drives. The State medical society has cited her for her contributions to medical history.

The white-haired Dr. Comstock wound up the interview with the not surprising comment that she had no plans to retire. She said goodby, then added: "Be careful how you drive."

Damage of World War II Still Visible in Budapest

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues a third article in the series by Gaston Coblentz on present-day Hungary appearing in the New York Herald Tribune. It appeared in the issue of May 3, 1961:

WORLD WAR DAMAGE REMAINS—SCARS OF 1956 REVOLUTION ERASED FROM BUDAPEST BY COMMUNIST REGIME

(By Gaston Coblentz)

BUDAPEST.—Few signs remain of the physical destruction wrought in Budapest in the fierce fighting of the 1956 uprising.

In the blocks around the Kilian barracks, a few hundred yards from the heart of the city, new apartment buildings have been built on the sites of those too badly damaged for repair, and other shell-pocked structures have received a new coat of plaster.

The thoroughness with which the Kadar government has obliterated these scars—the same thing has been done at other points, such as the National Museum and Moscow Square—offers a startling contrast to the continued failure to refurbish thousands of buildings damaged in the savage battle between the Soviet and Nazi armies in Budapest in early 1945.

MARKS OF WAR VISIBLE

The walls of practically every second building in the city are still marred by the deep shrapnel holes of that earlier struggle. But at the Kilian barracks, next to nothing remains to indicate that it was the spot where the troops of the ill-fated Gen. Pal Maleter, one of the revolt's great heroes, rose against Soviet rule.

The barracks themselves, a large four-story structure at the corner of Ulloi Street and Jozsef Boulevard, have been completely restored and repainted a pleasing ochre. They have been converted into offices and apartments, and are no longer used by the Hungarian army. Across the street, the tiled dome of the Museum of Applied Art has been restored to a bright green and gold.

NEW BUILDINGS

One of the new apartment buildings in the area, a glass-fronted structure with green facing, is among the few distinctly modern buildings to have been put up in Budapest in 13 years of Communist rule.

After the last 5 years under the post-rebellion Kadar regime, the Budapest of 1961 is a city which one judges very much according to the direction from which one arrives here.

Those who come from Moscow find it almost a gay place.

To those who arrive from the West, it seems drab and dilapidated.

GOOD FOOD, MUSIC

On balance, within the limitations of a Communist city, it unquestionably has some relieving features. Among them are a fair choice of restaurants with good food served from extensive menus and Magyar music played with verve and style. There is also a night life of sorts.

One otherwise rather desolate night club features a five-girl Can Can. The closing hours in the bars have been extended by the Kadar regime. The center of the city is likewise dotted with new espresso coffee bars in imitation of those that have flourished since the war in Italy and Austria and which, in Budapest and in Vienna, are replacing Central Europe's traditional prewar stammtisch cafes. The Budapest espresso machines are manufactured in Hungary in the same shiny silver-plated style as the Italian type.

HOTELS FOR FOREIGNERS

There are at least two comfortable hotels for foreigners, of which the newest is the handsomely renovated Gellert on the west bank of the Danube, with a large modern lobby that would look well almost anywhere. These hotels are equipped with well-serviced international Telex machines for use by foreign businessmen.

In the realm of arts, the 200-page "New Hungarian" is a potentially interesting development. It is a newly established publication which seems to reflect limited liberalizing trends in belles-lettres, painting and sculpture. Its first issue late last year featured the bronzes and captivating drawings of Ferenczy, a half paralyzed artist of 70.

A NEW TREND

Its second issue, in dealing with modern Hungarian novels, has the following to say on Socialist realism as practiced in post-rebellion Budapest:

"During the last 4 or 5 years the formerly restricted concepts of Socialist realism have been discarded and a more reasonable view has come to prevail."

The magazine makes some deep bows to communism, but is distinctly readable.

Everything considered, Budapest is obviously neither a happy city today, nor is it any longer a beautiful one. But it has recovered somewhat from the low ebb of the Rakosi era.

Goodby to Manlio Brosio

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. RODINO. Mr. Speaker, two stories appear in the Washington Post today which, though unrelated, bear on a matter close to my heart.

The first one appears on the editorial page, and I quote:

GOODBY TO BROSIO

More than 5 years as Italian Ambassador in Washington have earned Manlio Brosio a wealth of respect and a wide circle of friends. This blue-eyed native of Turin, once described by a Londoner as having "the look of an austere minor saint from a medieval mural," has been anything but austere in his relations here. An expert on the Soviet Union in the Stalin era, he has been a warm friend of the United States and an alert and effective representative of the interests of Italy. As he and Signora Brosio leave for their new assignment in France they will take with them a host of good wishes.

The second appears on page A16, and is a report of certain statements made by our distinguished colleague in the other House, the junior Senator from Arkansas. The Senator deplores the policy of shifting our capable ambassadors from country to country after but 2 years' service.

We are fortunate that the Italian Government is more liberal than ours, for we have had the privilege and pleasure of Ambassador Brosio's representation for over 6 years. In that time he has done much—officially and personally—to improve our already pleasant and healthy relations with his Government and country. "An alert and effective representative" of Italy and "a warm friend of the United States" describe him well. I was perhaps more fortunate than many, for over these 6 years I came to know Manlio Brosio as a thoroughly delightful, understanding social associate, as a keenly intelligent, inspirational professional colleague.

We shall all miss the distinguished Ambassador and his gracious lady. I shall miss them both, and I shall envy Paris.

Unofficial Good-Will Mission

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ROOSEVELT. Mr. Speaker, each Member of this House works dedicatedly and diligently with the hope of improving America's international relations. Governmental agencies and departments have been instituted for this purpose. The new Peace Corps has been created to perform people-to-people tasks that will win America friends in nations throughout the world.

An individual who is not a "department" nor a "corps," nor governmentally created nor regulated, took it upon himself to perform a good-will mission that from all reports won support and admiration of the people of Mexico.

Early this year, Mr. Frank Sinatra was asked to make a charity appearance in Mexico City on behalf of the Mexican Rehabilitation Institute. The institute is the first Latin American center to assist amputees.

Mr. Sinatra, who during his tour was referred to by one patient at the center as the "man with the golden heart," readily accepted the invitation to appear at a society ball on April 21. At his suggestion, three performances were held for the general public the following day with proceeds going to the Mexican Rehabilitation Center. Four appearances brought $45,000 to aid in the work of the center.

Mr. Sinatra's appearances were profitable in a greater sense. They illustrated a care, concern and regard for the people of Mexico and their problems. I feel that Mr. Sinatra's humane conrtibution entitles him to applause beyond that given a great entertainer.

Printed below is an article which appeared in the April 21, 1961, edition of

the News, Mexico's English-language newspaper, telling of Mr. Sinatra's tour. I hope you will find it to be a good account of this unofficial good-will mission:

SINATRA TOURS MEXICAN REHABILITATION INSTITUTE

(By Margaret Butler)

"Good morning, Frank See-na-tra," sang the children of the Mexican Rehabilitation Institute to the famous singer Thursday morning.

Their performance climaxed a tour of the institute by Frank Sinatra and his party, led by Don Rómulo O'Fárrill, ex-president of the institute and president of Novedades and the News.

"I've never seen anything like this," said Mr. Sinatra. "It's incredible work. I'm really moved."

Gesturing around him, he exclaimed, "Everyone is smiling. There's a wonderful psychological atmosphere here."

One reason for the high morale in the institute is Don Rómulo O'Fárrill who, in addition to being a founder of the rehabilitation plant, has only one leg himself. At the appearance of any long faces in the practice line, he calls cheerily, "Look, this is the way. Stand on your new leg. Like this. Hop on it," and proceeds to do the exercise himself.

Upon his arrival, Mr. Sinatra was greeted with a football cheer from the children on the balcony. Mrs. O'Fárrill decorated him with the heart-shaped insignia of the institute, and Mr. OFárrill showed a large stack of car radios piled ready for delivery. Seventy of these are produced in the workrooms of the institute every day, as well as precision parts and the needed supply of artificial limbs and braces.

In addition to the workshops producing articles for sale, the tour included the physical therapy department and gymnasium, occupational therapy rooms and the prosthetics section where artificial limbs that defy detection are made to individual specification.

In recognition of his great work for the institute, Mr. Sinatra was presented with a plaque by the women's auxiliary.

Mr. Sinatra, whose benefit performances this week will aid both the institute and the National Institute for the Protection of Children, has donated a complete high fidelity system and record library to MRI.

Copies of his recent record, "Ring-a-Ding-Ding," were on sale and many managed to get their's autographed. A percentage of the profit from record sales this month will also be given to charity.

It has been estimated that the "April in Mexico" ball at the Hilton last night and the three benefit performances at the Cine Internacional will net some 350,000 pesos in the 3 days of Frank Sinatra's visit for these two worthy organizations.

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. HERMAN T. SCHNEEBELI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. SCHNEEBELI. Mr. Speaker, the Balkan Peninsula has been the home of a large number of peoples differing in race, language, history, and traditions. However, throughout their long and eventful history they have shared one thing in common: they all have fought for their freedom, and thus have shared the same fate. The Rumanian people, constituting one of the largest of the group in the area, have suffered a similar fate.

Early in modern times their country was overrun by the Ottoman Turks, and they were subjected to the unwelcome and harsh rule of their conquerors. For centuries they struggled for their freedom from the oppressive yoke of their overlords, but most of their attempts ended in disasters and bloodbaths. In the middle of the last century, however, they had better luck. At the end of the Crimean War in 1856, they gained autonomous status, and this status was guaranteed by the great powers of Europe. The next and more important move was made in 1877, during the course of the Russo-Turkish War of 1877–78. On May 10, 1877, they took their destiny into their own hands and proclaimed their independence. Since that memorable date, for 84 years May 10 has been celebrated as their national holiday, their independence day.

Today on the observance of this anniversary I join the Rumanian National Committee and voice my heartfelt sympathy for the sad plight of their compatriots in Communist-dominated Rumania.

Ex-Soldier Flies to Reunion of Elbe River Linkup Vets

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. ASPINALL. Mr. Speaker, when American and Russian troops linked up at the Elbe River in Germany 16 years ago, one of the members of the six-man American patrol was Pvt. Leroy Hamlin, a member of the Ute Mountain Ute Indian tribe of southwestern Colorado. A recent article in the Denver (Colo.) Post recalls that historic moment. Under leave to extend my remarks I should like to include in the RECORD the Post article, in recognition of the service rendered their country by members of Indian tribes throughout the Nation:

EX-SOLDIER FLIES TO REUNION OF ELBE RIVER LINKUP VETS

(By Marilyn Robinson, Denver Post staff writer)

A World War II veteran from Towaoc, Colo., boarded a jetliner in Denver Tuesday afternoon for his first jet flight and the first leg of his journey into the past.

The man: Leroy Hamlin, 38, who as a private in the 69th Infantry Division was a member of the first American patrol to link up with Russian troops at the Elbe River in Germany 16 years ago.

His destination: Torgau, Germany, where American and Soviet veterans of the famous meeting held a 16th anniversary celebration April 25.

How did he become a member of the six-man patrol that dashed across the broken girders of a bridge over the Elbe to greet the Soviet soldiers?

As Hamlin, who lives on the mountain Ute Indian Reservation at Towaoc and works for the tribe as a filing clerk, waited to board his plane at Stapleton Field, he described how chance made him a participant in the historic linkup.

"I was an artilleryman and was sent as a replacement to an outfit," Hamlin said, "but somehow my name was left off a list and an officer told me to join an infantry unit so I joined up with the infantry boys."

When they reached the river and spotted the Russians, he said, "a lieutenant—I don't remember his name—told six of us to go over."

The meeting, which came just 2 weeks before the end of the war with Germany, was "pretty friendly," Hamlin recalled. "We all shook hands and were laughing and trying to talk to each other."

What of the strained relations between the United States and the Soviet Union today?

"It's pretty hard to pinpoint the exact conditions," he said. "I sure hope they are friendly again in the future."

Hamlin, divorced and the father of one son, has lived on the reservation all his life except for his 3½ years in the Army which took him to north Africa, Italy, France, Belgium, and into Germany.

The Ute tribe contributed $1,000 toward his trip expenses to help fulfill Hamlin's long-time dream of returning to Germany.

"This is the first time I've gone back but I've always had hopes," he explained.

Federal Government Cannot Create Jobs

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. ALGER. Mr. Speaker, in an editorial in the Wall Street Journal, which I include as a part of my remarks, the writer calls attention to a great truth many have overlooked in the rush to adopt New Frontier-sponsored programs. Many of the so-called solutions to our economic problems have been tried before and found wanting. Are we so bankrupt of ideas that we have to resurrect all the New Deal formulas which failed before and, in fact, contributed to many of the current weaknesses of our economy? I believe the best solution to building a strong economy is to give full rein to our private, competitive system and sound economic principles upon which our prosperity and our unexcelled standard of living have been built. There is no possible way, under a free society, that government can create jobs. Only private investment, with as little Federal control as possible, coupled with the vision and the daring of free men can put men to work and keep them working at high wages. The fallacy of the administration-sponsored programs for greater public works and expanded Federal controls is ably stated in the following editorial:

RUSTY MACHINERY

It's the dream of a certain kind of economic planner to reduce the most complex problems to simple-pushbutton solutions. And it's his custom, once his scheme is wired up through Washington, to ignore the clanks

and flashing lights that warn of short circuits between the theoretical model and the real world.

Right now, one gadget being promoted in Washington is a revival of the New Deal job making machine: Massive public works spending. Even as they concede the economy's recovery from the recession, some of President Kennedy's advisers urge works spending as the solution to an "unacceptable" level of unemployment. They would prefer immediate spending, but are willing to settle for standby authority to punch the public works button if present unemployment persists into next fall.

It would be well if the President looked into the innards of the machine set before him, tracing the mixedup circuits and loose wires. First, the machinery of massive Government works programs accomplished little during the thirties; unemployment remained at high levels right up to World War II.

Moreover, today's unemployment situation is in no way comparable to that of the 1930's. There are no masses of people made jobless by a general slump; instead, genuine joblessness exists largely among those who, for one reason or another, lack the skills necessary to take advantage of increasingly demanding job opportunities.

Make-work is no solution to such unemployment. Indeed, a new WPA-style program, with its promise of the indefinite dole, would be likely to delay adjustment to change. It might even create a permanent body of "unemployables" who would remain jobless amid plentiful job openings they could not fill.

If the economists in Washington really want an expanding economy and higher employment, they ought to put the rusty public works machinery of the depression back on the scrap heap.

Rivers Need No Defense

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I rise in defense of a Member of the other side of the aisle, L. MENDEL RIVERS, of South Carolina.

Mr. Speaker, as a Member of this body, I take exception to the contents of an article by a well known Washington columnist on Monday of this week reflecting on the character, the reputation and the integrity of the gentleman from South Carolina [Mr. RIVERS]. Mr. RIVERS is a veteran Member of this House and enjoys the respect and confidence of all who know him. I have known him pleasantly during my membership in the Congress. He is a dedicated Member of the Congress of the United States.

While columnists make a livelihood of this kind of writing, it is the first time I have read such a criticism of Mr. RIVERS. With his accustomed dignity, Mr. RIVERS elects to treat such a tirade with quiet disdain. This is admirable.

Mr. Speaker, I have never traveled outside the continental limits of the United States, consequently, I am not defending myself or my record. However, I have complete confidence in Mr. RIVERS, his judgment, his conduct, and his responsibility. I am sure he represents the best interests of the great Committee on Armed Services and of the Congress of this Nation in his travels.

I am sure the people of South Carolina will not be swayed, in the slightest, by an unwarranted and highly inaccurate article.

Currying Favor

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DEROUNIAN. Mr. Speaker, in days of old, court jesters, in order to curry favor with the king, used to do small things to please him. Apparently this custom is still prevalent, especially in the New Frontier. The following article by George Dixon, in today's Washington Post, is most timely:

NAME DROPPING

(By George Dixon)

Herbie Klotz, who used to be a ski jumper and escort of Hedy Lamarr, has a new pastime. He is trying to get President John F. Kennedy mentioned in the newspapers.

Herbie is an exceedingly proper young man, so I suppose we should employ his proper name. It is Herbert W. Klotz, thanx lotz. He is special assistant to Secretary of Commerce Luther H. Hodges, in charge—apparently—of roundheeled-robins.

"Klotz' Shotz," as Herbie's penetrating pronouncements are now known to the cognoscenti, are aimed at the administration's press information officers, or flacks, as they are called in the sordid world of private enterprise.

Herbie spread this scatter shot all over the Commerce Department:

"At a White House meeting of Cabinet assistants, we have been advised again that speeches of Cabinet and sub-Cabinet officers do not contain sufficient reference to the President and his personal interest in, and compassion with, the problems which face the Nation. Liberal quotations from his speeches, past and present, should be used * * *. It should also be kept in mind that, in making announcements of local projects, the President should be given a credit line in the lead paragraph.

I trust Herbie will note that I heeded his injunction in this column. He can't say the President is the only one with compassion. I am so compassionate I will never be able to rest until I smash this foul plot to keep Mr. Kennedy in anonymity. Let the miscreants who are conspiring to go to press without a line about him blanch at this: Kennedy, Kennedy, Kennedy, Kennedy, Kennedy, Kennedy, Kennedy.

They may send goons to intimidate me, but I won't retract a single Kennedy.

I wish I could get clearance to ask Herbie about the plot to keep the identity of the Nation's Chief Executive secret. But I am forced to suppress my curiosity. This new passion, or compassion, for secrecy in Government has rendered me almost tonguetied.

It is extremely difficult for one who has been in this business as long as I have to readjust to not asking questions, but complete suppression of news can be achieved only if we put into it our whole hearts and our thoughts, Klotz.

Noble examples have been set for us. The U.S. Naval Research Laboratory gave us possibly the greatest inspiration of all. It tried to hide its telephone book behind a wall of secrecy.

There was a disposition on the part of Chairman JOHN E. Moss of the House Information Subcommittee to challenge the classification of the Navy Lab's interoffice phone directory, but the secrecy was so effective that, for 48 hours, not a single enemy agent got a wrong extension.

This must, however, have caused Herbie Klotz misgivings. It was a local project, but the President was not given a credit line in the lead paragraph.

Nevertheless, I am determined to be an old dog learning new tricks. I believe I have made a commendable start, although it is causing some people to stare at me rather quizzically.

I go around with my hand clamped over my mouth. Statesmen plead with me to ask them questions, but I refuse—even though I'm convinced it isn't the questions, but the answers, that endanger the national interest.

Cooperation Among Farmers Is an American Tradition

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Farmers Union Central Exchange's 30th annual meeting, held recently in St. Paul, Minn., drew 5,000 members and visitors, who learned that this regional wholesale cooperative had just completed its second largest year. Under leave to extend my remarks, I would like to include an article on the highlights of the meeting in the RECORD. This story appeared in the May 1961 issue of the magazine News for Farmer Cooperatives:

FARMERS UNION CENTRAL EXCHANGE HAS NEAR RECORD YEAR

The 30th year of Farmers Union Central Exchange, St. Paul, Minn., turned out to be the second largest in its history—with over $8 million distributed to affiliated cooperatives as patronage refunds on a total sales volume of $90.7 million. This amounted to 8.9 percent in net savings to be distributed to patrons.

More than 5,000 people attended the 3-day annual meeting February 27, 28, and March 1. Here they heard Thomas H. Steichen, general manager, give some highlights of the year and do some projecting. He said:

"A generally depressed agricultural economy, unfavorable weather, a nationwide soft market for refined petroleum products affecting the entire industry, and a reduction in the number of farms has had its impact on central exchange's operations. And although unit sales were up for some products, market prices for them were lower. If it weren't for these factors, dollar volume would have hit an alltime high.

"As I see it, there are three things we must strive to do. They are: (1) Attract new members, (2) expand and integrate even further, and (3) offer the best in product and services."

Some highlights of the 1960 year for this regional wholesale cooperative—owned by 350,000 farm families through 850 locally controlled co-ops—were:

One million dollars' worth of improvements and repairs at Exchange's oil refinery in Laurel, Mont.

Construction of $5 million Cenex pipeline and oil storage terminal at Minot, N. Dak.

Retiring $1.6 million in cash of the remaining half of 1950's patronage refund stock.

Expanded operations of soil service centers to 14 plants where members can get prescription mix fertilizers.

Increased authorized capital stock to $100.2 million.

Among the many agricultural and cooperative leaders speaking at the meeting was Senator EUGENE J. MCCARTHY, of Minnesota. Among the points he made were that there were three important basic characteristics a sound farm program must recognize. The first is that of the family farm where the family lives on its holdings, supplies most of the labor and capital, and makes the basic managerial decisions. The second is that of the farmer's close association with the rural community * * * a community from which they have received benefits and to which they have contributed resources and leadership.

"The third characteristic of American agriculture is that of farmers working together for mutual benefit," according to Senator MCCARTHY. "Though they settled on individual holdings and each is the manager of his own operation, American farmers have a tradition of cooperating. On the frontier such cooperation was informal and local, sufficient for the needs of the times. They exchanged work and united in common efforts for harvesting, building and similar activities. Later, this spirit was channeled into larger and more formal groups, giving rise to farm organizations, cooperatives, and occasionally political parties."

COOPERATIVE SYSTEM THE OUTCOME

"From this tradition has developed the farmer cooperative system, one of the most effective means by which the farmer has maintained his individual ownership and management, while still securing the advantages of collective marketing and purchasing."

The 1960 annual report of the Exchange used as its cover a painting by one of its employees, Forrest Hill, and offered reproductions to farm families who wanted an art print. The original hangs in the Exchange's lobby beside the painting used on last year's cover.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. RODINO. Mr. Speaker, in the turbulent history of Eastern Europe May 10 is one of the most glorious of dates. For on that day 84 years ago, the Rumanian people achieved their long sought independence.

One of the richest countries, one of the largest in area and population, Rumania had for centuries been a part of the Roman, then the Ottoman Empire. In the 19th century the Sultan's grip was at last loosened, and the Balkans broke free. In 1877 while the Turks were engaged in a defensive war against the Russians, Rumanian leaders took their destiny into their own hands and proclaimed their independence from Turkey. Thus, 1,776 years after its beginnings as a Roman colony, Rumania was a nation of free people.

For 64 years she remained free; but in the last 20 years she has again been under the yoke—first of the Germans, then of the Russians.

Today in their Communist-dominated homeland, unhappy Rumanians cannot publicly observe their most important national holiday. But in their hearts, I know they join with me and my Rumanian friends everywhere in the free world in celebrating this historic occasion. May the day soon come when Rumania will again be a free and independent nation.

The Call to Arms

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. SANTANGELO. Mr. Speaker, on April 27, 1961, the New York County Democratic organization gathered at the Hotel Commodore to review the principles of the Democratic Party, rejoice in the victory of the Democratic standard bearer, John F. Kennedy, as President of the United States, and issued a call to arms. My colleague, ADAM C. POWELL, delivered a fiery address and laid down the gauntlet to splinter groups. The leader of the New York County Democratic organization, Carmine DeSapio, who was also the national Democratic chairman of New York, delivered a stirring address to 2,000 participants, summarized the principles of the Democratic Party, set forth the program of the accomplished Democratic deeds and joined the call to arms by Democratic forces against splinter groups and the second major party of New York City which claims credit for Democratic accomplishments. The speech was so well received and its message so important that I believe that a reading of the message will open our minds to the wonderful opportunities which are becoming realities in an incredibly fast moving world. Mr. DeSapio's speech follows:

Reverend clergy, Senator Hartke, Congressman Powell, State Comptroller Levitt, Chairman Prendergast, Council President Abe Stark, Comptroller Larry Gerosa, members of the board of estimates, our distinguished District Attorney Frank Hogan, my esteemed colleagues, the county chairman, Congresswoman Edna Kelly, Vice Chairman Mae Gurevich, distinguished guests, district leaders, captains, friends, and my fellow Democrats, if throughout my life, I have ever believed in the old adage that a man can be judged by the company he keeps, then this is the very moment I would choose to be judged.

Surrounded as I am by so many loyal, distinguished and dedicated friends and fellow Democrats, I am moved to a sense of gratification and gratitude that I find difficult to express. I thank you from the bottom of my heart.

During my lifetime as a Democrat, but especially in my 12 years as leader of the New York County Organization, I have given constant and repeated thought to the principles of our party. And, if those principles needed reaffirmation, we all have merely to look about us to find it. For the men and women who have gathered here tonight, in the spirit of party purpose and warm friendship, represent as near a cross section of the greatness that is America as can be found anywhere, at any time, under any roof.

In our midst are lawyers and industrialists; doctors and government officials; labor leaders and salesmen; teachers and housewives; men and women from every walk of life. We are Protestants, Catholics and Jews, all united for a common goal. And we can trace our ancestories to the vales of Ireland, the shores of the Mediterranean and to virtually every corner of the earth.

And, I cannot help but reflect upon the contrast between the Democratic Party, and what it stand for, and the Republican Party and what it pretends to stand for.

I cannot help thinking of the callous Republican attempts to represent itself as the party of progressive principle, while it behaves in its more familiar role as the party of privilege and pretension.

The New York State GOP historically has offered the people a program of accomplished Democratic deeds. They have consistently tried to steal the Democratic thunder but only after the clouds have passed, and the storm was over.

To understand the Republicans, one need only conjure up the picture of the old plowhorse, wearing blinders, refurrowing the same fields—time after time—in the vain hope that it will choke off the weeds of outmoded ideas and archaic philosophies.

And if the Republican plowhorse wears blinders, my friends, then there is another plowhorse which wears magnifying glasses. For like most third party organizations in the history of our country—and particularly of our State—the Liberal Party has equated its dreams with its claims, and confused its promises with its achievements.

Of the almost 8 million voters in New York State, it has enrolled a little less than 100,000—approximately 1 percent. And yet its leadership, with neither compunction nor embarrassment, proclaims to the world that the election of a Democratic President was its gift to America.

And at the same time that they agree to secret covenants with the Republican bargainers in Albany—at the same time that they conspire to scuttle deserving candidates and make patronage deals with whoever will barter with them—they sanctimoniously preach to the Democratic Party about the character and meaning of honest leadership.

The Liberal Party's subterfuge and its transparent techniques would really be quite comical, if so many well-meaning and well-intentioned people were not deluded. For even the tiniest splinter, if neglected, can cause a serious infection.

It takes a special and rare ability in the art of manipulation, for them to claim to control the elections in our city or State. The election results in our city in 1953 and 1957 evidence the futility and the sham of this assertion. It sets a new high or low in temerity, for the Liberal Party to suggest that if it didn't nominate President Kennedy, those who voted for him on its line would have cast their ballots instead, for Richard Nixon.

I tell you, my friends, never have so few claimed so much for so little.

But even more pretentious than their claim to a balance of power—even more egotistical than their claim to strength and

popular support—is their boast that they—and only they—represent the labor leaders and the trade unionists of our State.

For the traditional home of labor in New York State has been—and will continue to be—the Democratic Party. For what party, after all, is more liberal than the Democratic Party? We Democrats are proud of the close working relationship which we enjoy with the great majority of labor leaders. We seek their counsel and their help, and when we advance deserving, progressive and farsighted candidates for office, we invariably win their support.

For it has been proven time and again—election after election—that the responsible labor leaders of our city and State have never compromised the principles nor the aspirations of organized labor for political aggrandizement. Neither have they sacrificed the aims or the purpose of the labor movement, for political power.

And it is significant, my friends—and the best testimony to the inherent weakness of splinter parties—it is significant, indeed, that in the history of our State, no third party has ever survived for much more than a single generation.

And I am sure, that even more shortlived than the Liberal Party's effectiveness, will be the spasms of another vindictive group. And, as seems to be the habit among willful minorities, this one also parades under a righteous and sanctimonious name; this time it is called: reform.

If we are to judge the effectiveness of a political group or party on the strength of its vocal chords, there is no doubt that those self-proclaimed reformers would be a powerful instrument within the framework of our body politic. But, unfortunately for them, the people of our city and State do not trade promises, slogans and scapegoats * * * for performance, purpose and character.

Nevertheless, it is the hope of the reformers—the very vain hope indeed—that their voices, like the horn of Joshua, will crumble the Democratic Party structure of progress and growth, a structure which, in our county, has taken 160 years to build.

It is this very structure, my friends, which we, as Democrats, must keep uppermost in our minds. We must not only defend it against those who, for the sake of personal power and gain, would find comfort in its destruction, but we must always secure it; strengthen it; and assure its continued growth.

It is easy, indeed, for opportunists to attach themselves to fashionable phrases and words, words like "reform." But it is the very principle of reform; of improvement; of progress which has been greater than all others in turning us, and millions of Americans, to the Democratic Party.

Whether it is the principles, so clear and pure, of the party of Jefferson; the ideals of Wilson; the humanitarianism of Roosevelt; the courage of Truman or the force and vigor of Kennedy, these are the emotions and influences which we must now keep before us, and which must inspire and guide all of our thoughts.

As Democrats, we must concern ourselves with the communal good and with the national progress. We must not let self-interested crusades gather momentum against any of the fundamentals of our society. With our Nation facing its most critical test in history, we must work toward unity and progress.

As an organization, we are dynamic and strong. We have the finest leaders and the most devoted party workers.

As Americans—and as Democrats—we must call upon our deepest and most fervent beliefs, and summon our greatest faith and strength for the battles that lie ahead. Ours is the heritage of enlightened leadership. Ours is the tradition of government by conscience. Ours is the history of forward-looking dedication. Ours is the symbol of noble example and forceful action.

Neither idleness nor isolation can protect us, either from the Republicans; from the capital "L" liberals, or from the self-styled reformers.

We must not permit splinter groups to splinter our unity of purpose.

The two-party system is the very essence of our democracy, and the very source of America's strength.

Those, who would conspire, through faceless fusion or devious deals, to undermine that system, bring upon their own house the danger of destruction.

Yet, as reckless as it seems, and as obvious as the consequences appear, the seeds of this disruption have already been sown in the most hypocritical of gestures.

Only 2 weeks ago, the Republican Advisory Council said, and I quote:

"Healthy government under our traditional American system is the progressive, vigorous government administered and legislated through the constructive competition of the two-party system." End of quote.

But, 2 days later the Republican Party leadership announced it would welcome a coalition with the Liberal Party.

It will be interesting to see whether the Republican Party heeds its Advisory Council or its leadership, in what promises, this year, to be a year of decision. The 2½ million voters of New York City will welcome the opportunity to determine whether it is practical, and whether it is wise, for a political party to trade principle for expediency.

For our part, we in the New York County Democratic Organization will not permit any splinter group to dictate who our candidates shall be.

And we are confident that our standard-bearers will be of such high caliber, character, and qualification that all of the truly independent voters of our city will support and help elect them, as will those Liberal Party leaders who seek good government, rather than power and patronage.

The American people carry the pain of anxiety in their hearts, as they observe the tragic results of unchecked political opportunism in Cuba—only 90 miles from our shores.

Let us here, in our own city—in the Capital City of the world—set an example of the kind of unity and dedication on which progress thrives, and from achievement grows.

The best defense of our system of government, and one which will withstand all attacks, is to remain firmly dedicated to the principles which are traditionally identified with the Democratic Party. Yet me must always remain open in mind and spirit to the beautiful phenomenon of change * * * and of social, economic and political advancement for all of our fellow citizens.

I have no doubts, my good friends, that this thought; that this pledge, is uppermost in the minds and hearts of everyone here tonight. For it is no more than a rededication to the very ideals which have carried each of us—and our party—to the great heights of public support and to the great responsibility of safeguarding the public well-being.

In the days ahead, let us not lose, but let us rather gain momentum. Let us not waver, but let us rather grow stronger in our convictions. Let us not close, but let us rather open our minds to the wonderful new opportunities and dreams which are quickly becoming realities in an incredibly fast-moving world.

Our work here in New York must serve to spread the fulfillment which is democracy, to a world which is today half in slavery. And by our continued expression of faith in the Democratic Party, we will build together a meaningful, purposeful and bountiful life for ourselves, our children and for all humanity.

Thank you, thank you very much.

A Message From Garcia

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ASPINALL. Mr. Speaker, it is my present recollection that some voices in the United States have been raised in criticism, even in suspicion, of some of the pronouncements and actions of the present President of the Republic of the Philippines. Whether or not such criticisms or suspicions had or have any justification is of no concern to me as of this particular moment. Rather, would I bring to my colleagues' attention an address made recently by Carlos P. Garcia, President of the Philippines. I believe it to be an outstanding pronouncement of a friend of democracy, a friend of the free world, a loyal citizen of his own country and an understanding and loyal ally of the people of the United States of America. I recommend the reading and study of the address to my colleagues and fellow Americans. Mr. Speaker, the brief paragraphs which follow are by way of further introduction of President Garcia's recent address:

A MESSAGE FROM GARCIA

(Since the day he took office in 1957, Carlos P. Garcia, President of the Philippines, has worked to develop an independent foreign policy which would best serve the interest of a young democracy at the crossroads of the Far East.

(He has sought to develop closer relations with his country's Asian neighbors, without in any way weakening Filipino friendship with the United States "our closest ally and friend."

(President Garcia has consistently guided Philippine policy along lines which would enable his country to serve as a magnet, drawing together the non-Communist nations of Asia.

(Although the Philippines itself is not yet fully developed, President Garcia has backed the cause of economic development at home and among other Asian nations which are also undertaking the transition from agricultural to industrial economies.

(Since communism first appeared on the Asiatic mainland, Filipino political leaders have recognized it for a deadly enemy. President Garcia has repeatedly warned that its relentless drive for world domination "is something that cannot be ignored by any free Asian."

(Two years ago, at the Manila Overseas Press Club, President Garcia outlined his efforts to promote closer cooperation between the nations of free Asia while retaining traditional ties with the United States.

(This year he again used the same forum to emphasize his philosophy and, in particular, to define his nation's policy with respect to the recognition of Red China and its admission to the United Nations.)

ADDRESS BY CARLOS P. GARCIA

A little over 2 years ago, I broached the idea of bringing about in this region (southeast Asia) an association of states which, mostly in the cultural and economic sectors, might explore common areas of interest, common problems and perhaps avenues of cooperative action for a common good. Shortly afterward we had the pleasure of welcoming among us the Premier of Malaya, Tengku Abdul Rahman, who likewise saw

merit in the concept and became one of its most vigorous advocates.

This month a beginning was made, a limited one to be sure, but one holding great promise. In the agreement between the Governments of Thailand, Malaya, and the Philippines to confer on the mechanics of such regional association is the beginning of the kind of understanding and cooperation so essential to the free world in this time of trial.

Before discussing this development more fully, however, it might be useful to sketch briefly the background against which elements of our foreign policy should be viewed.

First let us examine the current international situation and the nature of the tensions which constitute the crises of our day.

A great scholar and observer of world affairs makes the significant observation that it is inaccurate to speak of the conflict between the free world and communism as a contest of two similar power blocs. He points out that whereas the Communist bloc is a monolithic organism held together by violence and intimidation, such as the Russian tanks in Hungary, the free world bloc is a voluntary association impelled toward pooling its resources in the interests of collective security only by the threatening pressures of the Communist bloc itself. I think it is also useful to define more sharply the nature of the conflict.

It is a matter of Communist doctrine for all to read that the Communist revolution will not, indeed cannot, stop short of an all-Communist world. No Communist of any stature has as yet repudiated this basic doctrine of international communism. In fact, careful study of their most recent literature establishes conclusively that even the concept of peaceful coexistence is seen by top Communists as a temporary lull in armed hostilities during which they may consolidate their gains and prepare for the next violent phase of Communist expansion. The present world crisis therefore derives from the Communist Party's continuing attack, by whatever means possible, on all non-Communist countries, since the continued existence of free societies, of free men, cannot be tolerated within the concept of an all-Communist world. Thus, unless we consider surrender to intimidation, the initiative for ending the cold war and averting a hot war rests with the Communists—and only the Communists.

I think it is also high time that we demolish the distortion heard from some quarters that small nations committed to the free world bloc are merely pawns fighting the war of the United States in a big power contest with the Soviet Union.

The question has been asked in some quarters, for example, why the Philippines, a small nation, has chosen to take an active part in this decisive world struggle. Our reasons in terms of political and religious belief, or morality and justice, already have been adequately stated. For the benefit of those who claim to be practical realists, however, I think it might be wise to add this further practical and realistic reason. The free world is fighting for a world community ruled by law, the Communists for rule imposed by force. As one of the small nations, a world of laws is our sole hope of stature and dignity. Under a world rule of force we can expect nothing better than national extinction and racial absorption.

There is little need to labor the obvious as to why we accept American leadership in this struggle. The American record for supporting freedom for all peoples is ample endorsement of their motivation and intent. In material resource and tenacity no other nation or combination of nations can claim the contribution already made to the fight, or match the strength and potential of America to sustain it. (In this connection, it is interesting to note that while some commentators go so far as to claim Soviet superiority over the United States, Mr. Khrushchev himself promises his people only that they will catch up with the United States in 7 to 10 years.)

To summarize up to this point, we may say that until the Communist bloc decides to abandon the world revolution, international tensions and conflict, regardless of temporary lulls of peaceful coexistence or peaceful competition, will continue. Further, by the Communists' own doctrine, every free society, committed or otherwise, will continue to be a target of whatever weapon is considered appropriate, whether armed aggression, assistance to internal rebellion, economic sabotage, or any of the many forms of subversion. It may also be assumed that America will continue to exercise the leadership and shoulder the major material burden of free world defense, while her allies gain the strength necessary to tip the balance so decisively that the Communists will be discouraged from further pursuing their aggressive expansion.

This brings us to the question of what may now be forecast as to the American posture of free world leadership under a new administration.

From President Kennedy's pronouncements to date, from those of his major appointees, and from the writings of those known to influence the thinking of the new administration, it is possible to derive at least a preliminary assessment. It now appears likely that there will be no alteration of basic policy and fundamental objectives. In executing policy and pursuing these objectives, however, it may be expected that full advantage will be taken of the opportunity afforded by change to secure a broader area of tactical maneuver, greater flexibility and variety in the instruments of policy brought to bear. Although for years the United States, almost alone, has carried the burden of military and economic assistance to the recovering and developing nations of the free world, and today is suffering in some measure from the economic consequences, it appears likely that neither of these programs will be abandoned or drastically reduced. There appears to be some inclination to lean more toward acceleration of economic growth, and it is predictable that because of economic pressures both military and economic foreign aid programs will be more sharply scrutinized and more carefully weighed, so that each dollar of investment in free world strength delivers its maximum yield.

In his inaugural address, President Kennedy said: "My fellow citizens of the world: Ask not what America will do for you, but what together we can do for the freedom of man."

What can we do together for the freedom of man? What can a small nation such as ours do now?

It seems immediately obvious that maximum acceleration of economic growth and technical development serve not only the individual national interest, but also the objective of strengthening the free world alliance. It is toward this end that we are taking steps toward stimulating both foreign and domestic private investment, expanding and diversifying our pattern of trade and commerce, and developing new credit lines with appropriate nations of the free world.

Another contribution we can make to the free world effort, one wholly compatible with the national interest and aspiration, is in the political sector—not alone in terms of maintaining our own domestic stability but even more in terms of the posture and initiative we take in our regional and global international relationships. For example, the consultative conference held recently in Manila, I believe, established firmly for the information of all concerned the fact that the peoples and governments of this region see the situation in Laos not as a big power contest but as a serious threat to their own peace and security and a manifestation of renewed Communist expansionism.

Aside from the special and significant features of the free world bloc already mentioned, it should not be forgotten that the free world, precisely defined, includes the so-called uncommitted nations which nevertheless are as dedicated to the preservation of their own free societies and individual freedom as ours. With these nations, while we may differ on the measures taken to insure national integrity, we have much in common in terms of other problems and aspirations wherein mutual understanding and cooperation can be mutually beneficial.

For the most part, these common problems are characteristic of the developing new nations: security against external aggressions, internal defense and protection of free institutions, and the acceleration of economic growth and technological development. It is no coincidence certainly that each of these areas is today included in the broadened front of Communist attack. As the arms race reaches a point of stalemate, the political and economic sectors grow in importance, and whatever can be done to increase the strength of these sectors in every free nation, regardless of military commitment, is a net gain in terms of free world security.

This has been the underlying purpose of our determination to broaden the base of our relationship, first with neighboring free societies and later with those geographically more remote. It would be Utopian to think that in the free association I have described there could be complete agreement in all matters, but it is a characteristic of a democratic community such as the free world comprises that the individual and the community may seek benefits wherever agreement and cooperation can be achieved.

While on the subject of the small nation—committed, uncommitted or neutral—we might stop to consider a particular phenomenon of our times—a phenomenon, incidentally, which underscores my earlier emphasis on the fact that it is the small nation that has the greatest stake in realizing a world community accepting the rule of law.

Recently the General Assembly of the United Nations has been augmented by the admission of many new small nations. Small though each may be in resource and limited in experience, each enjoys numerical equality with the oldest and largest in that assembly of nations. The magnitude of the influence these nations acting in concert can wield has been demonstrated and commented upon. Some view the phenomenon with elation, others with concern. We of the Philippines, ourselves a small nation, experience both reactions. We are elated to have this confirmation of our most fundamental foreign policy outlook, but we are concerned that this power of small states, unique in mankind's history, not be lost or destroyed by abuse.

We must never lose sight of the fact that the power exists only by virtue of the organization in which it is exercised, the United Nations. This organization itself will exist only so long as it honestly and impartially reflects the intent of its Charter, only so long as each member feels that its decisions and judgments are the result of sober and honest deliberation. The intrusion of petty or sordid motives, of ancient grudges or racial bias, could bring about the the destruction of what the world has so painfully tried to restore since the tragic collapse of the League of Nations.

Before concluding, there is one other aspect of this administration's foreign policy I should like to clarify. Our determination to withhold recognition from nations of the Communist bloc has been questioned as being more rigid than that of the United States. "More popish than the Pope," is one of the flippant criticisms.

In the first place it should be pointed out that the free world alliance by its very nature does not impose rigid conformity of policy upon each of its members. For its own reasons, the United States recognizes the Soviet Union and sits with its representatives in the United Nations. We have avoided such diplomatic relations without impairing our U.N. participation. Should Red China shoot its way into the United Nations, or even negotiate formal relations with the United States, we see no reason why either development need influence our own policy, which is based upon considerations of practical self-interest. In terms of trade, we certainly have not so thoroughly exhausted the markets of the free world as to turn in desperation to those of the Communist bloc. As for diplomatic convenience, we ask "Whose?" All too vivid is the experience of many of our neighbors, warning us of the tremendous burden that would be placed upon our security services should we permit an influx of hordes of spies, propagandists, and professional saboteurs, working from the protection of a diplomatic sanctuary in our very midst.

This then, in summary, is our position. The clash between world communism and free societies is not of our choosing and not subject to our evasion. We believe that the only way to avert war, or win it if it is forced upon us, is by a pooling of all free world strength in every sector, that weakness or disunity can serve only to invite aggression or piecemeal capture. For ourselves we choose active participation. In the case of those of our free world neighbors and friends who choose otherwise we are prepared to respect their freedom of choice, developing our relations with them in any or all of the other constructive categories of democratic activity mutually acceptable.

Contrary to Marxist dogma, we hold that tyranny—not the free society—carries within it the seeds of its own destruction. We believe, too, that the urge toward freedom is one of the strongest instincts, a divine endowment of all living things—including the people of Russia and Communist China. Therefore, the longer the free world can maintain and widen the margin of deterence, the closer we come to peace with justice and freedom for all mankind.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. WILLIAM W. SCRANTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. SCRANTON. Mr. Speaker, Rumania has been the source of contention for many centuries between Western and Eastern forces. Containing territorially the mouth of the Danube, this great artery into the heart of Europe, the Rumanian nation has passed under the suzerainty of Hungary, Russia, Austria, the Ottoman Empire, and Poland. Its aspirations for independence were not realized until the great powers were engaged in a struggle among themselves. At that time only was Rumania able to declare itself at war with the Ottoman regime, the dominating power then, and to declare itself independent. The date was May 10, 1877.

From that time on, the Rumanian people have celebrated that date as their official national holiday, a day always to be cherished. Coincidentally, too, this day, May 10, marks the emergence of the kingdom of Rumania. For, on May 10, 1881, the elected Prince Carol was proclaimed king.

Today, we in America must celebrate this momentous self-determination of an ethnic group for the people of Rumania since they are prohibited from honoring this holiday by their Communist overlords. Let us hope that once more the yoke of captivity will be overthrown and that Rumania will stand free and independent among the freedom-loving nations of the world.

Saturday Evening Post Says Congress Should Slam the Back Door

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PELLY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the May 6, 1961, issue of the Saturday Evening Post. In a relatively few words this editorial explains the backdoor spending loophole by which congressional spenders are able to finance programs outside the scrutiny of Committees on Appropriations, thus abdicating a responsibility written into the Constitution itself.

I would hope, Mr. Speaker, that this editorial will reach and be read by hundreds of thousands of taxpaying Americans who in turn will be alerted to the need for Congress to curb this fiscally irresponsible device.

In the end, public opinion must surely force Congress to act, and anyone reading the following editorial from the Post will understand why:

CONGRESS SHOULD SLAM THE BACK DOOR ON THE SPENDERS

One of the first acts of the liberalized House Committee on Rules was to bottle up a resolution calling for an end to back-door spending, by which is meant the bypassing of Congress by Government agencies. Through this device billions of dollars never appropriated by Congress flow into spending agencies. This is how it is done:

Under normal procedure two separate steps must be taken by Congress to establish a program or set up a project. First, Congress must authorize the program or project. Then Congress must appropriate funds from the U.S. Treasury to pay for it. Unfortunately it is not required that the two steps be taken together.

Why would Congress authorize a project, but fail to provide money to carry it out? The answer is that it is easier to favor some grandiose plan as a good idea than to knuckle down to the task of finding the money. Besides, it is more popular. Many a fancy spending program has sailed through both houses of Congress, only to be stopped dead in its tracks by one of the Appropriations Committees.

Now where does the back door come in? This way: To bypass the Appropriations Committees the sponsors of some spending programs hit on the device of writing into each authorization bill a provision by which money for the program could be borrowed from a specified fund in the U.S. Treasury. This fund consists of money paid back to the Treasury by those who had previously borrowed from it—other countries, for example. This money is earmarked to be applied on the public debt. Before it can be so applied, it is up for grabs by the various agencies named in the authorization bills.

Back-door spending has become a popular instrument for initiating programs involving large-scale spending unlikely to be approved by Appropriations Committees.

Well, what's wrong with this? Authorization to drop around at the Treasury's back door comes from the same Congress that appropriates money in the ordinary way.

First, this method is a loophole in the control of Federal spending and budgeting. It encourages special-interest groups and spenders to avoid budgetary controls.

Second, back-door spending has enabled some Federal programs to continue year after year without scrutiny by the Appropriations Committees.

Finally, it's probably unconstitutional. The Constitution provides that "No money shall be drawn from the Treasury but in consequence of appropriations made by law."

The situation calls for reform, but the House Rules Committee, apparently reluctant to throw up any barriers to Federal spending, refused to let the House vote on a bill which would have outlawed the practice.

A Plan for New Election Districts on a Uniform Basis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MULTER. Mr. Speaker, H.R. 841, which I introduced on January 3, 1961, would provide for the establishment of congressional districts composed of contiguous and compact territories and require that such districts contain approximately the same number of inhabitants.

The need for this legislation has long been apparent and serious consideration in this session is called for. The following article is pertinent to this subject. It appeared in the New York Herald-Tribune on May 7, 1961:

KENNEDY AND THE RELUCTANT CONGRESS

(By Don Irwin)

WASHINGTON.—The reluctance of the Democratic-run House to advance President Kennedy's New Frontier has administration forces at both ends of Pennsylvania Avenue examining causes and cures.

The immediate phenomenon is plain: While the Democratic paper majority is 260 to 172, administration proposals face resourceful opposition from a conservative coalition drawn from the ranks of its 99 southern Democrats as well as its 172 Republicans. So far, the coalition has lost more often than it has won, but it poses a hazard to most bills in the President's domestic program.

Raw material for the same coalition exists in the Senate, where 34 Republicans and 22 Southerners could add up to a 6-vote majority in the 100-seat Chamber. But the 4-month record of the 87th Congress shows these elements haven't coalesced effectively in the Senate. Why is the modern Senate generally less conservative than the House?

The answers lie partly in the constitutional system, partly in the legislative machineries of the two Chambers, partly in shifting historical trends.

Constitutional differences worked for more than a century to make the Senate a citadel of conservatism, while the House was more responsive to popular demands. But the public demand in the big metropolitan areas that are absorbing more and more of the Nation's population is often very different from—and more conservative than—the demand in the rural and small-city districts represented by most of the members of the conservative coalition.

There is convincing statistical evidence to suggest that nonmetropolitan areas in Congress are overrepresented under the present apportionment of congressional seats which expires with the current Congress. The new apportionment, now underway, will bring substantial changes in the allocation of the 435 permanent House seats. The changes are likely to cut into the coalition's strength—for reasons more of politics than of equity.

MANY STATES GERRYMANDERED

The Constitution sets a 2-year term for Representatives and requires that they run from districts laid out by State legislatures in compliance with the allotment of seats apportioned each State under the decennial census. The Constitution says nothing about districts being compact and approximately equal in population—and they often aren't.

In many States, including New York, the legislatures that did the apportioning 10 years ago were themselves gerrymandered to furnish built-in majorities for the nonmetropolitan sections of the State. They were and are generally conservative and, outside the South, Republican. Repeatedly underweighted in the legislatures were the less conservative (and usually Democratic) big cities.

A recurring result from coast to coast was the creation of urban districts that included more inhabitants than the national average of 346,000, balanced off by rural districts that repeatedly run below that figure.

There is a congressional saying that "Congressmen vote their districts; Senators vote their States." It is true often enough to contribute to the difference in voting patterns between the Chambers.

CONSTANT CAMPAIGNS

The explanation lies in part in the limitations of the 2-year House term, as opposed to the 6-year Senate tenure. Because he must stand for reelection the year after he is sworn in, the House Member is generally campaigning covertly or openly from the time he takes his seat. If he comes from a nonurban district, however under par its population may be, he is as much a captive of majority opinion back home as is the most liberal New Frontiersman from the cities. Only bold, foolhardy or very safe Members break often from this pattern.

Senators represent statewide constituencies which are usually sufficiently varied—and conflicting—in their interests so that a Senator can pick and choose, since he can't please everybody anyway. If there are obvious political axes to grind, he can save them for the 2 years before he runs for reelection.

A House Member has less than a quarter the weight of a Senator, numerically speaking. If he is a rank-and-filer, his principle avenue for self-expression is group action, either behind his regular party leadership or in a sectional or ideological subgroup. The largest of these is the southern Democratic bloc, the Dixiecrats who so frequently lend muscle to Republican minority efforts. There is also a Republican fragment of about two dozen Members, all from urban or suburban districts, that tends to help the administration Democrats on economic issues.

The Congressmen with power are the chairmen of the 20 standing committees and their important subcommittees. The seniority system requires long tenure—which means a safe district—to attain a chairmanship. The result in the present Democratic-run Congress is that 11 chairmen are southerners and, in varying degree, conservatives. They can, and do, exercise considerable influence over the treatment of legislation, including administration bills.

The House is more rule-bound than the smaller Senate, and this is essential to the conduct of business in the ungainly House. But rules can also be used to shape the will of the House—as was demonstrated when Republicans and Dixiecrats sidetracked the administration's minimum-wage bill on a poorly attended nonrecord vote. They were working under rules that prevented its being brought up for a roll call, so the House passed a cutdown coalition bill. The Senate supported the broader administration plan.

Congressional historians date the rise of conservatism in the House from the bitter fight in 1937 over President Franklin D. Roosevelt's plan to pack the Supreme Court. It alienated most southerners and shredded big Democratic majorities in both Houses of the 75th Congress. The effect lingered on in the House long after the Senate breach was patched up on most questions except civil rights.

Last August, loyal Democrats were supposed to be working to put over the legislative program backed by Senator John F. Kennedy, the party's Presidential nominee. But Dixiecrats worked successfully with Republicans, mostly in committee, to spike the bills the candidate sought. Revived now as key parts of the Kennedy program, they would: raise the minimum wage; initiate Federal aid for public schools, and incorporate a plan for medical care to the aged into the social security system.

SPEAKER SAM'S TEAM

Administration lieutenants clipped the coalition when a hairsbreadth House vote reorganized the House Rules Committee to insure enough proadministration votes so that the conservatives on rules couldn't bottle up program bills. Since that vote in February, no administration bill has finally failed in the House—although the minimum wage bill was temporarily emasculated there and the President's medical care bill has yet to stir in the Ways and Means Committee.

But most White House proposals have begun to move in the House. The credit goes primarily to a legislative combat team working under Speaker SAM RAYBURN that fights each issue as a separate engagement in a campaign mapped in close liaison with the White House.

Building from a big minority of northern Democrats, the team scrounges the rest of its votes from big-city Republicans who are less conservative than their party's leadership and from administration-minded southerners, especially those whose districts include burgeoning new industry. Incidentally, the President's habitual courtesy to his elders hasn't hurt his cause with etiquette-conscious senior southerners.

To accommodate the population shifts, 25 States face reapportionment action before the 1962 election. Sixteen have little choice except to revise congressional district lines to compensate for loss of seats. Nine can either carve out new districts for new Congressmen or elect them "at large"—statewide. Altogether, 19 seats will be switched in a transfer in which the Northeast loses and the West and South gain.

Nonsouthern Democrats stand the best chance of gaining in the ungentle game of redistricting. When the last apportionment was made in the 18 months before the 1952 election, Republican strength stood near its postwar zenith in the State governments where reapportionment is decided. The party had across-the-board control of 16 State governments and commanded either the executive mansion or the legislature in a total of 30 of the States, which then numbered 48.

Republican fortunes have ebbed to the point where the party holds full legislative and executive command in only 10 of the present 50 States. In 21 States, Republicans control as much as one house of the legislature.

The statistics look like good news for the Democrats, but they don't answer the biggest question raised by the migration of the 1950's—what is the voting taste of the millions who swarmed to suburbs of big cities from coast to coast? Most of them are former city dwellers, mostly Democratic by habit. They are moving into suburban counties most of which are historically Republican. No one is sure which pressure will prevail, but smart politicians can do a good deal for the party in power by judicious drawing of the new district lines. Democrats will do some of the most strategic drawing.

Their bonanza is California, which heads the list with an eight-seat gain. Democrats who now run the State are more than likely to atone for a decade-old Republican apportionment which laid out the State's 8 most populous congressional districts in Democratic areas and 10 of its 12 thinly populated districts in Republican sections. The present House delegation is 16–14 Democratic, and that ratio seems likely to increase.

CHANGE MICHIGAN RATIO?

Michigan, now solidly Democratic, had a Democratic governor and a Republican legislature when the last apportionment was made. Its present lines were drawn so that 11 Republicans fill seats which represented an average of 319,000 persons each in 1950, while 7 Democrats speak for an average of 406,000 each. In the process of fitting in one new seat, it seems likely that the Democratic legislature will find a way to change these ratios.

Pennsylvania, the apportionment's big loser, must pare three places off its 30-seat delegation. With Democrats controlling the governorship and the legislature, it's likely that Republicans will take more than their share of the cuts.

In the South generally, reapportionment means contraction or expansion of the number of (southern) Democratic Congressmen from each State. It's not that easy in fast-growing, fast-changing Florida, which picks up four seats. There is already one Republican Congressman from Florida and there may be more, no matter how the Democratic legislature draws the lines. The legislature will be hardput not to give more seats to the State's badly under-represented cities.

Another puzzler is New Jersey, which gains one seat. It is the only State with reappointment problems that holds its State elections this year. If the Democrats retain their hold in Trenton, there is sure to be an assault on lines drawn by Republicans in 1951. If not, Republicans might just leave the old lines alone and elect the new Congressman at Large.

Although New York must give up 2 of its 43 seats, change is likely to be kept to a minimum. It is the only big State under full Republican control that faces reapportionment. The upstate Republicans who run the legislature aren't anxious to upset the happy balance laid down by their predecessors a decade ago. Under it, New York City, with 7,517,000 inhabitants, was awarded 21 Congressmen. The 7,203,000 New Yorkers who

lived elsewhere divided 22 Representatives between them.

If the metropolitan voter continues under the new apportionment to receive a smaller share of a Congressman than his rural or smalltown counterpart, the House could continue to be the more conservative arm of Congress. But the trend could be drastically reversed if city-oriented Democrats take advantage of their present power to do some gerrymandering on their own.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DERWINSKI. Mr. Speaker, today we observe the traditional national holiday of the people of Rumania in commemoration of that nation's independence and the formation of the Kingdom of Rumania. Since Rumania is one of the unfortunate nations now held in bondage behind the Iron Curtain, it is especially significant that we cooperate with the Rumanian people throughout the world in energetically perpetuating their goal of eventual freedom for their oppressed nation.

The Rumanian people and their vigorous monarch, King Michael, fought courageously to maintain their freedom before engulfment by the Soviet hordes in the closing days of World War II, and under the unfortunate wartime blunders of President Roosevelt and his advisers, Rumania and the other nations now behind the Iron Curtain suffered their present enslavement.

We, as Members of the U.S. Congress, have an obligation to the cause of true freedom throughout the world to rededicate ourselves on occasions such as this to the proposition that Rumania and its fellow satellite nations will, as soon as practical, see a rebirth of freedom.

Rumania has had a long, unique history marked by numerous battles for survival. As is the case in all small nations, the danger of domination by huge neighbors has always been present, but the Rumanian people have maintained their spirit of resistance to oppression, their nationality, their culture, their distinctive customs and observations, and they are maintaining them today.

Mr. Speaker, as we commemorate the Rumanian national holiday, it is well for us to appreciate the Rumanian historical contributions but also to emphasize that we look forward to the future when these heroic people will once again share in true freedom and be permitted to establish a government of their own choice.

I also wish to take this opportunity to commend the Americans of Rumanian ancestry for their great contributions to the United States. They are honest, hardworking, dedicated people, who have made great contributions to the development of this country, just as their people in Europe for centuries who were the bulwark of Christianity against the Moslem invaders, and who always stood for sound principles in government, and freedom and legitimate nationalistic aspirations for all men.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, the average man on the street has become familiar with many strange new countries since the beginning of World War II. Rumania, however, remains relatively unknown. Indeed to many people the word suggests haunting melodies played on the violin but little else. Even the geographical location of this country of 17 million people is remote—it is east of Hungary and west of the Black Sea with the Danube flowing along its southern border.

Even less known is the history of Rumania. Since the beginning of modern times, Rumania has been overrun again and again by Huns, Goths, Turks, and others. For nearly 700 years, from the 13th to the 19th centuries, they lived under the harsh rule of the Ottoman Empire. After several unsuccessful attempts during the last century they finally achieved independence on May 10, 1877. This is the date which we commemorate. Unfortunately, their freedom was not to endure. In December 1947 King Michael was forced to abdicate under Communist pressure and the country is now completely dominated by the U.S.S.R. The Russians "liberated" Rumania primarily to make use of its rich oil reserves.

Since the country is so far removed from the lives of most Americans—the question may be asked—why is Rumanian Independence Day being celebrated in the House of Representatives of the United States of America?

The answer can be found in the quotation from John Donne—

> No man is an island, entire of itself; every man is a piece of the continent, a part of the main; any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee.

Like the Poles, the Hungarians, and other mid-European peoples, the Rumanians loved freedom and fought gallantly and stubbornly for it. Their unfortunate position, flanked on every side by greedy and unscrupulous neighbors, has doomed them to subservience time after time.

Just as John Donne reflects that the death of one person diminishes all of humanity, so the loss of freedom in one country, even though a small and remote one, is a loss of freedom to all mankind.

How can we encourage people suffering under foreign domination as the Rumanians are today? One way is by being very conscious, very aware of our own privileges. Such dedicated men as Comdr. Alan Shepard are an inspiration to all who love freedom. But his achievement was only possible because he had complete faith in the vigilance of the hundreds of other people working on the Project Mercury. In the same way we cannot for one moment be unmindful of our responsibilities. We cannot, as participants in the government of this great Nation, "cut corners" or in any way jeopardize those values which differentiate our system of government from the communistic system.

There is another reason for our awareness of the plight of captured nations. Here in the security of the United States, long accustomed to our advantages, there is a tendency to use such words as "freedom" and "justice" lightly. In our efforts to be tolerant of all opinions we sometimes become fuzzy-minded. Tolerance is an innate part of our philosophy of government but it requires thorough knowledge. When we fail to be cognizant of the real meaning of such words as freedom and justice, we can quickly clear our minds by observing the plight of a conquered people. There is nothing indistinct about the difference between our system of government and that of the so-called People's Republics. This is an euphemistic term for a government which is not of the people, nor by the people, nor for the people, but on the people.

We must keep faith with the Rumanians, and the other captive nations in bondage. The Rumanians, who have continued the struggle for freedom over the centuries can be trusted to keep up their resistance to this sinister new ideology. We cannot be an island entire of ourselves, we cannot forget the ordeal of this small and remote country, we must offer all encouragement to these valiant people.

This is why Congressmen of widely divergent racial backgrounds come down to the well of the House of Representatives of the United States of America to commemorate Rumanian Independence Day for a nation which today is without independence.

We Can Have Adequate Defense if We Cut Nonessential Spending

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. ALGER. Mr. Speaker, the American people have never failed to make whatever sacrifices are necessary to preserve our freedom and to protect this Nation against any threat by foreign foe or natural cause. I believe the American people have demonstrated they are far ahead of our national leadership in meeting the challenge of today. I have not heard a single objection to spending

whatever is necessary for defense and for winning the race to conquer space. We can budget whatever it takes to do these jobs and still maintain a strong economy, if the administration will stop pushing the nonessential, nondefense programs for which we are spending an ever-increasing amount far out of proportion to the increase we are asking for defense spending. We must make a choice. If the administration will take the lead, I am sure it will find a ready and willing people to support whatever action is necessary. "The Need To Choose" is a thought-provoking editorial from the Wall Street Journal, which is included herein:

THE NEED TO CHOOSE

No one, we suppose, is under any lingering illusion about the costs of exploration and national defense in the years ahead; those costs promise to skyrocket.

President Kennedy has just spoken of a bigger space effort. Annual outlays for civilian space work alone will probably more than triple, to $3 billion, within a very few years, this newspaper has reported. Military spending, already consuming more than half the national budget, will also continue to rise; for one reason, the engines of war grow more costly as they grow more complex.

Whether all the prospective increases in defense and space spending are absolutely necessary is something few of us are in a position to judge, though all would agree that whatever is necessary must be spent. But the prospect does raise what former Vice President Nixon calls a fundamental issue, an issue all but overlooked by most commentators and most people in Washington.

The issue, as Mr. Nixon puts it, is "how our national effort is being mobilized to meet the threat to our existence. For example, the new administration has made proposals which would impose upon the Nation, over a 2-year period, an additional $10 billion in new obligational authority, with the result that we shall have a new deficit of at least $5 billion even if revenues are estimated on the optimistic side.

"Of this new total of $15 billion in spending and obligations, less than one-third is to be spent for defense and national security over and above the Eisenhower estimates. Fully $11 billion is budgeted for spending and obligational authority in nonmilitary areas such as health, welfare, education, housing, and public works."

Opinions naturally differ about the merits of these new domestic spending proposals; our own opinion is that most of those presented or enacted so far are remarkably ill-conceived even in terms of their ostensible aims. There is no doubt at all, however, that they are extremely expensive and that they will grow still more expensive in the later years when defense and space costs will also be much higher.

And when the Government is already heading into deeper deficits, it takes no great economic foresight to see the inflation that is being built up for the future. Among its many other evils, such inflation would of course boost still more the costs of all the things, including defense and space work, which the Government is trying to do.

Even if the various new or enlarged domestic programs were desirable in themselves, the necessity for choice is inescapable. President Kennedy and most Americans believe international communism's threat is grave and getting worse; then the priority belongs on meeting the threat. The Nation cannot undertake all these things as well and still maintain a strong economy which is the foundation of military strength.

The President recently referred to what he regards as a kind of collective American unwillingness to do the things that must be done in the face of the Communist threat. We do not believe such unwillingness exists; on the contrary, we think the people are perfectly prepared for greater sacrifices if needed to preserve their freedom and their Nation.

What many people are perhaps unwilling to countenance, in a time of international peril and domestic inflationary danger, is business as usual in Washington—this splurge of new billions for political handouts. That is not a particularly noble cause for which to pay still higher taxes or suffer more inflation or both.

The United States has never been, and we think is not now, a Nation of children incapable of understanding the need for choice. The choice today is as simple as it is fundamental. In Mr. Nixon's words, "before we embark on any new spending programs at home, we should put first things first * * * so that we can meet the increased threat of Communist aggression."

If the Kennedy administration and the compatible Congress would restrain their extravagance for the nonessentials, they would be able to see clearly America's willingness to sacrifice for the essentials.

Year-Round Lakes Shipping Feasible From Technical, Economic Standpoints

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ASHLEY. Mr. Speaker, the possibility of keeping the Great Lakes open to commercial shipping during the winter months has intrigued businessmen, scientists and the general public for the last 50 years. Since the completion of the St. Lawrence Seaway this interest has intensified with the realization of the annual economic benefits which would derive from year-round shipping activities on our great inland seaway.

Last week a number of Members of this body from the Great Lakes area, including myself, introduced a bill to authorize a study by the Corps of Engineers of the feasibility of keeping the lakes and the seaway open during the winter months. This study will be concerned with various deicing systems and methods of removing ice blockades, and its purpose will be to determine the possibility, means, and economic justification for providing year-round navigation on the Great Lakes—including connecting harbors and channels—and the St. Lawrence Seaway.

The following article by Ray Bruner, science editor of the Toledo Blade, contains an interesting and informative discussion of the problems, possibility and potentiality involved in this undertaking. I commend it to the attention of all who are interested in the subject:

YEAR-ROUND LAKES SHIPPING FEASIBLE FROM TECHNICAL, ECONOMIC STANDPOINTS—INCREASINGLY URGENT BECAUSE OF FUEL STORAGE PROBLEMS

(By Ray Bruner)

Shipping on the Great Lakes and through the St. Lawrence Seaway can be conducted the year around, providing there is a willingness to make the investment.

Year-round shipping, in spite of ice formation, is both technically and economically feasible.

The necessity is becoming increasingly urgent, particularly in the Toledo-Detroit area, where fuel storage is a problem in meeting the demands of a growing economy.

These are the conclusions today of Rear Adm. Edward H. Thiele, Coast Guard engineer in chief, Washington, which he based on a thorough study of weather conditions, ice formation, ice breaking potentialities, ship design and other considerations. He recently presented his ideas for study to faculty members and students of naval architecture at the University of Michigan.

In his analysis, he did not take into account such proposals as H-bomb blasting under the lake bed, or the more recent suggestion that atom plants be constructed at the headwaters of the St. Lawrence River to provide heat for keeping the ice melted.

Admiral Thiele pointed out that Great Lakes' open water navigation extends from April 15 to December 15, that relatively few commercial vessels, during the 4 months of winter, ply the lakes and interconnecting channels, and that no traffic moves along the St. Lawrence Seaway.

"The situation exists," he said, "not because navigation is impossible within the present state of the art, but because of tradition, economic requirements, and the lack of modern equipment to cope with the ice problem."

There is an increasing demand for fuel in areas where land transportation facilities are not adequate to meet the requirements. In the heavily industrialized Detroit area, year-round movement of coal is necessary.

"In past years," he said, "the storage yards were adequate to take care of the winter demand, but with the ever increasing output required by our expanding economy, a continual resupply is now mandatory.

"Over the years, the coal industry and the railroads have developed the Toledo area as a major distribution point on the Great Lakes. This corresponds to the Hampton Roads outlet on the east coast. Economically, the combined use of rail and water transportation is sound, and provides a flexibility and low cost not possible by rail alone.

"Today, all-year operations are maintained between Detroit and Toledo by standard self-unloaders, some of which have been ice-strengthened. With the assistance of Coast Guard icebreakers, the Detroit River and shallow passes into the Maumee are kept open throughout the winter.

SIMILAR DEMAND FOR OIL

"There are many other industrial areas along the Great Lakes that depend on coal from Toledo, and as their demands increase, they too will require winter resupply."

A similar demand exists for oil along Lake Michigan. Present oil tanker fleets are inadequate for operations through the ice. They are being successfully employed the year around, however, through a cooperative effort of the Coast Guard and industry.

The Great Lakes, with 95,000 square miles of water surface and 8,300 miles of shore line, drain approximately 325,000 square miles of land. During the warm months they store up a tremendous amount of heat, which is not entirely dissipated until midspring. Winter winds cause surface water to sink, with the warm water rising to the top. This "mixing bowl effect" prevents some areas from freezing, even though the air temperature is below zero.

The stored up heat, along with the mixing bowl effect, keeps large areas free of ice, even in Lake Erie, Admiral Thiele said.

ICE SURVEY MADE

Under different conditions, nine different varieties of ice form on the lakes.

Occasionally ice dams form, threatening floods in some localities and city water supplies in others. Ice thickness may reach 50 inches in some areas, but, in most, it ranges only from 6 to 18 inches.

In the winter of 1958–59, the Coast Guard's aircraft, surface vessels, and shore stations made a complete survey of ice formation and breakup.

During the last 15 years, Admiral Thiele said, the Coast Guard cutter *Mackinaw* has been able to plow through all ice barriers. This cannot be done by the customary lake freighters, however, with their shallow draft and blunt bows.

Another obstacle is the freezing spray, to which low board boats are particularly vulnerable. Ice jams also block the channels at the Soo, Welland Canal and St. Lawrence Seaway. Because of the ice, buoys serving as guides into channels, must also be taken in during the winter.

Solutions to problems such as these would include:

More consistent and thorough ice reporting system.

Larger fleet of ice breakers to be of service over the entire lake area.

Change in design of Great Lakes ships "to permit all-year operations without excessive damage and uneconomically overpowered propulsion plants."

Improved navigation system to provide guidance in unbuoyed channels.

Compressed air bubbler systems to prevent ice formation in locks and dock areas.

De-icing devices on all mechanical equipment ashore and on ships.

Ice diversion jetties and changes in some channels in the Soo-Whitefish Bay area and along the St. Lawrence Seaway.

"There is every reason to believe," Admiral Thiele concluded, "that general all-year commercial navigation on the Great Lakes will become a reality with the expanding economy and increased demands for transportation facilities."

Government Requirements Contracts—Snares for Unwary Contractors

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the January 1961 issue of the Commercial Law Journal:

WASHINGTON NOTES

(By Solomon Dimond)

GOVERNMENT REQUIREMENTS CONTRACTS—SNARES FOR UNWARY CONTRACTORS

The increasing use by the Government of term requirements contracts has spotlighted new hazards for heedless Government contractors. Term requirements contracts for goods or services are used when the Government does not know what its requirements will be for any stated period of time,[1] but wishes to have a contractor commit himself to supply the Government's needs for that period at a fixed price. Ostensibly the Government commits itself to place all of its requirements for the specified goods or services with the contractor during the stated period. In discussing requirements contracts, the U.S. Court of Claims said: [2]

"Though this type of contract lacks the fixed and definable signposts of quantity which are ordinarily found in supply contracts, business necessities require that they be deemed enforceable."

The contractor gives a valuable consideration for the promise of performance on his part, which entitles him to a reasonable opportunity to make a fair profit. However, overzealous contracting officers, anxious to give the Government every advantage and with an utter disregard for "mutuality" can cause the entrapment of a contractor.

SNARE NO. 1

As an aid to the contractor in determining the quantity of goods or services he might be called on to furnish and to compute his price, the Government furnishes its quantitative estimate of requirement. Government requirements estimates are sometimes either deliberately or carelessly computed to the advantage of the Government and to the detriment of the contractor. In most instances, since the contractor cannot determine the Government's requirements, he has no way of knowing or ascertaining whether the Government estimate is realistic. However, to rely on the Government estimate could be fatal. The cemetery of defunct Government contractors has a good number of tombstones indicating the demise was due to a reliance upon Government estimates.

The Government view of the obligations to furnish correct estimates is illustrated by a recent decision [3] of the Comptroller General. The case involved a requirements contract for the removal of all trash from specified buildings for a period of 1 year. The Government estimated the number of cubic yards of trash which would be generated per month at each building. The bid invitation required the bidders to quote a lump sum monthly fixed price to perform the services. The contractor had no way of computing the amount of trash which would be generated in 1 month at each building and was forced to rely on the Government's estimates. Despite the fact that the Government concededly erred in its computation of the estimates, the Comptroller General refused to give the contractor any relief. The Comptroller General held that there could be no reformation of the contract because the mistake was "in the inducement of the contract and not in the drafting or execution of the contract."

Further "the contract as written expresses the true intention and agreement of the parties and the fact that the parties might have made a different contract had they known the true state of affairs is immaterial." The Comptroller General ignored the fact that the parties had intended the "estimate" to be a realistic one and that the contract as written did not represent the true intention and agreement of the parties. He likewise concluded that to have a reformation on the basis of misrepresentation or fraud, it must be based upon a failure of the contract, as written, to express the true intent of the parties. He placed great reliance on the fact that although the amounts indicated were "estimates," the dominant quantity was "all." There was, however, no recognition of the conceded fact that the estimates were based upon factual errors made by the Government. The contractor had no way of ascertaining the true facts and if he made an error, his error was in relying upon the Government's representations.

The Court of Claims takes the position that "where the understanding of the parties, as embodied in the language of the contract, is for the supplying of whatever amounts of goods or services the buyer may require, then the inclusion of a quantity estimate will not be viewed as anything more than a device to assist the parties in coming to terms." [4] The fact that quantities are set forth as "estimates" creates no obligation upon the part of the Government, absent bad faith, since the dominant measure is the Government requirements. The court contended that the Government could not give a guarantee or warranty as to any specific amount for the reason that "the exigencies of national security in today's world make the number of troops situated at any given installation subject to sudden, unexpected upward and downward fluctuations."

Yet the court failed to recognize that if the Government had no way of estimating the quantity, certainly a contractor would have less information on which to evaluate the future requirement.

In a classical situation of entrapment a contractor had a contract to remove "all" of the garbage as a particular Navy installation which had a population of about 500 men. The contractor had a pig farm and a sufficient number of trucks to give him a balanced operation. With the advent of the Korean war, the installation quickly expanded about tenfold and the contractor had more garbage than he could cope with, and pleaded for relief. Despite the fact that the Navy recognized the hardship and wanted to give the contractor relief, the Comptroller General held that the dominant measure was "all" and the contractor was stuck with his "bargain." While the U.S. Court of Claims has recognized the fact that some courts in the past have held this type of requirements contract invalid for want of mutuality, the current view is that they have mutuality of consideration and enforceable cross-promises. The court states that: "Their utility in the commercial world demands that they be recognized as binding." The unconscionable advantage given to the Government is obvious. But the greater fault is the likelihood that many unsuspecting contractors, not versed in the intricacies of the law, will be victimized because they ascribe significance to the inclusion of "estimates."

SNARE NO. 2

Gambling is a universal custom in which the participants are both willing to take a chance on a contingency, providing that neither party can influence the outcome. Requirements contracts are in effect wagering contract. Both parties assume that the contract price is a fair one and that the supplier of the goods or services will make a reasonable profit.

As the gambler would put it, the odds favor the Government. If the cost of supplying goods or services should rise (there is no ceiling to rising costs), the contractor is faced with an unlimited loss. On the other hand, if the cost of supplying goods or services should drop (there is a base to the dropping of costs), the contractor might enjoy a relatively small windfall.

The contractor must perforce rely upon the integrity and good faith of the Government. However, this reliance is on occasion misplaced. Government personnel, like their commercial counterparts, sometimes cannot resist the temptation to take advantage of the contractor. Although the requirements contracts are usually mandatory contracts, requiring the Government to order all of its stated requirements from the contractor, the Government has two escape routes. If the cost of goods has dropped, the Government can wait until the contract period has expired, and then buy at the lower price. In some instances, the Government has withheld placing orders and utilized its reserve warehouse stocks.

If there is a long waiting period, there is a built-in escape route. Tucked away in the "General Provisions" which are included in practically all Government supply contracts (goods and services) is a provision permitting the Government to cancel at will for its own convenience. If the price of the goods or services should drop, the Government can terminate the contract. Of course, the Government would be liable for termination charges. However, the Government would

Footnotes at end of speech.

probably accept and pay for what it had ordered, but undoubtedly would resist paying any termination claim on what it had not ordered. Since the requirements contracts generally are for staple items, it would argue that the Government had no fixed obligation to take any additional quantity of services or goods. It is clear that the contractor would lose his profit on the terminated portion of the contract. If the Government terminates a mandatory term supply contract, under the termination for convenience clause, and then reprocures from another source at a lower price, it should be considered as a breach of the contract, although a court might conclude that the Government was merely exercising a contract right when it terminated the contract.

The U.S. Court of Claims recently considered the problem of whether a contractor whose typewriter repair service requirements contract was terminated had a claim against the Government for breach of contract. The case[5] involved a contractor who was one of four contractors in the San Diego, Calif., area who were awarded identical typewriter repair service contracts. Government agencies in the area who had need for such services were required to utilize the services of any one of the four companies. The contract of one of the four companies was improperly canceled for default. The court held that the contract was breached and remanded the case to the Commissioner to determine the extent of damages. While the court recognized the difficulty in determining the amount of damages, it gave the Commissioner guidelines, by asking for findings on specific points.

However, the court intimated that if the Government enlarged its own repair facilities so that it had no further needs, the Government would have no obligation to the contractor since it no longer had requirements. This indicated view is manifestly unfair, for the contract required the contractor to maintain his facilities and to provide services at a fixed price for 1 year without any corresponding obligation upon the part of the Government to utilize those services merely because the Government during the contract year had expanded its own facilities so that it had no requirements. Under these conditions it would permit the Government to take advantage of the contractor by causing him to expend time and money and additionally have him keep his facility in a standby condition during the contract period, without any corresponding obligation on the part of the Government to utilize the contractor's services. It would be the same as getting the benefit of insurance without having to pay any premium for the protection.

A mandatory 1-year requirements contract for a staple chemical product was recently terminated by the Army for its own convenience. Subsequently, it alleged it had found another Government agency that had available material which it would acquire at a saving to the Government. The contracting officer contended that he was merely exercising a right afforded to him under the contract. The standard termination for convenience clause in the contract gives the Government the unilateral right to terminate its contract obligation, while requiring the contractor to stand ready to perform for the full stated period of 1 year. It would appear that the canceling of a requirements contract, not because there were no requirements, but to effect a saving by buying the requirements from another source, albeit a Government source, would be such an act of bad faith as to constitute a breach of contract. The Government would have been in a better technical position had it not canceled the contract, but merely did not order its requirements. It is the deprivation of the contractor's right to get orders for the Government's requirements which is the gravamen of his right to redress, and not the failure of the Government to place orders with him for its requirements. The latter involves the issues of administrative discretion and the meaning of the word "requirements." The unconscionable advantage given to the Government by permitting it to escape from its contract obligation can hardly be considered to give mutuality to the contract.

If the Comptroller General and the courts do not provide relief to entrapped contractors, and the Government persists in taking advantage of unwary contractors, it is up to Congress to see to it that the situation is rectified. If the Government were not involved, this might well be the sort of ethical situation which would get the interest of a better business bureau.

The New York Times Views House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. RYAN. Mr. Speaker, I want to call to the attention of my colleagues a New York Times editorial of May 8, 1961, which points up one of the issues which I raised in my remarks in this House on March 1, 1961.

The editorial follows:

"OPERATION ABOLITION"

The film entitled "Operation Abolition" is an official production of the House Un-American Activities Committee dealing with the demonstrations against it during hearings in San Francisco last May. It gives a misleading impression that the demonstrators were organized and directed by Communists as part of a campaign to abolish the committee—with the implication that all who opposed the committee are Communist-inspired. Defense Department purchases of prints for its libraries, and a great increase of its sales and public showings, make essential a full understanding of the film's accuracy and origin.

The pictures in the film feature almost exclusively the disorders that occurred. They give special prominence to the inexcusable disruptions at the hearing by a few Communists and others charged by the committee with being such. The fact is, however, that the demonstrators were almost entirely students who were peacefully, though noisily, protesting what they believed to have been the committee's unfair and unconstitutional conduct and its refusal to admit them to the hearing room packed with friends of the committee.

The only violence shown in the film is that of the police in ejecting many of the protesters from the city hall. But every one of the 64 who were arrested by the police has since been found innocent of wrongdoings by the courts. Neither the picture nor the commentary gives any firm evidence of Communist direction or control of the bulk of demonstrators, as is charged by members of the committee who appear on the film.

Not only is the film itself reprehensible, but so also is the way it was made and is distributed. It is composed of cuttings—chosen without regard to sequence—from pictures made by the broadcasting companies and subpenaed by the committee. These were turned over to a commercial company to make the film. More than 700 prints have since been sold by the company at $100 each. This whole un-American operation by the Un-American Activities Committee is evidence not of the need of its continuance but need of its abolition—a course we have urged before.

New York Mirror Portrays a Great American: Senator John O. Pastore, of Rhode Island

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an article appearing in today's New York Daily Mirror entitled "Immigrant Boy to U.S. Senator." The article is written by Ara Piastro and Harry Altshuler and is another in the series on eminent Americans of Italian extraction.

The immigrant boy who reached the position of U.S. Senator is none other than our beloved and very able Senator from Rhode Island, the Honorable JOHN O. PASTORE, who is a credit to America and a source of joy and honor to his Italian forbears. Those who are seeking to malign the good name of the Italian American community should study the career of a man like Senator PASTORE and his record of service to America, before they are ready to condemn a whole people because of the misdeeds of a few.

The article in the Mirror reads as follows:

IMMIGRANT BOY TO U.S. SENATOR

(By Ara Piastro and Harry Altshuler)

"Don't look at it as a 'hyphenated-American' story," said U.S. Senator JOHN O. PASTORE, Democrat, of Rhode Island, "It's just an American story. Nothing unusual about it. It happens all the time."

He was talking about his own career.

It isn't often, however, that boy orphaned at the age of 8 finances his own education, rises to the governorship of his State, and becomes a Member of the U.S. Senate.

PASTORE, born in Providence, R.I., on March 17, 1907, is the only man of Italian parentage in the Senate. He is conscious of the old world heritage, and proud of it—but he has never traded on it or tried to turn it into a political asset.

"Though I am very proud of my ancestral background and wouldn't allow anyone to belittle it," he said, "I feel wholly American. I wouldn't wear my heritage on my sleeve or attempt to enhance my career with it. My feeling is that it's not wise to fence yourself in with groupism, a form of self-segregation. In my State, with only a nominal population of Italian background, I had to be everybody's Governor—and I try to be everybody's Senator."

His father, Michele, came to this country as a young man from San Archangelo, near Naples. Here Michele married a young woman named Erminia, also from Italy. Together they sought in the new land the same shining light that brought so many others—"a better life."

Michele, a tailor, died at the age of 41, leaving his widow with five children to bring up. John was 8. Almost from the time he could walk, he learned to work. When he was going to grammar school he had errand-boy jobs after class. Through high school, he worked in jewelry shops and for a power company. It didn't appear to hurt his schooling; he was an honor student at Classical High School in Providence.

Impelled—he doesn't quite know why, it just seemed natural—toward the study of law, he took his law degree at Northeastern, a Boston-based university which at the time ran an extension division in Providence.

Getting involved in a political career seemed inevitable for him. He was intensely interested in government problems on all levels. He began to do a lot of public speaking because he enjoyed being with people. All of this catapulted him into the State assembly in 1934, when he was 27, and ever since then his career has been one of public service.

He was reelected in 1936; served as an assistant State attorney general for several years, Lieutenant Governor in 1944–45, and Governor from 1945 to 1950. In 1950 he went to the U.S. Senate.

He was married in 1941 to the former Elena Elizabeth Caito, and they have three children—John, Frances, and Louise.

As a legislator he prefers not to be labeled as specially interested in a particular field, but he admits a profound concern for what he calls "the consumer panorama." He thinks like an ordinary citizen, a consumer, and tries to represent that point of view on matters as varied as civil rights, naturalization, trade and the other things that affect the average family.

He is a member of the Joint Committee on Atomic Energy, the Defense, Appropriations, Interstate and Foreign Commerce Committees, and chairman of a subcommittee working out a new policy to help the textile industry.

He is busy enough—and sure enough of himself and his ground—so that petty prejudice against Americans of Italian birth or descent has never troubled him.

"As a people," he remarked, "we have withstood the vicissitudes of the ages; we are virile and strong enough to withstand this offending trivia which will wash away like footprints in sand. Let us not give it credence that it doesn't deserve. Within the scientific community, for instance, in the world of scholarship, music, art, also, in the courts where there are many judges of Italian ancestry, there is no such prejudice."

For himself, his area of concern is the problems of all people, because political life stands, in his estimation, next to the ministry as the human instrument for helping everyone.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Senator Edward D. Baker, of Oregon, a Civil War Hero and Friend of Lincoln, Killed in Battle of Balls Bluff, October 21, 1861

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mrs. NEUBERGER. Mr. President, one of the first and greatest U.S. Senators from my State was Edward Dickinson Baker, whose brilliant career was cut short by his tragic death nearly 100 years ago in the battle of Balls Bluff, Va., October 21, 1861. He was one of the first senior officers of the Union Army to die on the battlefield. In his honor and memory stands a statue of Baker in the Rotunda of the Capitol, which was placed there at President Abraham Lincoln's suggestion.

Born in England, Baker served as an Illinois lawyer and congressman and as a volunteer colonel in the Mexican War. He achieved fame as a trial lawyer in San Francisco and was elected by the Oregon Legislature to the Senate of the United States October 2, 1860. The "Grey Eagle" as he was nicknamed was considered one of the great orators of the 19th century. He died serving as a major general of volunteers.

It would seem particularly appropriate to honor Senator Baker on the 100th anniversary of his death in connection with the Civil War centennial. I have corresponded with the Post Office Department urging the Department to issue a special commemorative stamp in honor of this distinguished leader. I am hopeful this might be done. State representative Clinton P. Haight, Jr., who represents Baker County in the Oregon Legislature, has called this matter to my attention, and the Baker County Historical Society has also corresponded with me on this matter. The city and county of Baker in my State are named after this outstanding public figure.

Former Representative A. W. Lafferty of Oregon has written a penetrating biographical sketch of Senator Baker which appeared in the Sunday Oregonian of May 7, 1961. I ask unanimous consent that this article "Was Oregon's Hero-Senator An Alien?" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAS OREGON'S HERO-SENATOR AN ALIEN?
(By A. W. Lafferty)

In 1801 or 1811—the evidence is conflicting—a handsome manchild was born in London, England, to Edward Baker, a weaver by trade, and his wife Lucy Dickinson Baker.

He was their first born, and they named him Edward Dickinson Baker.

Charles Dickens, writing of our American statesmen, said Stephen A. Douglas was "a steam engine in breeches."

Today it may be said that Edward Dickinson Baker, a Civil War Senator from Oregon, was a human jet, who rose to immortality with the speed of spacecraft still in the making.

The Bakers, father, mother, and children, including Edward Dickinson, arrived in Philadelphia as immigrants in 1815, when the future Oregon Senator was either 4 or 14, depending on date of his birth.

Feeling his genius, young Edward lost no time. He attended public school, did homework at night, was a little later apprenticed as a student weaver to a Philadelphia textile mill, which would indicate he may have been born in 1801 instead of 1811.

In 1825 the Bakers moved West, first to New Harmony, Ind., for a year, then on to Bellville, Ill., where young Edward had the free run of a fine library owned by a former Lieutenant Governor of Illinois.

That was the first main source of young Baker's self-education, which was classical, broad, and deep.

In 1828 young Baker went to Carrollton, Ill., where, in 1829, he was admitted to the bar, "at 19," the biographers say, and soon married a widow lady, Mary Ann Lee, "10 years his senior." Mrs. Lee already had two children. Four more were born to the new union, and affectionately reared.

In 1837 Mr. and Mrs. Edward Dickinson Baker moved to Springfield, Ill., whereupon the lifelong friendship between Lincoln and Baker was formed.

Long before he was President, Lincoln named his first son, who died young and is buried in Springfield, Edward Dickinson Lincoln.

Baker's service in the lower House of Congress: One term from Springfield, 1845–47; one term from Galena, a different district, 1849–51. Baker was elected from the Galena district on 3 months' residence. The reason Baker went to Galena was that Lincoln, who served one term in the Congress, 1847–49, was still the incumbent when Baker got home from the Mexican War in 1848, and thinking Lincoln might desire a second term, which Lincoln didn't, Baker went to Galena, registered at a hotel, and was elected from there.

Col. E. D. Baker arrived in California in 1852, practiced law and was active in politics until February 1860, when he arrived at Oregon city, registered at the hotel, announced as a candidate for the U.S. Senate from Oregon, and was elected by Oregon's legislature 8 months later, October 2, 1860. He fell in battle at Balls Bluff, Va., October 21, 1861, a colonel in the Union forces, though he had not resigned his seat in the Senate.

There appears to be no record that either of Senator Baker's parents were naturalized before he was 21, if at all, or that he ever found the time, if it were necessary, to apply for formal naturalization. It may not have been called for. His early military service in the Black Hawk War, or early immigration laws, may have covered his case.

As to Senator Baker's birth date: A biography by John D. Baltz (1888), a citizen of Pennsylvania who served under Baker at Balls Bluff, recites that one of Baker's earliest recollections, which impressed Baker most, was his attendance as a child of 5 at the funeral of Lord Nelson, in London, which was in 1806. That would put Baker's birth date 1801.

James G. Blaine in his "Twenty Years in Congress" (vol. 1, p. 321), refers to the unproved Nelson funeral incident, as follows:

"From the far-off Pacific came Edward Dickinson Baker, a Senator from Oregon, a man of extraordinary gifts of eloquence; lawyer; soldier; frontiersman; leader of popular assemblies; tribune of the people. In personal appearance he was commanding, in manner most attractive, in speech irresistibly charming. He was born in England, and the earliest recollection of his life was the splendid pageant attending the funeral of Lord Nelson."

I express no opinion on Baker's birth date. I do say he never misrepresented anything. Nowhere do I find where Baker ever stated himself, or authorized anyone else to state, the date of his birth. He is immortal. Only his biographers, after his death, some of them, stated that Baker was born February 24, 1811, and that is generally accepted.

I may say that many were the remarks, in Oregon, and in the Senate, that Baker "looked much older than his years," which was attributed to his severe illness in Panama before his arrival in California.

In the Senate, where Baker was sworn in December 5, 1860, at only 49 if he were born in 1811, he was gray, and mature, and his colleagues affectionately nicknamed him "Grey Eagle."

Lincoln attended Baker's memorial services in the Senate late in 1861, and sat sorrowfully in front of the Vice President's podium.

On his way to Washington as Oregon's Senator, Baker spoke in the American Theater, San Francisco, the night of October 26, 1860.

His opening sentence was:

"I owe more thanks than my life can repay, and I wish all Oregon were here tonight."

The space immediately under the Capitol's dome is known as the Congressional Hall of Fame.

By act of Congress, passed soon after the Civil War, Baker's life-sized statue was placed in that rotunda. Baker's is the only life-sized statue of a person from west of the Mississippi River so far admitted to the Congressional Hall of Fame. Also in that sparsely filled rotunda are the life-sized statues of only seven others: Washington, Hamilton, Jefferson, Jackson, Lincoln, Grant, and Garfield.

Communism: Our Active Enemy

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by Janet Schick, a student of Richmond High School. This essay was

published in the April 16, 1961, issue of the Palladium-Item and Sun-Telegram, of Richmond, Ind.:

(By Janet Schick, Richmond High School)

In the beginning, Eve plucked an apple from a sinful tree and gave it to Adam. Then God grew wrathful with them, and they walked in His grace no more.

Thousands of years later, a man without sin stood on a mountainside near Jerusalem and said to His disciples, "Beware of false prophets who come to you in sheep's clothing, but inwardly they are ravening wolves. Ye shall know them by their fruits."

Today, trees laden with their corrupt fruits are flourishing. Silent, unseen flocks of wolves in sheep's clothing are lurking everywhere in the world, everywhere in America.

Immediately we ask ourselves, "Are we in America being tricked by this guise?"—for our future lies in the answer. First of all, we Americans seem to think that communism without Russia is an acceptable thing. We don't realize that Communists are more than native Russians, Cubans, or Chinese; they are the men who plan in secret rooms today's hatred and tomorrow's wars.

ALL AROUND US

They are the men standing in the shadows behind kings, presidents, and dictators. They speak in languages of the past, the present, and the future. They are all around us, but we will know them by their fruit.

Secondly, the United States believes it has an impregnable front against communistic infiltration. In reality, communism is threatening us and we don't see the danger signals. The "Star-Spangled Banner" is not as popular as some well-known advertising jingles.

Every time your watch ticks off 12 seconds, a major crime is being committed in the United States. In June of 1958, Nikita Khrushchev told of the communistic goal to have our grandchildren under the communistic power. Yes, we are being warned; we must take notice.

Thirdly, the Communist Party in America has been revitalized. While duping us with clever propaganda, it is starting new campaigns for infiltrating our Government, our industries, our school systems, and most important, our youth through church and civic organizations. Supreme efforts are being to ban our nuclear weapons tests. Minority and majority groups are being set up to fight each other.

SWEEPING NATION

Oh, yes, this Red WAVE is sweeping across our Nation. Its weapons of deceit, duplicity, division and disunity are battering at our door. Its workers are sowing seeds of destruction among the innocent, ignorant, and the indifferent. How will we know them? Christ told us 2,000 years ago, "Ye shall know them by their fruits."

We have one last question to ask. What are the fruits of communism? The victims of its terrible onslaughts would have many answers. "Death," Hungary would cry, weeping for its lost loved ones. "Famine," the Russian peasants would wail, looking for garbage in the streets.

The brainwashed postwar victims would groan, "Torture." The ex-dictators of Latin America would sigh, "Corruption." J. Edgar Hoover, in his famous speech about crime and communism in America, stated: "No matter how enticing the mask it wears, no matter how seductive its promises, the fruits of communism are inescapably and inevitably evil."

Truly, if communism succeeds in its efforts to pit race against race, nation against nation, world revolution will be its final, most bitter fruit.

Seizure of Katanga President Moise Tshombe

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. BRIDGES. Madam President, an editorial entitled "Congo Treachery," which appeared in the May 10 edition of the Chicago Daily Tribune, is a very significant commentary in my estimation on recent events in one of the world's chronic sore spots.

The editorial provides a provocative analysis of the recent seizure of Katanga President Moise Tshombe and focuses attention on the far-reaching implications of this act.

I believe the views expressed are worthy of widespread attention, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGO TREACHERY

Moise Tshombe, president of Katanga, ran the only orderly and thriving provincial government in the chaotic Congo. At a conference in neutral Madagascar, he produced a plan for confederation which promised stability for the whole country. A second conference opened late last month at Coquilhatville, under the control of the Congo's central government, to work out the details.

When Tshombe decried the subservience of his fellow administrators to the United Nations and attempted to leave the conference, he was seized by troops of the Leopoldville regime. Now it is announced that he is to be tried for treason and a variety of other offenses, among them the assassination of the unlamented Patrice Lumumba, the original pro-Communist premier.

Seven U.S. Senators, protesting the arrest, have called upon the United Nations to procure Tshombe's release. This group argues that Tshombe WAS cloaked in the immunities of a negotiator for peace and that his arrest violates good faith. The U.N. maintains a so-called peace force in the Congo, and the Senators argue that it is duty bound to intercede for the Katanga leader.

To find a parallel to the treacherous arrest of Tshombe, it is necessary to recall the Soviet invitation to 16 Polish leaders to come to Moscow early in 1945 to consult about the future Polish Government. They were promised personal safety, but, after they entered Russia in March, nothing was heard of them. Five weeks later Moscow announced they had been imprisoned.

Although the United States is paying the greatest part of the whole U.N. bill in the Congo, it is idle to expect U.N. to do anything for Tshombe unless the Washington administration puts on the pressure. The U.N. is seeking its own mysterious neutralist ends in the Congo, and its boss, Rajeshwar Dayal, an agent of Premier Nehru of India, has been hostile to Tshombe, and indeed to any Congolese, who has his own ideas of putting the country in order.

Because Tshombe had the good sense to utilize Belgian administrators in industry, to rely on Belgian political advisers, and to support his 10,000-man army with a core of white mercenaries, there have been frantic U.N. demands to run the Belgians out. His Government undoubtedly had something to do with the removal of Lumumba, for which it deserves a vote of thanks, but the death of this prophet of Marxian confusion brought bellows of rage from the Soviet Union, which has systematically employed every means of promoting chaos in the Congo.

The neutralization of Katanga through the seizure of its leader, to be followed predictably by his execution if the United States does not take firm action to save him, will hasten the process of violence and dissolution which the Communists have been stimulating in anticipation of a takeover.

The question is whether Mr. Kennedy will realize that without this pro-Western leader and his center of order in the midst of anarchy the Congo may well be added to the recent disasters in Cuba and Laos. Can Mr. Kennedy afford that?

WGY Radio and WRGB–TV of Schenectady Undertake a Public-spirited Campaign To Stimulate Buying in Upstate New York

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. STRATTON. Mr. Speaker, everyone is agreed that at least one part of the answer to our current economic recession lies in stimulating the purchase of needed commodities, especially in those cases where an individual may have the necessary funds on hand but may simply be holding back momentarily. In an effort to stimulate such purchases, for example, President Kennedy recently directed the early distribution of dividends from veterans national service life insurance policies.

In that connection I was pleased the other day to read of a public service drive recently started in my home community of Schenectady by one of our leading radio and television stations, WGY–WRGB, the stations of the General Electric Co., to stimulate our economy by making purchases now rather than deferring them.

Under leave to extend my remarks, I include the text of several of the public service announcements over radio and television used in this public service campaign.

The announcements follow:

WGY "BUY NOW" CAMPAIGN No. 1

(Sixty-second announcement)

It is smart to have a rainy-day fund, and it is necessary to save for future educations, major purchases, and those private little retirement dreams. However, if you have been saving for a major purchase now is the time to make it. It is a buyer's market for everything from automobiles, to appliances, to new homes, and homefurnishings. So, if you can afford that major purchase now, make it now. You will personally save many dollars on your purchase and at the same time you will be injecting a shot of economic adrena-

lin into the current sagging marketplace. Every purchase you make helps preserve or create another job. The more people employed, the sounder the economy, the sounder the economy, the sounder the community. So WGY offers this advice: If you can afford it now, and need it now, buy it now. It is a buyer's market.

The headlines shout unemployment, recession, economic slump, and poor business barometer. But the fact remains, that in practically all communities savings deposits are at an alltime high. How come? It's simple. The people who have been saving money for major purchases—a car, a home, new furniture, new clothes, and so on—are simply not buying. The result, more unemployment. What's the solution? Simply this: If you've been saving money to make a major purchase, and you need that article, now is the ideal time to buy. It's a buyer's market. You're the boss. Your local retailer is offering the best possible deal and the best possible service to keep his merchandise moving. Shop carefully, wisely, you'll not only save on your purchase, but dollars you do spend will contribute heavily toward boosting the present day sagging economy, WGY says: If you can afford it, and need it now, buy it now.

The big game hunter is a choosy hunter. He doesn't knock over the first elephant, lion or tiger that happens in his path. He waits for the right season, he stalks his trophy, and then he strikes. You can play at this game, too, when making that major purchase of an automobile, furniture, a home, or similar item. The market is right, a buyer's market, perfect for the smart shopper. So, if you've been putting off that purchase waiting for a better time, better get on your hunting shoes now. Retailers, salesmen, and agents are at your service with the best possible prices. But remember, it's a buyer's market. So hunt wisely, compare prices, values, features, and service warranties. Major appliances, furniture, automobiles and homes are the biggest targets today. Trot out that economic weapon known as cash, and get your trophy at big, big savings. You'll enjoy the hunt, your community will enjoy a healthier economy.

Good old-fashioned thrift makes good old-fashioned commonsense. And although you may not realize it, spending as well as saving is a part of being thrifty. Right now you the buyer, are boss in the marketplace. And if you can afford it now, buy it now. You'll get the best possible deal on clothing, furniture, appliances, automobiles, or new homes. You'll buy at big savings, and at the same time, give our sagging economy a well-needed shot in the arm. Spending when prices are right is the smart way to save. So, think about it, now is the time to make that important purchase, if you can afford it now, and need it now, buy it now. It's a buyer's market, and you, the buyer, are the boss. Your local retailer, automobile dealer, and building contractor is offering you red carpet service, and the best deals that they've been able to offer in many years.

WRGB "BUY NOW" CAMPAIGN

Good old fashioned thrift makes good old fashioned commonsense. And although you may not realize it, spending as well as saving is a part of being thrifty. Right now, you the buyer are boss in the marketplace. And, if you can afford it now, buy it now.

You'll get the best possible deal on clothing, furniture, appliances, automobiles or new homes. You'll buy at big savings, and at the same time, give our sagging economy a well-needed shot in the arm. Spending when prices are right is the smart way to save.

So, think about it, now is the time to make that important purchase * * * if you can afford it now, and need it now, buy it now.

It's a buyer's market, and you, the buyer, are boss. Your local retail automobile dealer and building contractor are offering you red carpet service * * * and the best deals that they've been able to offer in many years.

The big game hunter is a choosy hunter. He doesn't knock over the first elephant, lion, or tiger that happens in his path. He waits for the right season—he stalks his trophy—and then he strikes. You can play at this game, too, when making that major purchase of an automobile, furniture, a home or similar item.

Trot out that economic weapon known as cash, and get your trophy at big, big savings. The market is right, a buyer's market, perfect for the smart shopper. So, if you've been putting off that purchase waiting for a better time, better put on your hunting helmet now.

Retailers, salesmen, and agents are at your service with the best possible prices. But, remember, it's a buyer's market. So hunt wisely, compare prices, values, features, and services warranties. Major appliances, furniture, automobiles, and homes are the biggest targets today. You'll enjoy the hunt, your community will enjoy a healthier economy.

Atlanta Journal Opposes Civil Rights Proposals

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. TALMADGE. Mr. President, the Atlanta Journal in its lead editorial of May 9, 1961, forcefully emphasizes the great damage which would be done to harmonious race relations by the enactment or serious consideration of the drastic and far-reaching civil rights proposals which have been introduced by the junior Senator from Pennsylvania [Mr. CLARK] and the Representative from New York [Mr. CELLER]. This outstanding metropolitan daily in stating its opposition to these proposals correctly points out that social progress should be a matter of evolution rather than revolution. Its position is an accurate assessment of the feeling of the overwhelming majority of Southern people, and I ask unanimous consent, Mr. President, that the text of the editorial entitled, "Too Much, Too Soon," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOO MUCH, TOO SOON

The civil rights proposals adopted last summer at the Democratic convention in Los Angeles have turned up in Washington as legislation to be acted upon by Congress.

Time neither has mellowed them nor added to their charm. And while these proposals may please the idealists and theorists and be useful as vote catchers in some States, as practical matters they won't all work.

The six-point program was drawn up by Senator CLARK, of Pennsylvania, and Representative CELLER, of New York, two Democrats who have nothing to lose and much to gain, including reelection, by pushing the plan.

The most troubling provision here and now, where we already have more troubles than we can say grace over, is the plan to compel every board in the country operating segregated schools to file a desegregation schedule within 6 months after the measure becomes law and start actual desegregation by 1963–64.

This disregard for local customs and traditions and the cold realities of the situation may be only a bit of political cynicism useful for bargaining with southern conservatives over other questions.

But if it is sincere, the administration's domestic intelligence is every bit as faulty as that which caused the Cuban fiasco.

This is pushing the revolution too far and too fast at a time when evolution should be the order of the day. Adoption, or even a serious effort to press this legislation, would reopen old wounds and make even more difficult the sort of progress being made now.

Small Businessmen Oppose Postal Rate Increase

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. GROSS. Mr. Speaker, I call to the attention of my colleagues the following text of a news release issued this date, May 11, by Mr. George J. Burger, vice president of the National Federation of Independent Business:

George J. Burger, vice president of the National Federation of Independent Business, today sent the following wire message to the Honorable TOM MURRAY, Democrat of Tennessee, chairman of the House Post Office and Civil Service Committee, opposing any postal rate increase at this time which would place an added burden on small business throughout this Nation.

The full text of Mr. Burger's message is as follows:

"MAY 11, 1961.

"Hon. TOM H. MURRAY,
"*Chairman, House Post Office and Civil Service Committee, House Office Building, Washington, D.C.*

"Nationwide poll of federation small-business-and-professional man members during April 1961 discloses 72 percent oppose increasing first-class mail rates to 5 cents and airmail rates to 8 cents.

"This poll was taken among our 166,003 individual, directly supporting members (this total has since increased) as of that period, business and professional people located in all but a very few of the Nation's 439 congressional districts. Results announced in this message are based on verified records of signed ballots which they sent directly to their Congressmen at Washington, D.C.

"These independents are heavy users of first-class and airmail in their operations. Their opposition is based primarily on the conviction, founded in their practical daily business experience, that postal rate increases in these categories, such as have been proposed to your committee, can but add further to their overhead burdens, and by further tightening their cost-price squeeze make it more difficult for them to continue in operation.

"In line with outcome of this poll we urge you to turn down proposals you have been given for increases in first-class and airmail rates specifically, and any other increases which would add further cost burdens on the backs of struggling independents.

"Let us remind you that President Kennedy recently declared that the small business sector of the economy has to be sustained and broadened if the Nation is to achieve the growth rate it must have to maintain employment and national strength.

"Will you kindly make this message a part of the records of your hearings?"

Secondary Education Lag and Medical Problems in the Congo

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the two articles written on problems of the Congo, which have appeared in the Sioux Falls (S. Dak.) Argus-Leader.

One of the articles is written by Mr. John A. Kennedy, publisher of the Argus-Leader, and the other is written by Mrs. Kennedy, president of the Argus-Leader.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SECONDARY EDUCATION LAG DULLS HOPES FOR FUTURE

(John A. Kennedy, publisher and editor-in-chief of the Sioux Falls Argus-Leader, and Mrs. Kennedy just concluded a stay in the Congo and compared conditions in that strifeworn land with what they observed in traveling in five of its six provinces for nearly 2 months in 1959.)

(By John A. Kennedy)

LEOPOLDVILLE, CONGO.—Two years ago in Elisabethville, Mrs. Kennedy and I visited a native Congolese grammar school. It was of the 4-year variety but had students varying in age from 8 to 25.

Its director complained of a serious problem—the older students, when they finished, didn't want to go to secondary school. Because of their age they felt they should be able to enter universities and colleges on graduation from their present status—the equivalent of completion of the sixth or seventh grade in the United States.

The lack of a system with sufficiently high standards in the secondary schools is the worst problem facing the future of the Congo according to Msgr. L. Gillon, president of Louvanium University at Leopoldville.

"The aid which countries abroad must give the Congo is first and foremost a direct effort in the development of secondary education," he said. "In the immediate future, this aid must be that of providing this country with secondary schoolteachers and helping it to train its own teachers for this level of education."

FEW GRADUATES

At the present time the Congo has four universities getting started but it is having difficulty filling the halls and residences because of the lack of qualified secondary school graduates.

Primary education was being hastily pushed by the Belgians in the few years prior to independence—but unfortunately too little and too late.

There were approximately 1,500,000 students in schools before the chaotic independence of last July but more than 900,000 were in the first two grades and of this number, only 300,000 were in the second grade.

Again quoting Monsignor Gillon, "Some countries, such as Ghana and Nigeria, see their universities refusing qualified students because their secondary schools turn out more young people than can be absorbed by their national universities.

"Our situation here at Louvanium is that we could take in a far greater number of students than we are admitting because the secondary schools are not preparing them in sufficient numbers."

Dr. M. Dartique, vice president of Louvanium, pointed out that for the year 1959–60, there were only 13,400 students in the secondary schools in the whole of the Congo of which only 9,000 were natives and 4,000 Europeans. Only 8 percent of these were in the upper two classes.

Ninety-five percent of the schools are run by Catholic and Protestant churches. They are subsidized by the Government.

Like in other basic civic housekeeping the European teachers fled the Congo in droves when the independence riots got underway, but about 1,200 already have returned.

RETURN FORECAST

Dr. Dartique feels that by August 1961, if the general situation quiets down, they will have approximately 80 percent of the Belgian teachers back.

"But that doesn't solve the problem," he explained. "We must have trained native teachers and the only place we can get them is through first having good secondary schools to produce able students in our pedagogic institutions who can learn to teach the Congolese children."

U.S. Ambassador Clark Hayes Timberlake is suggesting that American colored families take Congolese primary school graduates into their homes so that the youngsters can attend American high schools.

This move may get some important backing, but other experts here raise the question, would these returning natives become dissatisfied with their lot at home. And in addition they might not be able to pass the rigid Louvanium University entrance requirements by merely getting a minimum diploma from some of our American high schools.

ANOTHER PROBLEM

Education of girls is another problem in some parts of the Congo—and in many other parts of Africa.

Here in Leopoldville 2 years ago they told us the story of a 12-year-old miss, the daughter of a plantation worker who had agreed to let his daughter attend a boarding school.

She was to return to her parents' wattle hut on weekends. In school she was taught to use plates, cups and saucers, knives and forks.

After the first weekend at home, she seemed more reluctant to enjoy the new tools of her school dining room.

After the second weekend the child did not return.

School social workers visited the parents—they thought they found the answer—"We don't need these fancy tools," the father said. "We have been getting along very well the way we have been living."

That may not be the full answer, but it's one of the problems of educating the women natives.

DOCTOR SELDOM CALLED TO ASSIST AT BIRTH OF NATIVE

(John A. Kennedy, publisher and editor-in-chief of the Sioux Falls Argus-Leader and Mrs. Kennedy just concluded a stay in the Congo comparing conditions in that strifeworn land with what they observed in traveling in five of its six provinces for nearly 2 months in 1959.)

(By Bruce Lee Kennedy, president of the Sioux Falls Argus-Leader)

LEOPOLDVILLE, CONGO.—They brought a 14-year-old half-paralyzed youngster into native Katambo hospital the other day. A cursory examination revealed the child was suffering from polio.

Nine others were already in a ward in this institution, one of the two in Leopoldville taken over and operated by the Congolese last summer.

"What are you doing for these children?" Sister Eloardo, the medical Sister Superior, was asked.

"All we can do is put them to bed and hope this is not the start of a polio epidemic because we have no vaccine and have only very limited technical facilities for treatment, and very few doctors, technicians, and nurses."

SANITARY CONDITIONS DETERIORATE

Sanitary conditions in the Congo have disintegrated terribly—the Belgians used to spray for mosquitoes twice a week with helicopters, and three times a week during the rainy season. Additional spray tanks roamed the street, taking care of lawns and gardens to curb the rise of mosquitoes and the dreaded tsetse fly in the swamps. A little spraying was being done a few weeks ago but this too has vanished for lack of equipment and material.

The Sister's worry could be a genuine one for only a small percentage of the sick people come to the hospital and then only as a last resort—whether because of fear, ignorance or superstition, I could not find out.

It was our last day in the Congo. I tried to contact Dr. M. Bellerive, World Health Organization chief sent by the U.N. as senior consultant after the collapse of civilian government with the advent of independence last July. He was away from the headquarters until after 7.

SCHEDULE INTERRUPTS STUDY

Our plane left at 6:30 so I couldn't find out how widespread polio had developed and whether the Sister's concern of its possible epidemic proportions was justified.

Katambo is a cluster of many one-story buildings, started by the Belgians years ago as one of a variety of hospitals and dispensaries which they had spread throughout the six Provinces of this now-troubled land.

We visited many of them when we were in the interior in 1959.

I made my tour with Mrs. Clare Hayes Timberlake, wife of our Ambassador. She is "Julie" to the nuns and to the many native assistants who greeted her warmly. She works there every Monday morning, bathing babies, changing their umbilical cord dressings and assisting in every way possible. Her German pediatric nurse does the same on Wednesdays.

Mrs. Timberlake devotes an additional two afternoons each week teaching English in a secondary school.

Sister Eloardo greeted us even before she had time to wash the blood from her hands as she had arrived just after she had assisted with two Caesarean deliveries.

She took us into classrooms where 29 students between 14 and 17 years of age were learning to be assistant midwives. They have to take them at that age as otherwise the girls would be married.

MIDWIVES ASSIST DELIVERY

All babies are delivered by midwives here. If a doctor is called to the maternity section, it is to do some repairing on a patient who is badly torn.

Only about 25 percent of the Congolese women come to the hospital to have their babies. To our eyes this one seemed quite unsanitary and of very low standard but it is far superior to giving birth to a baby in the bush.

Most maternity cases are kept in the hospital for a week—at least until the baby's cord is healed so as to prevent infection that could develop after they return to their primitive wattle huts.

MOTHERS WALK TO THEIR BEDS

After the birth in the maternity room the mothers walk to their beds in a nearby ward, taking their babies with them. There is a bassinette at the foot of each bed but as I walked around the wards, I didn't see a single baby in its bassinette—they were all in bed with their mothers.

The student midwives wore short white uniforms, sandals and blue bandanas. Both their uniform and the bandana were embroidered with EAL, for "École Assistantes Accoucheurs." One girl's uniform was very soiled and the Sister reported that it was almost impossible to teach them cleanliness.

"COULD HAVE SAVED HER"

I saw a 1-day-old baby whose mother died having her eighth child. She had been in labor for 24 hours when she arrived at the hospital and then was near death. "We could have saved her," Sister Eloardo said, "if she had been brought to us earlier." She felt the chances are the baby will not live as there will be no one to feed and nurse him.

In one of the wards there were about 40 children with various illnesses. Many of their mothers were with them as well as their brothers and sisters who had no one to care for them at home—some were crawling around the floor.

The screens on the windows had many big holes made by patients or parents who wanted to get back to their families or friends. It was impossible to keep the screens repaired so there were many flies, and some mothers were fanning them away from their sick children.

In the kitchen, six men, dressed in khaki aprons, were preparing lunch for 387 patients registered that day.

There were three Africans, dressed in white in the sterilizing room and I peeked into two operating rooms where European surgeons were at work. Two of them had red crosses on their uniforms.

LAUNDRYMEN STRUCK

In the laundry and sewing room, men were doing the work. Sister Eloardo said the laundrymen struck the week before. They wanted to work from 7 a.m. until 2 p.m. She said those hours were impossible as the clothes would not dry in that time and if left unironed would mildew. There were huge washing machines but no dryers.

We met the new superintendent who was in an air-conditioned office, the only cool room in the hospital. He was a very young Congolese and had no medical experience.

I left feeling grateful that the hospital had the wonderful Belgian sisters who dedicated their lives to helping the sick of the Congo.

SS "Hope I"

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. DERWINSKI. Mr. Speaker, at the present time the SS *Hope I* is in Indonesia displaying the advancement and benefits of the American medical world to people in that part of the globe. I am especially pleased to note that two Chicago area people, Dr. Stanley Hellman, a dentist, and Miss Charlotte Roller, a medical secretary, are presently serving.

The Chicago Daily News, in an article May 3, 1961, described in a most interesting fashion some of the latest experiences of staff members of the SS *Hope I*. I believe this article is an appropriate item for study in the CONGRESSIONAL RECORD:

[From the Chicago Daily News, May 3, 1961]

BACKWARD NATIONS ARE PORT FOR FLOATING YANK HOSPITAL—SS "HOPE" SERVES AS TEACHER TO THE WORLD'S MEDICS

(By Georgie Anne Geyer)

Many think the most interesting hospital in the world today is a former Navy hospital ship that sails with the winds of change.

It is Project Hope, a privately sponsored floating medical school serving the underdeveloped nations of the world in the name of concerned Americans.

Slight, easy-smiling Dr. Jack Tetirick, of Columbus, Ohio, was one of the first concerned Americans to go aboard.

Djakarta, Bali, the storied islands of Indonesia, where Western conquerers and adventurers once sailed, Dr. Tetirick and his medical colleagues on the SS *Hope* sailed last fall bringing the newest medical techniques.

"The Indonesian doctors are very sophisticated," Dr. Tetirick said on a stopover in Chicago. "For instance, they do heart surgery, but certain things like vascular surgery they've read about but never seen.

"So we were able to show them.

"The *Hope* is, of course, primarily a teaching venture," he said.

"We televised operations aboard the ship into classrooms—operations that the doctors had never seen before.

One day the Russian Ambassador came aboard. When he saw 300 Indonesia doctors sitting in this ship watching an operation by TV, he looked a bit unhappy.

"When the *Hope* left, four Russian surgeons suddenly appeared in Djakarta to help the Indonesians."

Dr. Tetirick joined the ship on its first voyage last September. Aboard were 18 doctors, 20 nurses, a medical crew of 60 and a crew of 150. Indonesia was its first stop.

For the medical contingent aboard this meant no pay. It meant leaving wives, families, and practices for 2 months.

The idea for SS *Hope* originated from a private source, but the U.S. Government donated the former Navy hospital ship. Industry, labor, medicine, the public and the host country share the $3,500,000-a-year costs through the People to People Health Foundation in Washington.

Dr. Tetirick is a member of Lions International, which has shown great interest in the project.

Local committees in Indonesia met before the ship arrived to select cases to be treated aboard the *Hope*.

American doctors then reviewed the cases "to be sure the wealthy doctors didn't pack the ship with rich patients."

Relations between the two peoples were excellent, he said. Americans were charmed by the Indonesians in addition to being aghast at their cleanliness.

"We soon ran out of water aboard, because they were always taking showers."

From the capital of Djakarta, the ship sailed to remote and fabled Bali. Here several sturdy midwives from Kentucky's tough pioneer Frontier School of Nursing held a meeting with the local Dukens, semiwitches who deliver children.

"They got along fine," Dr. Tetirick said. "The Dukens tried hard to impress the midwives with how modern they were."

"We found the Indonesians really like the American people," Dr. Tetirick said. "They even like rock and roll. They call it folk music. But they criticize any outside control of their resources."

"The *Hope* only goes where it's asked," he added. And already it is booked into various other Southeast Asian countries.

As soon as Dr. Tetirick got home, his partner, Dr. W. M. Hayes, went aboard. And, as the SS *Hope* is steaming ahead now to Singapore to reload, hundreds of others are joining to keep it sailing.

The Need for Tax Reform

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "The Need for Tax Reform," which appeared in the Shelbyville (Ind.) News, April 19, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NEED FOR TAX REFORM

The recent Federal income tax deadline should make all of us more painfully aware of one of the most pressing needs of the American economic system: tax reform.

As we and many others have said before, the present tax structure is self-defeating. It is hampering the economic growth that is needed to provide jobs, the growth that is needed to benefit everyone.

Now that the so-called recession is apparently nearing its end, this is a good time for each of us to make the point that a complete overhaul of the tax system could provide an effective deterrent to any future business slump. Our Members of Congress should be told how we feel about this.

The arguments in favor of tax reform are many and varied; and all are valid.

For example, take unemployment. Its high rate was one of the key barometers during the recent slowdown in industry. It is important that the number of jobless be kept at a minimum.

But the creation of new jobs costs money in the form of investments (anywhere from $10,000 to $20,000 per job). And the fact is that the present high personal burden prevents many Americans from saving their funds and investing in private ventures.

Or consider the matter of depreciation. The current long-term writeoffs discourage firms from replacing obsolete equipment with the modern machinery America needs to meet foreign competition.

As recently pointed out by the U.S. Chamber of Commerce, it is ironic that the United States is the most backward of all leading industrial nations in this matter of depreciation. The more flexible systems prevailing in such once war-devastated countries as West Germany, Japan, Italy, and Britain have enabled them to become major competitors of this country in world markets.

At the present time, it appears that neither the administration nor a majority of the Members of Congress expects to seriously consider any major tax reform program this year, although the urgent need for such a program should be well known to all.

Comprehensive tax reform legislation already has been introduced in Congress in

the form of the Herlong-Baker bills, which would provide for a gradual 5-year decrease in both personal and corporate levies. Such legislation is not only needed now—the need will become increasingly great in order to provide the job demands for the record numbers of men and women who will enter the labor market in the next decade.

It is very difficult to understand why both the administration and the Congress seem unprepared to act for major Federal tax reform now. Lengthy and comprehensive studies have been completed. Legislation has been introduced. Why further delay?

Address by Newton N. Minow, Chairman, Federal Communications Commission, to the 39th Annual Convention of the National Association of Broadcasters

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. AVERY. Mr. Speaker, under unanimous consent I am inserting an address by Newton N. Minow, Chairman of the Federal Communications Commission to the 39th Annual Convention of the National Association of Broadcasters meeting here in Washington this week.

This is the first time Chairman Minow has spoken directly to the broadcasting industry since his appointment last January. There has been considerable concern, if not apprehension, as to his real philosophy in respect to broadcasting program control by the Federal Communications Commission. Although the Federal Communications Act of 1934 contains a direct prohibition against censorship, there are many ways that the industry can be induced to conform to a prescribed program pattern through administrative control under existing law. The remarks of Mr. Minow yesterday are generally along lines that would not be objectionable to a viewer or a licensee, or even to a Member of Congress. However, when this statement is read in connection with other statements made by the Chairman I want to again express my concern, Mr. Speaker, over the extent that the Commission, under Mr. Minow's chairmanship, may go into the field of program control.

In previous correspondence, Mr. Minow has generously documented what he believes to be the Commission's right to intervene into broadcast programing; and that documentation would no doubt stand. It is more the philosophy of Mr. Minow as reflected by Commission action that continues to concern me and, I think, the broadcasting industry as well.

Mr. Minow's address follows:

ADDRESS BY NEWTON N. MINOW, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION, TO THE 39TH ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION OF BROADCASTERS, WASHINGTON, D.C., MAY 9, 1961

Governor Collins, distinguished guests, ladies and gentlemen, thank you for this opportunity to meet with you today. This is my first public address since I took over my new job. When the New Frontiersmen rode into town, I locked myself in my office to do my homework and get my feet wet. But apparently I haven't managed to stay out of hot water. I seem to have detected a certain nervous apprehension about what I might say or do when I emerged from that locked office for this, my maiden station break.

First, let me begin by dispelling a rumor. I was not picked for this job because I regard myself as the fastest draw on the New Frontier.

Second, let me start a rumor. Like you, I have carefully read President Kennedy's messages about the regulatory agencies, conflict of interest, and the dangers of ex parte contacts. And of course, we at the Federal Communications Commission will do our part. Indeed, I may even suggest that we change the name of the FCC to the "Seven Untouchables."

It may also come as a surprise to some of you, but I want you to know that you have my admiration and respect. Yours is a most honorable profession. Anyone who is in the broadcasting business has a tough row to hoe. You earn your bread by using public property. When you work in broadcasting you volunteer for public service, public pressure, and public regulation. You must compete with other attractions and other investments, and the only way you can do it is to prove to us every 3 years that you should have been in business in the first place.

I can think of easier ways to make a living. But I cannot think of more satisfying ways.

I admire your courage—but that doesn't mean I would make life any easier for you. Your license lets you use the public's airwaves as trustees for 180 million Americans. The public is your beneficiary. If you want to stay on as trustees, you must deliver a decent return to the public—not only to your stockholders. So, as a representative of the public, your health and your product are among my chief concerns.

As to your health. Let's talk only of television today: 1960 gross broadcast revenues of the television industry were over $1,268 million; profit before taxes was $243,900,000, an average return on revenue of 19.2 percent. Compared with 1959, gross broadcast revenues were $1,163,900,000 and profit before taxes was $222,300,000, an average return on revenue of 19.1 percent. So, the percentage increase of total revenues from 1959 to 1960 was 9 percent and the percentage increase of profit was 9.7 percent. This, despite a recession. For your investors, the price has indeed been right.

I have confidence in your health, but not in your product. It is with this and much more in mind that I come before you today.

One editorialist in the trade press wrote that "the FCC of the New Frontier is going to be one of the toughest FCC's in the history of broadcast regulation." If he meant that we intend to enforce the law in the public interest, let me make it perfectly clear that he is right—we do.

If he meant that we intend to muzzle or censor broadcasting, he is dead wrong.

It would not surprise me if some of you had expected me to come here today and say, in effect, "Clean up your own house or the Government will do it for you." Well, in a limited sense, you would be right—I've just said it. But I want to say to you earnestly that it is not in that spirit that I come before you today, nor is it in that spirit that I intend to serve the FCC.

I am in Washington to help broadcasting, not to harm it; to strengthen it, not weaken it; to reward it, not punish it; to encourage it, not threaten it; to stimulate it, not censor it. Above all, I am here to uphold and protect the public interest.

What do we mean by "the public interest"? Some say the public interest is merely what interests the public.

I disagree.

So does your distinguished president; Governor Collins. In a recent speech he said, "Broadcasting to serve the public interest must have a soul and a conscience, a burning desire to excel, as well as to sell; the urge to build the character, citizenship, and intellectual stature of people, as well as to expand the gross national product. By no means do I imply that broadcasters disregard the public interest. But a much better job can be done, and should be done." I could not agree more.

And I would add that in today's world, with chaos in Laos and the Congo aflame, with Communist tyranny on our Caribbean doorstep and relentless pressure on our Atlantic alliance, with social and economic problems at home of the gravest nature, yes, and with technological knowledge that makes it possible, as our President has said, not only to destroy our world but to destroy poverty around the world—in a time of peril and opportunity, the old, complacent, unbalanced fare of action adventure and situation comedies is simply not good enough.

Your industry possesses the most powerful voice in America. It has an inescapable duty to make that voice ring with intelligence and with leadership. In a few years, this exciting industry has grown from a novelty to an instrument of overwhelming impact on the American people. It should be making ready for the kind of leadership that newspapers and magazines assumed years ago, to make our people aware of their world.

Ours has been called the jet age, the atomic age, the space age. It is also, I submit, the television age. And just as history will decide whether the leaders of today's world employed the atom to destroy the world or rebuild it for mankind's benefit, so will history decide whether today's broadcasters employed their powerful voice to enrich the people or debase them.

If I seem today to address myself chiefly to the problems of television, I don't want any of you radio broadcasters to think we've gone to sleep at your switch—we haven't. We still listen. But in recent years most of the controversies and cross currents in broadcast programing have swirled around television. And so my subject today is the television industry and the public interest.

Like everybody, I wear more than one hat. I am the Chairman of the FCC. I am also a television viewer and the husband and father of other television viewers. I have seen a great many television programs that seemed to me eminently worthwhile, and I am not talking about the much bemoaned good old days of "Playhouse 90" and "Studio One".

I am talking about this past season. Some were wonderfully entertaining, such as "The Fabulous Fifties", the "Fred Astaire Show", and the "Bing Crosby Special"; some were dramatic and moving, such as Conrad's "Victory," and "Twilight Zone"; some were marvelously informative, such as "The Nation's Future", "CBS Reports", and "The Valiant Years". I could list many more—programs that I am sure everyone here felt enriched his own life and that of his family. When television is good, nothing—not the theater, not the magazines or newspapers—nothing is better.

But when television is bad, nothing is worse. I invite you to sit down in front of your television set when your station goes on the air and stay there without a book, magazine, newspaper, profit and loss sheet or rating book to distract you—and keep your eyes glued to that set until the station signs off. I can assure you that you will observe a vast wasteland.

You will see a procession of game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, western badmen, western good men, private eyes, gangsters, more vio-

lence, and cartoons. And, endlessly, commercials—many screaming, cajoling, and offending. And most of all, boredom. True, you will see a few things you will enjoy. But they will be very, very few. And if you thing I exaggerate, try it.

Is there one person in this room who claims that broadcasting can't do better?

Well, a glance at next season's proposed programing can give us little heart. Of 73½ hours of prime evening time, the networks have tentatively scheduled 59 hours to categories of action-adventure, situation comedy, variety, quiz, and movies.

Is there one network president in this room who claims he can't do better? Well, is there at least one network president who believes that the other networks can't do better?

Gentlemen, your trust accounting with your beneficiaries is overdue. Never have so few owed so much to so many.

Why is so much of television so bad? I have heard many answers: demands of your advertisers; competition for ever higher ratings; the need always to attract a mass audience; the high cost of television programs; the insatiable appetite for programing material—these are some of them. Unquestionably, these are tough problems not susceptible to easy answers. But I am not convinced that you have tried hard enough to solve them.

I do not accept the idea that the present overall programing is aimed accurately at the public taste. The ratings tell us only that some people have their television sets turned on and of that number, so many are tuned to one channel and so many to another. They don't tell us what the public might watch if they were offered half a dozen additional choices. A rating, at best, is an indication of how many people saw what you gave them. Unfortunately, it does not reveal the depth of the penetration, or the intensity of reaction, and it never reveals what the acceptance would have been if what you gave them had been better—if all the forces of art and creativity and daring and imagination had been unleashed. I believe in the people's good sense and good taste, and I am not convinced that the people's taste is as low as some of you assume.

My concern with the rating services is not with their accuracy. Perhaps they are accurate. I really don't know. What, then, is wrong with the ratings? It's not been their accuracy—it's been their use.

Certainly, I hope you will agree that ratings should have little influence where children are concerned. The best estimates indicate that during the hours of 5 to 6 p.m. 60 percent of your audience is composed of children under 12. And most young children today, believe it or not, spend as much time watching television as they do in the schoolroom. I repeat—let that sink in—most young children today spend as much time watching television as they do in the schoolroom. It used to be said that there were three great influences on a child: home, school, and church. Today, there is a fourth great influence, and you ladies and gentlemen control it.

If parents, teachers, and ministers conducted their responsibilities by following the ratings, children would have a steady diet of ice cream, school holidays, and no Sunday School. What about your responsibilities? Is there no room on television to teach, to inform, to uplift, to stretch, to enlarge the capacities of our children? Is there no room for programs deepening their understanding of children in other lands? Is there no room for a children's news show explaining something about the world to them at their level of understanding? Is there no room for reading the great literature of the past, teaching them the great traditions of freedom? There are some fine children's shows, but they are drowned out in the massive doses of cartoons, violence, and more violence. Must these be your trademarks? Search your consciences and see if you cannot offer more to your young beneficiaries whose future you guide so many hours each and every day.

What about adult programing and ratings? You know, newspaper publishers take popularity ratings too. The answers are pretty clear: it is almost always the comics, followed by the advice to the lovelorn columns. But, ladies and gentlemen, the news is still on the front page of all newspapers, the editorials are not replaced by more comics, the newspapers have not become one long collection of advice to the lovelorn. Yet newspapers do not need a license from the Government to be in business—they do not use public property. But in television—where your responsibilities as public trustees are so plain, the moment that the ratings indicate that westerns are popular there are new imitations of westerns on the air faster than the old coaxial cable could take us from Hollywood to New York. Broadcasting cannot continue to live by the numbers. Ratings ought to be the slave of the broadcaster, not his master. And you and I both know that the rating services themselves would agree.

Let me make clear that what I am talking about is balance. I believe that the public interest is made up of many interests. There are many people in this great country and you must serve all of us. You will get no argument from me if you say that, given a choice between a western and a symphony, more people will watch the western. I like westerns and private eyes too—but a steady diet for the whole country is obviously not in the public interest. We all know that people would more often prefer to be entertained than stimulated or informed. But your obligations are not satisfied if you look only to popularity as a test of what to broadcast. You are not only in show business; you are free to communicate ideas as well as relaxation. You must provide a wider range of choices, more diversity, more alternatives. It is not enough to cater to the Nation's whims—you must also serve the Nation's needs.

And I would add this—that if some of you persist in a relentless search for the highest rating and the lowest common denominator, you may very well lose your audience. Because, to paraphrase a great American who was recently my law partner, the people are wise, wiser than some of the broadcasters—and politicians—think.

As you may have gathered, I would like to see television improved. But how is this to be brought about? By voluntary action by the broadcasters themselves? By direct Government intervention? Or how?

Let me address myself now to my role not as a viewer but as Chairman of the FCC. I could not if I would, chart for you this afternoon in detail all of the actions I contemplate. Instead, I want to make clear some of the fundamental principles which guide me.

First. The people own the air. They own it as much in prime evening time as they do at 6 o'clock Sunday morning. For every hour that the people give you—you owe them something. I intend to see that your debt is paid with service.

Second. I think it would be foolish and wasteful for us to continue any wornout wrangle over the problems of payola, rigged quiz shows, and other mistakes of the past. There are laws on the books which we will enforce. But there is no chip on my shoulder. We live together in perilous, uncertain times; we face together staggering problems; and we must not waste much time now by rehashing the cliches of past controversy. To quarrel over the past is to lose the future.

Third. I believe in the free enterprise system. I want to see broadcasting improved and I want you to do the job. I am proud to champion your cause. It is not rare for American businessmen to serve a public trust. Yours is a special trust because it is imposed by law.

Fourth. I will do all I can to help educational television. There are still not enough educational stations, and major centers of the country still lack usable educational channels. If there were a limited number of printing presses in this country, you may be sure that a fair proportion of them would be put to educational use. Educational television has an enormous contribution to make to the future, and I intend to give it a hand along the way. If there is not a nationwide educational television system in this country, it will not be the fault of the FCC.

Fifth. I am unalterably opposed to governmental censorship. There will be no suppression of programing which does not meet with bureaucratic tastes. Censorship strikes at the taproot of our free society.

Sixth. I did not come to Washington to idly observe the squandering of the public's airwaves. The squandering of our airwaves is no less important than the lavish waste of any precious natural resource. I intend to take the job of Chairman of the FCC very seriously. I believe in the gravity of my own particular sector of the New Frontier. There will be times perhaps when you will consider that I take myself or my job too seriously. Frankly, I don't care if you do. For I am convinced that either one takes his job seriously—or one can be seriously taken.

Now, how will these principles be applied? Clearly, at the heart of the FCC's authority lies its power to license, to renew or fail to renew, or to revoke a license. As you know, when your license comes up for renewal, your performance is compared with your promises. I understand that many people feel that in the past licenses were often renewed pro forma. I say to you now, "Renewal will not be pro forma in the future. There is nothing permanent or sacred about a broadcast license."

But simply matching promises and performance is not enough. I intend to do more. I intend to find out whether the people care. I intend to find out whether the community which each broadcaster serves believes he has been serving the public interest. When a renewal is set down for hearing, I intend—wherever possible—to hold a well-advertised public hearing, right in the community you have promised to serve. I want the people who own the air and the homes that television enters to tell you and the FCC what's been going on. I want the people—if they are truly interested in the service you give them—to make notes, document cases, tell us the facts. For those few of you who really believe that the public interest is merely what interests the public—I hope that these hearings will arouse no little interest.

The FCC has a fine reserve of monitors—almost 180 million Americans gathered around 56 million sets. If you want those monitors to be your friends at court—it's up to you.

Some of you may say, "Yes, but I still do not know where the line is between a grant of a renewal and the hearing you just spoke of." My answer is, "Why should you want to know how close you can come to the edge of the cliff?" What the Commission asks of you is to make a conscientious, good faith effort to serve the public interest. Every one of you serves a community in which the people would benefit by educational, religious, instructive, or other public service programing. Every one of you serves an area which has local needs—as to local elections, controversial issues, local news, local talent. Make a serious, genuine effort to put on that programing. When you do, you will not be playing brinkmanship with the public interest.

What I've been saying applies to broadcast stations. Now a station break for the networks:

You know your importance in this great industry. Today, more than one-half of all hours of television station programing comes from the networks; in prime time, this rises to more than three-fourths of the available hours.

You know that the FCC has been studying network operations for some time. I intend to press this to a speedy conclusion with useful results. I can tell you right now, however, that I am deeply concerned with concentration of power in the hands of the networks. As a result, too many local stations have foregone any efforts at local programing, with little use of live talent and local service. Too many local stations operate with one hand on the network switch and the other on a projector loaded with old movies. We want the individual stations to be free to meet their legal responsibilities to serve their communities.

I join Governor Collins in his views so well expressed to the advertisers who use the public air. I urge the networks to join him and undertake a very special mission on behalf of this industry: you can tell your advertisers, "This is the high quality we are going to serve—take it or other people will. If you think you can find a better place to move automobiles, cigarettes and soap—go ahead and try."

Tell your sponsors to be less concerned with costs per thousand and more concerned with understanding per millions. And remind your stockholders that an investment in broadcasting is buying a share in public responsibility.

The networks can start this industry on the road to freedom from the dictatorship of numbers.

But there is more to the problem than network influences on stations or advertiser influences on networks. I know the problems networks face in trying to clear some of their best programs—the informational programs that exemplify public service. They are your finest hours—whether sustaining or commercial, whether regularly scheduled or special—these are the signs that broadcasting knows the way to leadership. They make the public's trust in you a wise choice.

They should be seen. As you know, we are readying for use new forms by which broadcast stations will report their programing to the Commission. You probably also know that special attention will be paid in these reports to public service programing. I believe that stations taking network service should also be required to report the extent of the local clearance of network public service programing, and when they fail to clear them, they should explain why. If it is to put on some outstanding local program, this is one reason. But, if it is simply to carry some old movie, that is an entirely different matter. The Commission should consider such clearance reports carefully when making up its mind about the licensee's overall programing.

We intend to move—and as you know, indeed the FCC was rapidly moving in other new areas before the new administration arrived in Washington. And I want to pay my public respects to my very able predecessor, Fred Ford, and my colleagues on the Commission who have welcome me to the FCC with warmth and cooperation.

We have approved an experiment with pay TV, and in New York we are testing the potential of UHF broadcasting. Either or both of these may revolutionize television. Only a foolish prophet would venture to guess the direction they will take, and their effect. But we intend that they shall be explored fully—for they are part of broadcasting's New Frontier.

The questions surrounding pay TV are largely economic. The questions surrounding UHF are largely technological. We are going to give the infant pay TV a chance to prove whether it can offer a useful service; we are going to protect it from those who would strangle it in its crib.

As for UHF, I'm sure you know about our test in the canyons of New York City. We will take every possible positive step to break through the allocations barrier into UHF. We will put this sleeping giant to use and in the years ahead we may have twice as many channels operating in cities where now there are only two or three. We may have a half dozen networks instead of three.

I have told you that I believe in the free enterprise system. I believe that most of television's problems stem from lack of competition. This is the importance of UHF to me: with more channels on the air, we will be able to provide every community with enough stations to offer service to all parts of the public. Programs with a mass market appeal required by mass product advertisers certainly will still be available. But other stations will recognize the need to appeal to more limited markets and to special tastes. In this way, we can all have a much wider range of programs.

Television should thrive on this competition—and the country should benefit from alternative sources of service to the public. And—Governor Collins—I hope the NAB will benefit from many new members.

Another and perhaps the most important frontier: television will rapidly join the parade into space. International television will be with us soon. No one knows how long it will be until a broadcast from a studio in New York will be viewed in India as well as in Indiana, will be seen in the Congo as it is seen in Chicago. But as surely as we are meeting here today, that day will come—and once again our world will shrink.

What will the people of other countries think of us when they see our western badmen and good men punching each other in the jaw in between the shooting? What will the Latin American or African child learn of America from our great communications industry? We cannot permit television in its present form to be our voice overseas.

There is your challenge to leadership. You must reexamine some fundamentals of your industry. You must open your minds and open your hearts to the limitless horizons of tomorrow.

I can suggest some words that should serve to guide you:

"Television and all who participate in it are jointly accountable to the American public for respect for the special needs of children, for community responsibility, for the advancement of education and culture, for the acceptability of the program materials chosen, for decency and decorum in production, and for propriety in advertising. This responsibility cannot be discharged by any given group of programs, but can be discharged only through the highest standards of respect for the American home, applied to every moment of every program presented by television.

"Program materials should enlarge the horizons of the viewer, provide him with wholesome entertainment, afford helpful stimulation, and remind him of the responsibilities which the citizen has toward his society."

These words are not mine. They are yours. They are taken literally from your own television code. They reflect the leadership and aspirations of your own great industry. I urge you to respect them as I do. And I urge you to respect the intelligent and farsighted leadership of Governor LeRoy Collins, and to make this meeting a creative act. I urge you at this meeting and, after you leave, back home, at your stations and your networks, to strive ceaselessly to improve your product and to better serve your viewers, the American people.

I hope that we at the FCC will not allow ourselves to become so bogged down in the mountain of papers, hearings, memorandums, orders, and the daily routine that we close our eyes to the wider view of the public interest. And I hope that you broadcasters will not permit yourselves to become so absorbed in the chase for ratings, sales, and profits that you lose this wider view. Now more than ever before in broadcasting's history the times demand the best of all of us.

We need imagination in programing, not sterility; creativity, not imitation; experimentation, not conformity; excellence, not mediocrity. Television is filled with creative, imaginative people. You must strive to set them free.

Television in its young life has had many hours of greatness—its "Victory at Sea," its Army-McCarthy hearings, its "Peter Pan" its "Kraft Theaters," its "See it Now," its "Project 20," the World Series, its political conventions and campaigns, the "Great Debates"—and it has had its endless hours of mediocrity and its moments of public disgrace. There are estimates that today the average viewer spends about 200 minutes daily with television, while the average reader spends 38 minutes with magazines and 40 minutes with newspapers. Television has grown faster than a teenager, and now it is time to grow up.

What you gentlemen broadcast through the people's air affects the people's taste, their knowledge, their opinions, their understanding of themselves and of their world. And their future.

The power of instantaneous sight and sound is without precedent in mankind's history. This is an awesome power. It has limitless capabilities for good—and for evil. And it carries with it awesome responsibilities, responsibilities which you and I cannot escape.

In his stirring inaugural address our President said, "And so, my fellow Americans: ask not what your country can do for you—ask what you can do for your country."

Ladies and gentlemen, ask not what broadcasting can do for you. Ask what you can do for broadcasting.

I urge you to put the people's airwaves to the service of the people and the cause of freedom. You must help prepare a generation for great decisions. You must help a great Nation fulfill its future.

Do this, and I pledge you our help.

Will the Farmers Have a Voice?

EXTENSION OF REMARKS

OF

HON. JOHN KYL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. KYL. Mr. Speaker, the farm legislation now pending before the Agriculture Committee is the most comprehensive and far reaching ever considered in a single proposal covering this industry. If this measure becomes law, it will probably be in effect through several administrations and would be administered by several Secretaries of Agriculture. It is, therefore, apparent that

there must be adequate safeguards in the bill to make it function in accordance with the broad and commendable purposes stated in the preamble. If the purpose of the bill is to give farmers a voice in writing legislation, we should guarantee that this will be done in fact.

Concern that this may not actually be the case is expressed in the Washington Report of Wallaces Farmer for May 6, 1961. A part of the report is printed here:

Don't count on farmers running the farm program if the bill passes. All the talk of farmer-elected committees calling the shots is proving to be just that—talk.

Farmers will be asked only to submit nominations. Of these, the Secretary of Agriculture will select about a third to serve on the advisory committee. Other committee members will be farm organization officials plus one or more consumer representatives. And if the advice of the advisory committee does not suit, the bill allows the Secretary to reject it.

Then why bother to have committees? One guess is that USDA intends to advertise the committees as the voice of farmers * * * largely to offset somewhat similar claims by the Nation's largest farm organization.

The Press and Federal Deposit Insurance

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid editorial from the American Banker of May 10, 1961, entitled "The Press and Federal Deposit Insurance."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the American Banker, May 10, 1961]

THE PRESS AND FEDERAL DEPOSIT INSURANCE—EDITORS OF THE NATION FULSOME IN PRAISE OF FDIC

Every time an insured bank closes there is an outpouring of editorial comment in the Nation's press. The closing of the Sheldon, Iowa, National Bank, following disclosure of an embezzlement of more than $2 million was no exception. Comment is almost uniformly favorable, viz:

"The consolation Sheldon residents can have is that it has afforded an opportunity to observe a Government agency which operates smoothly, efficiently and very courteously, and treats individuals as if they were indeed individuals and not merely a sort of nuisance. * * * We are referring, of course, to the very fine relations the public is having with the FDIC at the Sheldon National Bank. There is a great deal of praise throughout the community for their excellent work."—Sheldon (Iowa) Mail.

"Another demonstration of the speed with which the Federal Deposit Insurance Corporation works is furnished in Sheldon, Iowa. The insurance officials were right behind the police in moving into the bank which suffered a $2.1 million loss from embezzlement. * * * An entire new generation of Americans has grown to adulthood without ever having seen or suffered from a run on a bank."—Ogden (Utah) Standard Examiner.

"Thanks to the FDIC, Sheldon, Iowa, is 'back on its feet' financially.

"Economic recovery for most of the people in Sheldon was swift, thanks to the Federal Deposit Insurance Corp."—United Press-International report 6 weeks after the Sheldon National Bank closing.

"Discovery of the theft ($2.1 million Sheldon bank defalcation) did not create a panic among depositors. They knew they were secure, and within 10 days after the bank was closed, the FDIC began paying off in fully up to $10,000. As evidence of public calmness and confidence, many depositors took the money they received and went up the street to place it in another bank, also insured * * *. This is one of the bulwarks of the nation's economy, providing an absolute guarantee against a run on a bank ever again."—Henderson (N.C.) Dispatch.

"It takes something like that astounding $2 million embezzlement to recall that for nearly 30 years, the Federal Deposit Insurance Corp. has stood ready to reimburse depositors up to $10,000. Since the FDIC law was enacted, there have been 439 bank closings, and 99.7 percent of depositors were covered by deposit insurance."—Newport (R.I.) News.

"This importance of the protection afforded bank depositors by the Federal Deposit Insurance Corporation has been dramatically demonstrated in the collapse of the bank at Sheldon."—Des Moines (Iowa), Register.

"When Money Vanishes, Federal Bank Agency Appears Like Magic."—New York Daily News headline on Sheldon, Iowa, post closing report.

"The FDIC is probably the best reason for people's confidence in our banking system and the safety of their money * * *. When people have confidence in banks there is little danger of panic."—L. A. C. in the Long Beach (Calif.) Independent.

"Before FDIC, depositors usually lost money if a bank failed. * * * Uneasy depositors could cause a run on strength of a rumor. * * * However, the FDIC has changed all that."—Champaign (Ill.) Courier.

The public, speaking through its newspaper and magazine editors, obviously is satisfied with the manner in which the FDIC operates to protect depositors' interests.

A step in the direction of educating the public with regard to this agency's efficient function should be taken by banks through utilizing these laudatory comments and expressions of confidence in their promotional efforts.

Nature and Directions of the New Frontier

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, one of the Midwest's notable newspaper editors, Mr. Herbert H. Heimlich, of the Lafayette (Ind.) Journal-Courier, set forth some interesting views in an editorial after his return from the recent editors' meeting in Washington. He titled his editorial "The Washington Scene," and his observations are so interesting that I ask unanimous consent that the text of the editorial be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WASHINGTON SCENE

Something of the shape, nature, and directions of the New Frontier, as well as the problems facing the United States on many fronts, were described and explained, and in some cases defended, for newspaper editors of the United States at two meetings in Washington which your editor was privileged to attend over a span of a week.

Some 35 top Washington officials, headed by President Kennedy himself, gave addresses, took part in panels and discussions, and answered questions, first before the annual meeting of the American Society of Newspaper Editors, and then at a foreign policy briefing conference conducted by the Department of State.

A great deal of enlightment was provided the editors. Whether or not they agreed with all they heard, there was ample opportunity to learn firsthand of administration thinking on a wide variety of problems facing the Nation, both at home and abroad. This comphensive backgrounding is bound to prove useful and valuable. Come to think about it, there may have been a degree of attempted brainwashing, also.

Washington lives in an atmosphere of crises. A deep sigh or frown on the part of a high official can only be a sign of trouble and next morning there are reports of new difficulties and top-level decisions. Nothing seems very clear or certain. A Cabinet member sized up this situation most aptly, it appeared, when he remarked: If you leave here more confused than when you came, perhaps you may be closer to reality.

The pervading spirit of Government leaders and the atmosphere they created breathed of crises and urgency, and also of frustration and uncertainty in some respects. The threat posed by communism overshadowed all else. What to do about it was on about all tongues.

Some of us who attended both sessions heard the President three times within 6 days, including a regular Presidential press conference. In addition the programs included six members of the Cabinet and various administrators, deputies, assistants, directors and others in such Departments as State, Defense, aeronautics and space, task forces, the U.S. Information Agency, the Central Intelligence Agency, and the Federal Housing and Home Finance Agency, as well as the U.S. Ambassador to the United Nations.

The foreign policy conference was conducted under rules which forbade attribution to the many speakers. However since at leats one Communist correspondent was present, it may be that top Reds will know more about who said what than Americans.

As might have been expected, Cuba and Laos came in for main attention. While some things, such as these, were described as bad, there was the intimation that they may become worse. There was some recrimination as to who goofed on Cuba, with interested parties defending themselves and their agencies. One held there had been some bad miscalculations, while another insisted there had been none. Just what did happen, or why, never was explained.

The President made a strong impression upon the editors when he promised with reference to Cuba, that this Nation "will not hesitate in meeting its primary obligations, which are to the security of our own Nation," whatever the cost or peril and alone if necessary. He appeared well informed, alert, and clear on all questions. At a time of a rising crescendo of criticism, the President undoubtedly won a great deal of sympathy from the editors, and was credited in a special poll with having performed well thus far.

The President, while appearing confident generally, also gave evidence of the weight of the office he holds and of the responsibility which goes with it, in special relation

to the confusion and grave situations which exist today in the world.

As might have been expected, the speakers were received with mixed emotions by the bipartisan audiences.

Two Cabinet members, Secretary of Commerce Hodges and Secretary of Labor Goldberg, declared that the country seems to be pulling out of the recession. Mr. Goldberg, however, appeared to take special delight in recounting our difficulties. He properly insisted that the country should know the truth about our economy, the bad as well as the good, but went further, unnecessarily emphasizing and repeating the unfavorable factors, it seemed. Secretary of Health, Education, and Welfare Ribicoff also was in an argumentative mood.

Secretary of the Treasury Dillon also surprised us by citing the Nation's shameful lack in education. Further, he outlined an extensive Government program designed to make everyone happy, holding we can and must fulfill all of the Nation's needs. In this connection he assured there is no question as to adequate revenue, but that the main question is how the billions are to be spent. Also, he shocked not a few editors when he stated that multibillion deficits this year and next are "not a cause for alarm" and that a "modest deficit" is required to stimulate the economy.

Some of the so-called Republicans who have accepted appointment to high posts sounded as Democratic in some of their approaches as those who chose them.

Other Cabinet members—Secretary of State Rusk and Attorney General Robert Kennedy—were less partisan and more moderate in their discussion of national problems, it seemed to this observer.

Highlighting the American Society of Newspaper Editors program and of great significance to the Nation and to the world was the President's declaration on Cuba, providing a sharp break with our former stated position. Earlier, he had given assurance that U.S. forces would not be used, but now he has opened the door on this point.

This array of top brass, all articulate spokesmen, might well have dazzled the editors in some ways, but we doubt that the New Frontier gained any new converts.

Communism: Our Active Enemy

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by George Duncan, of Test Junior High School. This winning essay appeared in the Palladium-Item and Sun-Telegram of Richmond, Ind., on April 16, 1961:

COMMUNISM: OUR ACTIVE ENEMY

(By George Duncan, Test Junior High)

Communism, the economic theory by which all of the property, industry and distribution of the products are controlled by the community or society as a whole, is a science and its followers consider themselves scientists.

Communism denies God. With this denial all of the standards of truth and righteousness, all of the moral laws for which He stands, and all of the values and virtues which originate with God are completely destroyed.

In communism man is a body which is explained by the terms of chemistry and physics. He has no soul, no spirit, and no continuity of life.

According to Karl Marx, the originator of communism, the perfect government would equally distribute all of the income, property and produce among its members. This government would be spread throughout the world by force. Numerous attempts have been made to establish a "Utopian" community, none have suceeded.

Although Russia is said to have had a communistic government since 1917, in order to make is succeed and I use succeed with numerous reservations, many of the Marxist theories were amended and now lean toward the capitalistic ideas.

UNSCRUPULOUS METHODS

It is a proven fact that communism is being disseminated throughout our country by various powers using low and unscrpulous methods. This infiltration has become entrenched in our religion, education, and government. It has been so cleverly carried out that we, the victims, have been unaware of its occurrence.

Most people think only of a nuclear attack in the communistic conquest of the world. They do not realize that right now, in our own country, the Communists are making their most forceful and, thus far, most successful attack on the American people. This attack is on our students. In some of our schools Communist teachers are trying to turn America's future adults into traitors by instilling the ideas of communism in them with sly, scarcely perceptible teachings of their doctrine.

WHAT CAN WE DO?

We also find Communist speakers attending youth meetings and church groups attempting to convert the youth of America from capitalism to communism. How can I, as a student, differentiate the communistic teachings imperceptibly slipped upon us from our American teaching? How can I protect myself?

You might wonder what appeal a student could find in the principles of communism; however, numerous details presented to the student can produce an appealing future. The nature of this appeal is that the student can participate in the conquest of the world and, later, in a program to change human nature, perfect human character and populate the entire earth with a new quality of personality.

You might consider a Communist monopoly of world government a long way off; however, it is very near. Not long ago the United States was told that its next generation would live under a communistic government.

I cannot and will not be willfully led away from our American government and principles. However, I repeat, how can I differentiate the communistic teachings from our American teachings? I devoutly pray for perception to see the truth.

Continuation of Mexican Farm Labor Program

SPEECH
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2010), a bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes.

Mr. McCORMACK. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, the remarks I am about to make are in my individual capacity as a Member of the House and not as majority leader. Because I am majority leader I do not completely abdicate all my rights as a Member of this body.

I can remember this legislation through the years. Not so many years ago we were fighting to bring about better conditions for the poor, unfortunate Mexican workers. More should be done. Now we are trying to do something for Americans.

I supported this legislation in the past. I recognized the necessity for it in past years. But our fight then was to try and have the Department of Labor get some authority to go in and use its offices to protect human beings, Mexican workers, who were being exploited, not by all the farmers, but by a sufficient number so that it was a public scandal. Now we are trying to do something for American workers.

Those who favor the bill—and I have no quarrel with them—talk about the need for Mexican workers. That is not our immediate concern today. What we are concerned about today is to try and get some fair consideration given to American citizens.

I offered an amendment to the committee which I thought might solve the situation, in trying to help this problem as I saw it, and I knew it would arise today. I know you are going to put your bill through. You are going to win a battle, but you might lose a war later on. Some of you members of the Committee on Agriculture, all of whom represent agricultural districts, must recognize that sometimes some of us Members from the urban districts have a thought. I have a 1,000-percent voting record on agriculture and I do not think many agricultural Members are able to say that they have a 1,000-percent voting record on agriculture. I offered a single amendment, but a fair amendment. What was the substance of it?

No workers recruited under this title shall be made available to any employer or permitted to remain in the employ of any employer unless the employer has made and is making reasonable efforts to attract domestic workers—

What is wrong with that? Then I give some criteria. Then I add a paragraph as follows:

Provided further, that in no event shall Mexican workers be permitted to be employed by any employer who is paying domestic workers less than the prevailing wage rate for the activity in the area.

That is the combined effect of my amendment. Yet they opposed it. They declined it. If they had accepted that amendment we would not have been completely satisfied, but the bill would have gone along. Of course you are going to put it through, but later on there will be other legislation coming up and you might regret that you rode roughshod over some of us who have humanitarian considerations in our minds, who had them years ago for the Mexican worker and who have them now for the American worker.

You are going to bring a bill out of your committee in the near future entitled the Agricultural Act of 1961. And what is a part of the declaration of principle of that bill? One part is, "to afford farmers the opportunity to achieve parity of income with other economic groups."

I am for that. But there are some of us today who are trying to give consideration to American citizens, who are trying to get economic parity for American citizens in connection with this type of work.

So where are you going to be when you get up?

Mr. BECKWORTH. Mr. Chairman, will our distinguished majority leader yield?

Mr. McCORMACK. I am talking now as an individual member.

Mr. BECKWORTH. Will the distinguished gentleman from Massachusetts state what he thinks the position of the Department of Agriculture would be in connection with the amendment that he offered?

Mr. McCORMACK. As I understand it, this amendment would be satisfactory. That is my understanding. I will ask the gentleman from Iowa [Mr. COAD]. We conferred on this. I should like to ask that of the gentleman with whom I consulted about trying to draft one simple amendment to try to iron out the situation for the House purposes.

Mr. BECKWORTH. I was informed yesterday in the presence of many other Members of the House that the administration speaks with one voice, that is, it favors the extension of Public Law 78 only if it is amended, and that includes the Department of Agriculture.

Mr. McCORMACK. Might I say to the gentleman without changing his position at all, if this amendment had been accepted we would gladly have gone along.

Mr. BECKWORTH. That is correct, if the administration would accept it.

Mr. McCORMACK. I would go along with this if the administration would accept it, but I hear no voice from the committee.

Last Chance for Unity

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. HUMPHREY. Madam President, I invite attention to an article entitled "Last Chance for Unity," written by Mr. A. N. Spanel, founder of the International Latex Corp., of Dover, Del. It is a matter of public record that Mr. Spanel has sought to alert, times without number, the whole free world to its danger and the compelling need for dedicated unity among its member nations, to successfully meet those threats.

I, therefore, ask unanimous consent that the editorial by Mr. A. N. Spanel, which appeared in the New York Times on March 21, 1961, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 21, 1961]

LAST CHANCE FOR UNITY

(By A. N. Spanel, chairman, International Latex Corp.)

"We are unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed. Let every nation know, whether it wish us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend or oppose any foe, in order to assure the survival and success of liberty."

This inspiring declaration was made by President Kennedy in his inaugural address. Rarely in recent years have the American people—as well as their friends and enemies throughout the world—heard a pronouncement so firm, clear eyed and courageous from a President of the United States.

If it proves a portent of policy and action in the same fearless spirit, the forces of freedom may at last seize the initiative in the historic world struggle, now held by our monolithic adversary.

The President's words will be appraised, moreover, in the light of significant points he underlined in his inaugural address. The world will recall that there he renounced any self-delusion as to the extreme gravity of the present international situation. "The tide of events has been running out and time has not been our friend," was the way he put it.

Even more important, he in effect rejected as unrealistic the perennial hope that world communism—in the name of peaceful coexistence or some other slogan of confusion—will suddenly give up its inflexible goal of totalitarian world rule. Referring to Red Russia and Red China, he declared:

"We must never be lulled into believing that either power his yielded its ambitions for world domination—ambitions which they forcefully restated only a short time ago."

The implications of this essential truth should be self-evident: (1) Those Communist ambitions cannot be wished away or argued away; they can only be curbed and defeated by those whom they endanger, which means all non-Communist nations and peoples; (2) the free world must generate quickly—before the point of no return is reached—not only superior military-economic power on a united basis but an unswerving determination to win the struggle.

And if these imperatives for survival are to be met, the central and indispensable condition is genuine and dedicated free world unity which can only exist in depth and in breadth. As we have emphasized repeatedly in these columns, "To meet the challenge of Communist hordes under totalitarian discipline, we need a free world unity to match." For the continued divisiveness of the Western World, even as the tide of events runs out, defies all reason and could well encompass our annihilation.

The Communists use their threats and their blandishments on the Marxist premise that capitalist nations, among themselves, have no friends, no enemies, only interests. For their leaders from Lenin to Khrushchev it has been a basic principle of operation in their assault on our world.

It must be refuted and frustrated, not in words but in wisely formulated acts and institutions to promote true unity of the nations earmarked by the Moscow-Peiping axis for conquest and burial, whatever the price and sacrifice. On April 7, 1959 we wrote:

"The Soviet bloc is a monolithic entity. The free allies are at best a collection of strong-willed individual countries and governments. In order to cope with the life-and-death menace posed by the Red monolith, we have no alternative but to provide a voluntary unity to match. Only by pooling more of its resources, brains, and skills and facing up to the need for sacrifice—including the sacrifice of some types of sovereignty—can the free world thwart the Soviet pattern of pillage."

It is noteworthy that General de Gaulle in the past called for the closest harmony among the United States, Great Britain, and France wherever the Communists threatened our world. He was misunderstood and ignored. Washington and London failed to grasp that such a leadership union would have given other free nations, new and old, the confidence and the courage to stake their destinies on the freeworld alliance

General de Gaulle also urged that the responsibilities of NATO be broadened to include areas affecting the very lives of its members. Again he was misunderstood and ignored—until the chaos in the Congo confirmed his fears.

It is interesting to note that the Foreign Minister of West Germany, Dr. Heinrich von Brentano, has come closer to this view. In an article in the current Foreign Affairs, though he disapproves of the proposed three-power council, he does agree that a reorganized NATO must extend its influence outside of Europe.

NATO and the whole Western World must know that weaker nations generally gravitate toward the strong; and that historically, communism feeds on the fears and appeasements it can generate in its divided opponents, weakened targets.

Of what avail a stabilized and neutralized Africa, for instance—even if the miracle were achieved—if in the process the strength of our European allies is sapped, their resolution for the common cause eroded? The resultant disunity, to the point of driving some allies to seek shelter in neutralist delusions, would make of Africa a time bomb in the hands of the Communists.

"Support any friend and oppose any foe."

This deceptively simple but actually profound formula advanced by President Kennedy offers a firm guide to the conduct of free men in a free world. It should serve as the acid test of every specific policy. If adopted by common consent by all the major free powers, it could cut through confusions and self-destructive quarrels among them.

If adhered to in earnest in everything involving the Communist challenge, it would sustain the unity of the free world essential to victory for the world of freedom.

U.S. Relief Program and Shortage of Doctors in the Congo

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. MUNDT. Mr. President, during the past month the publisher of the Sioux Falls (S. Dak.) Argus-Leader, Mr. John A. Kennedy and Mrs. Kennedy, have been visiting in the Congo, surveying the conditions in that land.

Two excellent articles, providing us with an insight into the many problems which confront the people of this

troubled nation, have been written by the Kennedy's and carried in the Argus-Leader.

Because of the importance of this area of the world to the international scene, I am bringing the attention of the Senate to these articles.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the two articles on this subject:

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

U.S. RELIEF PROGRAM SHOWING DRAMATIC RESULTS IN CONGO

(EDITOR'S NOTE.—John A. Kennedy, editor in chief of the Sioux Falls Argus-Leader and his wife serving as photographer, spent nearly 2 months in the Congo in 1959. They have just concluded another survey of conditions in that chaotic land.

(By John A. Kennedy)

LEOPOLDVILLE, THE CONGO.—Last January 20 President Kennedy announced his foreign relief program to help needy nations to help themselves.

Yesterday I saw that plan combined with the U.S. food for peace project dramatically in action.

From a small hill not far from the Leopoldville Airport we watched 1,300 laborers digging ditches with shovel and mattock to drain the swamps and marshes.

The land will be used to grow cash vegetable crops to be sold in Leopoldville markets.

The wages for the workers come from the sale of U.S. gift surplus flour to local bakeries.

Earlier I had visited one to watch American flour sent by the food for peace administration—headed by South Dakota's George McGovern—made into tasty loaves of bread.

The third shipment of 1,400 tons of American surplus flour arrived at Matadi port this weekend. The first 700 tons reached the Congo March 16, the second reported ready for unloading March 28.

The flour gift is distributed under U.N. supervision in a three-way deal approved by the Congolese and U.S. Governments. It helps meet a serious shortage in this troubled republic and also curtails unemployment.

TIRED OF RED LABEL

The flour arrived just in time. In fact, for a few days there was none to supply the bakeries. U.S. Ambassador Clare Timberlake had urged speed in its shipment because Western people here had grown weary of the earlier Russian Red Star labeled flour bags that had been the source of their bread under the then premier Lumumba.

The U.N. sells the flour to importers on a quota basis, established and approved by U.N. and Congo authorities.

The importers in turn sell to local bakers at prices fixed by the Government. All moneys received from the sale are deposited in a special account in the Central Bank drawn on to finance many public work projects jointly started by a U.N. team and Congolese officials. This helps to stem the growing tide of unemployed caused by the brakdown of normal commercial and manufacturing operations following the explosive independence emergence of July 1960.

MARSHES DRAINED

The draining of the Stanley Pool marshes for conversion into truck gardening is the first of these public works projects. The plan, originally started by the colonial Belgians, was interrupted when they lost the Congo.

This reclamation is combined flood control and ditch drainage providing vegetable growing land for Leopoldville needs because soil in surrounding areas is generally unsuitable for gardening.

The area is 15 miles above the capital and embraces 30,000 acres, 80 of which already are in production of maize, manioc, and other basic needs.

DIKES STRENGTHENED

The dikes along the drainage ditches are reinforced by revetting with mattresses of young trees and strong reeds filled with palm leaves to keep the banks from caving in—somewhat similar to the early U.S. Army Engineers protection of the Missouri River in the first two decades of this century in South Dakota, Iowa, Nebraska, and Missouri.

Surplus vegetation was being burned off when we were there. Congolese laborers were cutting trees with their machetes. Others were tying the mattresses while the rest were digging the drainage ditches.

From our hillside vantage point we were not bothered by mosquitoes and tsetse flies that swarm in the swamps where 1,900 men were laboring below.

Up to the end of February the U.N. spent about $200,000 for this project. Practically all the money went for wages, but now the U.N. appropriation is exhausted.

And here is where the proceeds of the American gift flour came to the rescue.

TO MEET NEEDS

In addition to giving needed work for 1,900 men—much like our public works projects of the 1930's—they expect to produce all the vegetables needed for metropolitan Leopoldville which now are flown in often from Europe or other areas of Africa.

The pilot project, now being drained, will be ready for planting next month—if, and a big if—they can obtain seeds from abroad. It will give permanent employment eventually, the sponsors hope, to thousands of men.

Since the Stanley Pool area is the breeding ground of mosquitoes near Leopoldville, the authorities feel it will greatly improve health conditions in the capital.

NARY A NATIVE DOCTOR IN VAST LAND OF UPHEAVAL

(By John A. Kennedy)

LEOPOLDVILLE.—When the Belgians pulled out of the Congo last July, there was not a single Congolese medical doctor in this vast country.

And only 50 students now in the new medical college at Louvanium University here as the only pipeline to supply Congolese health supervision in the future.

This medical-health picture perhaps dramatically points up the problems of the Congo—and for that matter similar difficulties already present or certain to be encountered in the emerging of the new African nations today.

NOT ALL THE WAY

Experts say the people just can't all go back to see the sorcerers and witch doctors of the past—though these mysticists still prevail in a large part of the uncivilized areas of the bush and jungle.

On Independence Day, there were 761 Belgian doctors. After the uprisings, only 150 remained and those were mostly in the big cities to care for 13 million Congolese and 4 million more in Belgian administered Ruanda Urundi.

The departing medicos took with them the technicians, X-ray and laboratory experts, leaving only a very few to help man the hospitals and dispensaries.

Under Belgian rule, according to Dr. M. Bellerive, senior U.N. medical consultant who had visited the Congo several times before as World Health Organization expert, medical care of natives in hospitals and dispensaries had been, perhaps, the best and most complete of any nation in black Africa.

With the aid of hurriedly recruited Red Cross teams, the U.N. chief has been able only to partially reorganize the nation's health setup.

AT LEAST 15 YEARS

Dr. Bellerive's most optimistic guess is that it will take at least 15 years before the Congolese can get along without foreign doctors—if then.

Through the Red Cross, Dr. Bellerive tried to get 130 doctors immediately. Of this number, 72 have arrived. In addition to medicos, public health advisory teams were assigned to each of the six provinces consisting of a doctor, one sanitary engineer, and a public health expert.

The Belgians fortunately had medical stores which they believed adequate for 1½ years in the event the Congo was cut off by another world war. The first 6 months since July drew heavily on this stock but Dr. Bellerive says they are not too desperate on this score at present. But Sister Eloardo of Katambo Hospital reports that her equipment and supplies are running very low.

"The big problem today," the WHO chief said, "is what can we do in the future because the Red Cross doctors are planning to leave in June?"

TO SCHOOL IN FRANCE

The U.N. already has sent 61 medical assistants to France who have been accepted into schools with the understanding that in addition to the 3 years in these institutions, the students at the same time will make up their deficiencies in the basic sciences. By comparative training, that would rank between an intern and a graduate nurse.

If they do not pass the French medical exams—which are tough—they will be returned to the Congo as supermedical assistants. The first reports from five French universities are quite good. It is the hope of Dr. Bellerive to send 20 more medical assistants to school this year. The World Health Organization is picking up the tab. They also have worked out a full program for public health doctors with about 1,000 students.

Some Swiss medical schools are also training natives but the small supply of medical assistants here is so badly needed to help to at least partially preserve the Congo's health that it will be difficult to let them leave the country.

In 3 years time this group of Congolese will form the backbone of the country's health service and will be augmented by graduates from the relatively newly formed medical school at Leopoldville—Louvanium University.

COOL RECEPTION

Dr. Bellerive reported considerable difficulty in the placing of doctors after they arrive.

Kivu, from where most of the Belgians were chased when the tribles rose against their former colonial masters, first said "No" to proferred medical teams. In April they cabled the U.N. in Leopoldville for 10 doctors including surgeons and specialists.

There has been some difficulty in obtaining full cooperation with native officials by U.N. heads. A few doctors were roughed up a bit but Bellerive feels his operations are beginning to work more smoothly.

The lack of medically trained Congolese has presented the most serious problem to the U.N. health authorities. They cannot find trained medical experts to suggest as commissioners of health.

Under the Belgians, both the national and provincial posts of this type were occupied by top medical men—nonnative.

When Lumumba was president, he appointed a 29-year-old medical student as commissioner. The present head, Paul Bolyx, is a former medical assistant who had quit the profession to head a semipolitical organization.

Lawmakers at School

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial dealing with an outstanding lawmaker, the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, which appeared in the Boston Globe for May 10, 1961.

LAWMAKERS AT SCHOOL

Few public figures have as good a claim to the title of Old Pro as has JOSEPH W. MARTIN, JR., of Attleboro, 37 years a Congressman, long House minority leader, twice Speaker. No one is better qualified to coach freshman Republican Members in parliamentary rules and courtesies.

He teaches them besides to be punctilious in answering mail and in doing legitimate favors for all constituents; to be seen and not heard at their first session; to be conscientious in committee, and to avoid unnecessary floor fights. These suggestions may sound elementary, even amusing to some, but the freshman Congressmen soon discover they are vital.

Actually, Congressman MARTIN has brought informally to Republicans in Washington the kind of course the Massachusetts Division of University Extension has been offering all freshman lawmakers on Beacon Hill for more than a quarter of a century. Prior to every session, Clerk Lawrence R. Grove gives 12 one-hour periods to new legislators, whom he informs as to the rules, parliamentary courtesies, and even the idiosyncrasies of the House (but not, of course, those of individual Members).

In such teaching, Massachusetts has once more proved herself a pioneer. In a kindred enterprise, selected college graduates are learning at first-hand by working for a year under a Carnegie Foundation grant as "political interns" in departments of the State government or with the Legislature.

The full implication of such courses, their vast potential importance, even those responsible for them may not realize. Science and technology are advancing at a fantastic pace, but there is little reason to amend Al Smith's comment of 40 years ago that the art of government has lagged badly. Desparately needed once more is the kind of creative political action which laid the basis for national independence and the Federal Government, opened the way to national growth, rallied the Union against rebellion, and met the challenge of the post-Civil War period, when an agricultural country became industrial.

Crowding upon most Americans today are the new problems of a society fast becoming urban. How to meet them? How in time to stabilize a world order in a cold war and nuclear age? Who will find the answers?

The word "politician" has taken on an uncomplimentary meaning. But this term applies to all the great creative public figures of the past. Ben Franklin served in the Pennsylvania Assembly, and prepared for his diplomatic mission to France as colonial agent in London. In the Virginia Legislature, Washington learned that the military should respect the civil power. Jefferson, the Adams', Madison, Hamilton, John Marshall, Jackson, and Lincoln all had experience as lawmakers.

A statesman was once described as "a famous politican, now dead." The definition has this much truth; achievement in government is only possible for those of sufficient knowledge and experience to hold their own and make their way in the intangibles of public life.

Following Massachusetts, it is good to know, other States, and now the Republicans in Washington, are teaching freshman lawmakers. The financing of Beacon Hill political internships by the Carnegie Foundation is heartening evidence that the need of creative action in public affairs is beginning to be recognized. In the face of today's frustrating, dismaying, and sometimes terrifying problems, full realization cannot come too soon.

Communism: Our Active Enemy

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by Linda Brown, a student of Dennis Junior High School, which appeared in the Palladium-Item and Sun-Telegram of Richmond, Ind., on April 16, 1961:

COMMUNISM: OUR ACTIVE ENEMY

(By Linda Brown, Dennis Junior High)

Probably the first question we should ask ourselves is why is communism our most active enemy? Indications are it is so. Just whose fault is it? Maybe it's the Government's or the church's. Perhaps the finger should point at us. Have you ever contemplated on the thought that we may be the guilty ones?

This presents another question: How have we failed? In the book, "What We Must Know About Communism," the authors give four elements of our way of life that we wish to preserve.

"Law is the first element, for where there is no law, the people will perish." This isn't stressed enough in America. Children are not reared to respect the law. "No one who is familiar with our law can learn about phony trials, forced confessions, arrests for no reason, use of secret police, that are the basis for Communist law—and not to pledge anew faith in our own liberty under law."

"The second element is respect for the individual." If you read a book, magazine or other Communist publication you would realize that in all the hundreds of words you would not find one word, individual. You now see that communism is only interested in a person as part of a larger class.

ATMOSPHERE OF HATRED

"A third element is our personal right to feel friendship and good will toward others." Communists, live in an atmosphere of hatred for all who do not agree with or believe in the Communist theory. On the other hand, we are protecting the right to feel affectionate and have mercy.

"The fourth element in our life is our right to learn." How many of us really seek knowledge or do we just take one person's acclamations to be the true word?

When the first satellities were shot into space, many people claimed that Russian education was ahead of ours. We do not deny this, but those same people should compare the percentage of educated Russians with the learned Americans. We are interested in educating the whole population in the ways of democratic freedom, not just a few chosen to serve the State.

Looking over these elements, how many of us have conscientiously obeyed the law, respected each person as an individual and not just part of the population, have been friendly, affectionate, and merciful, and have taken advantage of the opportunity given everyone for equal education?

OUR NEGLECT CITED

Communism is our active enemy only because we have allowed it to be by neglecting to recognize and guard against its evils by realizing and learning what our own democracy stands for. Democracy is a priceless possession. Few people realize its true value until it is lost or threatened.

Since communism is the enemy to be opposed, our counterattack must be a rebirth of patriotism in America. People must know the cause for which they fight, because the enemy is dedicated in its belief, and we must be strong in ours.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "Step at a Time Toward Socialized Medicine," which appeared April 17, 1961, in the Fort Wayne News Sentinel.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STEP AT A TIME TO SOCIALIZED MEDICINE

The Socialist Party has long demonstrated that it is willing to take one step at a time as long as it makes some progress toward socialization of all phases of the American economy.

This is demonstrably the case with socialized medicine the same as everything else, despite the denial of proponents of Federal medical aid to everyone over 65 under social security, that this would be an opening wedge to all-out socialized medicine. Indeed, the party has now issued a pamphlet which describes a program for bringing about socialized medicine on a bit-by-bit basis.

Norman Thomas, long the dominant voice of socialism in the United States, makes this clear when he says that the bill in question is insufficient and a timid start, but he advocates its support—and with good reason, considering his format for continuing progress toward complete socialization.

Thomas' philosophy follows the old Chinese proverb that the longest journey begins with a single step, and that the program for socialization must also begin, and continue, in a limited way. He knows full well that if one group—arbitrarily defined, regardless of need—is to have medical care bills paid by the Federal Government, other groups will demand and ultimately receive the same handouts. And that thus, little by little, socialized medicine will eventually be brought about.

To oppose such a program, of course, is not to deny medical services to elderly people whose own resources are inadequate. Indeed, the Federal-State cooperation measure passed by the last Congress provides for aid to all who need it, whether they are under social security or not. That, of course, is the right and fair way to meet this problem.

Farm Strangulation Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. DERWINSKI. Mr. Speaker, considerable discussion of late has emanated from the executive branch of government urging voluntary censorship upon the nation's press. Personally, I feel that the expressions of our American press are basically free from abuse. If there is abuse, it emanates from extremists who normally support the administration's socialistic proposals and not from newspapers and columnists who support the American free enterprise system.

In today's Chicago Daily Tribune, the "Report From Washington" column, by Walter Trohan, chief of the Chicago Tribune Washington bureau, discusses an aspect of Secretary of Agriculture Freeman's farm strangulation program. Many of us realize that this bill contains the basis for administrative dictatorship over the farm economy. I believe Mr. Trohan's article should be thoughtfully read by all Members of Congress before they are pressured into supporting the monstrosity that is labeled an agriculture program:

REPORT FROM WASHINGTON

(By Walter Trohan)

WASHINGTON, May 9.—The House Agriculture Committee is holding hearings on an overall farm bill, a most complicated measure with far-reaching implications because it would supposedly let farmers write their own tickets but actually puts final power in the hands of Secretary of Agriculture Orville Freeman.

The bill, by which the administration hopes to discharge its campaign promises to solve the farm problem, is a 79-page affair which covers the soil front. Charles B. Shuman, president of the American Farm Bureau federation, says it will give Freeman absolute control over agriculture.

There is something for every farmer in the measure, from a low interest program to build farm houses and irrigation ditches to crops themselves. The home and irrigation loans would be paid over a 40-year period with the interest rate no higher than 5 percent.

The measure would expand the power of farm cooperatives, which many businessmen consider too big at present. There is a program for setting up food reserves in so-called underdeveloped countries and much more. Of course, the costs will fall, where they always come to rest, on the American taxpayer.

PLAN REVIVAL OF PAYROLLER VOTE FORCE

Plans are to revive the field committee set up to administer many items of the bill. This spells a return to a program that will place approximately 50,000 field committeemen on the Federal payroll, where they can be expected to constitute the potent political force they were back in the days of such Democratic Agriculture Secretaries as Henry Wallace, Claude Wickard, and Charles Brannan. The boost in administrative costs would be about $250 million a year.

Whether or not this will be approved by Congress, it is evident Freeman wants to dictate farm production and prices. His chief economic adviser is Willard Cochrane of the University of Minnesota, who was Kennedy's farm adviser during the campaign and who proposed the concept of parity income which would be even higher than parity price for farmers.

During the campaign, farm economists in the Department of Agriculture said the Cochrane formula would mean a 10-cent-a-pound jump in the price of hogs, a 17-cent-a-pound increase for chickens, and a 19-cent hoist in eggs, with other food prices jumping in proportion. The Department said the plan would raise food costs for consumers by almost 25 percent.

The first major piece of farm legislation under the New Frontier was the feed grain bill, which gave the Department authority to control production and price of corn and grain sorghums. If the overall farm bill now under consideration goes through, Freeman will undoubtedly try to promote the farm parity income concept.

VOTE TO RAISE CHICAGO FOOD PRICES

To win, Freeman is counting on the support of many big city Congressmen, who know nothing about the farm problem, but vote regularly for more and more Government domination over farmers, even though the domination means higher food prices for their constituents and less and less free enterprise.

The margin for passage on the feed grain bill last March 9 was furnished by Chicago's Democratic Congressmen. Led by the dean of the city's delegation, THOMAS J. O'BRIEN Democrat of Illinois, all 10 Chicago Democrats went down the line for the measure which passed the House by a vote of 209 to 202. Had the Chicago Democrats voted against the measure, it would have lost 212 to 199.

Undoubtedly, House leaders are counting on Chicago's Democrats, as well as those of other large cities, to go down the line again when the big farm bill comes up for a vote. In view of the prospective higher food prices, interference with the operations of merchants and traders of Chicago, and damage to the free trade system generally, it seems strange that Chicago Democrats are so loyal to the ideas of Professor Cochrane and Secretary Freeman.

Armed Forces Week

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. BARRY. Mr. Speaker, the Armed Forces of the United States have been paid a tribute in a special poem written by Chaplain Gilbert Darlington, lieutenant commander, NYMN retired, entitled "Frontiers of Brotherhood and Freedom."

The poem was first read before the Military Chaplains Association of the United States meeting at the U.S. Military Academy, West Point, May 3. Dr. Darlington also has been asked to read the poem at the Waldorf Astoria banquet May 20, which marks the culmination of Armed Forces Week observances in New York City.

I have been asked by the New York Chapter of the Military Order of the World Wars to insert in the CONGRESSIONAL RECORD this poem dedicated to "all who are working for peace and freedom everywhere":

FRONTIERS OF BROTHERHOOD AND FREEDOM

God of our Fathers, hear our prayer,
  Bless all Your children everywhere,
From pole to pole, land, sky, and sea;
  Teach us the truths that make men free
And laws that safeguard liberty
  To all Your worldwide family.

Hunger, disease and poverty—
  These are the frontiers where we see
Roadblocks to human dignity;
  But doubly damned is tyranny
  That shackles men that should be free,
Censors the news, denies free speech,
  Readies armed forces out of reach,
Plans ultimatums often hurled
  At its own serfs, or anxious world;
Boasts launching pads prepared to kill
  All those who vex a tyrant's will;
Trains saboteurs to infiltrate
  The heartbeats of some newborn state,
And teaches hatred as a tool
  To justify its own misrule.

Why must so many million men
  Beat plowshares into swords again?—
Wasting in sterile armament
  The lifeblood of each continent
  That should be used to set men free
To live in peace and dignity,
  Secure from want and tyranny—
To win from rivers, sun, and soil
  Rich dividends from honest toil,
Till not oppressed and more mature,
  For ancient ills they learn the cure.

Poor propaganda-blinded youth
  Can never hope to grasp the truth
That brotherhood makes mankind free,
  But hate and fear breed tragedy.
The burdens of another war
  Will be far greater than before.
Those who survive will fail to see
  A healthy, free economy,
For misuse of atomic power
  Can blast man's progress any hour,
And open wide the bloody door
  From world war III to world war IV.

Father, why do there have to be
  Frontiers of brutal enmity,
Where lack of true humanity
  Blinds us to our real destiny?
Teach us to serve our fellow man
  With all the strength and skill we can
To conquer through fraternity
  Hunger, disease, and poverty.
As ill will and aggression cease,
  Help us to share enduring peace;
And may the Prince of Peace, Your Son,
  Bless us until this peace is won.

Hoover 37 Years Head of FBI

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. LANE. Mr. Speaker, I am pleased to include an article from the Boston Traveler issue of May 10, 1961, which depicts the 37-year reign of J. Edgar Hoover as the Nation's top G-man:

[From the Boston Traveler, May 10, 1961]

ATTORNEY GENERAL STONE PICKED HIM FOR JOB IN 1924—HOOVER 37 YEARS HEAD OF FBI

(By Joe McLaughlin)

The temporary Government messenger in 1924 who remained to revolutionize U.S. law enforcement, J. Edgar Hoover, today rounds out 37 years as the Nation's top G-man.

On May 10, 1924, "Speed" Hoover, aptly described as "that bundle of high-charged

electric wire," took command of the Federal Bureau of Investigation.

BECAME "J. EDGAR"

Seven years earlier, he had gone to work for the Justice Department as a clerk-messenger, after learning his way around the Capitol as a congressional messenger.

In 1919, a scant 24 months later, he became a special attorney in the Justice Department. His first task, prosecuting subversives.

That was when he became "J. Edgar" Hoover, changing from "John E." to avoid confusion with a fellow employe of the same name.

In 1921, he became Assistant Director of the FBI.

On May 10, 1924, at the age of 29, he was named Director.

There were 657 employes in the bureau then, a politics-ridden unit practically helpless in the face of organized crime and violence sweeping the country.

NOT ALLOWED TO CARRY WEAPONS

Agents were prohibited from carrying weapons. They were poorly paid, poorly equipped and literally orphans of the Government.

They had not a single vehicle at their command, and their pursuit of criminals was keyed to streetcar timetables.

Today, the "temporary" messenger who almost became a minister heads the finest law enforcement agency in the world.

The force that numbered 657 when he took over 37 years ago has swelled to 14,000.

Political hacks went out the window. FBI badges handed out to politicians and ward-heelers were withdrawn in a hurry.

TEST TUBE MIGHTIER

He hammered home the principal that the "test tube is mightier than the rubber hose," banning use of the "third degree" by his agents.

He started from scratch with that theory, and from it pioneered the scientific law enforcement that is a blueprint worldwide.

The FBI's fingerprint file is the repository today for more than 189 million prints.

Its crime laboratory, its services available to police departments throughout the nation, almost daily weaves tiny scraps of evidence into irrefutable proof of guilt, or innocence.

The world-renowned National Academy trains police officers from departments all over the United States.

Under his direction, the FBI's scientific law enforcement has branched into scores of highly special units, including subversives, codes, and ciphers and disaster squads to name but a few.

INSISTED ON TWO CONDITIONS

When he took the top job in 1924, he insisted on two conditions that were backed to the hilt by the then Attorney General Harlan Fiske Stone.

They were: "no politics and no outside interference."

Since then, Hoover has served under 6 Presidents and 13 attorneys general with the 2 conditions unviolated.

His agents today, unfettered by political patronage or sponsorship, are top college graduates with a law degree or CPA's certificate.

Unlike their counterparts of 1924 who couldn't carry guns and who even lacked power of arrest, today's FBI men are backed to the hilt by Hoover and the law.

From a hard-hitting agency that cowed the underworld of the 30's into meek submission, the FBI almost overnight moved in as the shield of national security.

With the outbreak of World War II, thousands of potentially dangerous enemy aliens were scooped up and jailed within 24 hours after Pearl Harbor.

Secret arsenals were raided and explosives and other tools of sabotage seized.

Security measures were laid down for thousands of war plants.

So rigid and effective were the FBI's operations that not a single caste of foreign-directed sabotage took place during the entire war.

It's most spectacular wartime action was the capture of eight German spies and saboteurs landed from submarines on the coasts of Florida and Long Island in 1942.

With the war's end, the Hoover-directed security swung quietly into the nests of communism, effectively burrowed in strategic areas here during the war.

ARREST OF DR. FUCHS

Relentless probing into Red atomic spy rings brought about the arrest of Dr. Klaus Fuchs, Britain's top atomic scientist.

His arrest eventually culminated in the electrocution of the Rosenbergs and the jailing of scores of others.

Leo L. Laughlin, present head of the Boston division of the FBI, played a leading role in the Judith Coplon case in New York.

During the trial of 11 top Communist leaders in New York in 1949, it was revealed for the first time that agents had infiltrated the ranks of the Communists themselves.

Then, as today, Hoover warns, Communists here constitute a "fifth column far better organized than Hitler's fifth columns in Europe before World War II."

Today, at 66, the top G-man, who holds the alltime record for tenure as a Government agency head, still operates with the same drive and vigor.

His personal life is reflected in the spartan-like appearance of his office, which he calls "The Cave of the Winds."

Appointments, conferences and appearances adhere to a rigid schedule ticked off with clocklike precision.

The 14,000 members of the FBI—including 6,000 agents in the field—work 'round the clock under the strictest of discipline and conditions.

They are a monument to the man—FBI Director J. Edgar Hoover—who has molded the Nation's mighty shield of protection and security through eternal vigilance.

The John Birch Society—II

EXTENSION OF REMARKS

OF

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. ROUSSELOT. Mr. Speaker, the Los Angeles Herald-Express, a newspaper published in Los Angeles, Calif., has printed a series of six articles by George Todt concerning the John Birch Society. I had the first two articles of the series inserted in the body of the CONGRESSIONAL RECORD for May 10, 1961. I ask unanimous consent to have the third and fourth articles of the series printed in the Appendix of the RECORD for today.

[From the Los Angeles Herald-Express, Mar. 24, 1961]

GEORGE TODT'S OPINION

"By their fruits ye shall know them"—Matthew vii : 20.

A sign of the increasingly dangerous times we live in today may be seen in the predilictions of the anti-anti-Communists to make reckless and irresponsible charges of "fascism" against almost anybody who might be guilty of fighting the Reds.

The reaction of the AAC's to lump the opponents of communism as being in the so-called Fascist camp is a Marxist semantics trap in the first place.

In the second instance, most of the hurlers of these shotgun charges would not know a Fascist if he saw one.

What is a Fascist supposed to be, anyway?

NO MIDDLE

I asked this question of 12 knowledgeable persons recently and got 12 different answers.

My own thinking on the subject runs like this: Communism is the leftwing of Marxist socialism; fascism (and the National Socialism of the Nazis under Hitler), the right wing. Somewhere off to the side is Fabian socialism.

What decent American should wish to buy any one of these three items?

Or consider it another way. Let's put a triangle with three equal sides on the blackboard. And next to it a circle. The latter we will call Americanism and the triangle Marxist socialism.

One side of the Socialist triangle will be marked communism, another side fascism, and the third fabianism. These are the three chief brands of socialism.

But our Americanism in the adjacent circle would be none of this said trio, fortunately. Who among us that believe in our constitutional Republic and free enterprise system would want to be a Communist, Fascist, or Fabian Socialist?

Now the semantics trap the Communists and their unwitting helpers, the AACs, attempt to bait for unwary Americans is this one—and the argument often seems sound at first blush. It goes like this:

OR LOGIC

"Yes, the Communists are admittedly the left wing of Marxist socialism. We agree to that much, at least, without taking the fifth amendment. But since we are left-wingers, then it also stands to reason that our opposition are right-wingers. And who are the right-wingers? Why, the Fascists, of course. Therefore, all those who oppose us are Fascists."

This specious line might find more adherents if we did not have the little example to choose from which I have indicated previously in this column.

Remember, we pointed out that a good American will not buy any part of the Marxist triangle. When asked if we are Communists or Fascists—or Fabians—our correct answer ought to be: "None of them. I am an American. Period."

Lately the smear bund now working overtime against the patriotic John Birch Society, of which I am not a member, seems determined to fix it with the appellation "Fascist." Why?

THEY BELITTLE

Last weekend an effort to brand the John Birch Society with this tired, tarred brush was made in the State and Nationalities Committee of the California Republican Assembly which met at El Segundo. It was decisevly beaten down, although I was told by members that almost intolerable pressures from topside had ordered it.

Later in the session a milder, unemotional resolution was passed unanimously which stated that the GOP was against all Communist and Fascist organizations, if any there be, and this was heartily approved by all the John Birchers present.

They are equally as much against fascism as communism, and vice versa. All the rest of us ought to feel the same way about it, too.

Here are some pertinent words of Robert Welch, founder of the John Birch Society, on this important subject:

THIS NO TRICK

"It is our purpose in the John Birch Society to inspire and cordinate greater efforts on the part of all men and women of good conscience and good will, who want to bring about 'less government, more responsibility and a better world.' Our long-range objectives are not negative, but positive. We know, however, that under present circumstances a preponderant part of our efforts must be directed in turning back the Communists, as a prerequisite to all else we wish to accomplish.

"In neither the defensive nor the constructive part of our program is it necessary, nor even desirable, that all our members be alike, or think alike on all subjects.

"One of the very things we are trying to prevent is the conversion of our civilization into a collection of standardized robots."

Does this sound like a Fascist speaking here?

[From the Los Angeles Herald-Express, Mar. 29, 1961]

GEORGE TODT'S OPINION

"Methinks thou dost protest too much."—SHAKESPEARE.

The weeping, wailing and gnashing of teeth by the "liberal" enemies of the beleaguered John Birch Society has suddenly assumed tempest proportions across the length and breadth of the land, and perhaps we should wonder why.

What are these people accused of doing, anyway?

They have banded together to fight socialistic communism, a termite disease which threatens to destroy the American Republic and its productive free enterprise way of life. This is bad?

The detractors of the John Birch Society hasten to assure us that they, too, are against the philosophy of communism. They merely deplore the methods which the society uses, or advocates. An old story.

DOUBLETALK

When asked what we ought to do to resist the international Communist conspiracy to dominate the world, the so-called liberals never quite seem to have a plan. But we hear a lot of doubletalk.

"Just be good, complacent little Americans," they tell us. "Above all, don't do a thing that our implacable enemies are doing to us. Just smile and take it. Show the world that we are so strong that nothing—absolutely nothing—can disturb us. That is the way to win." (But for which side?)

Frankly, the one-word reply of Gen. Anthony McAuliffe to the Nazis in the Battle of Bastogne during World War II is most appropriate here.

And that one word was "nuts".

Actually, we have had the pants beaten off us during the last 15 years by the highly competent and effective Red leadership—and they are now winning the battle for a planet, not us.

A CEMENT BLOCK

Complacency. Apathy. Incompetence. Those are the three greatest enemies of the American people today, veritable albatrosses about our collective necks. Without them we could give the Reds the short shrift they deserve—and much quicker than might be imagined by most of us.

Since the end of the Second World War, the forces of Liberalissimo in the United States have ridden tall in the saddle. In the main, they have called most of the signals. Where are the victories? What kind of ideological leadership have we had to be in the sorry position in which we now find ourselves? Why should the mightiest Nation on earth be a potential loser?

BE A HAWK

The main reason I am disgusted with the leadership provided by Liberalissimo is because it has managed to turn certain victory into defeat, order into chaos, hope into despair. It just cannot win.

To my way of thinking, leadership is only valid for a people as long as it can win for them. There is no other excuse. Whenever our leaders fail to win—or even when they don't win fast enough—it is time to call for new leadership.

The ideological leadership of Liberalissimo is bankrupt and we are dangerously close to the abyss of neutralism, appeasement and surrender.

We have no real choice left to us except to fight realistically against Marxist communism in all its phases—at home and abroad. No more shadowboxing, please.

The Reds only accomplish diplomatic agreements with us in order to make suckers of those who foolishly trust them. What do we gain by playing their deadly game?

Why make a treaty in the first place with a liar who will break his word as soon as it may profit him to do so?

The John Birch Society is basically designed to ultimately wrest the ideological leadership in the United States away from bumbling, inept Liberalissimo and return it to conservative fountainheads closer to the people.

Americans, by and large, are still overwhelmingly conservative and closely wedded to the principles of the Founding Fathers of our Republic—based on the Declaration of Independence, Constitution and the Bill of Rights. They believe in our free enterprise system.

CLOSE THE LOCK

But the unimaginative forces of Liberalissimo—led by the Americans for Democratic Action and their friends—would appear to have their hearts set on leading us into a Social Laborite government of the demoralizing type inflicted upon Great Britain from 1945–50 by Clement Atlee and Aneurin Bevan.

Fabian socialism would have proved an even worse calamity than it did for our English cousins except for the fact that the American taxpayer was required by the Truman administration to contribute literally billions for its upkeep. This deadly lesson ought not to be lost upon us now.

The liberals presently perceive the massive threat posed to them by the John Birch Society and are pulling out all the stops to discredit it—mainly through innuendo, emotion and hysteria to date. Strictly "stampeding the mob" kind of action definitely not in the spirit of Voltaire. How come?

Let's not buy a bill of goods from those with axes to grind.

The San Francisco News-Call Bulletin, Reporter Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association—Tom Wallace Award

---

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. SHELLEY. Mr. Speaker, I would like to bring to your attention, and to the attention of our colleagues a series of articles which appeared in the San Francisco News-Call Bulletin, written by Reporter Donald Canter, which has recently received the 1961 Inter-American Press Association—Tom Wallace Award. This merited award is financed and supported exclusively by editors and publishers of the Latin American republics, and given to a United States or Canadian newspaper that has most distinguished itself for its work in behalf of closer friendship and mutual understanding among American nations.

The award this year was given by the unanimous decision of the awards committee of the Inter-American Press Association—Tom Wallace Award in recognition of the campaign of the San Francisco News-Call Bulletin, to help the victims of the Chilean earthquakes of 1960.

Mr. Speaker, on April 18, 1906, the city of San Francisco was torn asunder by a great earthquake; what part of the heart of the city escaped the temblor itself was soon leveled by the raging fire which immediately followed. This crushing experience is deeply engraved on the memories of thousands of San Franciscans who either themselves suffered or whose closest relatives endured that great disaster.

Thus, when, 54 years later, in May 1960, when much of southern Chile was desolated by a terrible earthquake, what was more natural than these memories of San Francisco should have been rekindled? This natural sympathy that existed throughout the United States and the world for the poor, terror-stricken families of Chile struggling out of the wreckage was particularly felt by San Franciscans. The feelings of San Franciscans, appalled and grieving by this dumfounding destruction, was marshaled and channeled into concrete action, largely by the writings of reporter Donald Canter. In a great out pouring, 9,000 San Franciscans donated money sufficient to build 33 apartment units and a modern school in Valdinia, the heart of the Chilean disaster area.

Mr. Canter's efforts went far beyond authoring the articles which struck so responsive a chord in the memory of San Franciscans. Making several trips to the devastated area, he saw the stricken population first hand, and determined their most crying needs. With local authorities, he arranged for construction of apartment buildings and a school for the destitute families he located. He saw his work come to fruition when 75 people moved out of their 1-room huts without water or electricity, into modern dwellings. All of this promises to perpetuate itself with the new apartments, financed by the nominal rents from the original units. Thus, the Ciudad of San Francisco project, is rising, from the rubble left by the great disaster of May 1960.

It is more than heartening, Mr. Speaker, to read of this sympathy translated into such a spontaneous, concrete expression of sympathy between the citizens of two cities geographically so many thousand miles apart.

Under leave to extend my remarks, Mr. Speaker, I submit the following articles written by Mr. Canter and two others relative to the situation in Chile written by Mr. James O'Neill, Jr., and Mr. William Cooper. These latter articles are included within the award-winning series:

[From the San Francisco News-Call Bulletin, May 26, 1960]

LET'S HELP CHILE—SHE HELPED US IN 1906

More than half a century ago, the people of Chile established a San Francisco Quake Fund. That was in 1906.

Now Chile has experienced how one of the world's biggest quakes feels and hits, destroys and kills.

San Franciscans, perhaps better than anyone else, can imagine what it's like.

That's why we, and we especially, ought to rush to the aid of the Chilean quake victims, just as they helped us in our darkest hours.

The News-Call Bulletin therefore has started a fund drive to bring relief to the homeless and desperate people of Chile.

This newspaper has kicked off the drive with a contribution of $500.

Now it's your turn. Mail us your checks, big or small. Make them out to Chilean Quake Fund, care of News-Call Bulletin, 860 Howard Street, San Francisco.

Do it now. Show them we care.

[From the San Francisco News-Call Bulletin, May 26, 1960]

BAY AREA CHILEAN COLONY PLANS AID FOR STRICKEN

(By Donald Canter)

Members of the bay area's Chilean colony met in emergency session last night in the home of Consul Eugenio Ovalle Devoto to discuss measures for aiding their stricken homeland.

Just before their meeting started, a phone call came through from Santiago de Chile for Fernando Alegria, professor of Spanish-American literature at the University of California.

The call provided dramatic evidence of conditions back home.

Reported Alegria:

"I was told by my folks that my brother Julio, an administrator for the University of Chile, barely escaped death.

"He was aboard a boat off the port of Puerto Montt (670 miles southwest of Santiago) when a tidal wave hit, following an earthquake. The boat overturned, but through some miracle my brother was rescued."

Alegria, who was promptly appointed chairman of the local Chilean Relief Committee, also told the meeting that other Latin American countries are rushing to the aid of their neighbor.

It was decided to contact Latin American clubs and societies here to organize a city-wide aid Chile campaign.

With Chairman Alegria the following persons will serve on the committee: Enrique Lopez, 6 Seymour Street, San Francisco; Antonio Alcalde, 125 St. Francis Boulevard, Daly City; George Trench, 15 Mill Street, San Francisco; Mrs. Malens Armstrong, 8 Glenn Drive, Sausalito; Julio Marchant, 256 87th Street, Daly City; Fernando Guzman, 71 Wavecrest Drive, Daly City. An American official will be asked to join the committee.

These Chileans will contact local businessmen and firms urging them to donate funds for the quake victims.

It was decided that the first few weeks of the campaign would be dedicated solely to fund raising and that only afterward appeals would be made for other means of aid.

Mrs. Armstrong, a native of Chile, reported that next Saturday, Sunday, and Monday a stand will be maintained at Sausalito's Vina Del Mar Plaza, where contributions will be received. (Chile's Vina Del Mar and Sausalito are sister cities.)

Chairman Alegria announced that the shortwave station of the University of Concepcion in Chile today will broadcast any available information about the fate of relatives of Chileans in the bay area (25-meter band from 5 to 8 p.m.).

Committee members expressed appreciation for the prompt action of the News-Call Bulletin in establishing a Chilean quake fund.

Persons wanting to contact the committee may call Guzman at EX-7-4411, or PL-6-5855.

Mayor George Christopher said today he intends to appeal to San Franciscans to send aid to Chile. A meeting with civic leaders was scheduled for this afternoon.

The mayor stressed that he understands money is urgently needed right now, because food and clothing would cost too much to ship.

"I imagine that our money will help them with the job of cleaning up and moving the debris," Christopher said.

Surplus Property Allocated to the States for Purposes of Education, Health, and Civil Defense

---

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. McCORMACK. Mr. Speaker, pursuant to Public Law 61 which I introduced in the 84th Congress, the Secretary of Health, Education, and Welfare allocates surplus personal and real property to the 50 States and Territories for purposes of education, health, and civil defense.

The Honorable Abraham Ribicoff, Secretary of Health, Education, and Welfare reports that property costing $82,795,415 was made available to the States during the period January 1 through March 31, 1961. It should be noted that many of the States received property which cost in excess of a million dollars during this period. California received in excess of $8 million.

I am advised that the property received by the States, especially for educational purposes, is one of the most beneficial contributions made by the Federal Government to what many of us consider to be our first line of defense in this space age.

I wish to congratulate Secretary Ribicoff and his staff and the other agencies notably General Services Administration and Department of Defense who cooperate in making this program so successful.

Secretary Ribicoff's report follows:

Surplus property for which the Federal Government paid $82,795,415 was made available to the States for educational, public health, and civil defense purposes during January, February, and March 1961 by the Department of Health, Education, and Welfare.

Real property accounted for $5,559,507 and personal property for $77,235,908.

Secretary Abraham Ribicoff announced the totals in making his quarterly report to Congress on the Department's surplus property program.

Property no longer needed by the Federal Government is distributed, under the provisions of the Federal Property and Administrative Services Act of 1949, to educational and public health agencies and civil defense organizations of State and local governments, and to eligible nonprofit health and educational institutions exempt from Federal taxes. Regional offices of the Department of Health, Education, and Welfare and various State agencies channel the surplus property to the institutions.

Property transferred to the States includes such items as school and hospital building sites; buildings suitable for college dormitory or faculty housing; motor vehicles; hospital, school, and office furniture; hand and machine tools; motion picture projectors; laboratory equipment; and school and office supplies.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Personal property received by State surplus property agencies for distribution to public health and educational institutions and civil defense organizations and real property disposed of to public health and educational institutions, Jan. 1 through Mar. 31, 1961 (acquisition cost)

States	Personal property	Real property	Total
Total	$77,285,908	$5,559,507	$82,795,415
Alabama	2,950,773		2,950,773
Alaska	300,541		300,541
Arizona	741,290		741,290
Arkansas	505,189	15,750	523,939

Problems of the Congo

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles on the Congo problems written by Mr. John A. Kennedy, publisher of the Sioux Falls (S. Dak.) Argus-Leader.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

LEOPOLDVILLE BOASTS SOLE ATOMIC REACTOR

(By John A. Kennedy)

LEOPOLDVILLE—A blue-helmeted Tunisian soldier stands stiffly with his ever-ready Sten gun guarding Africa's first and only atomic reactor functioning in Louvanium University's hills overlooking Leopoldville.

Others of the 150 unit U.N. troop protect the adjoining physics laboratory where we saw native and white scientists working with isotopes in this most incongruous surrounding.

Louvanium is the Congo's huge new outstanding university—a tribute to the tenacity and imagination of Msgr. L. Gillon who got the Belgian Government to start it from scratch on a brush covered townsite 16 miles from Leopoldville in 1954.

The soldiers are housed in the basement of a men's dormitory. Other military—some 25 American Air Force and Navy technicians on duty at the U.S. Embassy—occupy two faculty houses nearby.

TWO YEARS OLD

The reactor was brought to the Congo 2 years ago through the intervention of Monsignor Gillon. He had had considerable training at the Princeton (N.J.), nuclear physics center and participated in much of the early work at Brookhaven atomic laboratory in the United States.

Congo educators say they are not about to try to launch a native into space—they are using it to help in medical, agricultural, and scientific experiments.

The Triga reactor was the first made by General Atomics in its huge, sprawling laboratories in La Jolla, Calif.—designed, built, and installed for former President Eisenhower's opening of the Atoms for Peace Exhibit in Geneva in 1957.

Monsignor Gillon, working with the Belgian Government, got the United States to sell it to his new university.

Mrs. Kennedy and I were present when U.S. atomic energy scientists were placing it in operation in 1959.

The isotopes from it are used in scientific research in medicine, agronomy, geology, physics, and biology. Canon A Vander Perre told us as he showed us the beautiful new buildings of this most extraordinary school.

This equipment with its deadly atomic pile figured large in the problems of the Congolese chaotic takeover last July.

URGENT MATTER

Urgent telephonic and cable messages from U.S. military and top scientists warned that a mistake in pushing of a control button by inexperienced help could unleash the lethal rays with a potential of wiping out the population of Leopoldville and its surrounding areas.

Monsignor Gillon appealed to Congo and U.N. authorities for ample protection—hence the soldiers' guarding the buildings and entrances—keeping out all unauthorized visitors.

In the meantime experiments continued throughout the revolt, although insistent demands were made at one time to close down its operation.

Monsignor Gillon, who left for the United States while we were in Leopoldville, pointed out that he is particularly happy that his people have the Triga because of the vital role played by the Congo in supplying the refined uranium which went into the first atom bomb dropped on Hiroshima and Nagasaki.

BELGIANS LEFT A LEGACY—$15-MILLION UNIVERSITY

(By John A. Kennedy)

LEOPOLDVILLE, CONGO.—There were only 19 native Congolese college graduates in the whole of the Congo at the time of independence last July.

With that fact, according to Dr. M. Dartique, senior educational consultant to the U.N., lies the explanation for most of the Congo's troubles today.

He had traveled through the six provinces of this country on his special duties as a UNESCO representative several times before. On those trips he questioned the Belgians as to why they did not send Congolese secondary school graduates to Brussels and other educational centers for university training.

WANTED NO PART

The answers invariably were that students who went from other African colonies to England, France or the United States to study came back to their native countries as "partially educated radicals."

"The Belgians wanted no part of that in this formerly prosperous colony of theirs," he explained.

Mrs. Kennedy and I got about the same answers in our touring of the Congo, talking with its experts, inspecting its schools and colleges 2 years ago.

They claimed to have profited by the mistakes of other nations who have send students from French and British colonies to European and American universities where they are exposed to political ideas they are not sufficiently educated to be able to criticize.

Educationally they told us they thought it was frong to teach the natives to run before they learned to walk.

The Belgians started to create a university—Louvanium, that would do credit to any nation in the world. It is modeled after the centuries-old institution of the same name in the mother country.

More than $15 million has been poured into its modern, beautiful, efficient, well-equipped laboratories and plant.

"AUDACIOUS MOVE"

It opened in 1954 with 33 students described by Monsignor Gillon as "an audacious move" to launch at that time considering the difficulty they were having recruiting students.

When we were there in 1959, they had 450 students in its various colleges, two-thirds of whom were Belgians, either sons and daughters of Congo residents or students from the mother country.

When we visited this time, all but 10 were natives from the Congo or other areas of Africa.

It has a college of medicine, agronomy, engineering and is starting a school of law.

Its hospital is as modern as most of such institutions in the United States.

The Belgian authorities made it an institution as difficult to get into scholastically as any in the world, patterning their requirements for entrance after that of the alma mater, Louvanium University in Belgium.

In October 1960, the new center of learning was admitted to the International Association of Universities which Monsignor Gillon pointed out is "the highest official academic body in the world."

When it was started, the ruling senate of the Belgian Louvanium supervised it but last June, on the eve of independence, complete control was transferred to the Congo.

There are now 6 African members among the 14 appointed at the present time and Monsignor Gillon hopes to have a majority running the institution as soon as possible.

Three other universities were being started just before independence—the most important one in Elizabethville, capital of the Congo's richest province—Katanga.

When we were there in 1959 it was just being organized—actual construction work was still months away. But a faculty was being appointed and some classes were meeting in various offices and houses which served as temporary classrooms.

What About Silk Industry?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Scranton Times of Thursday, May 4, 1961, in which that newspaper comments upon the impact of foreign textiles on the textile industry of northeastern Pennsylvania, particularly as they affect silk weavers and throwers in that area of Pennsylvania.

The indicated editorial follows:

[From the Scranton Times, Thursday, May 4, 1961]

WHAT ABOUT SILK INDUSTRY?

While the seven-point program of assistance to the Nation's textile industry just announced by President Kennedy seems to be directed chiefly at aiding cotton goods manufacturers, it is to be hoped that the administration will be equally concerned about the sorry plight of silk weavers and throwers. It is with the latter segment of the textile industry that we in northeastern Pennsylvania are particularly interested. In our area there are reported to be 21 such plants employing an estimated 4,000 persons whose annual earnings approximate $11 million.

Area representatives of the silk industry have tried—futilely so far—to convince the U.S. Tariff Commission of the urgent need for restoration of a 20-percent duty on imported silk. This area, once the Nation's second largest silk center, has suffered serious economic setbacks because of competition from Japan and it is about time American mills and workers should be given some consideration. It is immaterial whether relief comes through administrative or congressional action, just so it is provided promptly.

A ray of hope for this area may be seen in the awareness of the President of the fact that "unemployment in textile mills strikes hardest at those communities suffering most from depressed conditions." The truth of that statement is evidenced forcefully in our area, as well as in the President's home State of Massachusetts.

The San Francisco News-Call Bulletin, Reporter Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association-Tom Wallace Award

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in a series of articles relative to the situation in Chile, written by James O'Neill, Jr. The article is included within the award-winning series:

[From the San Francisco News-Call Bulletin, June 4, 1960]

THREE CHILDREN IN A CHILEAN PARK, THEN THE EARTH SHOOK—THEY WERE ORPHANS—U.S. AIRFORCE TOOK THEM INTO A NEW WORLD

(By James O'Neill, Jr.)

It was Sunday, May 22. Mass was over in all of the churches in Puerto Montt, Chile.

The sun at noon was warm in this Chilean autumn, and there was to be a band concert in the park at 2 p.m.

Carlos Fernandez Rojas had to change his white shirt before his mother would allow him to go across the waterfront to the park and listen to the musicians and to play with the other children.

Older people sat around the park and the young lovers were holding hands.

URGE HIM TO PLAY

Carlos' friends urged him to stay near the municipal pier to play.

Sunday is a lazy time in Puerto Montt.

Besides listening to the band, or playing on the pier, you can walk beyond the town and into the hills and sit on the green turf and watch the slow ships casually drifting at their anchor chains, the whaleboats drift-ings with them like gnarled logs.

Carlos considered all this, but chose the plaza and the people, and the gloriette, which is Spanish for bandstand, with the musicians sitting in it.

HOME NEAR THE WATER

Carlos' home stood on a high hill, near the water.

His mother called from the back. "Change your shirt, Carlos. Take off your new shoes. If you are going to play don't ruin the shoes. Or soil the shirt. And leave your father's necktie on his bed."

Carlos grudgingly obeyed.

He put on his patched shorts and his grey sweater and removed his new shoes.

Orefelina called.

"Carlos, Carlos, are you going to the park?"

He was, he said, but he was going alone; how can you run and fight and quarrel and holler if your sister, who wants to be a nun, is walking with you?

"Mother said to wait for me, Carlos. I am taking Rafael. And papa said I was to look out for you. We must go together, papa, said."

Carlos didn't like it but what could he do?

Orfelina had changed her white dress. Now she wore her old green sweater and a rumpled brown shirt, but her hair was neat, and combed. Rafael wore his blue sweater and shorts and one of Carlos' old open-necked shirts. Rafael was big and strong for his age.

Their mother called "goodby" and the children disappeared down the street.

WAS A GRAND CONCERT

The concert was grand. The amateur band was not quite in tune, but played with gusto.

When the concert was over, Carlos stood alone, near the front of the German Club. (Southern Chile has a lot of citizens of German descent; many of them wine growers). Carlos' friends had by this time gone home, or to the hills. Orfelina was dragging Rafael tired and reluctant across the grass toward the city hall and then on home, up the hill, and down the hill, and into the waterfront area.

It was 3:10 p.m. The musicians had left.

At that moment, Carlos looked out across the blue Pacific and wondered if it was not changing color. Some slight, minor, unidentifiable change, a shaft of light, or dark? What was it?

Now it was 3:12.

Carlos stuck a dirty toe into the grass of the park and wondered if he should go home.

There, across the lawn, was Orfelina and little Rafael, eating candy.

Then something moved.

Some small, unreal movement beneath his bare, brown feet.

It was so small a movement it made the soles of his hardened feet itch. He leaned over to scratch them and suddenly fell.

The ground was moving.

The ground was rolling, surging, heaving like the sea.

They were small rolls at first and then grew until the ground was shaking. Shaking, beneath his feet.

FILLED WITH TERROR

He was flat on the moving ground now, and his eyes were wide and round with terror.

He felt a tear on his cheek; his own.

I am too old to cry, he though, but I am afraid. He wanted Orfelina and Rafael, but they were way over there, across the park. His sister didn't hear him scream, "Orfelina."

The earth was talking now, as well as moving. It was rumbling and growling and shaking. Then, right beneath Carlos there appeared a crack, breaking autumn's sod apart with slow, grim motion.

Carlos scrambled to his feet and away from the horrifying crevice, fell, and snatched at the short grass with nailless fingers.

Orfelina!

Rafael!

The earth moaned and creaked and shook, and Carlos was so dry with fear he couldn't call out again.

There was a crash. And another.

THE BUILDINGS CRUMBLE

With a child's amazement at the sudden impermanence of familiar things, he realized the buildings he knew all his life were falling down.

The German club was all askew.

The front of the city hall was crooked.

Lying terrified on the grass, Carlos felt the earth—his own familiar earth—against his stomach, rolling like a huge snake, as if it wanted to get away from him.

He was crying now. Crying for himself, and for Orfelina.

For little Rafael.

I didn't mean to hit you, Rafael.

I love you, Rafael.

Please God, not little Rafael and Orfelina. Dear God, tell Orfelina how I love her. Don't die, Orfelina. Please God.

And where were father and mother? He wanted them most of all.

In a flash, Carlos remembered Father Miguel at the Church of St. Mary, telling how the end of the world would come, with fire and death and falling buildings—falling buildings—falling. Now he was seeing it.

HE SEES HUGE WAVES

Carlos scrambled to his feet, whole walls of buildings were falling now; all around the square.

Carlos ran to the end of the Plaza.

Orfelina was there. She lay still, her brown little arm across Rafael's small back. Carlos whispered, "Orfelina."

Orfelina turned her head and took Carlos under her arm and he felt a small hand pat him.

Rafael turned his bewildered little face to Carlos.

Tears muddied his tan cheeks, but the familiar sight of Carlos comforted him a bit.

The earth's groans and rolling continued and then diminished. Sea water lay all the way across the Plaza. Carlos was wet.

Now the earth was still. The waterfront was crumbled. Shards of broken walls still stood here and there.

Water flushed from a broken main, then dribbled to nothing. The curbs were split. Some fences on the steep hill toward Carlos' home were ripped from their concrete bases, warped into crazy patterns.

But the earth was still again.

Carlos cautiously got to his feet.

Orfelina crept to hers, too, and pulled Rafael to his.

The children stared with awe at the strange shambles.

"WE MUST GO HOME"

"We must go home," Orfelina said. "Mother and father will worry."

So, holding hands and moving with wary eyes and bare feet through the rubble to the waterfront street, they went to where their home had been. It was a pile of broken boards and timbers.

One small, worn hand, with a slim gold band encircling a finger, reposed limply on a heap of rubble. That to which it was attached was lost in a jumble of broken wood and plaster.

A man's shoe protruded. It held a foot. The foot was still.

The children knew it without really knowing it; their father and mother were dead.

It was quite a while before they moved aimlessly away. Carlos clutched Orfelina's hand, and she caught up Rafael in her free arm.

"WE'LL FIND THEM"

"We must go away from here," said Orfelina. "Come, Rafael. Take Rafael's hand, Carlos." A little later, as Rafael began to sniffle and cry for his mother, Orfelina said, "Perhaps it was not mother's hand we saw. Perhaps she is safe. Perhaps Father took her to the hills for a walk. We'll find them!"

With Rafael still looking wistfully at the broken house, she cajoled Carlos into leaving.

Carlos was being very brave. He was looking at the wreckage of the street, their old home, and he didn't want to be brave at all, really. He wanted things as they used to be.

Back past the Plaza where frightened people clustered and tried to talk, Orfelina, Carlos and Rafael saw no one they knew. And there was no place to go.

So they sat on a bench until night.

A waitress from the German Club who knew all the children who used to play in the square, came over and scolded—"Orfelina, why are you not at home? Your mother will worry. And little Rafael.

"MAMA, PAPA DEAD"

Orfelina said, "Our home is gone. Mama and papa are dead, I think." The waitress took them into the German Club, which was cracked, but hadn't fallen down.

The three orphans spent the night of Sunday, May 22, in the German Club, with countless other refugees.

On Monday the sky was clear. Light tremors moved the earth briefly.

A priest with a pushcart gave them some bread. A kind stranger shared some dried meat.

Officials told them to "drink no water, no matter how thirsty you are."

They were given small cups of red wine.

Tuesday, May 24, they gave them water—bottled water. And more bread.

THERE ARE MORE TREMORS

Wednesday, the tremors again. Rafael cried a little now and then; he wanted his mother. When he cried very loud, Carlos tried to talk him out of it. But his heart wasn't in it.

On Thursday, May 26, hope was dying in the hearts of the refugees. The homeless had sat, lost, for what seemed countless days. Food was running out.

Orfelina took Rafael to the toilet, only the toilet was down near the beach and there was no privacy.

Carlos shifted for himself and for Orfelina and Rafael. He stole some bread, and an orange from under the nose of a policeman who was guarding a food supply, and who probably saw him steal it and looked away.

He stole some dirty sweets from a ruined candy store.

For some time, there had been airplanes overhead, and now a curious looking man got off a truck in the square. He was an American soldier. His name, Carlos learned, was Sergeant Hall.

He was here to help them, he said. But he said it in English. The kids didn't understand.

On Friday, May 27, a carabiniero came to them with their uncle. Poor uncle Sebastian. He had been disfigured as a child and wasn't very bright. Uncle Sebastian had lain for 3 days in the wreckage of his humble house. He didn't recognize his niece and nephews. But the policeman knew them and told Orfelina to watch out for him.

"YOU WILL LEAVE"

"Feed Sebastian, if you have food. Soon you will leave," he said.

"Leave?" Carlos asked, incredulously.

"Yes," he said, "the U.S. Air Force has sent airplanes. They will take you to Santiago."

Carlso said, "I have never been to Santiago. We know no one in Santiago."

The policeman explained patiently:

"Carlos," he said, "you are a big boy. You will take your uncle, who is sick, and Orfelina and Rafael, to Santiago. The Americans will look out for you. The Red Cross will give you beds and clothes. You will be warm."

Saturday, May 28, was spent in wild speculation as they saw groups of people leave. An airplane flight! Hunger, fatigue, and now excitement dimmed their longing for home and parents. It was too painful to think.

Sunday morning, May 29, they missed Mass. The policeman and the American sergeant found them and told them to wait for a bus in front of the city hall.

HE WAVES GOODBY

With about 40 others, they got in, and as the wornout bus started away, Carlos leaned from the window and waved goodbye to their friend, the policeman.

But the policeman was too busy to wave back, and Rafael was weeping again.

The bus jolted across the earthquake fractures in the road to the airstrip.

Puerto Montt's airport is only a strip of concrete laid in a piece of badly drained land.

Huge, really huge, airplanes labeled "U.S. Air Force" stood waiting.

The wait seemed interminable. Uncle Sebastian said nothing. He smoked an occasional cigarette.

A man with a megaphone suddenly shouted:

"Carlos, Orfelina, Rafael, Sebastian Rojas." They walked up to him and he said, "You must board the plane."

They went slowly to the giant thing, and a smiling man in a light gray suit, a flying suit, met them. He had gray hair, and very white teeth. Orfelina thought he was very handsome.

"Capt. J. Denardo, U.S. Air Force," said a sign on his suit.

THEY BOARD PLANE

"Walk up the ramp, children," Captain Denardo said. "Don't be frightened. Just walk right up." He touched Orfelina's mussed-up hair, and then gently patted her head.

They boarded the plane, Uncle Sebastian leading the way.

A sergeant told them where to sit and strapped them in. He patted Orfelina on the head, too.

Then the noise of the engines filled the plane and Rafael's eyes went wide with fear but they all knew they were with friends. Carlos was very brave. Orfelina felt only wonder. She was tired out.

They saw the earth slide by, ever faster, and then sink out of sight. After a while they slept.

Below them and now far behind, Puerto Montt lay crumpled and woebegone in the last rays of the setting sun, where their mother and father were still, quiet in a litter of boards and broken plaster.

When they woke up, the plane was already on the ground at Las Cerillos Airport at Santiago, and they had to be shaken a bit and hurried down the ramp.

It was over.

And for them it was only the beginning.

Iowa Newspaper Supports Department of Urban Affairs and Housing

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CLARK. Mr. President, the impression exists in some places that the proposed Department of Urban Affairs and Housing, which President Kennedy has asked Congress to establish, would be of interest and benefit chiefly to the large cities in the industrial regions of the country.

I am therefore particularly gratified, as Senate sponsor of the administration bill to create the new department, to have received a copy of an editorial in support of the proposal printed by the Cedar Rapids, Iowa, Gazette, a newspaper published in a middle-sized city in the heart of agricultural America. I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

URBAN AFFAIRS IN THE CABINET

President Kennedy's request for congressional approval of legislation to set up a Cabinet-level Department of Urban Affairs and Housing contemplates an action which would appear inevitable. If it doesn't happen now, it probably will some time in the future.

The proposal would declare that national policy "shall be to assist communities in developing and carrying out local programs to meet the problems resulting from growth and change."

The new department would concern itself with many things: Comprehensive community planning, eliminating slums and blighted areas, providing decent homes in a suitable living environment for the Nation's population, providing adequate industrial and commercial locations, developing effective urban mass transportation, acquiring open space for recreational and other purposes around population centers.

It would deal, according to sponsors, not only with problems of great metropolitan centers but also with those urban areas regardless of size or incorporation status.

Opposition so far has issued largely from the council on State governments and an executive-committee majority of the Governors' Conference. In the forefront have stood Governors of chiefly rural States, expressing a fear of Federal-influence extension and weakening of local government.

On the other side, the American Municipal Association and the Conference of Mayors have long urged creation of such a department to put urban programs on an equal plane with those of labor, agriculture, and commerce.

Director Robert C. Weaver of the Housing and Home Finance Agency, mentioned as likely to get the new Cabinet post, also notes that about 70 percent of the American people now live in metropolitan areas.

"In another couple of decades," he says, "anywhere from 80 to 85 percent of the people will be so concentrated. It seems to me that these concentrations of people give concentrations of problems. A concentration of problems needs a concentration of attack."

Needless extension of Federal power for the sake of power is a trend that should be resisted at every turn. But an Urban Affairs and Housing Department, proponents insist, would add no new programs or operations.

Purportedly it would simply elevate the existing Housing and Home Finance Agency to higher status, bring other present agencies under its wing and assign "additional responsibilities for leadership in coordination."

An element of controversy over who would get the new Cabinet appointment is seen as another roadblock to creation of the post. This is not germane to the issue. Whatever comes of it, the bill should be considered on its own merits alone.

It is hard to argue, finally, against an urban affairs and housing department when such other groups as agriculture, labor, and commerce have fully justified their own for so long.

In the interests of coordinating agencies, perhaps streamlining their work, possibly avoiding duplication or overlapping functions, and minimizing jurisdictional conflict, action on the urban affairs move seems inescapable. Sooner or later it will have to come.

Hoover of the FBI

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Boston Traveler of May 10, 1961, which will be of interest to the readers of the RECORD:

HOOVER OF THE FBI

It was 37 years ago today that J. Edgar Hoover took his oath of office as Director of the Federal Buerau of Investigation.

Since then he has served under 6 Presidents and 13 Attorneys General. He has won honorary degrees from 18 colleges, medals from his own Government and from abroad. But probably his greatest honor lies in the fact that his name has become a national symbol for the maintenance of security, law and order.

The FBI didn't amount to much when it first passed into Hoover's hands. It was a small and sickly collection of hack agents who worked without weapons and who used streetcars in pursuit of criminals.

Hoover changed all that. He wiped out the Nation's organized gangs of the 1920's and 1930's. He went after enemy agents in World War II so successfully that the country never experienced a single case of foreign sabotage. And now in the cold war, he and his men have been the nemesis of Communist spies.

Today his agency is a model for the world to admire, and his devotion to duty is beyond criticism.

The anniversary of his directorship calls for congratulations, appreciation, and our sincere hope for many more years of such service.

Tribute to Charles A. Dana

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial which appeared in the Fort Wayne (Ind.) News-Sentinel on April 25 paying tribute to a great American, Mr. Charles A. Dana, on his 80th birthday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CITY HONORS A GREAT BENEFACTOR

Officials and numerous citizens of Fort Wayne joined with Indiana Technical College in paying fitting tribute today to an outstanding benefactor of the city and college, simultaneously along with a dozen other cities throughout the United States he had similarly benefited, an a unique mammoth birthday party in his honor. This great American is Charles A. Dana who today reached his 80th birthday still as virile and active as many men half his age.

As in all the other cities, including New York, which he has so munificently benefited, at Indiana Technical College today was cut a huge birthday cake which was shared by members of the student body, faculty, staff members, and guests. Thus, homage was most deservedly paid to the man who Tech President Archie T. Keene logically describes as the inspiration for the "New Indiana Tech."

At th New York party which was attended by many of Mr. Dana's friends from all over the United States, including Mr. Keene, Fort Wayne particularly stood out when a mommoth greeting card, which when unfolded, reach 60 feet in length, was presented to Mr. Dana, along with the best wishes from, and signatures of, the Indiana Technical College students, faculty, and staff.

The reference by Mr. Keene to Mr. Dana as the inspiration for the "New Indiana Tech" was indeed profoundly appropriate, for it was Mr. Dana who, in 1956, offered the Fort Wayne science and engineering college a gift of $300,000 for the construction of a new science building. The gift was met by the public to enable the college to add the first building to the campus formerly occupied by Concordia Junior College.

However, generous as the gift was in itself, it proved but the prelude—although a mighty important prelude—to the campaign presently in progress by Indiana Technical College to meet the challenge recently made by Dale W. McMillen, Sr. Mr. McMillen offered to donate a million dollars to the college, provided the college could raise an additional $2 million. This challenge made possible through the pledges from Louis Meyers, Mrs. Mary English, James D. Edgett, Sarkes Tarzian, and others, was accepted.

Mr. Dana's first gift, which spearheaded the promise of even greater gratuity for the city and Indiana Tech, understandably is a profound contribution to education in Fort Wayne as well as to the city's economy, to which Mr. Dana had already contributed so much through the Dana Corp.'s big plant here.

His great educational contribution to Fort Wayne can be particularly appreciated when one considers that today's enormous costs almost preclude the possibility of institutions of learning making it on their own. Colleges obviously need support and they will need to get it even more in the years to come if America's youth and America itself are to keep abreast of the rest of the world. Mr. Dana and those following in his footsteps at Indiana Tech and other institutions throughout the Nation he has so generously benefited, indeed have the foresight to recognize this challenging axiomatic truth.

Mr. Dana's philanthropies to American colleges and hospitals indeed stand as a monument to one who has lived a notable life that has been as varied as it has been productive. In his broad diversified career he attained fame as a lawyer (besides his practice of industrial law, he was counsel in the Harry K. Thaw-Stanford White case), besides as a financier and industrialist.

The practical operation of his administrative ability is remarkable as well as unique. Mr. Dana, whose corporation spreads across the country, has no office. He communicates with his staff from wherever he happens to be, and usually on hotel stationery. For him it has proved a highly successful method. He has enjoyed the remarkable ability of retaining the myriad details of running a vast corporation in his head. And fortunately indeed for such cities as Fort Wayne, and such institutions as Indiana Tech, in his head he has also kept this fortuitous counsel—that American higher education is one of the best investments Americans can make.

We join in congratulating Mr. Dana on his birthday, not only for reaching four score years, but for living them so energetically, fruitfully and beneficially for his fellowman.

Salute to Spaceman

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial that appeared in the Buffalo Evening News, Buffalo, N.Y., on May 9, 1961, saluting Comdr. Alan B. Shepard, Jr.

The contrast between our showing every detail of our shot and the secrecy thrown around the Russian shot should score a few points for our side in the propaganda war. Likewise, the contrast between the gay and unrestrained celebration of Russia's spaceman and the quiet dignified manner in which we welcomed our spaceman further reflects the ways a free country—a free open society—does things:

SALUTE TO SPACEMAN

Washington could have staged a hero's welcome for Astronaut Shepard rivaling the hoopla—planned and unplanned—that greeted Major Gagarin in Moscow's Red Square. That it did not do so—that the space officials instead kept the reception on a level of dignity and understatement—is a tribute to the good sense of Commander Shepard himself and his superiors.

In everything he said and did, Commander Shepard played the role of a down-to-earth test pilot and member of a scientific team. He used the "we"—the "we" being his colleagues—and there wasn't the faintest suggestion of the cold-war ideological guff that came through so purposefully in the utterances of the Russians first spaceman. Nor was there either false modesty or bowing and scraping to any central committee.

In ruling out other public appearances or the trappings of Soviet-style acclaim (the reels of red bunting, the spontaneous devised floats, the fireworks and gargantuan banners, the hastily printed biographies), the U.S. Space Agency officials did their best to keep the celebration in proportion. An unrestrained circus atmosphere would have undone much of the prestige benefit attaching to the comparison between the secrecy-shrouded Soviet achievement and the world's witness to the Freedom 7 flight.

Congressman Conte and the Depressed Area Bill

EXTENSION OF REMARKS
OF
HON. ROBERT T. STAFFORD
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. STAFFORD. Mr. Speaker, under leave to extend my remarks, I wish to include a copy of a recent editorial which appeared in the North Adams (Mass.) Transcript.

The position which my distinguished colleague, Congressman CONTE, took on the depressed area bill, as outlined in this editorial, seems to me to be worthy of review by all of us. As one who shared the feelings of Congressman CONTE, I can only add that I hope experience will not prove that our northeastern area is further raided of its industry or crippled in its attempt to replace industries already lost.

Several areas in my own State of Vermont—indeed, my own native city of Rutland, Vt., is a good example—are working desperately through private initiative and private capital to attract new industries. The depressed area bill, with further Federal interference, can only hurt this effort.

WILL IT HURT OR HELP?

Congressman CONTE's vote against the depressed areas bill passed by the House last week may have seemed paradoxical. It

wasn't. The Congressman was voting in the best interests of the depressed areas, including northern Berkshire, in his district.

For it is entirely conceivable that the House bill, like the administration bill passed by the Senate, will make it harder rather than easier for places like North Adams and Adams to attract new industries to replace those they have lost in recent years.

This is because the legislation that was passed will provide Government loans and grants to promote industrial development in purely rural areas—most of which are in the Deep South. This means that industrial areas, like North Adams, which are striving to replace their lost manufacturing activity, will now have to compete not only with other industrial areas trying to do the same thing, but with rural areas which have never had any industry whatsoever.

What the House-passed bill will do is try to make rural communities that have never had any industry because they are not suited to industry into industrial communities. It will do this not only through loans for industrial building but also through Federal grants to build water, sewer, and other facilities they don't have now—but which we do have—and which industry would need.

In short, Uncle Sam is now going to make it harder for already industrialized areas to get new industry by increasing the number of areas that are competing to attract new plants.

All during the House fight on the legislation, Congressman CONTE fought sturdily for a bill that would really help the depressed communities in his district.

He supported a measure that would have authorized industrial area plant loans of $150 million, compared to only $100 million in the bill that was adopted.

He supported a measure that would have authorized a $500,000 study to develop a planned workable program for depressed rural areas, rather than set up a $100-million loan program for such areas without any idea of where or how the money would be used, as was done in the bill that was passed.

He supported a measure that would have omitted altogether the $75 million public facility grant contained in the final bill.

He supported a measure authorizing $10 million in annual grants for vocational retraining of industrial workers in new skills, compared to only $4.5 million a year for this purpose under the bill that was passed.

He supported a measure that would have made the legislation much less political by eliminating the power of the Secretary of Commerce to use his discretion in designating areas for industrial redevelopment—discretion that was given the Secretary in the bill that was passed.

In other words, Congressman CONTE fought for a depressed area bill that would really have helped depressed industrial areas.

The bill that was passed was tailored to win Southern Democratic votes by setting up Southern rural areas in the industrial development business. Proof of this is that not a single southern Democrat supported the industrial-area help supported by our Congressman, but they voted almost to a man for the measure that was finally passed.

Congressman HAROLD D. COOLEY, Democrat, of North Carolina, who favored the rurally slanted bill that was adopted, put the whole matter in a nutshell when he ranted that the substitute measure favored by Representative CONTE "is an insult to those who live in rural areas of our great Nation."

Rural areas certainly are a problem, but to try to solve that problem by transforming them into industrial areas can only hurt areas that are already industrial in nature. That's why Congressman CONTE voted "No."

The Late John Cashmore—"Mr. Brooklyn"

EXTENSION OF REMARKS
OF
HON. HUGH L. CAREY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. CAREY. Mr. Speaker, in all its history the Borough of Brooklyn, N.Y., has had no more able proponent than its late President John Cashmore. To its waning moments his life was given to his office and his people. About the duties of the borough president he said: "I love the work and I love Brooklyn and I never want to do anything else."

The 20 years he served as chief executive of the Nation's most populous county followed 18 years during which he was a distinguished legislator in the State assembly, member of the city council, and alderman. World War I began his upfront career; he joined the infantry. Returning to Brooklyn in 1922 he became the candidate of the fifth assembly district for the State legislature. His opponent was seemingly unbeatable. The young candidate and his supporters staged a dynamic campaign.

He was 1 of 10 children of a proud, devoted mother who had immigrated from Canada. She had been widowed when John was 14 and she had seen him leave school to help support the family. He worked as a bellhop, newsboy, truckman and eventually became the proprietor of a furniture business. On behalf of her son she wrote a letter to every mother in the district—John was always proud of that letter which read:

> My youngest son, John, is running for the assembly. He is a good boy and I do wish you'd vote for him.

The young campaigner won the election to the surprise of everyone but his friends and family and never again left public office.

His abilities, vigor and warm personality won him many new friends. Among them, James A. Farley, who became his Albany roommate, Alfred E. Smith and James J. Walker. Like General Farley he became a party leader of stature as well as an outstanding public official. In the troublous post-war years he became leader of the Kings County Democratic organization and helped build it to its position as the strongest in the State of New York.

John Cashmore knew not only how to campaign, he knew how to win, fairly and cleanly and as his first victory was an upset. So were others.

In 1924 he defeated an incumbent on the board of aldermen by 37 votes. No one in New York City ever came that close to defeating John Cashmore for office again.

He was a striking 6-footer, whose warmth, wit and wisdom made him a platform natural. No smile was more engaging because none was more genuine. He was hailed as a speaker because his words packed the power of truth and sincerity. He was that rare combination of dauntless leader and capable administrator. In 1940 he succeeded Raymond V. Ingersoll as borough president. He won reelection to that office in 1941, 1945, 1949, 1953, and 1957. In the last two elections the Republican Party, to its credit, recognized that on his record of merit, no one could displace John Cushmore as long as he chose to run. They endorsed him.

Of his extraordinary accomplishments the New York Times in its editorial of May 8, said:

JOHN CASHMORE

In the nearly 40 years John Cashmore was in public life enormous changes have taken place in Brooklyn. As borough president for the past 20 years he was responsible for a great many of them. Some of these will serve as monuments for many years to his tremendous interest and pride in the borough where he was born and where he lived all his life.

Probably the best known and admired of the improvements for which he was responsible are the $250 million civic center, which has completely altered the appearance of downtown Brooklyn, and the downtown Brooklyn educational complex which now provides educational opportunities for 36,000 high school, public and private college students daily.

And on the same day, the New York World Telegram, "Voice of Brooklyn," by Roland Eckman:

CASHMORE'S WORK STANDS AS MEMORIAL TO HIM

It's a little early, just a few hours after his death, to speak of memorials to John Cashmore. We do so today, in the full shock of his loss, because among our first thoughts when we heard the news was the idea that Mr. Cashmore's memorials—the ones we're sure he would prize most—are already here and are destined to survive.

The first of these is the almost universal affection he inspired in his fellow Brooklynites. Mr. Cashmore was in public life 39 years. He was borough president since 1940. That's a long time in politics and in the course of it he undoubtedly made some enemies. It is a tribute to John Cashmore that he made many more friends.

The second memorial is the Civic Center. The borough's younger citizens probably can't imagine the snarl and tangle and blight that surrounded Borough Hall not so many years ago. All of that has been swept away and has been replaced by public and private buildings, acres of greenery, a smooth flow of traffic, in short, a downtown Brooklyn that is a model of city planning.

There are those who may argue with this or that aspect of the plan, this or that building design. But all can respect the vision of the overall plan and the fight to see it realized, and for this Brooklyn can thank John Cashmore.

We are sure all citizens of Brooklyn will join us in extending their sympathies to Mr. Cashmore's wife and family. It will be a long time before the borough again will have soneone it can call "Mr. Brooklyn."

Sunday evening, May 7, John Cashmore was doing what he loved best, aiding the underprivileged at a fundraising dinner to assist the work of the Williamsburgh Settlement House. On the way home, in the words of Michael O'Brien, (the Daily News Reporter who is Brooklyn's best biographer)—"God did what no man or women on this crazy whirling globe could to—tell John Cashmore to quit."

Among his friends, those of us in Brooklyn who learned from John and leaned on him for counsel will miss him most. His advice was sage and sound because he knew and loved Brooklyn. But our loss is not to be compared to that of his family's—a devoted husband, father, and grandfather. I trust that his wife Edythe Cashmore and his son James and his family will find solace in the realization that his deeds, monuments, and memorials will long surround them. John Cashmore found Brooklyn as an adolescent. While it raised him, he raised Brooklyn. He made his mark—everywhere. He is "Mr. Brooklyn."

Wisconsin Association of School Boards Votes Against Federal Aid

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. SCHADEBERG. Mr. Speaker, for the RECORD, I would like to include the results of a poll taken of local Wisconsin school board members regarding the support of local education and other programs by the Federal Government. It would be well for us to heed the voice of the people:

WISCONSIN ASSOCIATION OF SCHOOL BOARDS, INC.,
Winneconne, Wis., May 9, 1961.

WISCONSIN ASSOCIATION OF SCHOOL BOARDS POLLED ITS MEMBERSHIP ON FEDERAL AID

What are the personal opinions of local Wisconsin school board members regarding the support of local education and other programs by the Federal Government? This was the purpose of the recently completed survey by the Wisconsin Association of School Boards as reported by President T. G. Holthusen, Stevens Point, and the response indicates that many members are opposed or have reservations.

In answer to the questions of Federal support for education the responses indicated that 62 percent were registered "No" as compared to the 37 percent voting "Yes" of the 834 answers. This response represented expressions from members from 92 percent of the association member schools.

The association polled the individual board members of its member schools and the nonmember school boards of districts operating high schools. This included 438 local boards. The survey results are based upon a response from the members of 92 percent of the member boards, representing an estimated 85 percent of the student population in public schools. Only 29 school boards failed to return any response from any of their membership.

The query asked for an expression of the respondents opinion of having the Federal Government grant funds to local municipalities for other activities. Greatest approval was granted to highways (74.5 percent), to be followed by conservation at 57 percent and agriculture was sanctioned by 47 percent of the answers. Lowest of the 11 categories was housing at 22 percent and library services with a 15 percent favorable vote.

Of the 62 percent registering "No" on the Federal aid poll there were 74 percent expressing the opinion that education is a State responsibility. High Federal taxes was the next most popular reason to be followed by the fear of curriculum control.

The group of 37 percent of those participating in the survey the priority reasons for supporting Federal aid was the overburdened local tax sources; following closely in priority were such reasons as: the goals of education are now nationwide; education should be better in every State and Federal aid will reduce inequities among the States.

The questionnaire further asked the no respondents if they would make exceptions. Fifty-six percent allowed exception to school lunches; 20 percent for construction; 18 percent for instructional materials. Teacher salaries and student transportation had a 3 percent support.

The proponents of Federal aid gave top priority, 83 percent to school construction with school lunches, instructional materials and teachers salaries ranking next in that order.

In answer to the question of Federal matching funds, 40 percent of the opponents didn't like this as compared to 27 percent favoring while the proponents of Federal aid registered 48 percent approval as compared to a 16-percent dislike.

On the question of "earmarked funds" from Federal sources a majority of both groups expressed a dislike.

Do you favor limiting distribution of Federal aid to public schools? The answers from both groups on this question were "yes" in the majority of cases.

If Federal aid were distributed, and on an equalization basis, 40 percent of the opponents dislike this idea and 63 percent of the supporters of Federal aid like this plan.

The reaction to the question of effective results of the present National Defense Education Act indicates that 50 percent of those opposing Federal aid say "yes" and 72 percent of the supporters gave this same answer.

A majority of both groups agree that redtape, followed by dictating which subjects to be taught are their top priorities to the question on Federal control.

The answers from those not favoring Federal aid included: 50 percent self-employed, 1.7 percent retired, 7.9 percent housewives, and 35 percent "other" with 5 percent not answering their occupational category. Those school board members favoring Federal aid included: 40 percent self-employed, 1.6 percent retired, 11 percent housewives, 42 percent "other," and 5 percent not indicating an answer.

The school board association conducted this survey in their effort to establish a basis for representing their membership at the national school board convention and to determine how local Wisconsin board members felt about this most timely national question.

President T. G. Holthusen reported that the survey was under the direction of the Wisconsin Association of School Boards and in cooperation with the University of Wisconsin Cooperative Educational Research and Services Division of the School of Education.

W. A. Walden Named Alumnus of Year

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. SIBAL. Mr. Speaker, Bill Walden, an outstanding newspaperman in my hometown of Norwalk, Conn., is to be honored next month by the Norwalk Fathers Club. In recognition of his achievements, I would like to have reprinted the following article from the Norwalk Hour, of which he is city editor:

W. A. WALDEN NAMED ALUMNUS OF YEAR

The Norwalk Fathers Club announced today that it has selected William A. Walden, Jr., of 10 Thames Street as the outstanding Norwalk High School alumnus to be honored June 2 at the Shore and Country Club, at the Fathers Club eighth annual banquet.

Walden is now city editor of the Norwalk Hour and is a product of the local school system, having graduated from Norwalk High School in 1934. Walden became a high school sports correspondent for the Norwalk Hour in 1931 and following graduation was made a full-time reporter. He covered beats in Norwalk, Westport, and Darien and for several years was city hall reporter. In 1956 he was named to his present post as city editor.

A veteran of World War II, he has long been active in civic, veterans, and fraternal organizations and is a member of Trinity Episcopal Church.

Walden is the son of William and Elizabeth Walden, with whom he has made his home. His sister Amelia Elizabeth Walden of Westport, a well-known author, is also a graduate of Norwalk High School. Walden, a bachelor until this time, will be married in June to Mrs. Grace F. Sanders, 8 Elmcrest Terrace, a freelance writer and news correspondent.

Harold Munhall, president of the Fathers Club, stated that plans for the June 2 banquet are progressing and it is expected that a turnaway crowd will be present to honor Walden for the many services he has rendered to the community.

Collapse of Anti-Communist Invasion of Cuba

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "Old Fashioned Fault Finding," which appeared in the Indianapolis Star April 30, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OLD-FASHIONED FAULT FINDING

The official line of the Kennedy administration is that there will be neither recrimination nor fault finding after the miserable collapse of the anti-Communist invasion of Cuba. To adopt such an attitude is certainly the President's privilege. Also, the office requires that the President accept responsibility for this failure, just as a success would have been credited to him.

However, there is every reason for some plain, old-fashioned fault finding if the country is to learn anything from the Cuban fiasco.

Only a few hours before the Cuban landing, the President issued a statement in which he assured the world that the United States would not use any armed forces in Cuba under any circumstances. The Star questioned that position immediately, and suggested that at a later time, President Kennedy would find some way to withdraw from such an unfortunate, ill-considered policy.

The President should take this step at the earliest moment. The cold, harsh facts are that the United States will have to intervene, sooner or later, in its own interests to root Castro and communism out of Cuba.

Insofar as international public opinion is concerned, a few other facts must be stated for the record. The anti-Castro forces who were wiped out in the Bay of Pigs were faced with tanks, planes, and arms of modern design. Does anyone think that Fidel Castro and his bearded cohorts manufactured this accumulation of armaments during the last 2 years between television appearances and cane-harvesting? The cold fact is that international communism has already intervened in Cuba. The Cubans living in that island are well aware of the fact, the United States knows it, the Communists certainly have full knowledge of what is going on.

The American policy of no intervention under no circumstances has to be reversed if the anti-Castro forces within Cuba are to become effective. If those fighting the Cuban Communists are assured by the President of the United States that they can expect no aid from this quarter, where are they to seek help? Cubans cannot be asked to sacrifice themselves for the cause of freedom against Castro's Red planes and tanks while this country stands with its hands in its pockets.

All reports indicate that the nonintervention policy is the work of Adlai Stevenson, representative of the United States at the United Nations. The President will not say precisely who is the author of the idea, or who persuaded him to make it a matter of public, international record only a few hours before the Cuban invasion. The timing of the two events, it may be pointed out, was too precise to be coincidental.

The President and the American public need to understand that the United Nations does not and will not concern itself with the best interests of he United States. Mr. Stevenson must be led to understand that he speaks for his country, and not for some conglomeration of foreign lands. If he cannot accept this line of action, Mr. Stevenson should be returned at once to Illinois where he can resume his hobby of turning out stratospheric thoughts and sculptured phrases for the self-proclaimed intellectuals.

There needs to be some criticism of the Cuban situation, and the gravity of the circumstances demands immediate action by the Kennedy administration.

Communism's Rejection of God

EXTENSION OF REMARKS
OF
HON. JOHN H. ROUSSELOT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. ROUSSELOT. Mr. Speaker, writing in the Los Angeles Herald Express, a widely read newspaper in Los Angeles, Calif., George Todt succinctly discusses communism's complete rejection of God. To the hard-core Communist, man just simply exists, and only things material are important in the scheme of life. I ask unanimous consent to have Mr. Todt's article printed in the Appendix of the RECORD:

GEORGE TODT'S OPINION

"The first great break for the Communist conspiracy came in 1933, with our formal recognition of Stalin's regime."—Robert Welch, "Look at the Score."

Do more than 100 American patriotic societies possess the right to press for the impeachment of the Chief Justice of the United States by Congress in these modern times?

Many members of the press consider this such a ticklish question that they would prefer to see it swept under the rug.

Frankly, I think the question deserves to be aired. Why not put the cards on the table for everybody to see? Who is afraid of the truth? Let the chips fall where they may.

What are the facts in this case?

They are, quite simply, that the John Birch Society—a rapidly mushrooming anti-Communist organization in the United States—has requested a large number of American patriotic societies to join with it in whipping up popular support in Congress to impeach Earl Warren, Chief Justice of the Supreme Court.

There seems to be a lot of grassroots sympathy for this action, and the movement is apparently growing by leaps and bounds.

QUESTIONS WISDOM

I do not believe that there has been any false inference that Mr. Warren is a Communist, which he most certainly is not. The John Birch Society merely claims that he has performed his official duties poorly and in such manner as to bring considerably less than terror to the hearts of the Reds. It questions the wisdom of certain key decisions.

According to Robert Welch, founder of the society, one of these was *Brown* v. *Brown* because it overturned numerous previous decisions by the same court on nothing more substantial than "a set of psychological and sociological theories advanced by a Swedish Socialist named Gunnar Myrdal and a group of American Communist-fronters with whom Myrdal had been associated."

Here are three more decisions which have particularly incensed Welch and his supporters, as seen through his eyes:

"In the Steve Nelson case the Warren Court wiped out the antisedition laws of more than 40 States, and denied those States the right to protect themselves against treason, on the ground that the Federal Government had preempted the sedition field by passing the Smith Act (which act this same Supreme Court has done everything it could to vitiate).

OF HIS ACTS

"In the Konigsberg case the Warren Court canceled the right of any State to deny a license to practice law to a man merely because he would not say whether he was a Communist or not.

"In the Sweezy case the Warren Court reversed the New Hampshire Supreme Court and held that the attorney general of New Hampshire was without authority to question a lecturer at the State university—supported by the taxpayers of New Hampshire—concerning reported subversive activities.

"There have been dozens more which we cannot even mention here."

Welch bases his argument for impeachment on article III, section 1 of the Constitution, which provides that Federal judges "shall hold their offices during good behavior."

HERE ARE SOME

Since the Constitution specifies no other arrangement for limiting the tenure of Federal judges to the periods of their "good behavior," Welch believes it is to be considered obvious that impeachment is to be used for those who violate this requirement.

Now it appears that there is a considerable body of American citizens who express themselves as dissatisfied with the behavior of Mr. Warren as Chief Justice of the United States.

They want Congress to bring impeachment proceedings against him.

I am not arguing the merits of this case, pro or con.

But the question has been raised as to whether these people are within their legal rights to take this kind of action.

Actually, it seems to this writer that no officeholder in this democratic Republic of ours ought to be beyond the reach of the people should they become dissatisfied with his public actions.

UNDENIABLE FACTS

I say this impartially with reference to any position and regardless of the political party, race, creed, or color of the person holding it.

Those in public life who arouse the wrath of the people must expect to settle their account with the people thereafter.

Impeachment by Congress under special circumstances is a legitimate kind of accounting in the Republic of the United States.

I am not a member of the John Birch Society, although I know fellow citizens who are enrolled in the organization.

From all outward appearances I have been impressed with their dedication to anti-communism and constitutional Americanism.

I cannot see where they have overstepped their rights here.

The San Francisco News-Call Bulletin, Reporter Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association - Tom Wallace Award

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in a series of articles relative to the situation in Chile, written by William Cooper and Donald Canter. These articles are included within the award-winning series:

[From the San Francisco News-Call Bulletin, June 9, 1960]

UNITED STATES TOLD HOW YOU HAVE COME TO AID OF CHILEANS

(By William Cooper)

WASHINGTON, June 9.—A San Francisco newspaper reporter arrives in Chile today with proof San Franciscans have long memories of earthquake calamity—even after 54 years.

Donald Canter of the San Francisco News-Call Bulletin carries bank credits for $25,000 for relief of Chilean quake victims.

"It's our readers' money," he says. "I'll look around and see how it best can be put to use."

The fund was the idea of Canter, Rene Cazenave, assistant managing editor, and News-Call Bulletin associate editor Mary Ellen Leary. Looking through files, they found that Chile had sent aid to San Francisco after the disastrous earthquake and fire of 1906.

Fifteen days ago they suggested to News-Call Bulletin editor, Charles H. Schneider, that the paper sponsor a campaign on the idea that "Chile helped us in 1906, let's help them now."

Schneider agreed, and contributed the first $500 on behalf of the newspaper.

"The first editorial and story went on the streets in a late edition," Canter says. "An hour later the first $5 came in. We guessed it might grow to $3,000 or $5,000. Now it's over $27,000 and still growing."

The appeal hit quake-conscious San Franciscans in a number of ways.

Old-timers who remembered the 1906 San Francisco disaster were among the first to respond. Contributions were heavy from San Francisco's large Latin-American colony, anxious to help a sister republic. Chinese were among the most generous—many wrote that they remembered floods and natural disasters in their home lands.

Contributions came from Hungarian refugees—many of whom were personally thankful to Canter. At the time of the 1956 revolt he helped 100 refugee Hungarians come to San Francisco with money contributed by readers.

One man wrote the appeal came at a bad time; he'd been laid off work for months. But he enclosed a check for $10. A housewife sent a check for $5.10, explaining the dime came from her little boy, the only money he had. Another boy sent his stamp collection and asked the newspaper to sell it and send the money to Chile.

Canter visited Chile's Ambassador, Walter Muller, at Washington yesterday on his way to Chile. "The reaction has simply been incredible and most touching," Muller told him.

The Chile Fund even grew a littled uring Canter's stop here. Ellen McGinty, 14, San Francisco's entry in the Scripps-Howard National Spelling Bee, pressed a few dollars in his hand.

Canter plans to spend about 10 days in Chile and visit the disaster area. With the help of Chilean authorities he'll decide how the money can best be spent—and report to San Franciscans what their money went for.

[From the San Francisco News-Call Bulletin, June 9, 1960]

NEWS-CALL BULLETIN EARTHQUAKE FUNDS TOTAL: $27,461—DONATIONS CONTINUE TO ROLL IN

A benign tidal wave of bay area contributions to the suffering thousands of Chilean earthquake victims is still rolling in today.

The Red Cross here announced that it has received $44,845.12 from its nine chapters in the area.

This sum is in addition to the generous donations to the News-Call Bulletin Chilean quake fund, which today reached a total of $27,461.10.

And it did not include a special collection for Red Cross Chilean relief taken up last night at the First Unitarian Church here.

Meanwhile, Mrs. M. Justin Herman, chairman of a people-to-people citizens' committee in Sausalito, sister city of a Chilean community, announced that proceeds from this Sunday's excursions to Angel Island will be given to the Chilean victims.

Russell Lewis, of Lewis Excursions, announced plans for a special trip to the island aboard the *Blue Spirit*, leaving the Sausalito sandspit at 2:30 p.m. Sunday and returning from the island at 7:30.

Round trip fare will be $2.50 for adults and $1.25 for children under 12. Mrs. Herman advised phoning for reservations at ED-2-2163.

As San Franciscans were responding to the needs of Chile's hungry and homeless, News-Call Bulletin Staff Writer Don Canter was winging his way to Chile to determine how funds contributed by readers of the paper best can be spent.

Mayor Christopher, in a special telegram to Chilean President Jorge Alessandri Rodriguez, notified him of Canter's trip and its purpose and said:

"Your cooperation will be appreciated and any information you give Mr. Canter will aid in better serving your stricken people. Please be assured of our city's deep and heartfelt sympathy."

Here are the latest contributions to the News-Call Bulletin Chilean quake fund:

Balance brought forward, $25,281.89.

[From the San Francisco News-Call Bulletin, June 27, 1960]

ANOTHER "SAN FRANCISCO" RISES IN QUAKE RUINS—NEWS-CALL BULLETIN FUND THE NUCLEUS FOR CITY VICTIMS' DEMAND

(By Donald Canter)

In the ruins of Chile's quake-shattered Valdivia, a new city of San Francisco is rising.

Its future residents are still huddling together in shacks, tents and refugee centers today.

But not for long. The first homes of the city of San Francisco, a little city within a city, will be ready for occupancy in about 4 months, planned and built through the generosity of News-Call Bulletin readers.

To floorless shacks, where babies crawled in the rain-soaked adobe soil, and to stables where the smell was overpowering, I brought this message:

The people of San Francisco know how a quake hits you. They've given money to help you. Say the word: What do you need most?

In Chile's untouched capital, Santiago, officials had answered that question, too:

"Schools," they said, "schools, that's what our people need most of all."

But those who said it hadn't lost their children, friends and homes.

So is was from the people who did, that I asked advice on how to spend the money which warmhearted readers of the News-Call Bulletin had poured into their Chilean Quake Fund. I asked the people of Valdivia, the hardest hit center of the quake's wrath.

On Valdivia's Catrico Hill, where 1,200 people are trying to survive in the most miserable shacks I've ever seen, I asked a man what he wanted done with the money.

His shoeless, mud-covered daughter cuddled up to him and asked:

"Who is that man, father?"

He told her: "He says he's a newspaperman from San Francisco. But he could be God himself. For us at least. He says he came to help us and asks what we need. But when he looks around, he knows what we long for: homes. That's what we need. Homes and more homes. Please."

In the auditorium of Superior School No. 1, the only structure on Valdivia's main street still standing, I looked in the eyes of hundreds of miserable children huddled together in a refugee center.

Outside, in the courtyard, their parents lined up for food, tin soup cans in their hands.

I asked a pregnant woman if she wanted schools built first, as they'd told me in Santiago.

Her eyes shot fire as she grabbed my arm:

"Please, Senor, don't listen to them. Sure we need schools. But later, not now. Give us homes to raise our children."

But what kind of homes did she want built? The same shacks many had lived in before the quakes? Was that what she wanted?

"For God's sake, don't," she cried. "If you build houses, build decent ones, places fit to live in, not the shacks that were destroyed. Give us better homes and the quakes may have done some good, after all."

She saw me starting to agree and instantly her eyes lit up: "Senor, could you build us some houses Norte Americano with a bath and running water?"

Yes, running water, a bath and a kitchen and bedrooms enough to enable parents to sleep apart from their children, that's what they wanted, the homeless poor of Valdivia. So they told me, over and over, wherever I went in the emergency districts into which Valdivia is divided.

Everywhere, Bianca Freire went with me. She's an ex-San Franciscan—used to live on Geary Boulevard—and now runs Chile's Governmental social service for the Valdivia area.

I talked with her; with Sergio Bruce Saint-Jean, local director of the Chilean Housing Authority; with Gen. Alfonso Canas, temporarily in charge of Valdivia, and with his English-speaking legal advisor, Juan Michelson.

All agreed: The people want homes, decent homes.

That's why today, in Valdivia's Gilde Castro district, construction has started on a community to be known as the city of San-Francisco.

About 100 homeless Chileans will be its first residents. They are families I found in the mud of Catrico Hill, in the stables of the city's farm exposition grounds, in refugee centers in every corner of Valdivia.

The San Francisco of Valdivia won't be a golden gateway, I can assure you.

But to its residents it will be something close to heaven on earth, a place with water and electricity, a place without mud, a place to raise children, a place for hope—a place like Norte America.

What's more, these people will be held in high esteem by their fellow citizens. For these poor people, given homes by the generous readers of the News-Call Bulletin, are going to provide housing for other roofless folks.

Here's how they'll do it:

These people, handpicked by Bianca Freire and myself from the Valdivia refugee camps, will live in their new apartments rent free for the first 3 months.

Subsequently, they will become owners of their apartments by making payments of $10 a month for 30 years.

Their paymetns will be deposited in a special bank account, which draws 10 percent interest at present Chilean rates.

Every time sufficient funds have accumulated, another apartment building will be built on this land, which is big enough to hold two dozen similar buildings.

Thus, the money donated by News-Call Bulletin readers will be a self-perpetuating fund for the construction of homes and eventually will create an entire community proudly bearing the name of the city of San Francisco.

What will happen to some $5,500 which this paper's Chilean quake fund is holding to date in excess of the $33,000 needed for the initial building program?

Many Valdivians would like to see a small school incorporated in the plans for their city of San Francisco. It could be built at a cost of $10,000.

Since over half of that amount is already available, you and we may be able to make that dream come true in the near future.

Next: Who will live in Valdivia's San Francisco?

WHAT CHILE FUND GIFTS WILL BUY

Here's what the first phase of your Chilean building program includes:

Three apartment buildings providing 11 three-bedroom units in all.

Living room, dining area, bath, kitchen, hot and cold water and electricity in each unit.

Two-story, concrete and redwood, structures to be built in a triangle with a central playground.

Land donated by Chilean Housing Authority (CORVI).

Contractor: Empresa Constructora Nahmias Hermanos.

Building supervision by CORVI.

Completion scheduled within 4 months.

Here are financial details of the first phase of your Chilean building program:

Construction cost: $33,000.

Payment to contractor in four installments.

Funds remitted solely upon signature of Chilean Housing Authority (CORVI) director attesting to proper completion of construction for quarterly payments.

Monthly payments of $10 a month collected from residents by CORVI and deposited in Banco de Chile.

Free administration by CORVI.

No payments by tenants for first 3 months.

"Helping Latin America," and "Federal Aid to Schools"—Editorials in the New York Times

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. FULBRIGHT. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from this morning's New York Times. One is entitled "Helping Latin America," and the other "Federal Aid to Schools."

The editorial page of the Times this morning is exceptionally good. These two editorials are very well written, and concisely sum up the substance of these very difficult subjects.

I believe that the editorial on Federal aid to schools is one of the best that I have seen, and I thoroughly approve of it. I wish to congratulate the New York Times on the quality of their editorial page.

Whether or not the recent change in the staff of the newspaper is the reason for it, I do not know, but certainly this morning's editorial page is a very superior one.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

HELPING LATIN AMERICA

The law appropriating $500 million for social and economic development in Latin America (plus $100 million in earthquake aid for Chile) has been handled by Congress with admirable speed and realism in the wake of the Cuban fiasco.

North Americans are learning about Latin Americans and their problems in a hard school, but we are learning. There have been few top-level statements on the question of the U.S. economic relations with Latin America more important than President Kennedy's to Congress on March 14: "Economic growth without social progress lets the great majority of the people remain in poverty while a privileged few reap the benefits of rising abundance." Our aid in the past has largely benefited those "privileged few," the ruling classes of Latin America who have neither paid fair taxes nor distributed the wealth amassed by the national economies, nor given workers and peasants a fair share of the produce of their labor, nor made the social reforms now being demanded with revolutionary insistence.

Both Presidents Eisenhower and Kennedy have made it clear that the United States will and can only help those countries which help themselves. The half billion dollars now being appropriated will, as Senator FULBRIGHT put it, be used "primarily to help the common man." Under the ground rules described by Senator GORE, the money will not go to dictators, to a few large landholders nor to the wealthy who avoid paying their due share of taxes.

It must be recognized and accepted that in making such terms the United States will offend many Latin Americans who are sensitive to dictation and who are afraid, politically, to appear to take orders from the "Yankees." It will not be easy for them to share some of the power, privileges and wealth which they and their ancestors have held for centuries. The United States cannot force them to make social reforms. But the people of their countries can and will force them if the reforms are not made voluntarily. It must not be assumed any longer in Latin America that a rightwing military reaction will get from the United States the support or tolerance of past years.

A new era is taking shape in Latin America. It will, as Senator FULBRIGHT indicated, center on "the common man." The policies we are trying to follow today might have prevented the Cuban revolution if they had been employed in time. There is still time to forestall other Castro-type revolutions in Latin America if the governments there cooperate with us in trying to advance the social and economic welfare of their people.

FEDERAL AID TO THE SCHOOLS

Both Houses of Congress are now putting into final form the major proposals for direct Federal aid to elementary and high schools.

There can be no doubt about the need for action. Average teachers' salaries in the poorest States still hover around $3,500 a year. Almost 700,000 pupils are presently attending school in double or triple sessions. The Eisenhower administration, which earlier had held out the hope that the States could catch up with school construction, admitted in its final report that the classroom shortage has increased from 135,000 to 142,000 in the past year.

Enactment of a Federal aid bill has been blocked in the past by three major controversies.

One of them involves the question whether a Federal aid law should specifically exclude segregated school districts from Government assistance. In principle, aid to segregated schools is objectionable. But since school segregation is now a violation of the law of the land, the battle against segregated schools can, and must, be carried on under that law, in the courts. It is therefore now not only legitimate, but essential, to keep the issue out of Federal aid.

Equally controversial is the issue of aid to nonpublic schools. We believe that direct aid to parochial schools is a clear violation of the doctrine of separation of church and State. The fact that inroads have already been permitted is only added reason not to let the erosion go further.

Finally, there is the question whether Federal aid would limit the rights of the States or, worse, lead to Federal control over the schools. It is hard to see how any bill which leaves the distribution of Federal funds entirely to the States could offend even the most adamant of States righters. The long history of Federal participation, from the land-grant provisions of almost a hundred years ago to the Federal school construction program during the depression and finally the GI bill of rights after World War II and the Korean war, has established a clean record of freedom from political interference.

In the final analysis there is, of course, never any ironclad guarantee that government—Federal, State, or local—or any other agency or interest group will not try to control, or interfere with, education. This danger calls for constant vigilance, but cannot serve as an argument against aid which is needed and should rightfully be provided by the Federal Government.

In summary, we believe that passage of a bill for Federal aid to the public schools, without any extraneous riders concerning either segregation or aid to nonpublic schools, is urgently needed. The $2.3 billion bill proposed by President Kennedy is sound and should be passed.

Economic Impact of Highways With Particular Reference to the Merrimack Valley

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. LANE. Mr. Speaker, I wish to include a very interesting article by Dr. J. Laurence Phalan, staff economist of the Massachusetts Department of Public Works, which appeared in the spring 1961 issue of Business Review published by Boston University College of Business Administration.

ECONOMIC IMPACT OF HIGHWAYS WITH PARTICULAR REFERENCE TO THE MERRIMACK VALLEY

(By Dr. J. Laurence Phalan, staff economist, Massachusetts Department of Public Works)

Are the present and planned Massachusetts highways capable of giving the boost required to sustain and/or make possible resurgence of much needed growth in the State's economy? This article embraces that subject with particular emphasis placed upon the Merrimack Valley which for too many years has existed under depressed conditions.

Broadly speaking, the location of production of goods is either materials oriented or market oriented with, of course, concern being given to present or potential labor supply and other factors. By this is meant that firms will tend to locate plant facilities near either sources of raw materials or adjacent to markets for goods produced.

Importance in location at the source of raw materials in the primary stages of industrial development will depend greatly upon the amount of waste involved in production. For example, in the production of steel the Pittsburgh area rose to prominence because of the nearness of coal and iron ore, the basic ingredients of steel, and because of the much less bulk and weight of the finished product than of the ingredients which went into its production.

In addition to the basic raw materials, power has played an important part in the location of plant facilities and at times more than offset lack of adjacency to raw materials. It was in this area that New England offered many advantages. Thus, notwithstanding its complete lack of cotton and wool, the Merrimack Valley of Massachusetts became the textile center of the Nation.

Concomitant with the establishment of an area of production, there develops a hierarchy of skilled and other types of labor firmly entrenched in the area and offering resistance to movement from it, thereby deterring industry shift to other places offering various later inducements.

The textile industry of the Merrimack

Valley was to no small degree protected from migration in the face of competition from other areas by this hard core of skilled and allied workers until the 1930's.

Relative to this competition, some claim that for years limited management ingenuity was exercised; and others place blame upon too high wage scales making impossible profitable operations irrespective of management's failure to invest old or new capital in the area. We prefer to take the position that much of the reduced production is attributable to a wide variety of factors which made the fall in the valley inevitable, chief of which were decline in the world textile market, foreign competition, and the rise of the South out of its agrarian economy.

History shows that a first step out of an agrarian economy is in the manufacture of textiles. The South was ready and did take that step in its efforts to attract the textile industry from the valley—that is, to attract the industry from the multi-storied loft buildings in which it was operated to electrified single-floor efficient buildings located in areas of mass underpaid, unorganized workers.

The rush from the valley started and/or prepared to start in the 1930's. Blocked for a while by the production demands of World War II, it subsequently resurged and left the valley almost denuded of its chief source of industry.

What did the South get? A low wage industry suffering from worldwide depression pains whose new workers, while yet unorganized, may eventually prove disadvantageous to management that thought it was heading into paradise in the shift of operations from the valley.

What was left? Unemployment by the thousands, empty antiquated buildings, unacceptable to modern industry—a definitely distressed area with unemployment in Lawrence reaching 32.3 percent in 1949 and 20.5 percent in Lowell in the same year.

What is in the area now? A growing diversification of new industry, several new industrial parks, plant modernization, some abandonment of antiquated structures, an average wage rate still low but more closely approximating the statewide average, and greatly reduced unemployment rates. While the unemployment rate nationally has climbed to the highest point since 1940 (8.7 percent in February), that for the Lawrence-Haverhill standard metropolitan statistical area (8.2 percent) in that month was slightly below the national average. Lowell, while its situation has improved over 1947, had an unemployment rate of 10.7 percent in February 1961 and suffered from the unenviable distinction of being one of the three areas in Massachusetts classified as distressed,[1] the others being Fall River and New Bedford.

Route 128 with its supplementary and radial roads has been of great value in this limited resurgence. Route 128 has made for greater availability of materials of production to the valley and for the movement of goods to markets, but of most importance has been its offering of job opportunities to residents of the valley in new plants located on or close to the highway. It was not conceived as an industrial highway, and by some it was called the "road to nowhere." Now, for the past 5 or 6 years, it has been termed the golden semicircle of industry, and the magnitude of its industrial growth is widely known throughout the Nation.

While many of the firms located on it are those which have transferred operations from the central core of Metropolitan Boston (and the shift has caused complications in cities in that central core), generally, changed site of operations has been accompanied by expanded production and increased employment. To these firms have been added numerous other plants not previously located in the area.

While large numbers of displaced textile workers have not been absorbed by this new enterprise, chiefly because of age barriers and inability (or lack of retraining) to shift old skills to new, yet many of them (together with new and/or secondary workers) have been absorbed in varied and newer growing industries to the noted advantage of the valley. Not all plants through which the improvement has come are located immediately adjacent to route 128, but the highway has been an important factor in their location.

Previously, it was pointed out that industry tends to locate because of proximity to raw materials and/or markets for goods produced. With the passage of time, other factors, such as availability of workers (their degree of skill, supply, stability and resistance to relocation) and access to power facilities, likewise have been sources of attraction and industrial retention.

With today's high power transmission facilities the average Massachusetts manufacturer is not required to worry unduly about that element in his production costs. Notwithstanding the higher-than-the-national-average power costs in the State, that item (particularly when only percentage differentials are involved) presents no serious problem in locating a multitude of types of industry in and about the valley.

Nor are taxes, and in particular tax differentials, important cost determinants in the location of a plant in the State and valley—other than when there is intra-area competition in the location of a particular plant.

Massachusetts has been called taxachusetts by many who should know the relative unimportance of tax differentials in production costs, but who do not seem to realize that a well-publicized minor weakness, if there be such, may develop monstrous psychological impact. In other words, studies show that while property taxes, for example, are a minor cost item in the manufacture of goods, harping upon minor sectional differentials is destructive and may build a psychological block toward the entry of new industry into an area, which would enable the elimination of existing differentials. Of much greater importance in industrial development and/or resurgence are the availability of a good labor force, efficient plants or space for their construction, accessibility to materials and to markets.

Let us briefly consider each of these items and the valley. In doing so, we should bear well in mind that industrial and population shifts and growth are rapidly developing a single eastern Massachusetts metropolitan area rather than segmented Metropolitan Boston, Metropolitan Lowell, Metropolitan Lawrence-Haverhill and Metropolitan Brockton areas.

LABOR SUPPLY

What does the thoughtful employer consider a good labor supply? It is believed that the following would fill most of the requirements.

1. That there be an ample supply of highly skilled, skilled, semiskilled and nonskilled workers sufficient to his demands, without those demands immediately throwing the supply-demand relationship out of balance to his disadvantage.

2. A wage scale that, when weighted with productivity, results in comparative labor cost advantage.

3. Stable labor force mature enough in terms of unionization to be disciplined toward reasonable collective-bargaining demands and procedures.

The valley and the surrounding area have these. While the whole Nation is suffering from educational malnutrition damaging to productivity maximization, our area of discussion is above average, and college and university facilities are far above the national norm. We have been the university-trained feeding-ground for the rest of the Nation, exporting the products of Harvard, MIT, Boston College, Boston University, Northeastern, etc., to the advantage of the rest of the Nation and world.

Contrary to some belief, eastern Massachusetts is one of comparatively low wages. For example, recent community wage studies made by the U.S. Bureau of Labor Statistics showed that, among the 20 largest metropolitan areas in the Nation, for comparative jobs, salaries or wages were third lowest in Metropolitan Boston—where wages are higher than in the Metropolitan Lowell and Lawrence-Haverhill areas.

Indicative of the stability of the work force in Massachusetts and the valley, as a segment of it, are data supplied by the U.S. Bureau of Labor Statistics relative to work stoppages for the year 1959. In that year the average time lost in labor disputes in the State was only one-third the national average. In the Metropolitan Lawrence area there were only 6 work stoppages, involving 900 workers and 4,500 men-days, far below national averages. In deriving these figures, a work stoppage is defined as one involving six or more workers idle 1 workday or one full shift. Only areas where stoppages were five or more were reported by the Bureau. There was no report for the Lowell area; therefore, the number was less than five.

EFFICIENT PLANTS OR SPACE FOR THEIR CONSTRUCTION

In this area the Merrimack Valley has been weak for two major reasons. One, notwithstanding some acceptable improvements, too much of the factory space which cities like Lowell, Lawrence, and Haverhill have been trying to sell industry is completely unadaptable to modern manufacturing and distributive requirements. Two, many of the available sites for the construction of modern facilities are or were reached only through the use of comparatively over-trafficked city streets and/or inadequate country roads feeding into outmoded Routes 3, 28, and the Old Newburyport Turnpike. Perhaps topping all main arteries in the valley in their inadequacy to meet current demands are narrow, winding Routes 113 and 110, both of which transverse heavily populated sections and are far from capable of handling heavy, fast traffic.

A continued solution to the problems of the valley as well as those of eastern Massachusetts overall will be found partially in a new road complex involving the completion of Routes 3, 95, and 93 and the construction of an entirely new circumferential highway, Route 495, and outer belt running largely through underdeveloped land 12 to 17 miles to the west of Route 128.

These new and/or improved, relocated roads will make available sites closer in time to materials and markets necessary for retaining and expanding industry. At the same time they will relieve overburdened older roads, particularly those in the inner core of Lawrence, Haverhill, and Lowell, making more feasible extensive redevelopment plans.

ACCESSIBILITY TO MATERIALS AND TO MARKETS

Whether these hoped-for redevelopments will take place returns us to further questions revolving about our original thesis of industrial location being based chiefly upon materials and market proximity.

Let us devote a few words to the term "proximity." There are three factors to which one must give consideration. One, the bulk of raw materials and finished or semifinished products moved; two, the extent areawise of the market; and three, the vehicular methods used in transport.

Footnote at end of speech.

Goods of heaviest bulk generally can best be moved by ship, intermediate bulk goods by rail, and light goods by truck. Proximity to both materials and to markets is not based entirely upon distance or spatial relationships. The bulk and value of goods and transportation facilities involving time relationships are also of prime importance. More and more is "proximity" becoming a very flexible term.

The Massachusetts economy is one basically of production of light goods and services. Both of these require extensive use of highways and mass passenger transportation facilities.

The central cities in our State have become, and will become to an ever greater degree, service centers to the total areas of which they are the core. Downtown Lawrence (a city of only about 8 square miles in all) and overcrowded downtown Boston (the capital of the State, and yet surpassed in land area by many populationwise small towns) are not places for retention of manufacturing operations and truck-cluttered streets. It is of interest to note that Andover, bordering Lawrence, is almost four times as large areawise as is the core city, and that Boston is only two-thirds the size of the hometown of our new President, Barnstable.

If the central cities are to take their rightful place in the newly developing economy, they must seek ways to clear their streets, to replace antiquated loft buildings, and to erect modern central office and service buildings. The newly constructed highways will greatly aid in removing through traffic from the centers of cities of the Merrimack Valley making possible the expeditious safe use of the streets of those cities. The core areas can then be planned for optimum use by those who have business in them and are not merely exasperatingly attempting to use them as an impossible speedway to get from one point to another.

Cases of the benefits of traffic diversion are counted in the thousands across the Nation. For more on this we refer to the excellent publication of the U.S. Chamber of Commerce—Businessmen's Guide to the Road Program.

As a prime example, Lawrence should be aided by Route 93 removal of through traffic to New Hampshire from Essex Street, which as part of old Route 28 bisects the city.

Now let us look a little more closely at specific major highway improvements and what they likely will do, together with a few actions being taken by some communities to participate in the advantages offered.

Route 95: This road, a considerable portion of which is completed, goes both north and south of Boston. It connects on the north with the Maine Turnpike and on the south with roads in Rhode Island. Through Boston, it is both an overpass and underpass. Upon completion it will be a high-speed, controlled access road which will not only decrease time relationship to markets and sources of raw materials transported entirely by highways, but will also act as a feeder road to the Port of Boston. Thus world markets and materials will be made more readily available.

Route 93: This high-speed controlled access highway replaces Route 28 as a main road from Boston to New Hampshire. In doing so it takes dangerous through traffic off the major streets of Stoneham, Reading, Andover, Lawrence, and Methuen. Within the next few years it will terminate at the much discussed Route 695 Inner Belt through Boston, Cambridge, Brookline, and Somerville.

Route 3: This controlled access, high-speed road will also ultimately be a radial highway off the Boston Inner Belt. At its opposite terminus it will tie in with the New Hampshire Turnpike. With its completion will come elimination of bottlenecks now found in Arlington, Winchester, Burlington, etc.; also, the Lowell area will have greatly improved access to materials and new markets.

All three of these roads connect with Route 128, the complex of which will serve as continuous high-speed roads to the markets and suppliers of the Nation. Likewise, all will connect directly with the facilities of the Port of Boston and the markets of the world. Via all of them also will be high-speed, almost nonstop connection with Logan International Airport.

In the minds of many is the thought that circumferential highway Route 495 will be the road of the future—perhaps, even surpassing Route 128 in its eventual economic impact. Its most immediate impact likely will be felt in two areas. One, is in its more northerly segment where it will eliminate present tortuous, uneconomic use of Routes 110 and 113. The Haverhill area should be particularly benefited both because it gives the area new high-speed facilities and because it bypasses the centers of the city of Haverhill and other communities. Two, the other area which will likely show the most immediate economic effects is that directly west of Boston in a "wedge" generally bounded by Routes 135, 495, 2, and 128. This is the area immediately to the southwest of the valley wherein there was a population growth of 54 percent between 1950 and 1960, compared with the statewide 9-percent increase. It is the area which includes the junction of Route 495 and the Massachusetts Turnpike.

Now, what are community responses to the growth possibilities outlined?

On the one hand some of the industrial developers who played such an important part in the growth of Route 128 have a "wait and see" attitude toward 495, such a feeling being due chiefly to a knowledge that much of the 128 growth resulted from a running away of firms from core cities of Metropolitan Boston to areas of continued accessibility to the coordinating educational facilities of the core area universities. Others, recognizing the overburdened traffic load on 128, are quite certain that in not too many years Route 128 will be practically "downtown" and the Route 495 (feeding directly into the valley, its labor supply and markets, picking up the overload of 128 and shifts in plant operations in the Worcester area) is a road of tremendous economic growth potential.

Analysis of educated opinions would seem to lead to four basic conclusions. One, Route 495 and the other roads mentioned are a must for the economic welfare of the valley, and the whole State as well; two, Route 128 is not adequate to the travel requirements of eastern Massachusetts and must be supplemented by a road such as Route 495; three, industrial growth along most of 495 will not be so spectacular as along 128 and growth may not reach a high level of acceleration until about 1970; and four, the growth will be in manufacturing contrasted with research to a greater degree than along Route 128.

Perhaps brief descriptions of some representative community actions may best illustrate feelings toward the anticipated impact of these highways. Four are given.

1. There has been a marked awakening on the part of almost all communities affected relative to the need for planning. Basic to this awakening is the question of the future residential-industrial mix. Is the particular community to be a "bedroom" suburb, an industrial and commercial town, or somewhere in between? The great number of communities that have obtained Federal planning grants under title 701 of the Housing Act of 1954 is indicative of this awakening.

2. In Lawrence are being prepared adjacent industrial parks, one entirely financed with private funds, the other with city funds, 1 mile from access to Route 93. It is anticipated that single level plants with floor space approximating 4 million square feet will be constructed in these parks, covering about 40 percent of the 229 acres in them. Removed from the center they are located in the one sizable open space area of the very small city and will aid redevelopment along lines proposed for the rest of the central core area.

3. With the shift of through traffic from the main street of Andover to Route 93, a redevelopment program now in the planning stage will facilitate removal of the one "eyesore" area in this lovely community.

4. In Haverhill a new zoning law which permits industrial use of land adjacent to Route 495 is in the process of adoption.

These are but a few of the thoughts and plans revolving about the social and economic impact of some of our new State highways. We conclude this article with brief answers to three common questions:

1. Can we afford to spend the money for these highway improvements? The answer is that we cannot afford not to spend it. A brief digest of a study by Moody's Investment Service is to the effect that Massachusetts is at a turning point. Its economy can grow or shrink. Presently the State has a basic economy upon which to grow that is considerably stronger than some other States which have done more. Essential to our "doing" is a greatly improved highway system.

2. Who pays for these highways? All of the new routes mentioned in this article are interstate highways, the construction costs of which are paid 90 percent by the Federal Government and 10 percent by the State.

3. If these roads are imperative to aid the Valley in its long battle out of depression, why not concentrate upon them and get them built rather than build segments of highways in the valley, in Boston, in the southeast and in the Springfield-Holyoke area, and in other sections? To be able to do so would be of great advantage to the valley. However, important as that area is to the well-being of the Commonwealth, so too are Boston, Springfield, New Bedford, and Fall River. Only so much money is available each year for the building of roads. It is only equitable that it be distributed throughout the State in the best manner possible.

---

[1] A distressed area is one where unemployment is in excess of 6 percent and where the unemployment rate has been in excess of 100 percent of the national average for 1 of the past 2 calendar years, or 75 percent for 2 of the past 3 years, or 50 percent for 3 years of the past 4 years.

Fiasco of Invasion in Cuba

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "Let's Pick Friends," which appeared in the Indianapolis Star April 26, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S PICK FRIENDS

Be thankful that the fiasco of invasion in Cuba has set off some investigation in Washington of the misinformation and miscalculation and sloppy direction which went into the United States role in the affair.

Most urgent and necessary of all is to inquire into the selection of the figures to receive the blessing and backing of the United States as leaders of Cuban patriots in exile seeking to unseat Fidel Castro. This decision—this selection of men to be backed—is at the root of most of the other error and blunder.

These top figures, chosen to lead and mastermind the plot, are themselves leftists and former Castro aides, closely tied to the Castro movement, its activities and its policies. They were with Castro in his revolution and in setting the course of his regime after he came to power. Their differences are with Castro personally, not with the principles of his war, his dictatorship or his anti-Americanism.

One of the expectations of the invaders was that both soldiers and civilians inside Cuba would turn against Castro and help the rebels. This did not happen.

There is strong reason to suppose that the reason it did not happen was that the invasion movement was led by men tarred with the Castro brush. Jose Miro Cardona was premier under Castro, and is a signer of Castro's constitution by which Cuba is now ruled. Manuel Ray Rivero was minister of public works under Castro. Maj. Raul Chibas presided over some of the circus-like trials which sent anti-Castro and anti-Communist Cubans to the execution wall.

What kind of thinking in American high circles led to the approval of these men and others of their kind to lead the anti-Castro rebels? Why should Cubans have been expected to risk their necks to help men such as these, in the role of ambitious adventures, against Castro, holder of the power of life and death in Cuba?

And what would the United States have gained if the invasion—under this leadership—had been successful? Castro himself would have been deposed. Some of his top lieutenants doubtless would have gone with him. Perhaps the ties to the Soviet Union and Red China would have been pushed into the background. But the regime would have been essentially the same in philosophy. The confiscated properties would have remained in government hands; the socialistic trend would have continued. In all likelihood, an end of the anti-American agitation would have hinged on unreserved official U.S. blessing of the new regime's program—essentially the Castro program.

How came the United States to give aid and encouragement to such leadership of the Cuban exiles? How much farther is the United States about to go in fostering such leadership throughout the Americas?

On April 3 the State Department issued a statement written by Arthur Schlesinger, Jr. This statement attacks Castro. But it praises the Castro revolution and many of his accomplices who only recently deserted Castro and came to the United States in hope of taking Castro's place. It praises the positive programs initiated in the first months of the Castro regime, when it was setting its course of property seizure, socialization, blood purges and Yankee-baiting. It spoke warmly of authentic and autonomous revolution in the Americas.

Does the State Department want to replace only Castro in Cuba, not his principles? Does it plan to encourage other Castro-type revolutions in Latin America? The Schlesinger statement implies, as a judgment of the U.S. Government, that revolution is the only hope of spreading political liberty economic development and social progress through all the republics of the Western Hemisphere. Is this the New Frontier for Latin America?

This, even more than other aspects of the invasion disaster, needs to be investigated. It probably won't be covered by the administration's inquiry. It is a job for Congressmen and others not committed to the administration.

And next time we back an invasion or an uprising, let's pick one that is going our way.

Congressional Investigation Requested—A Resolution by American Legion Post No. 52, Houston, Tex.

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. CASEY. Mr. Speaker, the loyalty and support of our Nation by the American Legion have long been a source of pride to Members of Congress. One of the most active American Legion posts within the 22d Congressional District of Texas is Post No. 52, and it is my pleasure to insert the following resolution adopted by unanimous vote and forwarded to me by Post Adjutant George Siefert:

Whereas the local press of this date reports that ex-President Dwight D. Eisenhower has spoken out against congressional investigation into the U.S. role in the recent Cuban invasion fiasco; and

Whereas we believe such an investigation should be had, but on a much broader scale: Now, therefore, be it

Resolved by the American Legion, Post 52, Houston, Tex., in regular meeting this May 1, 1961, as follows:

1. We believe that our national security now demands a thorough congressional investigation into the influence in the administrations which have heretofore been in office since World War II and which influence has led to a shameful disregard of our best interests where Russia and communism have been concerned, which has permitted Russia to kidnap out of Germany, including our zone, the German space scientists, which has abandoned the Freedom Fighters in Hungary and now in Laos and Cuba while the Communists have been permitted to supply their partisans with arms.

2. That no good has come to the American people because of the squelching of other investigations and none will come from this present squelching.

3. That prior administrations under both parties have been to blame for the Cuban debacle while the present administration may yet, it is hoped, make a better, pro-American, anti-Communist record.

4. That a copy of this resolution be sent to the local papers, to President John F. Kennedy, and to the Honorable BOB CASEY with the request that it be inserted into the CONGRESSIONAL RECORD.

The foregoing is a true and correct copy of resolution adopted as stated, same having been adopted by unanimous vote. To which I certify this the 8th day of April 1961.

GEORGE SIEFERD,
Adjutant, Post 52, the American Legion, Houston, Tex.

Rickover's Brilliant Educational Success

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. PROXMIRE. Madam President, Admiral Rickover is recognized as a great military man who has contributed immensely to the defense of freedom. The admiral also has some provocative ideas on education. While almost everyone must be grateful to him for the inspiration he has given the country toward improving education, many educators disagree with what he has proposed.

It has been said that Admiral Rickover may be a great Navy man—but he has no real experience as an educator. This simply is not true. The admiral has not only had substantial experience, he has had eminent success as a professional educator.

The story of this success will make Americans grateful and proud. Admiral Rickover has ingeniously and significantly improved the quality of naval personnel in a way that richly merits emulation as well as warm gratitude.

For this reason I ask unanimous consent that an article from Time magazine, reporting on the Nuclear Power Schools of Admiral Rickover at New London, Conn., and Mare Island, Calif., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABLE-MINDED SEAMEN

For his salty criticism of U.S. schools, Adm. Hyman G. Rickover is often dismissed by professional educators as an out-of-his-depth amateur. In fact, Rickover is a seasoned schoolmaster running one of the most efficient school systems in the United States: the Navy's little-known Nuclear Power Schools at New London, Conn., and Mare Island, Calif.

Rickover launched them in 1956 and 1958 because he considered the products of U.S. schools illiterate in science and unfit for nuclear sailing. In his own 24-week schools, which already have 2,000 alumni, Rickover hurls college courses at enlisted men and graduate courses at officers with an intensity that is probably unmatched anywhere else.

FAT-FREE DIET

The schools' function is to train the men entrusted with the powerplants aboard nuclear subs and ships—about half the crew on a sub—and the training is aimed strictly at making sailors think. ("Hardware" courses come later at land-based nuclear plants.) The curriculum is a fat-free diet of pure math, physics, chemistry, electronics, engineering, and health physics (to guard against radiation) that goes on for seven 50-minute periods a day, plus an average of 4 hours of homework done in a tiny, distraction-free cell. Teachers are on duty for help around the clock, and Rickover himself often conducts a final oral exam.

Last month 500 more students entered the schools after rigorous selection and anguished boning up on calculus. Rickover personally screens every officer who enters,

grills every enlisted man who flunks to find out why. He checks the courses and picks the teachers, many of them former college professors now happily authorized to toss erasers at window gazers—if any.

Distractions are banned. A freshman must settle his money problems before arrival, and Navy rituals, such as marching and swabbing, are cut out. At Mare Island, the base commander gingerly treats Rickover's school like a well-armed island owned by a foreign power.

A $20,000 EDUCATION

Though they may have entered the Navy with a sketchy scientific schooling, Rickover's recruits soar in his rarefied atmosphere. "I had the best math teachers in the world," gloats one sailor. "It's like getting a $20,000 education," says another. The most impressive result is a new willingness to keep studying after graduation. On the Polaris sub *George Washington*, for example, sailors will soon attend classes in everything from calculus to computers, recently took a Harvard extension course using kinescoped TV lectures by Historian Crane Brinton.

Just to make sure the studying takes, Rickover requires requalification tests aboard ship. A man has to study to keep his rating, study harder to get ahead. This produces an odd personnel problem: a steady drain on savvy chief petty officers as they get commissions. Compared with the Navy as a whole, 30 times more Rickover sailors become officers. "You lose 20 percent of your people," growled one sub commander last week as he stared at a couple of chief petty officers hunched over books as well as black coffee. That fails to daunt "the admiral," as he is called without further identification. Says Rickover: "The main thing is that the men have been taught to think. It just shows what we can do with all our youngsters if we try."

Notes Toward an Understanding of the U.S. Airlines

EXTENSION OF REMARKS
OF
HON. CHARLES McC. MATHIAS, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. MATHIAS. Mr. Speaker, on May 1 a constituent of mine who lives in Rockville, Mr. Stuart G. Tipton, president of the Air Transport Association of America, delivered a most informative address before the Aviation & Spacewriters Association convention in New York.

We are all aware of the difficult times which have come upon our scheduled commercial airlines, both domestic and international. Not only did our domestic carriers have a bad time of it in 1960, but our international airlines are now faced with a prospect of further concessions on the part of our Government to foreign carriers.

Mr. Speaker, Mr. Tipton's speech, in its entirety, is too long to be completely included in the RECORD, but I have read it in full and have edited it for the sake of space. Under leave to extend and revise my remarks, I ask unanimous consent that excerpts of this talk be made a part of the RECORD:

NOTES TOWARD AN UNDERSTANDING OF THE U.S. AIRLINES

(Remarks by Stuart G. Tipton, president, Air Transport Association of America at the ATA luncheon in connection with the Aviation Space Writers Association convention, Hotel Commodore, New York, May 1, 1961)

One of the greatest assets our industry has had over the years has been a dedicated and competent press. In a difficult, fast-changing field, the aviation press not only has kept pace, but managed to interpret developments so that the Nation at large has been able to absorb a radical change in transportation habits.

Even with this invaluable contribution, however, and despite our best efforts, there is one big worry of major concern today. It has to do with the disparity of opinions or views that exist concerning the status, problems, and needs of the air transport industry.

On the one hand, there are those who envision the airlines as prosperously expanding while, on the other, there are those who see the industry as dangerously walking the brink of financial crisis.

This, of course, is no fault of the press and, we hope, no fault of ours. Actually, both things are true. We have expanded; we have improved our services; and we have bought the most modern, the safest, the most efficient and the fastest flight equipment available.

And we are just about broke. Last year, for example, the domestic trunk airlines, despite record revenues, earned a profit after taxes and interest of only $1.1 million.

Normally, the average corporation in the United States nets 5 cents profit out of every $1 of sales. The trunk airlines last year had to do $83 worth of business to produce the same nickel profit.

As most of you know, there are more complicated formulas for determining the adequacy of the profits of public utilities. For example, the Civil Aeronautics Board, after a 4½-year investigation, concluded last year that the trunk airlines needed earnings equivalent to a 10.5 percent return on capital investment.

That means that the sum of net profits plus the interest paid on long-term loans should be 10.5 percent of the capital invested by stockholders and that invested by lending institutions.

The $1.1 million net profit I mentioned is the return on stockholders equity; the return to lender was $43.7 million or the interest paid by the trunks in 1960. Add them together and they come to 2.9 percent of total investment, far below the 10.5 percent that CAB determined the airlines need. In fact, it would have taken about $118 million more in net operating profits to show a return equivalent to what the Government deems necessary.

While 1960 was the worst profit year in over a decade for the airlines, it was by no means the only year of subnormal profits. It was the fifth consecutive year in which profits have fallen far below the standards set by CAB.

This is the situation in an industry committed to one of the most progressive expansion and modernization programs in the history of American business. Over $3 billion is involved in this undertaking. Yet, the trunklines' profit last year would barely be enough for a healthy downpayment on a new airplane. It would just about cover the cost of the engines on one new jet.

I cannot stress enough the need for correcting this situation.

But corrective measures that might be forthcoming seem lost somewhere in the haze of what might be described as a strange paradox. There are those, as I mentioned, who seem to misconstrue the airlines' dynamic growth and modernization as prima facie evidence of financial well-being.

This reflects an attitude that seems to say that an airline that buys new airplanes, installs modern ground facilities, etc., must be well off—otherwise it couldn't afford such expensive equipment.

The purchase and utilization of the best tools available is a major part of meeting that obligation. When, in the course of progress and event, the tools are completely revolutionized—as was the case when jet-powered aircraft came along—meeting that obligation assumes massive proportions.

The only alternatives are: get the tools and give the public the best—or voluntary stagnation. And, as you well know, stagnation is no alternative in world aviation today—it is a death sentence.

Nor are the tools we are now getting the ultimate in what we will be operating. These are the subsonic jets. In the next decade we probably will be dealing with supersonic jets. And beyond that who can accurately predict?

Nor are these amazingly advanced and productive machines merely expensive playthings. On the contrary, they represent the safest and most efficient tools that technology has yet produced to serve the public need. When you consider that the entire U.S. certificated industry, that is, trunks, international, local service carriers, helicopter, air cargo, Alaskan and Hawaiian paid some $65 million in interest alone in 1960, it is apparent there is nothing casual about airline modernization.

The fact that airline management has consistently exhibited the courage necessary to move ahead, to provide the best possible service for the American public, despite severe handicaps and obstacles, should not be accepted at face value as economic strength.

The airline industry is modern, progressive, and growing, but it is not rich. It is in serious financial trouble.

In saying that, I don't suggest or imply that the industry will collapse overnight. The need for air service is too strongly woven into the economic and social fabric of the modern world. And that need is increasing daily. Nor do I imply that the airlines will cut corners on service and safety to accommodate poor profit results.

But it stands to reason that the ability of an industry to progress is strained when the circumstances in which it must operate exclude reasonable earnings. This country can no more afford to strive for the status quo in civil aviation than it can in the military, space, or broad industrialization fields. It is bound by the events of the world today to gear itself to maximum progress.

Since 1946, the railroads have suffered a 70-percent decline in total passenger miles. Their passenger deficits have averaged $585 million a year. Yet, a 20-year-old tax continues to discourage passenger use of their facilities.

The intercity bus fleet of the Nation has decreased since World War II yet the reduced fleet is operating at less than 50 percent of capacity today.

While airline passenger traffic has grown dramatically, the fact is that growth is being stifled by the unfair travel tax.

Of course, what happens is that the tax serves first to discourage travel at all, and second, to drive many of those who would travel away from the common carrier system onto our overburdened highways.

This is borne out by the figures which show that, since 1950, common carrier passenger travel has increased only 19 percent while travel by private automobile has increased 77 percent. Over that same period,

the common carrier share of the total market dropped from 15 to 10 percent.

It is interesting to reflect that if removal of the 10 percent tax were to permit common carriers to attract as little as 1 percent of private automobile travel, their traffic would be increased by almost 9 percent. If the railroads, buses, and airlines could but regain their 1950 portion of the total market, their traffic would increase over 45 percent.

What strength would flow into our common carrier system today with 45 percent more passenger traffic? Is the revenue from this 10 percent tax worth denial of that strength to such an essential national industry? Is it worth denial of the benefits that would flow throughout the whole economy?

The Government continues to grant new routes to foreign airlines to this country without, in many cases, consideration of the impact on U.S. carriers. The consideration we may exact in exchange is in areas completely unrelated to air transport economics.

One can't rightly object to friendly gestures to traditional allies, especially considering the condition that the world is in today. But the policy can be overdone. We certainly don't want to be like the fellow who, when his own house is in serious need of repair, spends all his time helping his neighbor improve his house. We would gain little respect that way.

And, believe me, we better look to repairing our own house. Ten years ago, the U.S. airlines carried 75 percent of the air traffic between this country and foreign lands. Last year, the U.S. carriers' percentage of this traffic was only 51.8 percent. The drop from 1959 to 1960 alone was five percentage points.

On the important North Atlantic route, that is, between the United States and Europe, our airlines last year carried only about 38 percent of the business.

What we are witnessing is a modern day version of the sad decline of our merchant marine—only the airline decline is occurring at a much more rapid pace.

And this is not limited solely to overwater competition. Our entire airline network is affected. The foreign carriers to which our Government has given domestic penetration rights, in addition to normal gateway rights, are diverting passengers who normally would fly via U.S. domestic carriers.

Sadly, our Government gives no indication of reversing this alarming trend. On the contrary, recent news reports indicate it is backing down from one of the few courageous stands it has taken in this entire area. I refer to the recent State Department notification that it has agreed to confer with the Netherlands Government on KLM's request for additional U.S. landing rights, this time at Los Angeles.

A year ago, the United States stood firmly against a Dutch request to add Los Angeles to the landing rights it already had at New York, Miami, and Houston. We will now apparently entertain this request even though KLM receives some 30 times the revenue from operating across the North Atlantic as our carriers receive from operating to Amsterdam.

We have already lost almost two-thirds of the North Atlantic traffic to the 17 foreign lines now operating that route. How much of our domestic market are we going to give up to those lines which are stretching clear across to the west coast for traffic?

Make no mistake about it. There is a race on in the world today for civil aviation supremacy. It includes the airlines of friendly nations and those of the Communist bloc, particularly the fast-growing system of the Soviet Union. Our air transport industry asks no special favors in this race—not even from our own Government. We ask simply that the race be a fair one.

The San Francisco News-Call Bulletin, Reporter Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association - Tom Wallace Award

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in a series of articles, relative to the situation in Chile, written by Donald Canter. These articles are included within the award-winning series:

[From the San Francisco News-Call Bulletin, June 28, 1960]

YOU HELPED THESE CHILENOS

(By Donald Canter)

Down Catrico Hill we came, Laura and I.

The gummy adobe soil sucked into my shoes with every step.

Not in Laura's. She had no shoes.

My pants were rainsoaked and soiled with mud.

Not Laura's. She had neither pants nor skirt.

I tried to avoid the filthy pools that blocked our descent.

Not Laura. She waded through them, often knee deep.

But then, her undernourished little body was already one with the mud.

I was searching for people to live in quake-torn Valdivia's city of San Francisco housing project—made possible through $33,000 of the money donated by generous News-Call Bulletin readers—when Laura's path crossed mine.

A social worker had given me the address of a family said to live in the debris of their shattered home.

On my way, a bunch of barefooted, half-dressed children followed me over the rubble-strewn streets, shouting the only English words they knew: "Chiclets, please, senor."

The smiles on their faces as I gave them candy froze when I asked directions to the street I sought.

One stretched out his arm: "That way," he said. Then they deserted me.

Within a few minutes I was wading through foot-deep water extending as far as I could see. Scattered remains of caved-in shacks rose from the water, but very little debris was floating around.

Then I saw the hill. From the front it looked like a giant mud heap crawling with undefinable creatures. Were those creatures human beings who had lived in the flooded lowland and dragged themselves and pathetic remnants of their shacks onto the hill?

I sloshed through the water and crawled onto the hill on all fours.

There they stood, the people of Catrico, gazing at me from the entrances of their hovels as if I came from another planet.

From the adobe rose a mud-covered bundle that had the shape of a little girl. No shoes, no skirt. Just a rag draped about the top of her body. This was Laura.

She touched the army jacket I'd borrowed from the Embassy in Santiago. I cried out loud.

I took Laura by the hand and started to move down the hill. Nobody spoke a word. We waded through the mud. I fell flat in it. Laura didn't. She waited for me.

We walked 2 miles to the Catrico emergency center. There, with the help of social worker Blanca Freire, an ex-San Franciscan, I removed the rags and aimed a DDT gun at the lice on her body.

From a stack of clothes I grabbed underwear, skirt, blouse and sweater. Laura hardly moved as Blanca dressed her. I washed her face with a few drops of Valdivia's scarce water. She was pretty.

I asked her age. Seven years, she said.

An hour later Laura and I were back on the hill. There were smiles as they saw her metamorphosis.

She went back to the shack where her parents and eight brothers and sisters huddled on two soiled mattresses.

I offered Laura's father an apartment in the city of San Francisco housing project in the neighboring Gilde Castro district. I told him that was high ground and safe from floods.

He shook his head.

"That's a wonderful thing you're offering and God bless the people of San Francisco for it," he said. But he added: "I can't take it. The water that came with the quake and tidal wave will go one day. Under it is land I own. It's all we have. We want to live there."

But he knew the family I'd first been looking for. They had moved from the hill to a refugee center in the city.

"They'll love it," he assured.

I didn't find the Jorge Vasquez family in the refugee center, but in a friend's home in the Gilde Castro district, near where the first apartment houses of the city of San Francisco will soon stand.

Jorge's four children were there: Maria, 5; Jorge Hernan, 4; Monica, 3, and Victor Eliso, 1 month.

I asked for his wife and he told me:

"That Sunday when the quake struck I worked in the morning at my job as a furnituremaker. I quit at 2 and went to the hospital to visit my wife, Zumilda, who had a baby the previous day.

"I stayed with her only 45 minutes because she was very tired. Moments after I left the hospital the earth trembled and then it shook and shook, I fell on the street, but it kept moving and houses collapsed all around me.

"The only thing I could think of was my wife and the baby. I rushed back. The hospital had split. Concrete blocks were all over the place. I rushed up six floors to my wife's room. I took the baby of 1 day in one arm and dragged my wife down six flights of stairs with the other.

"Four days later my wife died of a hemorrhage, senor."

Within 4 months, when the first apartment houses of the city of San Francisco are ready for occupancy, Jorge and his children will move in. Living with them there will be his parents and two inlaws, who also lost everything they had.

They will occupy a three-bedroom unit with living room, dining area, kitchen, and bath, built for them by warm-hearted readers of the News-Call Bulletin. They will be 9 of about 100 people who will move into 11 concrete-and-redwood apartments near the end of October—the 100 will live rent-free for 3 months, then pay $10 a month into a bank account which, when it grows big enough, will be used to build additional homes for the stricken families of the Valdivia.

But isn't a three-bedroom apartment too small for a family of nine?

"To us it will be a palace, senor, created by the Lord Himself."

That's what Jorge Vasquez said.

BUILDING PLAN IN CHILE

First phase of building program financed by News-Call Bulletin's Chilean Quake Fund:

Three apartment buildings housing approximately 100 people.

Two-story structures, built in triangle with central playground.

Land donated by Chilean Housing Authority, which supervises construction.

Completion expected within 4 months.

Financial arrangements:

Construction cost: $33,000.

Tenants make monthly payments of $10.

No payments for 3 months.

Rental proceeds to be used for more buildings.

Free administration by Housing Authority.

[From the San Francisco News-Call Bulletin, June 30, 1960]

YOUR GIFT RENEWS VALDIVIAN'S HOPE

(By Donald Canter)

Until May 22 of this year Humberto Segundo Leiva, 34, made $80 a month as a dental technician at Valdivia, on Chile's west coast.

This was more than the average take-home pay of his fellow Valdivians, and Leiva, a careful man, had carefully budgeted his income to acquire sturdy furniture and precious materials for the dental lab he'd installed in a backroom of his home.

He was, he thought, leading the good life. He had four children by his 27-year-old wife, Encarnacion del Carmen, and they were expecting their fifth momentarily.

At 3:12 p.m. on May 22, the first tremor of Valdivia's city-shattering quake struck the Leivas' home.

The living room collapsed. Falling debris wrecked all their furniture and buried the whole family.

Leiva managed to free himself, then dragged his wife and youngsters from the shambles. Only Son Alejandro, 7, was hurt, his face cut by glass.

For a moment the Leivas huddled in a corner of their ravaged living room. The earth rocked again, stronger this time.

Leiva rushed to push open the door. It was jammed. He kicked it—how many times he doesn't recall. Finally it gave way. He herded his family into the street, carefully helped his wife to a seat on the rubble-strewn cobblestones.

Another quake rocked Valdivia—a quake seismologists later said showed a force of 7.4 on the Richter Scale (San Francisco's 1906 quake registered 8.2).

Before Leiva's awe-stricken eyes the rear of his home, with his precious dental lab, disintegrated.

An adjoining home toppled, crashing within feet of the Leivas.

The family fled, leaving in ruins a newly purchased cradle.

The youngest Leiva came into the world under the roof of a hospitable friend.

Today the careful dental technician is working for a college whose lab still stands.

But soon he'll be on his own again. A few blocks from his old neighborhood a city of San Francisco is raising, and the Leivas will be among its residents.

The project, built through generosity of News-Call Bulletin readers, is scheduled for completion in October.

Its first structures are three apartment buildings erected at a cost of $33,000. They will consists of 11 three-bedroom units, complete with living room, kitchen, bathroom, flush toilet, and a central playground for children.

Leiva, like other tenants of the city of San Francisco, will live rent free for 3 months, then make monthly payments of $10 for 30 years, after which the apartment becomes his property.

His money, together with all other payments, will be deposited in a special account of the Banco de Chile. The moment sufficient funds have accumulated, more homes will be built in Valdivia's San Francisco on a site donated by the Chilean Housing Authority.

When I'd finished negotiating for construction of this development, the first permanent housing project after Valdivia's disastrous quakes, I asked Leiva for a down-to-earth appraisal of the project.

His answer:

"Senor, this is the kind of help the people of Valdivia have been praying for. We hadn't expected these prayers to come true so fast and certainly not through the prompt action of thousands of unknown San Franciscans, 10,000 kilometers away.

"Sure, we've been grateful for the food, clothing, and medicine we've received from every corner of the world. Those have kept us alive, senor. But they were not enough to live. For that you need a roof over your head, a decent roof. And that senor, the people of San Francisco are now giving us. How can we ever repay them?"

I showed Leiva the list of his fellow tenants, handpicked by social worker Blanca Freire and myself.

Among them is a diabetic, now trying to survive with his clan of eight in an overcrowded refugee camp; a cabinet maker, whose four children lost their mother in the quake; an upholsterer whose family of eight has to call a stable at Valdivia's farm exposition grounds their home.

"Never, as long as we live, and never as long as our children live, will we forget who built us a roof when ours was down. The name San Francisco will forever be engraved in our minds.

[From the San Francisco News-Call Bulletin, July 1, 1960]

YOUR GIFT WINS OVER YANQUI-HATER

(By Donald Canter)

It happened in the Chilean town of San Jose de Mariquina, 30 miles north of quake-shattered Valdivia.

My mission—to determine how the funds amassed in the News-Call Bulletin's Chilean Quake Fund could be used most effectively—was completed and I was heading home.

But transportation was poor and I decided to try to hitch a ride on a freight going north.

The conductor was a broad-shouldered, rough-looking character named Fernando Valenzuela.

"Who are you, anyhow?" he asked me.

I told him.

"Get in," he said.

I climbed into the caboose. Valenzuela followed me.

"Know why I took you aboard?" he said with a grin.

I wasn't quite sure. So he let me know:

"Because all of my life I've been a Yanqui-hater, that's why."

"Thank you for being so honest," I countered. "Mind telling me why you're giving me this ride?"

Valenzuela smiled enigmatically.

"First I'll cook you a dinner," he said.

He did and served it with a bottle of young Chilean wine.

After Valenzuela cleaned the crude wooden table of the last crumbs, he resumed:

"Anti-Yanqui, violently anti-Yanqui, that's what I've been all my life. Then came this quake, and the American Globemasters came. They didn't have to. Nobody asked them. They brought medicine and clothes and food. A lot of other Americans came. I watched them. They talked little—not a word about politics—and worked hard. Most worked harder than our own people.

"Then you came. I know all about you. You say you're a newspaperman from San Francisco and that you were in Valdivia. So you must be that fellow who collected money for us and is going to build homes. I read all about you. Nobody asked you to do that. You did it anyhow.

"Why? That's what I asked myself."

Valenzuela wiped his forehead with a dirty rag.

"I speak English," he said. "I've got a college education. I'm supposed to have some intelligence.

"Because I've got intelligence, there was only one thing to tell myself:

"Valenzuela, you've been stinking wrong all of your life. You're not anti-Yanqui. You just told yourself you were."

He looked me straight in the eyes:

"That's why I gave you this ride," he said.

President Kennedy's Tax Proposals

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "Taxpayer's Still Not Happy," which appeared April 22, 1961, in the Lafayette (Ind.) Journal Courier.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAXPAYER'S LOT STILL NOT HAPPY

Every time taxes come up for revision, taxpayers always light up with hope, but inevitably plunge again into the dark despair which is their normal estate.

Such was the case as they waited for, and then heard, President Kennedy's tax proposals.

There was little to take comfort in, except that things don't look like they'll go up much. But neither will they go down—a direction every taxpayer some day hopes to see.

Individuals face basic Federal taxes just about like they have been, but dividends on stocks will be depleted by higher taxes, no exclusions, and subjected to withholding.

Corporations, scheduled for a five-point tax reduction on July 1, will just have to whistle for it. The President wants present rates renewed and the reduction forgotten about.

Excise taxes, also scheduled to be reduced or expire on July 1, will stay on at present rates of President Kennedys' proposals prevail. And jet fuels will join them with a new 2-cent-a-gallon tax.

Loopholes which many riding expense accounts have galloped through to combine business expenses with the costs of pleasure will be plugged with fewer deductions and more enforcement under the Kennedy plan.

The President's proposals did present some help to businesses burdened by poor depreciation allowances and obsolete equipment. The recommendation was for tax reductions for investments in plant and equipment up to 30 percent of the firm's or businessman's taxes for 1 year. But it's still short of needs for a solid, realistic, long-range depletion allowance schedule which would recognize how quickly equipment can become obsolete and require replacing in this fast-moving age. And it's not as much encouragement for dynamic industrial expansion, plant building and modernizing as the country needs right now.

One thing the taxpayers were promised with some certainty: More Treasury agents to check returns and the assignment of an account number to each taxpayer so each person's reports and activities can be followed more closely.

So for another year, it looks like taxpayers will come out pretty much as they always do—second-best to the Government.

The Waiting Is Over

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. MUNDT. Mr. President, the successful space flight of astronaut Alan B. Shepard, Jr., a commander in the U.S. Navy, will be forever recorded as one of the bright moments in history for our Nation.

While much has already been written and much has been said concerning this important achievement, I believe it is important—if for no other reason than the sake of history—that the observations made by those who were on the scene should also be recorded for posterity.

Two such observations were reported to the American public this past Sunday on the NBC radio program "Weekend Report," by Mr. Russell Tornabene and Mr. Robert Abernethy.

I think both of these fine reports give us further opportunity to understand something of the strain and tension that enveloped those who were so much a part of this operation, and the type of men that we have serving our country in these vital assignments.

I ask permission to include in the Appendix of the RECORD at this point these excellent reports of Mr. Tornabene and Mr. Abernethy, which were aired over the NBC radio network.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

(By Russell Tornabene)

Among the many arts the rocket launchers and space pioneers must have is the art of waiting. No one likes to wait; it's more tiring than action, often is more exhaustive than work. But the hundreds of men who helped launch Alan Shepard last Friday have learned the art of waiting, the art of patience—of being in readiness.

Waiting is the mother of tension; the longer the wait, the preparation, the checking of a thousand and yet another hundred items, the longer it takes—the higher the tension. The men who helped launch Shepard have waited before, by the hour have sat before the radar scopes, the dials, the control boards. But this time, in the darkness before dawn Friday, the waiting seemed more charged for them, for a simple reason. A live man was sitting in a metal cabin atop their rocket.

It's said at Cape Canaveral that wives of the rocket launchers and the missile scientists at the Florida installation go down to the sands of Cocoa Beach when they know a manmade bird is to be put into flight. They stand there, knowing their men purse their lips and squint their eyes and frown in a blockhouse down the beach behind the well-guarded launch area. It's said when a missile is destroyed after launch, the men bite their lips—and their wives, on a nearby beach, cry.

We who covered the Mercury story, who prepared to report and to broadcast live the first attempt to put a man into space, were well aware of one Satan sitting on the beach—possible utter, complete failure of the mission, the possible death of the man. Who among the 500 news people there had no heart, who did not take 1 second at blastoff to offer a quick prayer?

The zero count did come, there was fire at the base of the Redstone, there was the holding of breath by us all as the burning fuel finally urged the rocket from the pad, the delayed thunder of the machine, it's flight straight up and then to the Atlantic waters where other men waited, too—the men who would pick Shepard from the waters, the men who would attend him, who would doctor him if necessary.

Mercury control gave crisp reports as the rocket winged 5,000 miles an hour from the cape with its precious, its historic passenger. Blood pressure, perspiration, breathing, speed, response to the weird demands of space travel upon a human.

Fifteen minutes after the rocket lifted from a concrete slab in Florida, the space capsule landed gently by parachute in the water, a helicopter picked up its passenger and let him down on the deck of a ship. It was said Alan Shepard hopped casually from the sling that brought him to the ship. The years of preparation before that moment were anything but casual.

(By Robert Abernethy)

The other evening in Cocoa Beach, a group of us were sitting at dusk on the terrace behind a comfortable new motel. There may have been some music in the background. The weather was good, and a few children took another plunge into the swimming pool before bedtime. Suddenly, we looked up and saw a man in a white tee-shirt and white shorts jogging over the sand to the beach.

It was John Glenn, one of the astronauts, off for his daily 2-mile run.

Glen is almost 40, a superb physical specimen whose doctors say he is physiologically 10 years younger than his chronological age. Like Alan Shepard and all the astronauts, he is highly trained and deeply disciplined.

I think at that moment, there on the terrace by the pool, a number of us felt as if our relaxation were in fact indulgence, and our talk just like a shell for lives which suddenly seemed soft.

The seven astronauts are remarkable men. All of them have the equivalent of a bachelor's degree in engineering. All are military test pilots. Their faces are lean and their eyes alert. Watching one of them run on the beach or ride into space may make one feel older, or envious, or regretful. But it also makes one proud of the kind of men this country can produce.

One of the interesting things about these seven is that most of them are from towns with names which sound as if they are relatively small. Carpenter is from Boulder, Colo., and Schirra from Hackensack, N.J. But Cooper is from Shawnee, Okla.; Glenn from New Concord, Ohio; Grissom from Mitchell, Ind.; Shepard from East Derry, N.H.; and Slayton from Sparta, Wis.

There was a time not too long ago when a boy growing up knew the rest of the world by train whistles. His dreams of adventure usually began with the sounds of the railroad and the imagined luxury of a pullman car appointed in green plush. More recently, the dreams of the young have involved the automobile and the airplane. Now, it is space.

All over the country, youngsters today are probably dreaming of following the trajectory of Alan Shepard.

But how did Shepard come to his flight last week? What did he and Grissom and Glenn dream of when they were boys?

They have been asked this. But they have not admitted to anything more than normal attention to Buck Rogers.

Shepard and Schirra are career officers, graduates of Annapolis. The others got into the service during the war, became pilots, then test pilots, then astronauts.

But one reason they are doing what they are doing today is that they stayed in the service after the war. And one reason for that may have been that they were from small towns. In 1945, a military career to a successful young officer from a small town—especially to a pilot—may have seemed more attractive than it did to his counterpart from a large city, where there may have been more civilian opportunities to which to go home.

If this is so, we should be grateful. And if men like the astronauts are what small towns can produce, we should do something quickly to help stamp out cities, before their steady spread swallows up the towns now producing the Shepards and Grissoms and Glenns of tomorrow.

Law Day in Los Angeles, Calif.

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. McDONOUGH. Mr. Speaker, May 1 marked the fourth annual observance of Law Day, U.S.A. nationwide. In Los Angeles, Calif., the main event of Law Day ceremonies was a Law Day luncheon at the famous Cocoanut Grove of the Ambassador Hotel. Participating in this most outstanding observance were more than 100 women's organizations, representing a cross section of the leading civic, business and professional women's organizations in the area. Also on the program were 12 women judges, other leaders of the bench and bar, top public officials, civic leaders, and other distinguished guests.

Miss Adele I. Springer, past president of the National Association of Women Lawyers and national chairman of the committee on law day and world peace through law, presided at the Law Day luncheon and welcomed the participants.

Miss Springer delivered an address on the objectives of making Law Day, U.S.A., worldwide.

The meeting also heard Law Day addresses by Justice Mildred L. Lillie, of the California District Court of Appeal, who is the highest ranking woman judge in the Nation, and James C. Sheppard, president of the State Bar of California.

I am including herewith these three outstanding addresses which were delivered at the Law Day meeting in Los Angeles, and am sure that these remarks of outstanding members of the legal profession on Law Day will be of special interest to my colleagues:

LAW DAY, 1961

(Address by Adele I. Springer, past president, National Association of Women Lawyers, national chairman, Committee on Law Day and World Peace Through Law)

The women lawyers have adopted a new slogan this Law Day: "Law can launch peace into world orbit; lets win the case for world peace through law."

The growing fear and defeatism which mark the current state of the world give

urgency to the efforts of all who seek world peace.

Law Day is a reminder that lawyers have always been in the front ranks as defenders of individual rights, and in directing social movements, in overthrowing tyranny, exposing intrigue, enacting laws and maintaining our constitutional system of government.

Women lawyers, trained in government and law, should and must take the leadership in bringing the objectives of Law Day to the women of the world.

Women lawyers can lead the way and can assist, but cannot alone produce the results which are required. Concerted understanding and action with other women and organizations are essential. In larger numbers we must take counsel together on those problems which press for solution in our Nation and in the world.

The need and the challenge are great—to assist in establishing a workable system of law and order in the world. Replacement of the rule of force by the rule of law is the only hope. Just as people take their disputes to court and disobedience of law is punished, nations should settle their disputes in a world court and the judgments of a world tribunal should be enforced.

With concerted action women can make their voice heard for world peace through law.

Womanpower can launch peace into world orbit. Womanpower is the greatest unreleased power in the world today. Womanpower can and must win the case for world peace through law. It can be done.

LAW DAY 1961

(Remarks of Justice Mildred L. Lillie of the California District Court of Appeals)

In 1958, American lawyers, realizing that most people in this country are neither aware of the true meaning of the rule of law nor appreciate its essential place in American life, procured the President of the United States to proclaim Law Day on May 1—to foster a deeper respect for law, to point up the contrast between freedom under law in a democracy and tyranny and oppression under the communistic ideology celebrated on May Day in the countries of the Soviet Union, and to encourage the settlement of international disputes under law. It is today we rededicate ourselves to freedom under law.

But the mere assertion of individual rights and liberties guaranteed by the constitution and laws and the declaration of principles of a democratic government is not enough—they can only be given meaning and substance by independent courts and a legal system dedicated to preserving them. Lawyers, a great factor in the administration of justice, are the technicians of democracy; they are essential to the implementation of the rule of law—indeed, to its very existence. Freedom under law cannot be maintained without the safeguards provided by our courts, or without confidence in our lawyers, or without faith in our judiciary, court proceedures and decisions. The Judiciary of this country is dedicated to the living American ideal of equal justice under law, and has the profound responsibility by its service to government and by education, of maintaniing and preserving our system under the rule of law that secures individual rights, freedoms and dignity and guarantees an impartial forum; of protecting and passing on to future generations our judicial system which unconditionally guarantees justice under law; of preserving and strengthening the administration of justice at home, and of extending the rule of law as an instrumentality of peace and orderly progress in all international relations.

LAW DAY 1961

(Remarks of James C. Sheppard, president of the State Bar of California)

This is the fourth annual observance of Law Day, U.S.A., in America. This is not a day of celebration, but a day of dedication. Our priceless liberties are preserved by law. Our government derives its power from the people, and exists only with the consent of the governed. For the rights which we enjoy, there are correlative duties. These are the duties which we individually owe to our government. It is later than we think. Just 90 miles off our shores a fortress of communism is being built. There, Cuba is an immense concentration camp where millions of anxiety stricken Cubans live under a ferocious, inhuman, cruel and fanatical tyranny. As in other redoubts of communism, the courts are but a part of the executive authority of a totalitarian state. When courts cease to be independent liberty dies.

Let us here dedicate ourselves to a renewed faith in our democratic republic. Let us here resolve that this government and these liberties shall not perish from the earth. Let us determine that we shall observe and respect and preserve a government of law.

Tribute to FBI Director J. Edgar Hoover

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. WILEY. Mr. President, yesterday, J. Edgar Hoover celebrated the 37th anniversary of his appointment as Director of the Federal Bureau of Investigation.

In itself, this long tenure of public service is worthy of recognition.

Of greater significance to the American people, however, is his dedicated, imaginative, farsighted, fighting leadership, unparalleled in our history, in combating crime, strengthening our internal security and promoting peace and order in our society.

Under his directorship, the FBI has set new standards of law enforcement, worthy of emulation throughout the world. In addition to effective law enforcement, the integrity and dedication to service of Mr. Hoover and his associates in the Bureau have elicited new respect for law and justice in our people.

Reappointed by President after President, regardless of political party, Mr. Hoover has rigidly established high standards and required conformance to such standards by his employees.

Rightfully known as "Mr. FBI," J. Edgar Hoover deserves a salute of gratitude from the American people for his long, splendid record of outstanding service.

Yesterday, the Washington Daily News published an article by Lyle C. Wilson entitled "A Toast to J. Edgar Hoover."

Reflecting some of the highlights of Mr. Hoover's accomplishments, I ask unanimous consent to have the article printed in the Appendix of the RECORD:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, May 10, 1961]

A TOAST TO J. EDGAR HOOVER

(By Lyle C. Wilson)

Now is the time for all good men to drink an anniversary toast in wine or water to J. Edgar Hoover of the FBI.

Today is the 37th anniversary of his appointment as FBI director. That choice was made by the late Harlan Fiske Stone, Attorney General in the Coolidge Cabinet before he was boosted to the U.S. Supreme Court.

The Justice Department and its investigative arm had been in ill repute before Justice Stone and Mr. Hoover began in 1924 to figure in the headlines.

William J. Burns was head G-man during the Harding administration and Harry M. Daugherty was Mr. Harding's Attorney General. Mr. Daugherty was head of the so-called Ohio Gang, a principal figure in the scandals which degraded the Harding administration. President Coolidge forced Mr. Daugherty out of the Cabinet in 1924, named Justice Stone to succeed him.

One of Justice Stone's first acts was to name 29-year-old J. Edgar Hoover director of the newly created FBI. Messrs. Stone and Hoover began accomplishing the almost impossible. Their task was to restore public confidence in the Department of Justice. Mr. Daugherty left the Department under charges of corruption growing out of an investigation which, according to the Encyclopedia of American History, "revealed that the Attorney General, acting in concert with members of the Ohio Gang, had received payments from violators of the prohibition laws (and) also disclosed that Mr. Daugherty had failed to prosecute for graft in the Veterans Bureau." He was acquitted in 1927 on a conspiracy charge.

Mr. Hoover established high standards for the FBI. He compelled his men and his organization to conform precisely to those standards. Soon, Mr. Hoover became and has remained a legend in his own time. It became standard operating procedure for the Congress and Presidents of the United States to turn to Mr. Hoover and his men when the Nation was troubled with a law enforcement problem of great magnitude and the citizens were uneasy in their beds at night.

That is the way it was when Charles A. Lindbergh, Jr., was kidnaped and murdered. Congress enacted the Lindburgh kidnap law and stipulated that Mr. Hoover and the FBI should enforce it. Not a moment too soon, either. When prohibition finally came to an end, the hoodlums who had been enriched by bootleg booze turned to kidnaping as a new bonanza. Others began knocking over national banks. They, also, were in FBI jurisdiction. One by one, the Dillingers and the Machine Gun Kelleys were disposed of.

Meantime, the Communists were crawling out of the internal woodwork in the United States. Mr. Hoover and the FBI drew the assignment to ride herd on them. Then began the ceaseless effort of the American commies, their friends, and their dupes to get Mr. Hoover.

Mr. Hoover and the FBI comprise the most effective roadblock in this country to the objective of all Communists here and abroad which is to bury the American way of life.

Harry S. Truman probably was under the greatest pressure of any President to fire Mr. Hoover and to cripple the FBI. H.S.T. wouldn't have dared even if he had wanted to do that. To Edgar Hoover: Skoal.

Tall Statesman From Arkansas

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. HARRIS. Mr. Speaker, the great record of service of our distinguished senior Senator, JOHN L. MCCLELLAN, from Arkansas, is well known. As chairman of the great Committee on Government Operations of the U.S. Senate and to the Special Investigating Committee he has performed a service to his country which in my judgment is unsurpassed.

He has been the recipient of many outstanding awards for service he has performed to his State and country and received many honors in recognition of his outstanding performances.

In the performance of public service and especially in intricate and important policy matters on which there is difference of opinion one often encounters contrary views and criticism. It is well known however that Senator MCCLELLAN is not easily disturbed because someone may have a different opinion on a matter of public policy. "He is too big to let such things bother him." This statement was contained in an article of the California Industrial News, Monday, May 8, 1961.

The article is entitled "Tall Statesman From Arkansas," by John Marschalk. It is a tribute to the Senator, well deserved, and I ask unanimous consent that it be included with these remarks:

This is our day for eating crow, and enjoying it.

A few weeks back this space carried a column titled "Collectivist Invention" in which the facts were right as rain, but there weren't enough of them.

Result, we did an injustice to one of our finest statesmen. Though we are sure the piece did the gentleman no harm—he is too big to let such things bother him—the impression given needs correcting for our own sake.

The statesman is Senator JOHN L. MCCLELLAN, of Arkansas. Among other honors, Senator MCCLELLAN is chairman of the Subcommittee on Patents, Trademarks and Copyrights of the Senate Judiciary Committee. His committee is currently holding hearings on two bills; S. 1176 by Senator LONG and S. 1084 introduced by Senator MCCLELLAN himself.

Both of these bills are opposed by every businessman we have talked to.

Summed up, these bills would take away the right of inventors to patents in any inventions where the Government has contributed even the slightest fraction of assistance in the form of a research contract. (Under the Long bill, a subcontractor who received not a dime of Government money toward his invention would still lose his patent rights.)

As earlier noted, Senator MCCLELLAN's bill would establish that "Notwithstanding any law, custom, usage, or practice to the contrary, no invention resulting from a research contract or grant financed by the United States shall be patented other than in the name of the United States."

We observed that this is a whole-hog proposition—that the Government already gets the right to use all such inventions for Government purposes—but that this proposal would prohibit the inventor from even having a patent to exploit his invention commercially.

Seeing as how the Government dollar doesn't do the thinking which produces the invention—and may only represent a tiny portion of the total dollars spent in development—the proposition has struck us as being both unfair to the inventor and shortsighted for the public. At a time when we need every possible inducement to advance technology, such bills would darn near club inventors to stay away from Government contracts.

Our views on these bills have not changed a bit. Nor have the facts. But like we say, there weren't enough of them—the facts, that is—in our earlier column. So they gave the wrong impression—and we'll eat the crow with pleasure.

The fact we didn't know that Senator MCCLELLAN introduced S. 1084, not as a reflection of his own views, but to keep a promise to the former subcommittee chairman, the retired Senator O'Mahoney who originated the bill in the last session. Additionally, Senator MCCLELLAN felt that the subject could best be considered in the spotlight of public hearings.

Happily, the truth was evident to anyone who attended the first 4 days of the hearings, April 18 to 21.

Every action of the Senator made clear that his mind was not made up ahead of time, that he was probing for facts, that he wanted to pick his way through the conflicting claims of the anti-private-patent boys, versus those of the believers that patents and productivity still walk hand-in-hand.

With one witness after another—pro and con—Senator MCCLELLAN listened to a volume of verbage. In each case he seemed to have the wheat separated from the chaff long before the testimony ended. Usually, he summed up an entire presentation in a single phrase to which the witness quickly agreed.

"Basically, that states your position?" the Senator would ask.

"Yes, sir," the witness would reply.

We wouldn't venture a guess as to how these hearings will come out. Our impression of the committee staff was quite different from our impression of the Senator. Whenever committee counsel had the floor, he conveyed to us the impression that he was intent on building the record in favor of the two bills.

Whether this impression of counsel was correct or not, Senator MCCLELLAN obviously stands on his own two feet. We are glad he is there. Our country can use more men like him.

Senator, to us, you stand 9 feet tall.

A Forward Strategy for America

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. SCOTT. Mr. President, I recommend for thoughtful reading in critical times a new book published as a Foreign Policy Research Institute book, University of Pennsylvania, by Messrs. Strausz-Hupe, Kintner, and Possony.

To illustrate the vital need for tougher thinking about an alert, reasoned, and determined forward strategy for the United States, I attach some pertinent excerpts from the conclusions reached in this careful study.

I ask unanimous consent that the excerpts be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM "A FORWARD STRATEGY FOR AMERICA"

(By Strausz-Hupé, Kintner and Possony)

The unsure response of the Western Powers to repeated Communist-instigated crises and the ever-resurgent hopes of Western democracies for a magic formula for peace bespeak the drift of the Western mood at the threshold of the sixties—the decade considered by the Soviets as the most crucial operational period in their history. The Soviets, beset by the internal contradictions of the Communist world, may try to finish us. Our defeat will free their hands for settling domestic issues. Communist ideological vulnerabilities and the latent antagonism among the peoples of the Communist bloc argue persuasively for the Kremlin to adopt a course of action that will insulate the Communist experiment from interference from outside. There is, last but not least, the problem of Kremlin succession. The present generation of Russian Communist leaders must seek to bring about a decisive change in the balance of power in order to harvest the fruits of victory. They may have left, at best, only 10 years to do the job. For the very dynamics of the power struggle within the Communist orbit accelerate the momentum of Communist strategy. The Communists, if they want to remain standing, must seek to keep us off balance to cause us to fall.

Neither our people nor our Government, nor for that matter the free peoples in general, have agreed on the basic nature of the Communist threat. Lacking this consensus, they cannot agree on a common plan for meeting it.

We may assume that, as long as present trends in the free world continue, Communist power will grow not only absolutely but, far more important, relatively.

Only an American forward strategy can halt the Communist assault.

At present, we are dissipating much of our incomparable national power through defensive measures taken in counteraction to calamities which timely action on our part might have prevented. This is the heart of our strategic problem. Unless and until the United States discards strategic concepts that are passive or, at best, reactive, our choice will be confined to two equally disastrous alternatives: (1) To keep on living in a fool's paradise and to let ourselves be drained slowly of our strength, or (2) to risk the holocaust of nuclear destruction. Is it too much to ask of ourselves that our range of choice be wider?

How can the United States discharge its obligation to mankind and itself? The answer seems to lie in a paradoxical strategy that will engage us deliberately in a variegated range of "warfare" over an indefinite period for long-term political objectives. Our efforts should be always harnessed to the pursuit of prudent measures; toward limiting, but not to shrinking from, risk; and toward the positive, the creative solution.

Lacking the demonstrable capability for the measured employment of power in all its aspects, including military force, the art of statesmanship is reduced to an idle exercise in rhetoric. Rhetoric has its place in international politics, but neither clever arguments nor noble sentiments are substitutes for power.

Whether the United States does act in its true self-interest in the new few years de-

pends on its will to act and hence its will to sacrifice.

The principles of a forward strategy for the United States must be derived from the following propositions:

1. The priority objective of any American grand strategy is, by a broad margin, the preservation and enhancement of our political system rather than the maintenance of peace. All other objectives, such as increased social welfare and continuing economic progress, while interrelated with the primary objective, are of secondary importance. Historically, democracies have proved to be short lived. In the light of the unprecedented dangers which now beset human freedom, it behooves us to think through the weaknesses of the democratic system and to overcome them. Perhaps the root weakness of democracy is reluctance to gage the full measure of the perennial and ever-recurring threat to its very existence, the very precariousness of freedom. It is because of this deficiency of will that democracies cavil at taking the steps in time that will insure their defense in the moment of supreme peril. The very existence of so aggressive and dynamic a force as communism imperils the survival of democracy everywhere.

2. The argument that the permanent threat to our existence can be fought by limiting our initiatives to programs for better education, higher living standards and improved international cooperation for world economic development is not only fallacious but also dangerously deceptive. It detracts attention from the hard solutions which our continuing survival demands.

3. Alliances are an integral part of our security system. But alliances will not lighten our burden. Unless our intrinsic strength improves, defection will inevitably thin the ranks of our allies. Our own strength is the most convincing pledge of our loyalty to friends and allies. Our military programs are the hard core of our alliance systems and free world security. We do not hold with the comfortable assumption that economic assistance to the underdeveloped countries can be a satisfactory alternative to military and alliance programs. Programs of economic development redound to our benefit only if they are fitted as secondary elements in to an integrated system of strategy. Such an integrated system must be designed to deal with all techniques of conflict. At the very heart of the Communist strategic system lies the will and the commitment to permanent conflict.

4. However sound our long-range programs may be, the day-by-day decisions (and, in particular, the responses to crisis situations) are crucial. When the chips are down, an instant of equivocation can reduce the most elaborate and foresighted strategy to gibberish. Strategy is inseparable from the willingness to take risks and deny the enemy a guarantee of immunity in case he desists from a particular aggression. If it is our purpose to combat communism, then it follows that our overriding objective is not to preserve peace at all costs, but to destroy the aggressive power of communism. In approaching specific problems we should ask: Does the decision hurt the enemy or put him under pressure or at least compound his decision-making problems? Does it hasten his demise, or help to replenish his capabilities for waging international conflict? Firmness, hardness, of decision should not be mistaken for continuously rattling the saber. A sense of measure and moderation is the leaven of all constructive undertakings. But without the willingness to use force and without the sacrifice which the use of force as well as the prevention of war entails, no major international crisis ever has been settled short of appeasement or surrender.

5. Our political system is basically sound, but it must be stripped for action and, in part, reorganized so it is equal to its dangerous tasks in a dangerous environment. It would be foolish to pretend that, in a crisis in which societies are pitted against societies, the collective will is not a decisive element. Our collective will is weak, partly because our grasp on the meaning of the challenge has been weak—and because we persist in emphasizing the products of our system to the detriment of the system itself.

6. The fundamental decision before us is whether we should accept the Communist concept of coexistence in one form or the other or bring about the final defeat of communism.

Shorn of all ideological connotations, our policy must be based upon the premise that we cannot tolerate the survival of a political system which has both the growing capability and the ruthless will to destroy us. If we are to triumph in the protracted conflict, we have to face what it means to have implacable enemies who, in turn, deem us to be their implacable enemies. We have to cultivate those dour virtues which alone sustain a people in mortal combat. To equate democracy with vapidity of spirit and the indulgence of the flesh is an unforgivable insult to democracy. Freedom is not a marginal luxury. Of all forms of government, democracy should be the one best fitted to inspire men with the sense of what they owe to one another and to themselves. But, if the Communists prove to have more courage, a stronger will, a more steadfast spirit, a clearer intellectual insight into conflict in the nuclear age, they obviously are the better men and deserve to win—and probably will.

The many great forces at work in the world are locked so intensely in struggle that the future of all mankind is at stake for the first time in history. The basic conflict over the question as to whether all mankind shall live henceforth under tryranny—for however long—or under freedom could be decided one way or another within the next decade.

America and her associates, their commitments to the cause of freedom notwithstanding, have failed to rally their moral and material strength sufficiently to enhance and extend freedom and make it prevail over tyranny. We have not unambiguously accepted the fact that the battle is already engaged. We have comported ourselves in the world struggle in a manner that is essentially passive, reactive, and defensive. We act as if time were on our side, when the evidence points to the contrary.

In the protracted conflict, the aspirations of the Communist elite have been fulfilled far beyond the reach of their material power. The phenomenal growth of Communist power and the naiveté and opportunism of many free world elites obscure the real issue of tyranny versus freedom. The forces of tyranny and inhumanity are gaining in relative power over the forces of the free and open societies. More specifically, Communist power is reaching a point where its integrated and manifold instruments of protracted conflict may achieve the triumph of Communist tyranny.

Only by bold and sustained action can the United States and the free world emerge the victor in this deadly struggle. There is a burning need for the restatement of the free peoples' common ideal of human progress under freedom, for concerted action to check and reduce the spread of Communist totalitarianism, and for the advancement by mutual endeavor of the well-being of mankind.

No people can be forced to be free or exhorted to make sacrifices which they do not believe are necessary. The great stumbling block to positive American action is not only American affluence but, above all, the intellectual euphoria that it engenders. In history, political systems usually were destroyed by their foes after their own leadership groups had committed intellectual suicide. Can a prosperous, easygoing people be aroused to their own defense? Can it master intellectually the discipline and sacrifice required for survival. This perhaps is the central question which this book must leave unanswered. In the last resort, the answer is given—as it has always been given in history—by the unique response of the living.

A national strategy for the next decade that measures up to the great issues of our times calls for an increase in effort and expenditure of resources. The impact on our way of life of sustained national effort may not be a cheerful prospect.

Actually, the gap between present levels of effort and the requirements of the next decade may not be so difficult to close as one might think. The American people have always met a genuine challenge when it was put to them squarely. Conversely, the record is replete with instances of national erosion in response to pusillanimous leadership. The potentialities of the American people should not be underestimated. We believe they will do what has to be done provided they are given the opportunity.

Public support requires education of the public by the responsible leaders, and trust by them in the people. Education in national strategy calls for patient and persistent effort. This is the task of leadership.

There never was a time in our history more propitious for great leadership than now. We face a challenge beyond historic precedent.

The great leader conquers the awful loneliness, which imprisons the holder of supreme power, by inner certitude and faith in a good cause, from which springs the power of decision. Aloofness and righteousness are inseparable from leadership. These unlovable and unsociable attributes are basically alien to the character of contemporary civilization. Many of those, therefore, who call for U.S. leadership do not recognize or, at least, are unwilling to admit the objectionable and repugnant elements in the very concept of leadership.

That we do consider these elements repugnant and objectionable is a symptom of high civilization and genuinely humanitarian trust in the dignity and equality of men who live with one another on a basis of free consent and free cooperation. But modern man feels entirely insecure, if not within the United States, then certainly in the world at large. Whatever our own predilections, the burden to provide certainty and thus security for the world that is still free does lie overwhelmingly on our shoulders. We cannot impose this burden on the shoulders of others, more exposed and less powerful than ourselves. We try to obtain universal consent and agreement for policies and actions. We feel more at ease if we scatter our bounty over the lands of the needy and desist from exploiting our potential power. But in a crisis of such magnitude as the one the world faces now, this reluctance to lead appears also as an unwillingness to accept ultimate responsibility and as an attempt to lighten the terrible load by sharing responsibility with those who simply cannot bear it.

The corollary of our right to guide and to prescribe a course would be our duty to protect and support our friends even where our specific interests do not coincide. How, otherwise, can we make credible our pledge to stand at their side in the hour of need?

Unfortunately, we are confronted by an opponent who sees to it that the "normal" processes of history shall not remain normal. Our lot is conflict. History brings us not peace but a sword. Will our hands grasp it?

The San Francisco News-Call Bulletin, Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association—Tom Wallace Award

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in a series of articles relative to the situation in Chile, written by Donald Canter. This article and an editorial are included within the award-winning series:

[From the San Francisco News-Call Bulletin, Oct. 17, 1960]

MOVING TIME IN CHILE—THANKS TO YOU

(By Donald Canter)

People in the Chilean coastal community of Valdivia say they've witnessed various miracles during the past few months and one glance at the pictures on this page shows you some of them.

It all began when the earth beneath them started weaving and gyrating like the traditional dragon on Chinese New Year. Concrete buildings toppled, frame houses crumpled, shacks just disintegrated.

When the land steadied, volcanos spewed streams of lava, wiping entire villages off the face of the earth. Then the sea struck.

Wave after wave battered the coastline in one of the most terrifying tidal catastrophes of recorded history, taking thousands of lives in mere seconds.

And when the holocaust was over, a strip of land 300 miles long and 40 miles wide had sunk some 12 feet, radically changing the country's geography.

That happened in the last week of May.

Then came the first week of June and a stranger—this reporter—came to Valdivia with the message that thousands in distant San Francisco (those were you, donors to the N–CB Quake Fund) had rallied to Valdivia's aid and planned to replace some of the houses the quakes had felled.

Some said it was a miracle that people in a faraway land would bother about the fate of a handful of destitute creatures thousands of miles away.

They heaped praise on me (intended for you) and those hit hardest of all by nature's wrath eagerly signed up for the new homes which I assured them would be ready before long.

Early this month word came from Valdivia that what was to be known as the City of San Francisco Housing project was about ready for occupancy and so, as your representative, I hurried back to Chile.

Of course, I expected to find all prospective tenants to be camping on the doorsteps of their new homes the moment I arrived. It wasn't quite so.

Most of them had scattered to new temporary shelters without leaving their addresses with the local authorities as I'd asked them to.

But why had they failed to do so when homes were what they needed so desperately?

Steelworker Herminio Rodriguez, one of the first I traced through an appeal by the local radio station, gave the answer:

"Sure, you promised us a new home last June, but a man who's just passed through the gates of hell doesn't believe any fairy tale a stranger cares to tell him. Oh, I didn't doubt your good intentions. But believing you—pardon me, Senor, that I just couldn't do."

Rodriguez' temporary home (where he'd lived for months unaware that in Valdivia's city of San Francisco a comfortable three-bedroom apartment was rapidly nearing completion) was a "ruco" (hut) of which the city had erected some 5,000 in 5 days.

It was a triangular contraption, constructed of a few shaky 2-by-4's, covered with a few sheets of galvanized iron. Not only was there no electricity, there was no water.

In that ruco, 10 feet long and 7 feet wide, Rodriguez lived with his pregnant wife, Silva, their two small children, and two in-laws. There they slept on a couple of soiled mattresses.

I took the Rodriguez clan out of their ruco and on a taxi ride (their first in years) to that gleaming new development where a sign proudly announces that this is San Francisco soil.

With disbelieving eyes they gazed at the bright, mustard-yellow color of the structures' ground floor and at the deep brown of the varnished wood of the second story.

Their eyes popped as I handed them a key to a corner apartment. Still they didn't move. "Come on, go in," I said, "it's all yours."

Slowly they shuffled toward the entrance. But before Mrs. Rodriguez stepped over the threshold, she turned to me and pleaded. "You're not kidding us, are you?"

Then she and her loved ones stood in the corridor, a few seconds later in the spacious living room, its large windows looking out over the inviting Gilde Castro woods.

From the bathroom came sounds of splashing water. Dark-eyed Emilia, 6, was trying the shower, the first she'd ever seen. I flushed the toilet to show her it really worked. She giggled. "What's that for?" she asked.

Then the clan climbed the stairs to the second floor with its three spacious bedrooms, complete with walkin closets and real electricity switches.

Herminio Rodriguez and his wife just stood there, hand in hand. She started crying: "Lord, you're too good to us," she stammered.

I asked her whether she had beds to sleep on and blankets to keep warm. Whether they possessed a stove that deserved that designation and a table to serve dinner and chairs to seat all seven of the family. I inquired whether they had plates and forks and pots and pans, a table cloth and possibly a little dresser.

They stared at me as though I was asking for the moon and I realized my blunder.

So I asked Mrs. Rodriguez to meet me in 2 days, armed with a list of the most necessary household items.

"We're going on a shopping tour," I announced, "you and some other folks who have homes now but nothing to put in them. You do the buying and I'll pay the bill. All right?"

She just nodded and promised to meet me at 9 a.m. sharp.

When I left her, she was on her knees, waxing the living room floor with the most loving strokes any boards of lumber ever have received.

HERE ARE FACTS

This is the first of three reports on how the News-Call Bulletin and its readers rushed to the aid of Chile's destitute quake victims.

Here are some pertinent facts about the dramatic campaign:

Reader donations to date: $46,238.02.

Of this amount, $33,000 has been used to build in the hard-hit city of Valdivia three two-story apartment buildings containing 11 three-bedroom apartments.

The housing development, named "City of San Francisco," is now occupied by families handpicked by reporter Donald Canter.

They will live rent-free for three months, then pay $10 per month for 30 years, after which the apartments are their property.

The monthly payments are deposited in a special fund with which additional houses will be built on the same site.

How the balance of the News-Call Bulletin Chilean Quake Fund will be expended will be announced in subsequent articles.

(None of the money has been or will be used to cover expenses such as those for Canter's trips to Chile. The News-Call Bulletin picks up the tab for that.)

[From the San Francisco News-Call Bulletin, October 17, 1960]

VALDIVIA SAYS "THANKS"

The following paragraphs are excerpts from an editorial in the Chilean newspaper El Correo de Valdivia.

"We, the people of Chile, have many reasons for being grateful to the readers of the News-Call Bulletin.

"Because they taught us a lesson.

"After all, while many of us who were not stricken so hard by the recent quakes lived only a few blocks away from our fellow citizens leading an animal-like existence, we did not especially show them the true Christian spirit.

"That spirit was shown by some newspaper readers thousands of miles away, who built our destitute countrymen a little City of San Francisco, a housing project here in Valdivia, which will forever be a landmark to us.

"How can we possibly repay those warmhearted men and women in San Francisco, Calif.?

"We can, by proving to them that we have learned our lesson, by following their example of trying to give every citizen a real reason to love life."

"The Casey Bill Deserves Support"—Editorial in Support of H.R. 5082, To Permit Income Tax Deductions for Housing and Home Repair

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. CASEY. Mr. Speaker, earlier this session, I introduced H.R. 5082, which would permit home and rent property owners to deduct a limited portion of the cost of repairs from their income tax.

The bill is receiving tremendous support from all segments of our economy, for many see it as not only a shot in the arm for their particular trade, but a possible answer to the cause of substandard housing and slum areas.

The support given this measure by the painting and decorating industry is deeply gratifying, and it gives me great pleasure to bring to the attention of my colleagues the editorial from the May publication, American Painter and Decorator, sent to 50,000 members in this great industry.

THE CASEY BILL DESERVES SUPPORT

Where the public stake in legislation is concerned, sauce for the goose has not always

been sherry for the gander. The consumer sometimes has been regarded as duck soup.

It is pleasurable, therefore, to report that a bill currently before Congress is meaningful not only to one section of the economy—in this case the hard-pressed construction industry, and the painting trades in particular—but is something the public can cheer about as well.

We refer to the measure introduced by Representative ROBERT CASEY, Democrat of Texas, which would allow the homeowner a maximum $750 income tax deduction for home maintenance and repairs, including painting and decorating, up to that amount spent in any one tax year.

In some quarters, H.R. 5082 undoubtedly will be tagged as "special interest" legislation. A similar measure died for lack of support in the last session of Congress. Nevertheless, we believe it is in the national interest for this bill to be vigorously supported and enacted into law.

President Kennedy has expressed himself as favoring tax changes that will encourage business expansion by allowing a faster depreciation rate on certain items of business housekeeping. This is exactly what the Casey bill is designed to accomplish, except that here the principal beneficiary would be the homeowner and small landlord, who get no tax writeoff for maintenance and repair as does business and industry. The bill would correct this longstanding inequity.

No one quarrels seriously with the need for slum clearance programs to arrest the dangerous spread of blight in large cities. But it is likewise clear that Federal urban renewal spending, which has been criticized as the biggest ragweed grower in the Nation, far exceeds the cost of the limited tax relief proposed in the self-help Casey bill. By stimulating home decorating and improvement and providing an incentive for the owner of rental housing to rehabilitate his property, would there be an increasing need for bigger and better public housing programs?

Finally, and perhaps most significantly, the tax proposal would ease critical unemployment in the Nation's largest industry—construction—and the added income to painters and decorators alone would give the entire economy a boost.

According to FHA estimates, 10 million homes in the Nation have not been painted for at least 5 years. As a result of liberalized tax incentives, suppose just a million were painted at an average cost of $375. This would quickly add $375 million to the income of painters and decorators. Since labor costs are computed at 60–75 percent of the cost of a paint job, an estimated $225 to $300 million in added wages would go into the pockets of painting mechanics and thence into the mainstream of the economy.

We can't see anything wrong with this. The painting and decorating industry would do well to put the case before the public on its merits.

The Role of the Federal Government in Our Society

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith an address by the distinguished senior Senator from Pennsylvania, the Honorable JOSEPH S. CLARK, delivered at the 49th annual meeting of the Chamber of Commerce of the United States at the Statler Hotel in Washington, D.C.:

THE ROLE OF THE FEDERAL GOVERNMENT IN OUR SOCIETY

The role of the Federal Government in our society should be whatever it needs to be to keep America prosperous and free. The first thing we have to do in deciding what is needed is to think. Too many people do not really think about the proper role of the Federal Government in the modern world; they just react. Their conclusions are arrived at emotionally, not as a result of careful thought.

I suggest these premises as a basis for rational thought:

First. The Federal Government is neither the "Great White Father" who will save us all, nor is it George Orwell's big brother.

Second. The Federal Government, in itself, is neither necessarily good nor necessarily bad. It is part of us. We created it.

Third. Federal officials are not necessarily inferior in ability to State and local officials, nor are they necessarily superior.

It follows that any particular role for the Federal Government should be considered on a case by case basis.

In short, if the Federal Government is the best means to accomplish a desirable end, let's use it. If it isn't, let's not.

For example, it may be the national judgment—as I think it is—that the choice of teachers, the kind of buildings and the curricula of our public schools should be determined by State and local elected officials, because these decisions cannot be made as wisely or as well by the National Government.

At the same time, it may be the national judgment—as I think it is—that part of the money for public education should be raised through national taxation. The national tax system, it is argued, is more equitable, and relatively less overburdened, then State and local tax systems.

Thus, our decision should be—and, I think, will be—for Federal aid to the public schools without Federal control. Nor should we be deterred by the irrational plea of those who argue that to put the Federal Government into any new field of "spending" is, in itself, undesirable and bad.

From these premises and this example, then, I conclude:

First, that insofar as our national resources must be mobilized to meet current problems, only the Federal Government can do it. If it be true that our human resources must be as fully educated, as fully trained, and as well utilized as possible—then the Federal Government must take an active role in planning for the development and utilization of our national manpower. Just as the personnel director of a company must be concerned with staffing his corporation, so must the U.S. Government concern itself with staffing freedom.

Second, only the Federal Government can effectively intervene in economic affairs where such intervention is necessary in the public interest. Our economy is now national in scope. Almost every transaction is inextricably intermingled with every other transaction. Such a national economy can be dealt with intelligently only through our National Government. We can argue among ourselves whether minimum wage laws, or labor relations laws, or unemployment compensation laws are necessary or wise. But if necessary and wise, they cannot be left to the 50 States for independent action. And, of course, nobody really thinks they should be the States rights argument in the economic area is a facade for opposition to any laws at all.

Third, our national tax system falls on the whole across the country in some relation to the ability of everyone to pay. Our chaotic State and local tax systems do not. The time is at hand to utilize the national tax system to raise the money to solve certain of our national problems, which have up to now been left strictly to State and local governments.

Many of those who inveigh against the Federal Government are really not devotees of States rights as such; they are interested in the incidence of taxation, and they know that they fare better when needed services are financed through local property taxes and State sales taxes. It is not that local democracy is purer democracy; it is just cheaper—for them.

I do not love big government as such; far from it. But I am convinced that as the world becomes constantly both smaller and more complex the role of the Federal Government in our society is both inevitably and, on the whole, wisely bound to become a larger one.

An Opportunity Remains Unchallenged

EXTENSION OF REMARKS
OF
HON. JAMES HARVEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. HARVEY of Michigan. Mr. Speaker, under leave to extend my remarks, I wish to include a recent editorial from the Saginaw News, which is worthy of capturing the attention of all Members. In these current days where we hear and read of restraining news coverage, this editorial is of particular significance. While we have heard much of "Ask not what your country can do for you, but rather what you can do for your country," it is obvious to an editorial writer of the largest daily newspaper in northern Michigan that the President has failed thus far to tell them simply what he wants from the people:

WILL PRESIDENT ASK FROM THE PEOPLE WHAT HE ALONE CAN?

What does President Kennedy want the American people to do? What does he ask of us, not as a nation but as individuals? Where can we move forward, physically or in verbal or financial response to his repeaded suggestion that the American people were unwilling to do what he thought essential to defend the Nation?

As good Americans, all of us are concerned with him about the fiasco in Cuba, the discouragement in Laos and the imminent threat to the independence of South Vietnam. We are concerned even more about what may lie ahead in half a dozen other danger spots if somehow we cannot soon come up with a more effective means of combatting Communists. They have been beating us to the punch.

What disturbs is that President Kennedy and his Cabinet some days ago quite frankly confessed faults about military planning and intelligence in discussing what happened in Cuba. It is a fair presumption to say that failures elsewhere are traceable to faulty plans and approaches.

Still, after all the administration soul-searching that has gone on since Cuba and Laos slid against the Red buzz saw, Mr. Kennedy last weekend told a Chicago audience, "Our greatest adversary is not the Russians. It is in our own unwillingness to do what must be done."

We would say with equal candor and we believe with more accuracy, that it is the American people's ignorance of what needs to be done—because the President simply has not told them what he wants from them.

No citizen can tell the Joint Chiefs of Staff how to mount an offensive capable of beating the Communists without turning the world into a nuclaer holocaust. Neither can a private citizen offer to do better what our various Government intelligence services have not managed to do. Relatively few Americans can fly jets or lead forces.

The fact is that the American people have not been shown by the President that our foreign relations situation is so desperate as to make almost any sacrifice here at home needful to force a change in the direction the world is going.

It is well enough to talk about "the winds of change" and the "tide of history" now sweeping over vast populaces in the underdeveloped areas of the world. But the role that the people of the United States must play has to be more specific than the President has defined it, for all his admirable words of courage and challenge.

Will the President dare challenge the American people to accept austerity at home, for example, to jolt them to a wideawake awareness of the Red peril that surrounds them?

By example, he has done anything but. Americans were stirred to hear his inaugural challenge: "Ask not what your country can do for you, but rather what you can do for your country." We regret to say that President Kennedy has done more to apply that exhortation in reverse than any other American living today.

One would never dream that such was the case if, on almost any day, you dropped into the House or Senate Chambers of Congress to witness the bleeding and pleading that goes on in behalf of a procession of administration domestic spending programs.

New perennial programs are being adopted and pushed—aid to depressed areas, aid to public schools, college scholarships, college loans, youth corps—that would add some $3.5 billion to the swollen budget within 5 years. Proposed expansion and extension of existing programs—college housing loans, urban renewal, home financing, water pollution control—could add up to $8 billion more annually by 1965.

If the American people are to be criticized for complacency about the state of the world or for their preoccupation with personal, private, and domestic interests, the business-as-usual politicking that goes on in Congress afford them a fine example of governmental complacency.

If President Kennedy should announce that his Government, awakened to the real peril pressing on the free world, was calling for a moratorium on all new or expanded domestic programs, he would have a test of the people's will to sacrifice.

If he said that our new understanding of Red warfare means fast and heavy investment in a new kind of military, with new equipment and new training—that we further must do what must be done by increasing our foreign aid (while insisting that the governments we seek to help act with equal dedication to provide honest, effective advancement benefiting all their people)—the American people would see their duty.

This would be a test of the American will to sacrifice for the protection and preservation of liberty and security. Confronted by it, each American would be forced to ask himself whether or not he could refrain from asking Washington to solve his every trifling domestic ache or pain.

In reality, it would prove a small price to pay when measured against the current defeatism about combating communism that has seized on all too many of us. To the contrary, Americans well might find themselves glorying in the discovery of a purposeful, fighting course which would provide every citizen with that good feeling that comes of punching a villain in the nose.

The President has done moderately well in telling the American people what the Communist menace means. He has not done well in failing to tell them something of the magnitude of the job or of the added billions of dollars necessary to finance it. He has a great opportunity to set an example of a special kind of courage—political courage to call back his plans for Federal indulgence of the people at home in exchange for an invitation to commit this wealth to the cause of free world liberty.

Centralization of Power

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "Back to Apron Strings?" published by the Indianapolis Star May 2, 1961.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

BACK TO APRON STRINGS?

If a poll is right, almost half of Americans have had their fill of thinking and planning and making decisions for themselves, and can hardly wait for the Federal Government to take over enough of these functions to relieve them of the strain. The "What America Thinks" poll dealt with the question of centralization of Government powers in Washington. Forty-five percent of those polled thought this was a good idea. Only 37 percent thought it was bad, and 17 percent had no opinion, indicating that they've already given up thinking anyway.

Some of the reported answers were just plain idiotic. One declared that there is "too much redtape in the Pentagon," and from there reasoned that "if things were more centralized, there would not be so much duplication and waste of taxpayers' money." The Pentagon represents 15 years of effort at centralizing the Department of Defense, which is well over half the entire Federal Government. How can someone who sees the result as "too much redtape" at the same time want to do the same with the rest of the Nation's affairs? This fellow, too, has already given up thinking.

Some indicated they had some inkling of what centralization of power means, but just don't care. "The head of Government could get and give out knowledge to the people and we would be better informed," said one. "The Government knows more about what is necessary and best for the country," said another. These are frank expressions of a desire to get out from under the problems of life. Let the Government handle them. Let the people be told what to do so they won't have to worry.

Is that really what is wanted by 45 percent of the people who responded to this survey? Is that really what is wanted by anyone, outside of the relative few who mentally and physically actually can't think for themselves and take care of themselves?

What is it toward which almost every young person looks so eagerly as he advances through the teens? It is the time when he can be independent, when he can cut loose from parental control and start planning and living his own life. Millions of young and not-so-young veterans came pouring out of military service at the end of the last war with the same eager objective. They wanted to get away from constant daily ordering of their lives by higher authority.

One person answered the pollster's question by saying it's a matter of point of view. "If the centralized powers are used for something I believe in, then I believe in greater centralization. If they are used for something I don't believe in, I'm opposed to them."

This might be called cynicism. But it's something much worse than cynicism. It's ignorance. It's a blithe, innocent supposition that centralized powers can be handed to government to be used only for the things approved by the people who hand over these powers, and not for things these people don't like.

People who think this either forget history, or have never read it. They do not understand the nature of centralized power.

The head of a centralized government does get control of knowledge, and give out knowledge to the people. But this does not make the people better informed. It makes the people informed according to what government wants them to know. Centralized government does assume that it knows more than the people about what is necessary and best for the country. And it acts on that assumption without bothering the people with information which might cause them to wonder.

The trend toward centralization of power in the Federal Government is a trend toward making Government the father and mother of everyone. It is a movement toward a paternalistic control of life which will not be relinquished at the end of the years of childhood, but will go on perpetually.

We can't believe this is what Americans want. So wake up! Shake the fog out of the minds of those who don't realize where they're pushing this country. Let's face the realities of the situation. Let's get back on the track of the wise separation and decentralization of power which for so long have kept us free from the control of tyrannical government.

Kansas Keynotes Boilermakers and Blacksmiths Convention

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news account of the opening of the International Boilermakers and Blacksmiths Convention in Long Beach, Calif., from the newspaper, Labor, of May 1, 1961. Mr. William A. Calvin, president of the brotherhood, is my constituent. In his keynote address, which this news account liberally quotes, Mr. Calvin reviewed the progress of the brotherhood, now in its 80th year, and spoke about certain aspects of the economy and the present U.S. and world political situations I am certain the article will be of

interest to my colleagues, and I respectfully call it to their attention:

"MOVE FORWARD OR PERISH," HE TELLS DELEGATES—KEYNOTE TO BOILERMAKERS AND BLACKSMITHS CALLS FOR UNITY TO MEET PROBLEMS

LONG BEACH, CALIF., May 1.—Opening the big 21st convention of the International Brotherhood of Boilermakers and Blacksmiths here this week, President William A. Calvin warned of grave perils ahead in the challening sixties, both for unionism and for the free North American peoples.

"Meeting the challenges, known and unknown," he declared, "will call for maximum courage, intelligence and impartiality that is not circumscribed by petty prejudices, racial or religious discrimination—and loyal adherence to the principles of morality and integrity."

The brotherhood itself, Calvin indicated, is hale and strong in its 80th year, having won enormous gains for its far-flung membership. "We have accomplished much," he declared, amid applause from the delegates. "We must accomplish more."

Observing that "we will either move forward or perish," Calvin stressed: "We must remain united if we are to reach the beckoning new horizon."

WAY TO ACHIEVEMENTS

"Courage, initiative, and honesty have always returned dividends in organizational achievements," the noted union leader added, "and as we meet the challenge of the sixties we serve notice that there is no sanctuary within the International Brotherhood for the disciples of fear, disunity, and defeatism."

In an era when the "octopus of world communism" has extended its tentacles over one land after another, Calvin warned that major problems exist also here at home.

"For approximately 8 years," he noted, "we have been plagued by repeated industrial recessions; our economy has been sick." Moreover, he pointed out, "each new recession has begun with a greater number of workers already unemployed."

IMPACT OF AUTOMATION

In contrast, he said; "our recent recessions have had little if any impact upon big business. In the steel and automotive industries, for example, where unemployment is rampant, automation has made it possible to produce an enlarged volume of products with a drastically reduced work force.

"The industries are making enormous profits while the workers are unemployed and the communities in which the industries are located have been declared distress areas."

In Washington, Calvin said, President Kennedy and his aides have been grappling "earnestly and energetically" with these problems—only to be thwarted often by the "horse and buggy" conservative coalition in Congress.

For workers, the Boilermakers and Blacksmiths president suggested, the lesson is clear: "No political party can be an effective substitute for a strong, solvent, and honestly administered labor movement."

Calvin called also for strong action against foreign low-wage competition sponsored by big business operators—such as "the building of giant oil tankers in Asiatic shipyards for American owners which will sail under foreign flags and carry petroleum to the United States."

Reviewing the massive gains won by the brotherhood, Calvin cited such facts as these: "Health and welfare insurance is now established for our construction members; supplemental pensions to afford greater security to those receiving railroad retirement and social security benefits; travel time, showup time, or daily subsistence allowances when on construction projects outside of the immediate area. * * *

"All of the mentioned fringe benefits, in addition to the highest wage rates and shortest workweek, have been attained through the efforts of our brotherhood, coordinated in some general instances with the combined efforts of the entire labor movement," Calvin noted.

Speaking seriously and forthrightly to the hundreds of delegates, Calvin recalled how the newspapers have made a sarcastic byword of the phrase labor boss.

"Within our brotherhood," he declared, "the word boss is a misnomer. Actually, our convention is the boss; your international president is a servant rather than a boss. As delegates to this convention, the future of our organization is a responsibility resting upon your shoulders. It cannot be shrugged off. You are the supreme tribunal representing every member of our organization."

Calvin's keynote speech was the first of many addresses to be heard from leaders in labor, industry, and government at the big union convention. Meanwhile, delegates also began progressing the wide variety of business before the convention.

GAINS ON ALL FRONTS

Delegates to the convention were also informed of a long list of gains won since 1957 in the various fields represented by the Boilermakers and Blacksmiths. Highlights of some of these gains, as described in the report of the brotherhood's executive council, are as follows:

Average hourly pay increases between 1958 and 1960 ran as follows in these industries: shipbuilding, 32.1 cents; boiler manufacturing, 29.3 cents; plant fabrication, 24.4 cents; forging, 28.9 cents; and miscellaneous manufacturing, 26.1 cents.

In field construction, numerous wage increases were obtained. In addition, a national agreement was signed with the National Contractors Association, representing major firms in the heavy construction industry. Improvements were negotiated in the Boilermakers' national health and welfare plan for members in the construction industry.

UNITY PAYS OFF

Shipbuilding, organization of the Iron Shipbuilders International Marine Council and its four regional district lodges marked a major step forward. The Pacific coast master agreement was signed, covering shipyards in that region.

In boiler manufacturing, the council report describes how united effort has begun to pay off in very practical terms. "In every case," the report says, "our members obtained greater increases than the national average for manufacturing, and better than any other organization was able to accomplish in this industry. In addition, fringe benefits were substantially improved in every case where such items were open for negotiations."

OTHER ACHIEVEMENTS

In the forge industry, the new Forge Workers International Council has begun plans to cope with the big economic and technological changes underway in that industry.

On the railroads, hard hit by unemployment, the Brotherhood has continued to make substantial gains in pay and fringe benefits for its members, in cooperation with other railroad unions.

The Brotherhood's new national pension trust has been established, and payments are being made into it for Brotherhood members by most employers in field construction, by west coast shipyards and by shop employer groups in Chicago and Los Angeles.

In Canada, widespread and substantial progress has also been achieved by Boilermakers and Blacksmiths units since the last convention in 1957.

Deicing Program for Icebound Areas

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, May 11, 1961

Mr. WILEY. Mr. President, earlier this session, I introduced a bill, S. 1704, to authorize the study by the Corps of Engineers on the feasibility of developing a deicing program for regions of the United States normally icebound in winter—particularly the Great Lakes and the St. Lawrence Seaway.

Recognizing that this would essentially be a long-term project—beset with difficult problems—I, nevertheless, feel that there has been sufficient progress in development of deicing systems to warrant further investigation. The purpose would be to determine the feasibility of developing broader scoped programs for icebound areas. As of now, annual trade and commerce are reduced by about one-fourth by the old foe—winter ice.

Following the introduction of my bill, a number of forward-looking newspapers in my home State and elsewhere have endorsed the idea. To give Congress the benefit of this constructive support, I ask unanimous consent to have the following items printed in the Appendix of the RECORD:

First, an editorial entitled "Cracking the Ice Barrier," from the Green Bay Press Gazette of May 1, 1961; and second, and article entitled "Ice Melting Hot Idea," written by Woodie Jarvis and published in the Bay City Times, of Bay City, Mich., on April 27, 1961.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Green Bay Press Gazette, May 1, 1961]

CRACKING THE ICE BARRIER

Senator WILEY has proposed legislation in Congress which would authorize the Corps of Engineers to make a complete investigation of problems involved in the development of a de-icing system for Great Lakes ports and the St. Lawrence Seaway.

His aim is to extend the shipping season, help to resolve icing problems in harbors on Great Lakes routes and in the seaway, and possibly to open the way to year-round shipping in the Great Lakes and the Seaway.

He admits that the task is a difficult one but says that in view of the progress that has been made in this field it would warrant a thorough investigation by Government.

The United States has a tremendous investment in the Seaway and in the lake ports. More money will be poured into harbor facilities along this course in years ahead. The investment is so large that a study such as Senator WILEY proposes and indeed any study which offered reasonable hope to extend the shipping season would be warranted. The extension of the shipping season by only a few weeks annually would warrant the investment of millions of dollars. It is inexcusable for the Government not to have available in understandable form all useful information on this subject.

[From the Bay City Times, Apr. 27, 1961]

ICE MELTING HOT IDEA

(By Woodie Jarvis)

DETOUR.—Among all the worthy projects Congress may consider in coming months, the most interesting is a proposal to melt the Great Lakes ice in winter.

This suggestion is the brainchild of Senator ALEXANDER WILEY, of Wisconsin, who obviously is an intelligent and imaginative fellow.

It is proposed on the practical basis of cracking the ice barrier to maintain shipping throughout the winter, a worthy cause deserving of all support.

And if in the process there should be a slight side benefit or two, such as bringing eternal summer to the shores of the St. Mary's River, and perhaps the Saginaw and Detroit Rivers as well, who could honestly complain of that?

The idea isn't exactly new. A year or so ago a space scientist suggested hanging a big reflector in the weightlessness of space, adjusted so it would concentrate the sun's rays on the Great Lakes.

This, the scientist said, would melt the ice in winter and make possible year-round shipping on the inland seas. But there seemed to be one catch that wasn't explained. How could the gadget be turned off in spring and turned on again in the fall?

If there were no turnoff button summer temperatures might become pretty drastic, hot enough to evaporate the lakes and fry all the inhabitants.

Senator WILEY, on the other hand, has more down-to-earth proposals. He would work on the ice directly, either with an ice-melting bubble system, chemicals or underground explosions.

Convinced that this is a worthy project, he has introduced a bill in the Senate that would direct the U.S. Corps of Engineers to investigate all possible methods of deicing the Great Lakes and the St. Lawrence Seaway as well.

This project isn't as complicated as it looks at first glance. Ice forms only on a small percent of the Great Lakes in winter. Mainly it is in the connecting channels and the ports, and rarely extends for more than a few miles from shore.

No ice of consequence forms in the vast open surfaces of the Great Lakes, even in northernmost Lake Superior. As they say of Superior, it never freezes over in winter and never thaws out in summer.

With the exception of the Straits of Mackinac, all connecting channels of the northern lakes are in the form of swift-flowing rivers—the St. Mary's, the St. Clair and the Detroit.

All main ports likewise are built beside rivers—Alpena, Bay City-Saginaw, Muskegon, to name a few.

The problem therefore becomes greatly simplified. Warm water melts ice. Heat the rivers, and the natural flow of the current will carry warm water through the area of the ice fields, releasing all our ports from the iron-bound clutch of winter.

Heating water is an extremely simple process, as every housewife knows. But to put the matter on a high scientific plane, let us describe this process of melting ice as the teakettle theory. This will involve applying heat to the bottom of the river.

We have at hand a readymade process to do this work. All atomic energy plants must be located on water because of the tremendous amounts of waste heat they generate.

So the answer is simply to build large nuclear or thermonuclear electric power plants on the rivers and use the waste heat, or even some of the working heat if necessary, to keep the ports and channels ice-free.

Heat could be applied to the river bottoms through a series of radiators with simple thermostats to turn it on or off as the water temperature dictated.

Making a rough guess, the thermostats could be set to maintain a constant surface of 70 degrees, with booster stations established at suitable intervals along the course of the current.

Engineers of course would be required first to solve the problem of radiation, but that's a mere technical detail along with other construction problems.

More interesting to contemplate are the results of such a deicing system. It would in effect create a series of warm Gulf Streams flowing through the Great Lakes, bringing comparatively balmy climates to previously frigid shores.

Warm water fish would rush into the rivers and grow huge from a year-round growing season as they do in tropic waters. Cold water fish such as the trout and chubs would simply retreat from the warm streams into the deep, cold holes in the open lakes, where they could be more easily located.

The future holds visions of year-round bathing beaches. Perhaps lush palms beside the pine trees, a day when Michigan, almost entirely surrounded by the Great Lakes, would become the Florida of the north.

Senator WILEY has a real good idea here. He should be—pardon the expression—warmly encouraged.

Fliers Deliver Santa Fe Scroll

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. ELLSWORTH. Mr. Speaker, this year marks the centennial of Kansas' role as a member of the United States of America, and we in and of Kansas are celebrating the event in appropriate ways. A centennial wagon train—of which I am an honorary wagonmaster—will roll along the Santa Fe Trail, as part of the celebration. From time to time I will invite my colleagues' attention to the progress of the Centennial Wagon Train. Today, I bring to your attention a news story from the Olathe (Kans.) News that tells about the arrival in Olathe of a scroll bearing the names of mayors and city officials of some of the major towns along the Santa Fe Trail. The scroll will be delivered to Council Grove, Kans., by the centennial wagon train, where Gov. John Anderson will sign it and start it on its final lap.

The article follows:

FLIERS DELIVER SANTA FE SCROLL

Six of 17 airplanes which left Santa Fe, N. Mex., about 8:30 a.m. Monday arrived on schedule Tuesday at 5:15 p.m. at NAS Olathe.

The six planes were the survivors of a flying farmers flight which followed the Santa Fe Trail Highway, U.S. 56, from Santa Fe, N. Mex. to Independence, Mo., as part of the Kansas centennial celebration.

A scroll, carried by the flight of light aircraft, was delivered to the centennial wagon train. The scroll bears the names of mayors and city officials of some of the major towns along the trail.

Mrs. Grace Collier, executive secretary of the Santa Fe Trail Highway Association, accompanied the flight. Mrs. Collier described the flight as "something more than routine." She will also serve as mule skinner on the return trip through Kansas, Oklahoma, and New Mexico with the wagon train.

After the scrollsigning ceremonies were completed at NAS, Olathe, the flying farmers continued to Independence, Mo., for a dinner date with Mr. and Mrs. Harry Truman.

Bob Frizell, Fort Larned, piloted the first plane to land at NAS.

The scroll carried by the flight commemorates the 140th anniversary of the Santa Fe Trail. It will end its tour when a Navy jet pilot delivers it to President Kennedy in Washington, D.C.

The scroll will be returned to Council Grove by the centennial wagon train, where Gov. John Anderson will sign it and start it on its final lap.

Members of the Olathe Chamber of Commerce and the Olathe city government were on hand with members of the wagon train to welcome the fliers here.

The John Birch Society—III

EXTENSION OF REMARKS

OF

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. ROUSSELOT. Mr. Speaker, George Todt has written about the John Birch Society in a series of six articles which have appeared in the Los Angeles Herald-Express newspaper. The Herald-Express is published in Los Angeles, Calif. Mr. Todt's articles are commendably objective. I had the first two articles of the series inserted in the body of the CONGRESSIONAL RECORD for May 10, 1961. I ask unanimous consent to have the fifth and sixth articles of the series printed in the Appendix of the RECORD for today:

[From the Los Angeles Herald-Express, March 30, 1961]

A VIEW OF THE NEWS—GEORGE TODT'S OPINION

(Every war of the Soviet Union is a war of defense, even if it is conducted with offensive weapons.—"Fundamentals of Communism," published by the Communist Party of America, p. 31.)

Recently I watched and listened to a 2-hour debate on a Los Angeles television station between a skillful liberal leader, who vigorously opposed the John Birch Society, and one of its members.

The former is a past master at the art of debating and needled his opponent so unmercifully that, understandably, he seemed rattled at times. Some ideological haymakers were missed.

For instance, toward the end of the debate when the liberal gentleman indicated that, in the spirit of Voltaire, both the Communists and the John Birch Society ought to be heard by the American people.

He indicated that, in his opinion, Communists had civil rights in our Republic—as did the John Birchers—and all should have the full protection of the law. What could be fairer than that?

WHEN U.S. SON—

While I have long admired the ability to win and technical savvy of the well-known

liberal leader—an effective and articulate champion of the ADA viewpoint. I must, nevertheless, disagree with him.

Here we go directly to the heart of the problem, the fundamental issue between conservatives and liberalissimo in our Republic as to the nature of the Communist beast we all say we oppose. But how?

To the liberal mind, the American (?) Communist is just another U.S. citizen who—in the interest of academic freedom—must be considered simply as a member of a routine political party, the same as Republicans or Democrats. Who has the right to persecute a bona fide political party?

This is where the liberals and conservatives part company.

Conservatives do not consider the Communist Party of America to be a bona fide political party—but a Trojan horse, or fifth column.

The reason: Every Communist upon entry into the party must subscribe to the traitorous and treacherous Communist oath.

Here is what it says:

TAKES RED OATH

"I now take my place in the ranks of the Communist Party, and the party of the working class. I take this solemn oath to give the best that is in me to the service of my class. I pledge myself to spare no effort in uniting the workers in militant struggle. I pledge myself to work unsparingly in the unions, in the shops, among the unemployed. I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism. I pledge myself to remain at all times a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States."

Reread carefully those last two lines. Can any person, calling himself an American citizen, take such an oath and still remain a citizen?

Express provisions of the Nationality Act of 1940 and later the McCarran-Walter Act say thusly:

"Loss of Nationality: A person who is a national of the United States, whether by birth or naturalization, shall lose his nationality by taking an oath or making an affirmation or other formal declaration of allegiance to a foreign state."

HE SERVES ONE

Would the great Democratic or Republican Parties sanction the Communist oath for any of their members? Of course not.

If the Communist Party of America is a bona fide political party of the United States, then the other two major parties are not—and vice versa.

To compare loyal Democrats and Republicans with a group which has taken an oath of allegiance to the enemies of our country at this time is intolerable, or should be. It is a smear of the worst kind.

The same goes for the John Birch Society vis-a-vis the Communist fifth column group located in our midst—like the Nazi fifth column in France before Hitler conquered our Gallic friends in 6 weeks in 1940.

The only oath, if any, these much-maligned people have sworn to is to the constitutional republic of the United States—not the Soviet Union.

I think real Americans ought to have the academic freedom to discuss and advocate any philosophy they desire—including even socialism and its tenets if they want to do so.

NOT BOTH

But members of the Communist Party are not real Americans after they subscribe to the Communist oath—and allegiance to the Soviet Union.

If an American wants to become a Russian, let him go to Russia and become one. Give him a one-way passage and good riddance.

But when a traitor takes an oath of allegiance to the Reds while on our soil—he is just one more reason why we all ought to get behind Glendale Congressman H. ALLEN SMITH's bill to make membership in the Soviet's fifth column here a major felony. The right idea.

SMITH, a former member of the FBI, is one of our smartest and most astute members of the Capitol Hill set. Let's get behind him all the way on this damaging blow aimed at Red quislings in our country.

[From the Los Angeles Herald-Express, Mar. 31, 1961]

A VIEW OF THE NEWS—GEORGE TODT'S OPINION

("Truth forever on the scaffold. Wrong forever on the throne."—Lowell, "The Present Crisis.")

Once again the forces of liberalissimo are treating the American people to their clarion call of Wolf. Wolf.

Not so long ago it was with reference to the so-called missile gap. Now it is the conservative John Birch Society.

A large number of citizens are already gagging at the emotional hysteria of the liberals as they view with alarm this small group of constitutional anti-Communists. Why?

Seldom before has there been such a determined brand of name-calling as evidenced now on the American scene.

We ought to be ashamed of ourselves.

WHEN YOU SAY

Unbiased and unprejudiced investigation of the John Birch Society reveals that the members are anti-Communist, anti-Fascist, definitely not anti-Semitic and proconstitutional to the *n*th degree.

Why try to railroad a society such as this one?

We can stipulate that the founder of the JBS does not seem to rate three recent Presidents highly because of their failure to stem effectively the Communist advance throughout the world. Is this a crime?

I, personally, have admired the last three Presidents—Republican and Democrat. My work indicates that much. All were my commanders in chief in the past while I was a young officer in the U.S. Army. I would never speak ill of any of them.

But our Republic has long been spoken of as the one place in the world where a man may have his honest disagreements with anyone—including the President, himself. Do we really mean it?

ONE IS VILE

It appears to me that Robert Welch, founder of the JBS, felt that our leadership in the highest brackets has not done enough to stem the Communist onslaught against us in the past 20 years.

He has raised his own particular brand of hell on this subject. The dramatic shock of his approach has focused much attention upon a matter all too many of us piously deplore—and do nothing constructive about.

It is not enough any longer that we adopt mere poses or spout wishful thinking to try to get the necessary job done.

We must not be lulled to sleep by such a fallacious approach to our problems.

The only things that count any more are results.

The people of the United States know that they don't want the slave ideology of communism fastened upon us, or our allies throughout the world. We must fight, if necessary, for our freedom.

We must charge our leadership regardless of political affiliation, with accomplishing desired results—or we must get rid of that inept brand of leadership. We must pay off on results, alone.

AMERICAN WAY

The John Birch Society is dedicated to the proposition of exposing mistakes made by any group on the national scene—and then requesting the American people to take action. They proposed to do this by constitutional and legal means. Such as letter-writing and working within the established Republican and Democratic political parties.

Actually, they are hardly more than an answer of sorts to the Americans for Democratic Action (ADA) who have been on the national scene for a generation.

Although one may not agree with the socialistic tenets of ADA philosophy or ideology, it would not be fair to call them vituperative names and suggest that they were alien totalitarians inimical to our way of life.

Yet this is exactly what some of their people are doing now to the young John Birch Society. How fair can we get?

I am not a member of the JBS but I dislike seeing it given slanted "hit-and-run" treatment.

Now the liberals are saying that after they have dumped their unfair innuendoes and garbage on the society—even calling for an investigation by the House Un-American Activities Committee and other bodies of inquiry—they really don't want such an informative investigation, after all. Also, after telling a large TV audience the Birchers were guilty of Fascism, they should not be given a public hearing. How un-American can he get?

CALLS FOR TRIAL

The specious reasons given us are that they don't want the JBS to have its day in court for fear it would propagandize the issues.

How quaint. The liberals knew all along that their fantastic charges were apt to be repudiated if open hearings were later to be held. They knowingly made their vicious attacks against JBS—but now whine that they don't want the American people to hear immediately the correct answers by their opponents.

Let's be fair and allow both sides to be heard. Robert Welch, JBS founder, will be in Los Angeles next week. I suggest he be heard by the people. Let your own eyes and ears be the judge. Don't buy false rumors.

To: Alan Shepard, Jr., Successful Astronaut, May 5, 1961

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I include a poem "To: Alan Shepard, Jr., Successful Astronaut, May 5, 1961," written by Florence C. Blake of Lochmere, N.H. which appeared in the Laconia Evening Citizen published in Laconia, N.H., on Tuesday, May 9.

TO: ALAN SHEPARD, JR., SUCCESSFUL ASTRONAUT, MAY 5, 1961

(By Florence C. Blake)

Your stamina, knowledge, courage supreme
Have for your country perfected its dream—
Advance into space. The big race is won.
With endurance, precision, and bouyancy
run.

The world will remember your missile's race—
Its beautiful progress as it sped into space,
Straight to its goal, as an arrow shot true,
The Mercury Redstone—the capsule and you.

A space pioneer with courage to match
Unfolding a dream we privileged watch.
The Zenith is reached as we strain to hear;
Then your confident voice rings back to our sphere.

We thankfully bless you, follow you through
Floating next seaward and back to earth too.
Thanks, Alan Shepard, for such faith and will;
Your hemisphere's proud of your helpers and you.

Poultry Trade Barriers

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I should like to share with my colleagues a thought-provoking editorial which appeared in Poultry and Egg Weekly on April 29, 1961.

The editorial follows:

POULTRY TRADE BARRIERS

For many years the United States has taken the lead in expanding trade among the nations of the world on a mutually benefiting and reciprocal basis.

Our support of and participation in intaken the lead in expanding trade among the GATT, and similar international groups are broadly indicative of our efforts to implement international economic trade policy. This policy is basically aimed at permitting the freedom loving countries of the world to so allocate their resources that they may produce that for which they are best fitted and to trade with one another, achieving the highest standard of living for all. Such a policy permits the forces of competition to function and to be the prime determining factor in resource allocation, instead of attempting to create uneconomic islands through the use of man-made trade barriers. Trade barriers serve only to protect uneconomic production. They force the consumer to pay higher prices and consume less.

Our foreign economic policy has been consistently followed by all administrations since it was first outlined in 1933 by Cordell Hull, then Secretary of State. It is in the light of this policy that we should attempt to evaluate the current position which the United States should take at the negotiations now being conducted in Geneva, Switzerland, with respect to the European common market. Policies are no better than their implementation. It is obvious, then, that our negotiating team must do more than give obsequious lip service to this policy. On the contrary, they should seek vigorously to obtain the benefits of this trade policy not only for U.S. agriculture, but in the interests of world trade.

Trade is a two-way street. No country can, or should, receive the benefits of exports unless it is willing to recognize the right of others to have access to its market on an equitable and nonrestrictive basis.

The six countries comprising the European Common Market (Holland, West Germany, Italy, France, Belgium, and Luxembourg) are attempting to establish rules and regulations which would increase duties on U.S. poultry to approximately 18 percent of ad valorem. They seek to establish an additional barrier in the form of fees which are designed to reflect the difference between feed grain prices in the respective countries (prices established by government action of such countries) and free market prices. While barriers in the form of increased duties and additional fees would be applied against U.S. poultry, duties on poultry originating in Holland and other common market countries would be progressively reduced to zero. Obviously such a policy is clearly designed to freeze out U.S. poultry and preempt the market for other supplying countries. This is the antithesis of expanding trade. It is protectionism in the extreme. How these countries can expect to resort to such protectionist devices, how they can also expect to have the continued support of the U.S. poultry industry and other segments of the U.S. economy for free and nonrestrictive access to the U.S. market is difficult to understand.

Only recently, in the hearing involving the confirmation of the Under Secretary of State, it was pointed out by Senator J. W. FULBRIGHT, the chairman of the Senate Foreign Relations Committee, that the United States could not continue to be a market for Volkswagens, which Germany produces so efficiently, if restrictive trade devices are to be employed to exclude agricultural commodities which our American farmers produce so efficiently. The point can be further emphasized by making reference to Renaults from France or Fiats from Italy, countries which totally exclude U.S. poultry and other agriculture commodities through the use of exchange controls and other restrictive devices.

It could also be pointed out that substantial quantities of Dutch hams are given free and equal access to the U.S. market and substantial quantities of such hams are being imported. Notwithstanding the fact that American farmers are capable of producing hams in abundance, the United States, instead of attempting to employ restrictive devices, has constantly reduced its duties and the duty on hams is now 2 cents per pound or 62 percent less than formerly.

These facts must be well understood not only by U.S. farmers, but by the responsible people in our Departments of State and Agriculture. It is also of equal importance that these facts be recognized by the government officials of these countries seeking to continue to discriminate against U.S. poultry products and by the producers in those countries whose products find profitable outlets in U.S. markets. It should also be of concern to the great port cities, such as Rotterdam, through which exports from Holland and other countries of Europe deport and into which U.S. products flow.

It is recognized that international negotiations are not an easy matter, but we are confident our negotiators will be successful if they make it clear that our agricultural producers are aware of these discriminations and that continued support of trade policies which have provided much broader and freer access to the U.S. market will be difficult if policies are not adopted at Geneva which remove these unfair barriers.

Henceforth and Forever Free

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. CURTIN. Mr. Speaker, the Lehigh County Republican Committee in the district that I have the honor to represent, annually sponsors two essay contests on the "Life and Ideals of Abraham Lincoln" as a part of the Lincoln Day celebrations, one being for senior high school students and the other for junior high school students of Lehigh County. The winning selections are made by a board of distinguished educators from several hundred essays submitted. I am very proud of the fine students and the essays they submit. This year, the contest for the junior high school students was won by Carol Margaret Boyer, a South Mountain Junior High School eighth grade student.

Under leave to extend my remarks, I include the winning essay of this young lady, entitled "Henceforth and Forever Free":

HENCEFORTH AND FOREVER FREE

(By Carol Margaret Boyer)

Abe Lincoln. The very name always sends the blood coursing through my veins at a furious pace and, head bowed, I murmur a fervent, worshiping prayer. For, you see, I was a slave.

I remember the first day I saw him. He was standing at the stern of a flat-bottomed boat, lazily floating down the broad and muddy Mississippi. Even then, in his late teens, he was ungainly tall and awkward with a shock of rumpled black hair hanging over a fine, broad forehead, partially concealing a keen, dark eye beneath thick brows. In all truth and due respect he was in nowise handsome. But I knew in a minute that he was honest, sincere, and (as I had noticed the bulge of his hard, strong arms) hard working.

I was at an auction for the purpose of trade. I usually brought fine prices for my master, as I was then quite young and obviously strong. I'll never forget that particular auction. There was a decided meanness in the air and we were whipped and lashed and abused until our bonds were wet with blood and our bodies ached from beatings. This was unusual, as slaves were considered far too valuable to mistreat. Nevertheless, the afternoon proved to be unbearable for me, and unforgettable to Mr. Lincoln.

After my first encounter, I was to see and hear more of this man Lincoln. The emotional blow that the young boy Abe received that memorable day hit him hard and left a permanent scar. Previously unfamiliar with slavery, he was appalled and disgusted with the whole procedure.

And this boy, this same awkward, unpolished backwoodsman, grew up to become the greatest President that our country has ever known. But that's ahead of my story.

Abe was one of us. His beginnings were shabby and totally unpromising. In the backwoods of Kentucky in a three-sided, mud-chinked log cabin he was born and bred. He worked hard and long, and often went to bed hungry. Yet he was eager, alert, intelligent. He had been known to walk many miles merely to secure a book that he wanted to read. His yen for knowledge was a physical ache inside him. And, book in hand, he would read far into the night by the flickering light of a fire. These were his crude beginnings. I once heard Lincoln himself say simply, "I am humble Abraham Lincoln."

So when the long-awaited day arrived when Abe was a legal 21 years of age, he set out, clad in buckskin with a homemade rifle slung over one shoulder, for New Salem, Ill., with a long, determined strike of one who has finally achieved a high purpose. For Lincoln this was, at the time, to shed the fetters of his humble home, and thus, freeing himself, set out to make it "on his own."

And there lived in New Salem a girl named Ann Rutledge, to whom a 26-year-old Abe was first engaged. And when she died not many weeks later, Abe felt his life was not worth living. Grief and remorse were a part of Lincoln's life as they have so often been akin to me. Great as he became, Abe was not set up on a spiritual pedestal that sheltered him from all things wretechedly tormenting and unbearably painful. And his gloomy moods of utter despair were far more severe after the tragic death of his young love.

From then on Lincoln's life is an almost continuous success story. However, when he had climbed the rugged mountain of hope and prosperity, the worst was yet waiting for him after he had finally reached the summit. Young Abe climbed up and up—from a farmer and a rail splitter to a lawyer, a Congressman, and—at last—President.

In that crucial year of 1860, the eyes of the land were focused on Lincoln. The tension mounted and was broken. Abraham Lincoln, 16th President of the United States.

But it was a Nation torn by conflict and hate that Lincoln tried desperately to hold together by sheer faith. He knew that the country's only hope was faith in God. And Lincoln prayed. No one could possibly know how long, how much, or how reverently. Knelt humbly at a window, he lifted his long, sad, thin face to the heavens and it was suddenly transformed by the radiant sun streaming through the glass into something awesome and holy.

It was a kind, compassionate, tenderhearted Lincoln that traveled to the very battlefronts to observe the bitter struggle: brother against brother; father against son.

The war lasted 4 years. Four long years that turned a young, eager, promising, hopeful candidate into an old man with the drawn, pale face of one who has aged suddenly, and a decided stoop in the worry-worn shoulders upon which the solemn problems of the Nation were to rest until his death.

And then it happened. The taut line of strain suddenly snapped. The summer of 1861 was hot, dry, and bloodstained. The battles continued wearily. Mr. Lincoln could wait no longer. With prayerful heart and doubtful mind he issued the Emancipation Proclamation. "As I would not be a slave," declared Lincoln, "so I would not be a master." The South had 3 months to free its slaves. All the world waited with bated breath. A faint wind of peace brought the first sweet scent of freedom to my nostrils. Alas, not all were as sure as I that his was the best course of action. I was sure. I knew in my heart that it was now or not at all, and I fell to my knees and praised the Almighty—and Mr. Lincoln.

September, October, November, December—there was no real Christmas that year. There was tension in the air, and an inner turmoil that had become a part of every American's life. With fear, trepidation, and sincere bewilderment, the South debated.

December 29, 30, 31, no action was taken. Wherefore, on January 1, 1863, Lincoln signed the Emancipation Proclamation, proclaiming all slaves "thenceforward, and forever free." My throbbing heart suddenly burst with a divine joy. I was free.

Not that this didn't present new problems. Perhaps if the kindly Mr. Lincoln had lived, many of these problematical aftermaths of war could have been avoided. But this was not to be.

It was a lovely, balmy April in 1865. The war was over. Joyfully, the lilacs and lilies burst into bloom and the robins and bluebirds warbled spring songs of ecstasy. The strain eased, but, unfortunately, the South did not hold true to "malice toward none" and a very bitter feeling still existed.

Accordingly, I journeyed north and soon acquired the position of head usher at the Ford Theatre.

Meanwhile, Mr. Lincoln was beginning to relax for the first time in 5 years and had begun to enjoy the luxury of the Executive Mansion.

A secretary popped his head into Mr. Lincoln's private room. "Sir, they'd like to see you in the library."

"Who would?"

"The Cabinet members, sir."

"Did we make an appointment?"

"Yes, sir."

"I'm sorry, but I'm going to the theater."

The fateful words were spoken. But how could anyone know that this rare night of pleasure would bring national disaster? The President had a mysterious dream while resting before the evening's festivities.

Everything was misty. Through the fog, a voice penetrated the gloom. "They'd like to see you in the library, sir."

He lifted his large dark head from the pillow and slowly stood up. He walked hesitantly, tiredly, as if his mind were in an ethereal sepulcher. The massive oak doors swung open, guided by an invisible hand. The middle of the room was a garden of blossoms and fragrance. The air was filled with loud wails and crying and tears adorned each flower. In the center of the blooms was a long, highly polished box of rich dark wood. "My soul," demurred Lincoln. "It's a coffin. But who is dead? And why are all the immortal spirits shrieking and crying?"

Slowly, carefully, he opened the casket. There, lying in serene beauty upon the satin, was * * *. "Lord," thought Lincoln, more than mildly alarmed. "It is I. I am dead." He dropped the lid that shut with a bang. The noise broke the spell. His eyes opened and Lincoln was once again in his own bed in his own quiet room.

Lincoln was not superstitious. He considered superstition ignorance, and had always said, "I do not respect a man who is not wiser today than he was yesterday." Nevertheless, when Mrs. Lincoln came in to wake him, he proteste mildly that he had so much to do, he didn't see how he could possibly find the time to go to the theater. But Mrs. Lincoln was firm, and shortly after 7 they departed.

That was the slave's story. I'm sure you know the rest. The shot that rang out through the darkness, piercing the peace and the gala atmosphere; the vivid image of that great man's lanky figure slumped almost lifelessly in his chair. Death could not reduce a man of Lincoln's stature. Rather, it conceived greater respect and deeper love for an immortal soul.

Today Lincoln is gone. Fate took a great man much too soon. To future generations he may be but a sculptured marble slab turned gracefully into a long-remembered monument of a long-forgotten man. God forbid it. Lincoln lives. He lives on and on in the hearts of true Americans.

The San Francisco News-Call Bulletin, Reporter Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association - Tom Wallace Award

---

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in a series of articles relative to the situation in Chile, written by Donald Canter. This article is included in the award-winning series:

[From the San Francisco News-Call Bulletin, Oct. 18, 1960]

MIRACLE IN CHILE—FROM SAN FRANCISCO HEART

(Last spring, when earthquakes brought ruin to Chile, News-Call Bulletin readers were quick and warmhearted in their response to this newspaper's appeal for aid to the Chileans.

More than $46,000 was contributed. News-Call Bulletin reporter Donald Canter visited Chile, decided that the money should be spent on a housing project in Valdivia, a southern Chile town hardest hit by the quakes.

Now that project has been completed. Canter has just returned from its dedication. This is the second of three stories about Valdivia and the "little City of San Francisco" built with the contributions of our readers.—The EDITOR.)

(By Donald Canter)

They're still talking in Valdivia about that stranger who took a dozen housewives on a shopping tour, with a million pesos in his pocket, and made them spend it all.

Many insist he's a miracle man. He definitely isn't. This reporter should know, since he was that stranger.

What I was equipped with, when I went back to Chile earlier this month to dedicate the city of San Francisco housing project, was some hard American dollars of your money, if you were one of the 9,000 donors to the News-Call Bulletin Chilean Quake Fund.

These homes, 11 of them, built with $33,000 from your quake fund, were now ready. But what good is a home when you've got nothing to put on its floors, no beds to sleep in, no stove to heat your food, no tables to eat your meals, no plates to eat from?

That's why I embarked on my 1-million-peso shopping spree, not doubting for a moment that you wanted me to.

Last June, when I first went to Valdivia and handpicked 11 families to live in the planned San Francisco apartments, I hadn't bothered to check on their wordly possessions.

This time, as the moment had come to move them from their hovels or out of friends' homes, I discovered six of them didn't possess even the most elementary items to set up decent housekeeping.

I'd found steelworker Herminio Rodriguez' clan of seven huddled in a bare hut around a brazier with glowing coals.

I'd traced the five-member family of carpenter Wenceslao Aresmendi to an unlighted emergency house, which they shared with eight other families.

His wife was nursing a newborn baby in a corner of the litter-strewn room. Asked what he could call his own, he pointed at the half-burned candle. "Not much more than that," he said.

Dental technician Humberto Leiva, who lost his home and all of his professional equipment, proudly showed me his 2-month-old baby boy, when I asked him what he'd acquired since the quake took all.

"That's about it," he said, but there was no bitterness in his voice. For the past 3 months he'd made it his daily routine, after returning from work in a friend's shop, to pass the construction site of the city of San Francisco. "Seeing it grow and knowing we'd live there gave me the strength to carry on," he laughed.

His wife, Carmen, asked me to guess the baby's name. When I failed, she gave me a reprimanding look.

"There was only one way I could show the people of San Francisco my gratitude,"

she said, "that was to name my boy after their great city. His name is Francisco, and I know he'll bear it proudly."

She asked me and Blanca Freire, a Chilean welfare worker who got her training in San Francisco, to be Francisco's godparents. We accepted, pointing out we did it in your name, that from this moment on virtually all of the News-Call Bulletin readers could consider themselves Francisco's godparents.

I asked Mrs. Leiva, Mrs. Rodriguez, Mrs. Aresmendi and three other women to make a list of what they needed most of all to start a half-way decent existence in their new houses in the City of San Francisco.

I urged them to shop around the next day, jot down the bargains they found, and come to my hotel 2 days later at 9 a.m. sharp.

Then I headed for the bank, exchanged $1,000 American into its equivalent of one million Chilean pesos.

The Chilean Red Cross readily offered me, without charge, two dozen mattresses, three dozen blankets and 11 cases of kitchenware, all brand new and all labeled: American Red Cross. They were promptly delivered by truck to Valdivia's City of San Francisco.

Then came the big day. I was still asleep when the phone rang in my hotel room. I looked at my watch. It was 7 a.m. The operator told me that a Mrs. Rodriguez was waiting for me in the lobby. None of her family had been able to sleep that night out of pure excitement, she confided when I came down.

By 8 a.m., a full hour before the appointed time, all six women were there. I looked at their shopping lists. Some of them had done pretty sharp looking around.

Mrs. Victor Gomez for example, had listed an entire rattan living room set for $35 (35,000 pesos) and Mrs. Rodriguez had found three brand-new beds for the grand total of $27. Mrs. Enedina Pavie had marked such items as an electric iron, 8 yards of drapery material, a table cloth and a doormat. And all of them needed stoves.

So we boarded two taxis and headed for the Molina stove factory, where I let the women loose, to the consternation of the owner. One particular model caught the fancy of all and in their inspection-fury they might have taken it apart if I hadn't calmed them down.

The price was $87 each, but after some determined bargaining (after all, I was working with your money) I got six of them for $450. There went close to half of my million pesos.

And so we went after the beds and the iron and the drapery material and the tables and the chairs and the dressers and the rattan furniture.

When the day was done and my wallet empty, I got six luscious kisses, which I gratefully accepted on your behalf.

It was Friday evening and tomorrow was moving day. That night I dreamed that all of you were there in Valdivia's City of San Francisco, that you watched them come to the homes you gave them, their old and new belongings loaded on horse and buggies, push carts and an occasional rickety truck.

Too Much About the Unpleasant—Too Little About the Worth While

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. ANFUSO. Mr. Speaker, today's installment in the series of eminent Americans of Italian descent, currently being published by the New York Daily Mirror, is devoted to the famous novelist and biographer, Frances Winwar. She is a native of Sicily and her original name was Francesca Vinciguerra—the English meaning of the last name being win war.

Miss Winwar's novels and biographies have attained best-seller popularity. Her contribution to American literature is widely acclaimed. We agree with her view that too much is told about the unpleasant, the misdeeds of the few who gain notoriety, but unfortunately too little is told about the worth while, about those who make lasting contributions to the welfare of America.

Under leave to extend my remarks, I wish to insert into the RECORD the article published in today's Mirror:

CHILD OF BUILDER—SHE BUILDS BOOKS

(By Ara Piastro and Harry Altshuler)

On a house in the middle of the Sicilian town of Taormina there's a plaque honoring a distinguished native, a world-famous novelist and biographer. "Frances Winwar was born here, May 3, 1900," it says.

It's the wrong house, and she wasn't Frances Winwar, then—but the date, at least, is correct.

Francesca Vinciguerra, which was her name, was actually born in a cottage on the outskirts of town. But the one with the plaque is a lot more convenient for tourists; maybe that's what inspired the townsfolk to place it there.

Every now and then in New York, she encounters friends just returned from Taormina; she can tell by a certain glazed look in their eyes as they recognize her. "They think I'm supposed to be dead," she laughs, "to have a memorial already."

Frances Winwar is very much alive, and looking forward to the publication next fall of her latest biography: "Jean-Jacques Rousseau: Conscience of an Era." Random House is the pulisher.

How did "Vinsiguerra" become translated to "Winwar," its English equivalent? It happened about 30 years ago, when her first novel, "The Ardent Flame," was accepted. "We've got to do something about your name," the editor protested. "It's too long to fit across the spine of the book."

She went along with the idea, and even trimmed "Francesca" down also.

She had been in this country since the age of 3. Her father, a singer well known in Sicily, turned to the building trades here, and her two brothers also are in the building trades. Some delightful magic in an eighth-grade public school class here turned the girl in another direction: the teacher read Stevenson's "A Child's Garden of Verses" aloud.

She was enchanted. She knew from that moment that poetry—or some form of writing—would occupy her life.

From poems in the school paper, she progressed after studying at Hunter and Columbia, to writing book reviews and newspaper features in a literary vein.

One of her early triumphs came on the day famed writer Joseph Conrad died in 1924. An afternoon paper, short of reference material and desperate for an adequate obituary, called Frances in, and she knocked out a front-page story about Conrad's life and work. When the great actress Elenora Duse and the playwright Luigi Pirandello visited this country in the 1920's, she helped them find their way around and interpreted for them.

She wrote seven novels, but her great interest in people led her into the field of biography, where she has won international acclaim—and best-seller popularity as well—with her lives of literary figures and others who trod the pages of history. Among them are "The Romantic Rebels," about Byron, Shelley and Keats; "Oscar Wilde and the Yellow Nineties," "American Giant," a life of Walt Whitman; "The Immortal Lovers," on Robert and Elizabeth Browning; and most recently, "Wingless Victory," about Duse and poet Gabriele d'Annunzio; and "the Haunted Palace," a biography of Edgar Allen Poe.

She also did, for the Limited Editions Club, what is recognized as the finest translation of the Decameron.

She was married early in life and has a son and a grandson, an accomplished musician at 15, of whom she is fondly proud. She lives in a pleasant apartment on Central Park West and has a summer home in Vermont.

Stories about criminals of Italian background, publicized out of all proportion to their trivial number, bring this comment from her: "We know too much of the unpleasant, not enough of the worthwhile.

"If Marconi had come to America at the same time a gang killing occurred, which do you think would have gotten the publicity?" The obvious answer: "Unfortunately the sensational, rather than the worthwhile."

And she develops a pet theory that our whole heritage of Western culture was channeled to us from the ancient Greeks through Sicily. "Sicily was the first Greek colony, and the cradle of European culture," she says. "Sicilians can be very proud of that."

Wyoming, Pa., Borough Council Commends Comdr. Alan B. Shepard

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mrs. William Semmens, secretary, Wyoming Borough Council, with which she forwards a copy of a resolution adopted on May 5, 1961 by the council in recognition of the space exploit of Lt. Comdr. Alan B. Shepard, Jr.

The indicated letter and resolution follow:

WYOMING BOROUGH COUNCIL,
Wyoming, Pa., May 5, 1961.

Hon. DANIEL J. FLOOD,
Wilkes-Barre, Pa.

DEAR MR. FLOOD: Enclosed is a copy of the resolution sent to Lt. Comdr. Alan B. Shepard. Burgess Jack Dempsey told me to send you a copy, which I was pleased to do.

We wish to say, in the past your generous hospitality, kindness, and thoughtfulness will always be remembered.

Sincerely yours,

Mrs. WILLIAM SEMMENS,
Secretary, Wyoming Borough Council.

RESOLUTION OF COMMENDATION

We the members of Wyoming Borough Council, Wyoming, Pa., in our regular meeting of May 5, 1961, hereby resolve, and said resolution has been spread on the minutes of this meeting.

We commend Cmdr. Alan B. Shepard, Jr. for his brave effort,

We are proud of a fellow American who has brought to our country the honor of having successfully achieved the flight into space,

Our respect, love, and kindest wishes for your future will always be with you, Cmdr. Alan B. Shepard,

LEE CHIAVACCI,
BERNARD GAVLICK,
PETER CHRONOWSKI,
CLAIR MURDOCH,
JOSEPH MICHAELS,
GEORGE METCALFE,
Council Members.
JACK DEMPSEY,
Burgess of Wyoming Borough.
MRS. WILLIAM SEMMENS,
Secretary, Wyoming Borough Council.

People Over 65 Have Best Payment Record at Wisconsin Hospital

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, how well do our older citizens meet their hospital bills? Certainly, one of the best criteria of ability to pay for hospital services is the record of actual payments. One survey of actual hospital records shows that our older people have a far better record of payment of hospital bills than other age groups.

This survey was made by Mr. L. T. Servais, credit manager of the Bellin Memorial Hospital in Green Bay, Wis., one of the principal cities in my district. It is based upon actual records of hospital admissions and delinquent accounts over a 2-year period.

It shows, contrary to popular belief, that people over 65 have a significantly better record of payment of hospital expenses than other patients. While they represented 14.6 percent of admissions to this hospital, they constituted only 9.6 percent of delinquent accounts and only 4.7 percent of uncollectible accounts.

Particular attention is called to Mr. Servais' statement that "all three hospitals (in Green Bay) take care of whatever patients the doctors send regardless of financial status. The matter of payment is taken up after the patient is admitted, not before."

The results of Mr. Servais' survey are contained in an article he wrote for the magazine, Hospital Management. Under leave to extend my remarks, I include it at this point in the RECORD:

DO THE AGED REALLY NEED FEDERAL AID?

(By L. T. Servais, credit manager, Bellin Memorial Hospital, Green Bay, Wis.)

For the past few years or more we have all been subjected to the oratory of the politicians declaiming for further medical assistance to the aged by the Federal Government.

Probably no individual has more genuine grassroots experience with the paying ability of the elderly than your hospital credit manager. As such I had been conscious of no greater percentage of hardship medical expense among the aged than of any other age group.

To a great extent the ability of any group to pay is reflected in how well that group does pay. The elderly, I had thought, were paying as well as any of the others, until the dingdong ng of the politicans made me curious.

For the past 23 years I have been credit manager of one of three private hospitals in Green Bay, Wis. There is no county hospital here to take care of welfare cases or those, far more of a problem, who are not quite poor enough to qualify for welfare assistance. All three hospitals take care of whatever patients the doctors send regardless of financial status. The matter of payment is taken up after the patient is admitted, not before.

THE SCORE

It was decided to find out just how well, or how poorly, patients over 65 were paying their accounts. The first step was to gather data on all of the admissions for the previous 2 years to see what percentage constituted those over 65. While we were at it we classified maternity cases separately, too, as we did think that we were having more than average difficulty with this class. Our percentage ratio (less newborns) was as follows:

Patients:	*Percent*
Over 65	14.6
Maternity	20.4
All others	65

Next we classified all delinquent accounts of 3 months to 1½ years of age. The percentage ratio was:

Patients:	*Percent*
Over 65	9.6
Maternity	29.6
All others	60.8

These percentages showed that the group over 65 were by far the best paying of the three. Their rate of delinquency was almost a third less than that of the average patient under 65 (other than maternity) and less than half of that of the maternity accounts.

Next we did a bit of further investigating. We went through our "dead file." This consists of a group of accounts accumulated over the past 23 years on which all collection effort has ceased. For adequate reasons they had become hopelessly uncollectible. We classified maternity and old age accounts, with the following percentage results:

Patients:	*Percent*
Over 65	4.7
Maternity	25.2

We did not have a classification over the 23 years to compare these percentages with. However, the percentages over the 23 years would not be greatly different than those shown above for the past 2 years. In other words, while oldsters made up about 14 percent of all accounts, they constituted only 4.7 percent of those not ultimately collected. While the maternity accounts consisted of about 20 percent of all accounts, those never collected amounted to 25.2 percent of the dead accounts.

MATERNITY ACCOUNTS

To extend this analysis a bit further, if a hospital were losing 4 percent a year through uncollectible accounts, about 1 percent of this loss would be on maternity accounts, while a little over ⅔ of 1 percent would be on the over-65 group, though these accounts average larger than maternity accounts.

Maternity accounts have become more difficult to collect over the past 20 years because of the younger age of marriage, and because of the ease with which a young couple can now get themselves hopelessly in debt.

At least from our findings it might seem to be a question as to whether the old folks are really the group most in need of aid. It must be pointed out though that old age assistance has played a large part in keeping down the losses on those over 65. However, this law, as that of social security, has been in effect for the past 25 years. It must also be pointed out that Wisconsin, as well as most States, has long had statutes covering necessary medical care by municipalities, counties, and townships of indigents of any age.

It might be quite interesting as well as illuminating for other hospitals to make a somewhat similar survey to see if the over 65 are really the problem that certain lawmakers depict. We were quite surprised to find that they were actually paying better than any other group. We had thought they might merely be doing as well.

Federal Water Pollution Control Act Amendments of 1961

SPEECH
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6441) to amend the Federal Water Pollution Control Act to provide for a more effective program of water pollution control.

Mr. HALPERN. Mr. Chairman, the subject of H.R. 6441, the water pollution bill, is one which is of very great interest, not only to the people of my district but to all Americans who share their concern with the preservation of our great national heritage of rivers, lakes, streams, and beaches, for health, for beauty, and for recreation.

I am privileged to have sponsored similar legislation on this subject and warmly associate myself with the proposals embodied in the measure introduced by the distinguished gentleman from Minnesota [Mr. BLATNIK].

The bill would, among other things, first, increase the annual authorization for grants for waste treatment works construction from $50 million to $100 million and the total authorization from $500 million to $1 billion; second, increase the maximum allowable grant from $250,000 to $800,000 and substitute a sliding scale formula for the existing 30 percent grant limitation; third, require priority for previously filed applications under $250,000; fourth, increase from $3 million to $5 million annual grants to State and interstate water pollution control programs, and extend the time limit from June 30, 1961, to June 30, 1971; and fifth, transfer the administration of the Federal Water Pollution Control Program from the Surgeon General of the Public Health Service to the Secretary of Health, Education, and Welfare.

It is essential that we should act immediately, through the Federal Government, to protect our coastal waters and navigable streams and many other waters which are now faced with the threat of sewage, industrial wastes, garbage and other sources of pollution.

The plain fact is, Mr. Chairman, that the tremendous growth of population, especially in the suburbs of our metropolitan areas such as my own district in

New York, requires action of a kind which was not needed in an earlier, simpler age. Practices which were tolerable even a generation ago, today threaten the homes, health, and happiness of millions of decent, self-respecting American families. I know nothing that is of greater ultimate national importance than to preserve our heritage of water for ourselves and our children. I freely acknowledge that State and local governments also share this responsibility. We of New York State have long recognized our obligation, through our long fight for conservation which began over a generation before the Federal Government concerned itself with this great national problem. It is clear now, not only for reasons of jurisdiction over coastal and navigable waters, but for the pooling of experience and the administration of broad conservation policies to deal with problems which are interstate in their nature, that the Federal Government should play a stronger and more decisive part in the struggle to preserve our heritage.

I hope that in the enactment of this bill in its entirety that the Congress and the Government of the United States will lend full authority, wisdom, and experience to the solution of the many problems of pollution and deterioration which have been created by generations of human carelessness and indifference.

Mr. Chairman, again I say I am pleased to be identified with this vital legislation.

Thailand Reported Moving Toward Neutralist Stand

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. MacGREGOR. Mr. Speaker, tomorrow in Geneva there is scheduled to begin an international conference on the subject of peace and war in southeast Asia. In this connection, and in view of our deteriorating position in Laos, I should like to call attention to the following article appearing in the New York Times of today:

THAILAND REPORTED MOVING TOWARD NEUTRALIST STAND

(By Robert Trumbull)

BANGKOK, THAILAND, May 10.—A strong drift toward neutralism is reported to be growing in Thailand as a consequence of a general feeling of discouragement over the prospect of keeping adjacent Laos out of Communist hands.

Unless the United States takes strong and immediate steps to halt Communist advances in southeast Asia, Thailand may leave the Southeast Asia Treaty Organization, in the view of some observers. She would then seek security with her neighboring neutralist or nonalined Nations: Cambodia, Burma, Malaya, and India.

Marshal Sarit Thanarat, Thai Premier, and Foreign Minister Thanat Khoman are expected to warn Vice President JOHNSON, who is on a tour of Asia to pledge U.S. support against Communist aggression, that the United States must act quickly to save the free southeast Asian countries for the West.

Although the Thai leaders may refrain, perhaps out of oriental politeness, from threatening Vice President JOHNSON with Thailand's withdrawal from SEATO, there is no hesitation here in communicating such sentiments to other Americans.

Some knowledgeable circles in Bangkok speculate that the Government might set the stage for a break with the alliance by first arranging Premier Sarit Thanarat's resignation so that the decision for neutralism could be made by a new leader.

The Thais are worried by the prospect that the forthcoming Geneva conference on Laos will end with some arrangement leaving the Communists in control or in a position to take control later of the Mekong River basin. This would leave the Thai border exposed to Communist infiltration, as South Vietnam is exposed to Communist North Vietnam.

Thai authorities have evidence that Communist agents are already training young men in northern Thailand for an eventual attempt to take over this country by arms. The police have reported the arrest this week of 50 persons suspected of plotting for the Communists in Ubon and Sakonnakhon Provinces.

Remnants of Communist guerrilla bands driven from Malaya to the wild Thai border form the possible nucleus of a Communist insurrection.

The Thai Government wished to protect the vital Mekong basin by sending troops to aid the Royal Lao Army against the pro-Communist Pathet Lao movement. The Filipinos also wanted to intervene militarily. Both Bangkok and Manila were disappointed when the Southeast Asia Treaty Organization conference here last winter merely issued a vaguely worded warning to the Communists against further encroachments.

The failure of the alliance—and the United States—to act as the pro-Communists continued to advance in Laos sharpened doubts here over the value of continuing the eight-nation alliance linking Thailand in a pro-Western defense pact with the United States, Britain, France, Australia, New Zealand, Pakistan, and the Philippines.

Some observers feel the United States might save the Western position in Thailand by standing firm at the Geneva talks for a truly neutral Laos and by positive military steps to assist South Vietnam against Communist guerrillas and infiltrators.

Bangkok opposes a settlement in Laos that would either bring the pro-Communists into a coalition government or that would partition the country so the Communists would be able to take advantage of an easy infiltration route into Thailand across the Mekong Valley.

Even if Thailand becomes neutralist she would continue to be anti-Communist and would probably avoid diplomatic connections with Communist China, it is believed here. On the other hand the likelihood is seen that a nonaligned Bangkok would seek friendship with the Soviet Union as a counterbalance to Chinese Communist ambitions to dominate southeast Asia.

Two Hundred Eighty-Seventh Anniversary of the Founding of Germantown

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1691

Mr. TOLL. Mr. Speaker, many old communities in the United States annually celebrate their founding dates with events which excite the interest not only of the residents of the area, but also of Americans everywhere. Some of these communities are so old that they deserve special comment because of a record of progress that has been both continuous and substantial. Such a place is Germantown, which is a part of the Sixth Congressional District which I have had the privilege to represent in the 87th as well as in the previous Congress. This settlement was founded more than a hundred years prior to the inception of the United States. It continues to flourish while maintaining the traditions which have made it one of the leading communities in the country. It will be recalled that George Washington was a familiar figure in Germantown in 1793 and 1794. He rented the Perot-Morris House for personal lodging; and it was here that his Cabinet met frequently during the summer of 1794.

The 278th anniversary of the founding of Germantown will be celebrated the week of May 14 with a series of events over an 8-day period. The celebration will be sponsored by the Germantown Community Council, comprised of some 150 organizations, and the Business Men's Association of Germantown. The activities will begin next Sunday with Prayer Day and a fellowship service at James Methodist Church. At 2 p.m. the annual Vernon Art Exhibit will open in Vernon Park, with awards presented at 3 p.m. Highlights of the week's exercises will include the traditional Vernon Fair to be held May 17 in Vernon Park. Value Days offered by the business community will be on Thursday, Friday, and Saturday, May 18, 19, and 20. A tour of historic homes will be conducted on May 21.

The Youth Forum—Teen's Views on U.S. Prestige

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORSE. Mr. Speaker, the very real contribution our young people want to make for their Nation is thumbnailed in a feature which appeared in the Lowell Sunday Sun, my hometown newspaper, and which is well worthy of sharing with my colleagues. Under leave to extend my remarks, I now insert it in the RECORD:

(By Dow L. Case)

LOWELL.—The centuries-long picture of America in the eyes of the world, as a political, scientific, and cultural power without peer, is admittedly dimming with the ascendency of Russian accomplishments in these realms. This situation is troubling all intelligent, patriotic citizens in every age group.

Today's panelists were asked what they think American youth can do, individually and collectively, to refocus the spotlight of

favorable world opinion upon these shores once again.

Burlington High School's Paul Luti said: "Normally, people seem to lack spirit and patriotism unless there's a war in progress. I believe greater emphasis on a display of this spirit of patriotism before the world, coupled with a sincere effort to help others, to share their interests and respect their national pride, and above all, to reveal genuine effort to understand them and their ways of life, can do a great deal to rebuild the image of America."

Irene Simano, St. Joseph's Girls High School senior, believes students at all levels should show a greater interest in governmental affairs and such projects as the financing of CARE packages for the underprivileged overseas. Understandably, she also believes that a greater emphasis on prayer for the rectification of world tribulations should be indulged in by all who would aid in the rebuilding of the picture of America. She terminated her stand with the following observation. "I think that these things should not only be done in order to defeat communism as such, but also because sincerity within the heart dictates that all humans seek to aid their less fortunate brothers and sisters simply because it is right that they so do."

Returning to Burlington High, John Harff believes that those young people outside of Peace Corps ranks may best serve the Nation and improve the posture thereof, by standing solidly together as an unofficial group, willing to sacrifice and work diligently for all worthy causes aimed at aiding others overseas. As for the political and scientific losses thus far, he is convinced that a greater concentration of interest and activity in both fields by American youth could snowball into a point where Government improvements would be definitely led or forced into new progress.

Theresa Betty, St. Joseph's Girls High, stated her case by saying, "First, I am convinced that we should get more young enthusiasm and vigor behind the push to accelerate relief programs for those overseas. It is the people we want to reach to prove that we are not only humanely interested in their welfare, but have the will and where-with-all to give them practical aid. Not that we want them to feel we are handing out charity, but to know within themselves that we are interested in them as equal, if underprivileged, fellow men. We must prove to them that while some Russian advances seem spectacular and overpowering, we are still the Nation with the greatest heart and fraternal warmth in all the world. We must convince their young and adults alike that, though we may be temporarily behind in the spectacular, in the long pull, we will again lead in the democratic ways of peace and human good."

The San Francisco News-Call Bulletin, Reporter Donald Canter, and 9,000 San Franciscans Receive 1961 Inter-American Press Association - Tom Wallace Award

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. SHELLEY, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in a series of articles relative to the situation in Chile, written by Donald Canter. These articles are included within the award-winning series:

[From the San Francisco News-Call Bulletin, Oct. 19, 1960]

WHEN A CITY OPENED ITS GOLDEN GATE

(By Donald Canter)

"San Francisco, open your Golden Gate."

They sang it in the Chilean port city of Valdivia as the doors to the just completed City of San Francisco housing project swung open for a dozen delirously-happy quake victims.

Unlike the actors in the famed movie depicting San Francisco's quake and fire of 1906, their names weren't Jeanette MacDonald, Spencer Tracy, Nelson Eddy, or Clark Gable, but rather Maria Vasquez, Victor Gomez, Humberto Leiva, and Francisco Avilez.

They weren't good actors, either, and they didn't have to be. They played it "live."

From their hovels where they had fled after the quakes crumbled their houses, they'd come to take possession of their new homes, to herald the first step in the revival and reconstruction of Valdivia, once known as "Pearl of the South."

Nine thousand readers of the News-Call Bulletin, well aware of the horrors of an earthquake, had contributed more than $46,000 to build these homes, which one Chilean newspaper described as an "everlasting landmark of true Christian spirit."

On moving day, shortly after sunrise, steelworker Herminio Rodriguez loaded his clan of seven and his few meager possessions on a rickety truck. They gave the "ruco" (hut) where they had spent the past few months, a last disgusted look and headed for the Gilde Castro district and the gleaming buildings of the city of San Francisco—the newest welcome additions to Valdivia's skyline.

On their way, they came alongside a horse-drawn cart carrying a load of rattan furniture in the same direction. The driver, Linotype Operator Victor Gomez, stopped at a little shop where he picked up a couple of beds, stacked them on top of the furniture and urged the horse on again.

Following them closely was the truck of Pharmacist Rosalda Leopoldo, the pushcart of Bookkeeper Isaac Garrido, and the human caravan of the Francisco Avilez clan, who carried their wordly belongings on their backs.

Laborers, on their way to an early shift, asked where they were heading for, shrugged their shoulders as they heard the answer: "For San Francisco, senor."

But they realized something unusual was going on when, in rapid succession, the limousines of Mayor Luis Damann, Valdivia's military commander, Gen. Alfonso Canas and Bishop Jose Sanos Ascarza went the same way, followed by a caterer's truck loaded with delicacies and four dozen bottles of good Chilean champagne (supplied by city of San Francisco building contractor Alberto Nahmias).

All the dignitaries made speeches, which—because of my knowledge of Spanish is limited—I understood only in part.

But what I picked up I want to share with you:

"News-Call Bulletin * * * wonderful people of San Francisco, Calif. * * * others made rash promises but you people delivered the goods * * * forever indebted to you * * * God bless all San Franciscans." And a few less relevant remarks about this reporter.

Then I crashed a bottle of champagne against one of the walls. The wall held up just fine and I told the contractor that his construction was apparently solid. Everybody agreed.

All of us walked a hundred yards or so to a site where a big sign announced that the Escuela Ciudad San Francisco (City of San Francisco School) soon will stand.

It will be constructed with the last $12,000 available in the News-Call Bulletin Chilean Quake Fund, and completion is scheduled in 4 months.

The school will accommodate some 150 children from 6 to 9 years, not only those from the city of San Francisco, but also from neighboring housing projects.

They don't know yet how to furnish the school properly, but they'll worry about that later. Their main concern are school benches, which are in short supply.

After some more speeches about your generosity (your ears must have been burning) somebody gave me a spade and I poured the first concrete for the foundation.

That ended the official part of the ceremonies, but to me that's when things just started.

Dozens of kids, who'd quietly stood by as the adults were engaged in their serious official acts, now suddenly rushed me, grabbed my hands, hugged me, and shouted gracias, senor, gracias, thank you a thousand times."

That's when I knew we, you and I, had done the right thing with our money.

We walked back to the home of the Leiva family, where contractor Nahmias was popping the corks off his champagne bottles.

We danced a Chilean cueca, sang the Chilean national anthem and the Star Spangled Banner.

Then somebody asked: Isn't there a San Francisco song?

And so I taught them the only one I know:

"San Francisco, open your Golden Gate."

Nothing seemed more appropriate that memorable day in Chile's Valdivia, when the doors of the city of San Francisco swung open wide.

GRATITUDE

"Without minimizing other foreign aid for our quake victims in the form of food, clothing, and donation, it should be said that this city of San Francisco housing project, presented us by readers of the News-Call Bulletin, to date is the only positive contribution for the reconstruction of Valdivia."

[From the San Francisco News-Call Bulletin, Dec. 30, 1960]

SAN FRANCISCO'S WARM SANTA SPIRIT IN CHILE

(By Donald Canter)

Never, in all of Valdivia's history, had the post office handled so many letters and postcards from Norteamerica.

As Christmas approached, they poured by the hundreds into that quake-stricken Chilean port city.

Most of them carried the same postmark: San Francisca, Calif.

And all of them carried the same address: San Francisco, Valdivia, the little city built for Chile's quake victims by warm-hearted readers of the News-Call Bulletin.

Some of the Christmas cards, individually addressed to the 11 families inhabiting the San Francisco apartments, contained dollar bills.

The Herminio Rodriguez family, whose plight was featured in one of the News-Call Bulletin stories on the Chilean disaster, received from one reader a substantial money order.

Along with the Yuletide cards arrived huge parcels containing dozens of dolls, toys, color books and warm clothing.

They were gifts from News-Call Bulletin readers who wanted to share the Christmas spirit with their Chilean friends.

When contractor Emilio Torrealba, who is nicknamed "bandido" but has a heart of gold, saw the display of good will for his people all the way from San Francisco,

U.S.A., he got into his truck and drove some 25 miles over a muddy road.

Then, in the town of Lanco known for its superb pine trees, he asked for the most beautiful Christmas tree of them all.

He erected the tree in front of the houses of Valdivia's city of San Francisco and asked the children to decorate it with some of the Christmas cards you sent them.

To most of them it was their very first Christmas tree and to all the most blessed Yuletide ever.

In the warmth of their brand new homes they played with their toys made in Yankeeland and tried to decipher the Christmas greetings written in Yankee-English.

All sang Christmas carols.

And none chanted "Yankee No".

Extent of Back-Door Spending

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. PELLY. Mr. Speaker, an idea of congressional lack of control over the Federal purse strings can be gained by examining the status of back-door spending authorizations to agencies of the Federal Government, permitting these agencies to borrow from the Treasury and expend the funds without requiring an annual justification or review by the congressional committees having jurisdiction over appropriations.

Just to show the enormity of these public debt transactions and their ever-continuing growth over the years, I include a tabulation covering the period from the time this device of bypassing the scrutiny of Congress was first used and on through the years until 1960.

However, the most shocking figures of all cannot yet be calculated; namely, the amount Congress will add to the total this year. Altogether on the heels of the recommendation of President Eisenhower that back-door spending be discontinued, the Kennedy administration requests already exceed $18 billion and thereby and therein is the threat of greater use than ever of this fiscally unsound method of financing Federal programs.

If the Congress enacts a $8 billion housing bill, a $7 billion foreign aid bill and $7 billion more for grain disposal under Public Law 480, plus many more, plus those that have passed to date—all outside the normal appropriations process—history may well set the 87th Congress as having yielded its constitutional responsibility to the executive branch in greater degree than any Congress before. If so, the Representatives of the people this year will have contributed more to "one man rule" than Members during any time since the Constitution was adopted.

Here, Mr. Speaker, is the year by year record of weakening of the legislative branch through increasing loss of control of money drawn from the Treasury without the regular process of appropriation as contemplated by the Founding Fathers:

Record of public debt transactions from June 30, 1932, to June 30, 1960

[In millions of dollars]

Fiscal year	Borrowings and other advances from Treasury	Unused balance of authority at end of year	Balance of borrowing from Treasury at yearend
1932	$350.0	$1,150.0	$350.0
1933	1,235.0	2,537.4	1,585.0
1934	1,670.0	7,570.7	3,255.0
1935	825.0	5,890.4	3,655.0
1936	805.0	4,586.9	4,030.0
1937	227.0	4,997.8	3,630.0
1938	345.0	5,783.8	882.7
1939	426.3	6,235.2	273.3
1940	641.8	6,874.3	104.3
1941	798.2	9,374.4	301.7
1942	4,178.3	18,868.4	4,078.7
1943	6,969.0	15,774.7	7,519.1
1944	7,615.0	15,156.8	10,717.3
1945	4,149.0	16,810.0	12,168.7
1946	3,553.1	24,527.1	12,504.9
1947	7,346.6	21,206.2	16,579.8
1948	5,505.0	15,166.8	9,122.7
1949	5,851.0	13,473.8	13,184.3
1950	4,031.7	16,991.4	14,756.8
1951	3,780.6	17,604.9	15,360.7
1952	2,739.2	21,326.7	15,854.1
1953	4,420.4	20,006.2	18,369.3
1954	5,398.4	20,738.4	19,067.4
1955	6,224.0	19,245.2	22,347.6
1956	5,273.1	17,979.9	26,172.8
1957	6,077.7	19,834.4	28,887.9
1958	7,301.7	25,197.4	28,019.2
1959	9,958.7	25,185.7	32,827.7
1960	6,733.6	25,734.0	33,068.4
Total	114,489.6		

George Washington Memorial Parkway

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. LANKFORD. Mr. Speaker, on May 10, 1961, I testified before the Senate Appropriations Committee, Interior Subcommittee, in favor of immediate action by that committee to provide a right-of-way appropriation for the purchase of parkland to complete the George Washington Memorial Parkway. This parkway is not a highway project for the benefit of local residents, but a national project conceived 31 years ago with the passage of the Capper-Cramton Act, Public Law 284. Prince Georges County has acted to meet its responsibilities and for the Federal Government to renege on its part of the bargain at this late date would be an obvious act of bad faith. Unless immediate steps are taken to preserve this historic stretch, announced private development plans will make land acquisition costs prohibitive.

In support of my views, I should like to commend to the attention of my colleagues a recent address by Assistant Secretary of the Interior John A. Carver, Jr.

The address follows:

REMARKS BY ASSISTANT SECRETARY OF THE INTERIOR JOHN A. CARVER, JR., AT 10 A.M., MONDAY, MAY 8, 1961, AT A CONFERENCE SPONSORED BY THE MARYLAND-NATIONAL CAPITAL PARK AND PLANNING COMMISSION AT THE INDIAN SPRING COUNTRY CLUB, GLENMONT, MD.

While we are meeting here, the city of Washington is honoring an American who only 96 hours ago experienced for a few minutes a dimension of open space the rest of us will only imagine, never experience, in our lifetimes.

It seems to me, however, that two lessons from that leap into open space have relevance to this conference: First, that it is not necessary personally to leave the sights, sounds, smells, and horrors of our atmosphere, to thrill vicariously in a fellow man's sampling of such escape.

The second lesson is more mundane—the escape may be enormously expensive. For Alan Shepard's 5 minutes out of this world the cost, I read yesterday, was $400 million.

In such terms, we must learn to think about man's need for parkland and open space here on the planet—the paradox that man needs some openness, though he himself may never sample it; and that to get it will not be easy or cheap.

The front page of the program for this conference says that Prince Georges and Montgomery Counties will have 700,000 more people by 1980 than they now contain.

Population experts tell us that by the same year Greater Metropolitan Washington's population will be between 3 million and 3½ million. These statistics creep upon us inexorably—most of you here can remember, as I do, when it was announced that the metropolitan area had passed the million mark.

By 1980 about 60 million additional humans will be added to the population of our country's metropolitan centers, and 50 million of them will live in new suburbs, in new houses on new streets. The children will attend schools which are not yet built. Country which is open space today will furnish their driveways.

In order to accommodate these new Americans, many wild and beautiful countrysides will be buried beneath the waves of population, pollution, profligacy and what some people call progress.

Those areas will have vanished like so many of the forests and grasslands of the past; like the clear water from our springs and streams; like the topsoil we have spilled into the seas; like the departed heath hen, the Eskimo curlew, the Atlantic salmon and the passenger pigeon.

It is a cruel hoax to dismiss the thought with a comfortable recollection that vast open areas still exist in the West. In my own State of Idaho, the struggle in which you are here engaged seems more abstract, but it goes on nonetheless. "What meaning," they ask in the West, "can a mountain lake in the Sawtooths have to an easterner who never in his lifetime will see it?"

The same meaning, I submit, that Alan Shepard's voyage has to all of us. Man's spirit soars in the escape of others. John Muir said it: "If I should be fated to walk no more with Nature, be compelled to leave all I most devoutly love in the wilderness, return to civilization and be twisted into the characterless cable of society, then these sweet free, cumberless rovings will be as chinks and slits on life's horizon, through which I may obtain glimpses of the treasures that lie in God's wilds beyond my reach."

I am not here to paint a rosy picture of the future for our crusade to save the Nation's parkland and open spaces. With the cooperation of groups like yours, we can win, but it will be a grinding battle all the way.

It is an honor to join your conference as the representative of Secretary Udall and the Department of the Interior. President Kennedy's special message to Congress on natural resources charted the broad outlines of the most ambitious park conservation program in our lifetime. Secretary Udall's immediate action to move ahead on that program I think is the greatest stimulus to the park movement since the days of Teddy Roosevelt.

The Secretary of the Interior is responsible for a vast Department with a multiplicity of duties. He is the Cabinet member responsible for the operation and administration of huge dams and enormous reservoirs, giant public land holdings, mining, grazing, fisheries, wildlife management, government of the insular territories and the real estate of about 350,000 American Indians. He is responsible for finding a way to turn ocean water into drinking water economically and for running a railroad in Alaska.

Yet of all these assignments and more, he has chosen for his burning personal interest the program for parks and open spaces.

The President has instructed him to take the lead in setting the course of the executive branch in meeting the challenge of our vanishing parklands.

It it no news to you, but a lot of Americans do not realize how far we have gone already to using up and wasting our national heritage. The Maryland-National Capital Park and Planning Commission merits high praise for its forward-looking 5-year plan to quadruple the public parklands in its two counties.

In the entire Metropolitan Washington area, the goal for park and recreation lands by 1980 is 200 square miles, including Federal, State, county and community facilities. It does not include the farmland and other open country we need.

The pressure to commit the available land to commercial exploitation is terrific. For instance, the fate of the George Washington Memorial Parkway in Prince Georges County is probably being settled on Capitol Hill today at the final Senate subcommittee hearing on appropriations for right-of-way funds.

Frankly, the chances do not seem good for saving the riverfront for a parkway down to Fort Washington. If it goes, it is gone forever, for the brutal realities of governmental finance argue against converting apartment buildings back into park sites.

Similar conflicts are taking place across the face of our country. And time is our mortal enemy, in the struggle to get park and recreational areas for present needs and to save them for future needs.

Secretary Udall defines it as a quiet crisis in conservation. One of our first needs is to turn it into a noisy crisis, with Americans from coast to coast realizing their predicament and clamoring for action.

We in the Federal Government need you to put the heat on, to step up the temperature.

Appeals from the White House, glowing promises in congressional bills, dramatic pledges by the Interior Department are all very fine intellectual exercises—but they are meaningless unless the general public gets behind them and pushes.

It is up to you to bear down hard so that your splendid plans won't get bogged down in public apathy or break into bits against a stone wall of bureaucratic excuses.

The nightmare rate at which the open country has been sacrificed to the concrete mixer has shown clearly that the task of protecting adequate parkland is simply too big for most individual communities to handle alone.

The Federal Government is forced by events to play a major role in helping towns and counties with the job. The Department of the Interior is concentrating major efforts on the evaluation of the national park needs. We are trying to do everything we can to see that easterners are provided with parks in the East. It is a new approach—and long overdue. The No. 1 item on our legislative calendar is the Cape Cod Seashore bill. We want the cape made part of the National Park System, as Cape Hatteras has been saved for the public.

The preservation of eastern parklands is expensive. But it will be more costly in terms of damage to the human spirit if we permit them to be buried under blacktop roads, parking lots, and barbecue shacks.

Theodore Roosevelt said: "The great natural resources which are vital to the welfare of the whole people should be kept either in the hands or under the full control of the whole people for the benefit of all our people and not monopolized for the benefit of the few."

President Kennedy had that admonition in mind when he warned in his natural resources message:

"Our entire society rests upon and is dependent upon our water, our land, our forests, our minerals. How we use these resources influences our health, our security, our economy, and well-being. And if we fail to chart a proper course of conservation and development, if we fail to use these blessings properly, we will be in trouble within a short time."

The public cheerfully spends millions of dollars for highways, cars to fill them with, cloverleaf interchanges, and overpasses. But only pennies are allotted, and then reluctantly, for the acquisition of land for park uses.

Parklands are expensive. But can we afford not to buy them? Costs are doubling about every 10 years. Is it economically sound to put off any longer what we should have done years ago?

The soaring rate of the population increase, coupled with the additional leisure time of our people, and their automotive mobility, all combine to exert a pressure on existing park facilities which is becoming unbearable.

The face of the Nation has been altered abruptly and without proper planning. Unless we come to grips with the park problems now the spaciousness of our country will be damaged profoundly.

Our abundant land is diminishing rapidly under the demands of the booming population increases. The American wilderness has helped to shape the American character. Something important would go out of us if we destroy our out of doors. We need it to maintain our very sanity against the pace of this age of plastics, motorcars, hypertension and tranquilizing pills.

Man does not live by bread alone—nor by outdoor movies, interstate turnpikes, and jet airports. As the quail have disappeared from the edge of our woods, as gadget-filled houses and swimming pools crowd out the bloodroot and the blackberries, as English sparrows and starlings chase away the titmouse and chickadee, our truest standards of living have gone down.

Suburban realty values have increased manifold. But we confront the paradoxical problem that they may become so valuable in terms of cash that the land will be just about worthless as a fit place to live.

Sherwood Anderson said that when America was new and men were often alone in the fields and forests, they got a sense of bigness outside themselves that has now in some way been lost. The bigness of the country took the shrillness out of them and they learned the trick of quietness.

"We simply need some wild country available to us even if we never do more than drive to its edge and look in, for it can be a means of reassuring ourselves of our sanity as creatures and part of the geography of our home."

Historically through the years the Department of the Interior, working through its National Capital Parks, has been concerned with your problems in the field of parklands. Now that we are in a crisis, our concern is more profound, and we will be devoting even more time and attention to them.

If you find yourselves getting tangled in our redtape, we will look around for the sharpest shears we can find. We are all in the same fix, and we have to work together. I know that we can and will.

Letter in Support of H.R. 6400, Proposed Farm Bill

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. ULLMAN. Mr. Speaker, I have recently received a letter from my good friend, Al Lamb, manager of the Morrow County Grain Growers, which indicates his support for the administration's proposed farm bill, H.R. 6400. The points which he makes are, I believe, basic ones and I am sure that they will be of interest to my colleagues. The text of the letter follows:

MORROW COUNTY GRAIN GROWERS, INC.,
Lexington, Oreg., May 4, 1961.

Hon. AL ULLMAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: In examining H.R. 6400, usually referred to as the omnibus farm bill, it appears to me that the Secretary of Agriculture will have less power under the proposed law than he now has under the present acts.

This is in effect a "do it yourself" farm bill under which the first responsibility of making changes in present programs lies with the growers of the various agricultural commodities. After the respective growers' committee comes up with a program, the Secretary of Agriculture and either Houses of Congress have authority to veto such a program individually or together should a review cause them to feel the plan is not in the public interest. Should there be no veto, the plan then goes to a vote of the farmers affected and must receive a two-thirds vote before becoming law. These provisions appear to give adequate safeguards from ill-planned moves or abuse and to refute any charges that Congress might be surrendering its responsibility.

It appears to me that any farmer organization opposing this bill would be indicating a great lack of confidence in the intelligence and integrity of their own members. This proposed bill should take farm plans out of the political arena and put the making of them into the hands of those directly concerned and who would naturally set them up on an economic basis. There seems to be ample protection for the consumer and taxpayer through the review and veto powers outlined above.

For many years wheat farmers have been trying to have a two-price plan enacted. Under the proposed law such a plan could be offered for a farmer referendum subject to first having been reviewed by the Secretary of Agriculture and both Houses within a 60-day period. We wheat people feel that this program would end the wheat problem with much less cost to the taxpayer than under the present program.

No doubt other commodity organizations have general plans affecting their crops, which would be offered for respective farmer acceptance after examination by the Congress, and the Secretary of Agriculture, should the machinery for such an undertaking be set up via Senate bill No. 1643. Such an action would be far less political in origin and be subject to far more farmer cooperation than has been experienced from one handed down from on high.

As long as the plan calls for a review and provides for an easy veto by the President, the Secretary of Agriculture, and either House of Congress. I cannot see any dodg-

ing of congressional responsibility or excess grant of power in the enactment of the proposed act. It appears to simply leave the writing of individual commodity programs in the hands of those most experienced and affected.

It is recognized that farmers are in a low-income category, that in many cases are subsidizing consumers through extremely low prices received, at a time when most other costs and incomes have been on the rise. This is true in spite of the fact that many billions of dollars have been spent by the Government in the effort to correct this situation. In view of the results, it seems highly necessary to try another approach.

Sincerely,

MORROW COUNTY GRAIN GROWERS, INC.,
AL LAMB, *Manager*.

Dr. Edward C. Welsh, Good Choice for Space Council

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article published in the New York Mirror on Wednesday, May 10, 1961, entitled "Behind the Space Scene."

The article is about Dr. Edward C. Welsh, who was recently named as executive secretary of the National Aeronautics and Space Council. In this capacity, Dr. Welsh will be the principal assistant to the Chairman of the Council, Vice President LYNDON B. JOHNSON, whom he will aid in drafting the Nation's space budget and step up the U.S. space effort.

It is universally recognized by now that the space age is the most challenging factor of our times. Under the circumstances, we are indeed fortunate to have a man of Dr. Welsh's caliber and background to assume a leading post with the Space Council. I wish to take this opportunity to congratulate President Kennedy and Vice President JOHNSON on the excellent choice they have made in selecting Dr. Welsh for this very important and responsible position. There is no doubt in my mind that he will render great service to our Nation.

The article about Dr. Welsh is as follows:

[From the New York Mirror, May 10, 1961]

BEHIND THE SPACE SCENE

(By Edward Cristy Welsh)

WASHINGTON, May 9.—For nearly 20 years Dr. Edward Cristy Welsh has belonged to the legion of public servants who from behind the scenes influence and direct public decisions but never receive public recognition.

The post-war reorganization of Japan's industry was largely the result of the handiwork of the 51-year-old economist, who started off as a university teacher and turned to Government service in World War II. The attacks of Senator STUART SYMINGTON of Missouri and his fellow Democrats on the defense policies of the Eisenhower administration were often based on the ideas and facts furnished by him.

Recently Dr. Welsh moved into a more open role as executive secretary of the National Aeronautics and Space Council. As the principal assistant to Vice President Johnson, the council chairman, he has been given the responsibility for drafting an expanded space budget, which is to accelerate the Nation's efforts in space.

As the alter ego for public officials, Dr. Welsh has two necessary attributes for any good staff assistant—a gluttony for work and an incisive mind which can digest vast amounts of material and then present it in condensed form for an official.

A slight man 5 feet 11 inches, 140 pounds, Dr. Welsh has a reservoir of energy that permits him to work up to 90 hours a week when a lively issue is boiling. As a physician told him after a recent physical examination, "You seem to be strung together with electrical wires."

In recent years, Dr. Welsh has been legislative assistant to Senator SYMINGTON—a job that has permitted him to become one of the best informed military experts on Capitol Hill.

His association with Senator SYMINGTON dates back a decade, when Mr. SYMINGTON, after resigning as Secretary of the Air Force, became chairman of the National Security Resources Board, and hired Dr. Welsh as his assistant.

Mr. SYMINGTON took Dr. Welsh along when he moved over to become administrator of the Reconstruction Finance Corporation and when he was elected to the Senate in 1952.

Dr. Welsh started his Government career in 1942 as regional price executive of the Office of Price Administration's headquarters in Cleveland, Ohio. After 2 years he was brought to Washington to become Director of Field Operations for Price Control and then Deputy Administrator for Price Control.

Early in 1947, at the invitation of General of the Army Douglas MacArthur, he became chief of the antitrust occupation government in Japan. Among his responsibilities were the dissolution of the Japanese cartels and financial reorganization of most of Japan's major companies.

At the conclusion of his work in 1950, he was cited by General MacArthur for "laying the foundation for private competitive enterprise in Japan."

Dr. Welch, who was born in Long Valley, N.J., in 1909, began his career as a university teacher and economist. After graduating from Lafayette College in 1930, he taught at Tufts College, the University of Cincinnati and 8 years at Ohio State University, where he received his Ph. D. in economics.

It was while on the faculty of the University of Cincinnati that he met his future wife, Carolyn B. White of Cincinnati. They were married in 1935. The Welshes, who have no children, are a working team, with Mrs. Welsh serving at his secretary.

Soviet Consumer Goods

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the New York Herald Tribune of May 8, 1961. Apparently Communist economic planning just does not fill the bill. Perhaps we should establish a technical assistance program for the Soviet Union.

THAT BETTER LIFE IN RUSSIA—WARES SCANTY, INFERIOR

(By Walter Lister, Jr.)

Moscow, May 7.—Soviet yearnings for the conveniences of modern life are being frustrated by the practical exigencies of fulfilling the very planned quotas under which these conveniences are supposed to be provided.

Production of vast consumer goods—the Soviet generalization for items beyond the bare necessities—is being encouraged at the top. The trouble is, these goods are measured in the planned economy by quantity, not quality. Weight and arbitrary ruble valuation are prized far above either efficiency or attractiveness.

Soviet technicians can design an electric iron or a television set for Socialist homes as efficiently as they can put together a spaceship for Maj. Yuri Gagarin—in theory.

"LESS THAN IDEAL"

In practice, the Soviet housewife has to wait hours, months or even years to get devices that turn out to be less than ideal. The intentions often are good, but the overriding importance of the plan is ruinous.

Furniture is made big and bulky, because that fills the plan—no matter, apparently, that overstuffed couches won't fit in the tiny rooms of apartments being built by the hundreds of thousands. Almost every issue of Economic Gazette, a Communist Party daily, carries some criticism of performances in the consumer goods industry.

Soviet manufacturers should be able to produce refrigerators and washing machines on a par with the best produced in capitalist countries, the journal recently insisted.

"However," it added, "a majority of complex technical goods needs serious renewal and modernization. Industry is slow to produce new models and to expand assortment."

COST IS EXCESSIVE

Washing machine production has been stepped up, but only 10 percent of the machines are equipped with automatic devices. Of the 45 different plants making washers, some are so small and inefficient that they turn out as few as 1,000 machines a year, naturally at excessive cost.

Only old-fashioned electric irons, without any heat regulators, are being produced in quantity. To change over to new models would jeopardize fulfillment of the plan.

Soviet cameras which the newspaper Economic Gazette has said are as good as any cameras made abroad 5 years ago, have not kept up to date. The cameramakers here "rested on their oars," the journal charged, and now Soviet cameras are 4 to 5 years behind the best imported models.

Soviet watches keep excellent time, it was said, but the owners wince at the crudely designed exterior of most timepieces made here. In 1960 Moscow had 135,000 new television sets, and during that year these sets needed 315,000 repairs, or an average of 2.4 repairs a set.

Similarly, among owners of 16,000 new refrigerators, there were 13,000 requests for repairs.

When Soviet equipment breaks down, repair is sometimes difficult. In all of the Soviet Union there are only five cities where the Volga model washing machine can be fixed.

Village Life, a publication for rural areas, complained recently that tires for motorcycles are virtually impossible to obtain in the small towns where they are most useful. The tiremakers, the journal said, prefer to turn out automobile tires because these are bigger and cost more and therefore fulfill the plan much more easily and quickly.

"NO VITAL CHANGES"

Committees were established under the Council of Ministers (Cabinet) 2 years ago to expedite new improved models of house-

wares, but Economic Gazette said the committeemen have not carried out their obligation. There have been "no vital changes," it charged, and not a single research laboratory has been set up to design electric devices for modern Soviet homes.

The journal said state committees on automation and electronics should start matching their words with deeds.

"A very good idea," it said, would be to encourage Soviet designers "materially"—that is, give them bonuses, as in the capitalist system—and to boost their egos in a rather non-Communist way by letting customers know the name of designers "who make comfortable, economical household goods."

"VERY NICE" BUT—

An exhibit of homefurnishings opened this month at Moscow under the banner: "Art in everyday life." The Soviet voice of labor, "Trud," said the exhibit was "very nice," but the most impressive items either are not in production or, if they are being made somewhere, are not available.

Despite the frequent complaints, the Central Statistical Board could announce that in the first quarter of 1961 Soviet industrial production exceeded the planned target by 2.5 percent and that volume was up nearly 9 percent, compared with the first quarter of 1960.

Four-Mile Run Called Most Polluted Stream

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Washington Post on Sunday, February 12, 1961, entitled "Four-Mile Run Called Most Polluted Stream":

FOUR-MILE RUN CALLED MOST POLLUTED STREAM—AREA SAMPLES SHOW BACTERIA COUNT REACHING STAGGERING LEVEL

(By James R. Carberry, staff reporter)

The most grossly polluted stream in the Washington area—and possibly the Potomac River basin—appears to be Arlington County's Four-Mile Run.

The stream enters the Potomac just south of National Airport, about 1,000 yards upriver from a sailboat marina operated by National Capital Parks.

According to a report released last week at the winter meeting of the Interstate Commission on the Potomac River Basin, samples taken from Four-Mile Run during the water year ended last October 1 showed:

Bacterial levels reached staggering counts. Analysis of the April samples found 2.4 million germs of sewage origin in each cupful of water. The average for the year was 550,000. The U.S. Public Health Service advises against swimming in water with counts above 3,000.

The dissolved oxygen content, as measured just above the stream's mouth, was among the lowest of any tributary tested. Lack of dissolved oxygen causes a "dead" river, one which can support no aquatic life, including the useful bacteria that decompose wastes.

The biochemical oxygen demand (BOD), an engineering term which roughly describes the capacity of river to assimilate wastes, showed Four-Mile Run spectacularly overloaded. The stream's average BOD was 90. The average for the worst section of the Potomac was 5. An engineer who saw the figures said they were more characteristic of raw sewage than river water.

Arlington County's sewage treatment plant discharges about 15 million gallons a day into Four-Mile Run several thousand yards above the point the stream meets the Potomac.

(Upstream of the plant, pollution levels are not unduly high.)

It is the largest primary treatment plant in the area, removing about 40 percent of the principal pollutants in sewage The District's secondary treatment plant at Blue Plains removes about 80 percent.

Arlington Manager A. T. Lundberg said yesterday that the county plans to install secondary treatment facilities at its plant starting in 1963. The job will cost about $5 million, Lundberg said, and will take about 2 years.

During the 3 summer months, when the Potomac is most used by boatsmen, the river was in much improved shape off Sue Plains. Tributary samplings, however, showed serious pollution.

Hunting Creek, above the Alexandria and Fairfax treatment plants discharge, had bacterial counts about as bad as Four Mile Run's. But figures were available for only 2 months.

The Anacostia, partly because of a sewer breakdown which resulted in overflows of raw wastes, had bacterial counts as high as 800,000 near the Bladensburg marina.

Virginia's Difficult Run and Pimmit Run, both of which carry treatment plant effluent, also have sizable pollution loads. Rock Creek was unclean, also, chiefly because of raw discharges from double-duty sewers during rainstorms. National Zoo also flushes out animal pens directly into the stream.

As the pollution carried into the Potomac from the Washington area diminishes, the river becomes increasingly pure downstream, according to the report. During June and July, for example, it was safe for swimming below Fort Foote.

Forthcoming improvements to the Arlington County plant, the abandonment of two Fairfax plants on Pimmit Run, and construction of improved sewers along the District side of the river might even allow removal of the famous sign at the boat landing below Mount Vernon.

Hundreds of thousands of tourists have seen the sign, which says: "Warning: Avoid Contact With Polluted River Water."

Fidel Scores a Win

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. DERWINSKI. Mr. Speaker, we give considerable attention to the editorial position of metropolitan newspapers throughout the country. It has always been my contention that local newspapers carry the most effective grassroots comment on the perplexing issues that we face here in Washington.

Two of the outstanding local community newspapers of the suburban area which I represent recently discussed the Cuban problem. I submit for the RECORD the editorial entitled "Cuban Sellout," from the Lansing Journal of April 27, and the editorial entitled "Fidel Scores a Win," from the Harvey Tribune of May 2, which give you an insight as seen through the eyes of the grassroots newspaper editors:

CUBAN SELLOUT

Only last week, the United States suffered a severe setback in Cuba when an invasion which we sponsored was crushed by the unexpected military might of Fidel Castro.

Blamed by most commentators and spokesmen for the collapse of the attack is the Central Intelligence Agency which directed it, and on a supposed miscalculation that the Cuban people would support such an attack on Castro.

For some reason we fail to understand, few people are placing the blame where it belongs.

It belongs to the traitor or traitors in our Government or closely informed by it who sold out to the Communists—the traitor or traitors who gave the Communists the exact time and place of the main ill-fated Cuban invasion.

The following can be blamed only on an inside leak and not on the CIA planning or Cuban people's sympathies.

That Castro was able to move a large store of heavy arms to the landing site at Cochina Bay in time to overpower the invasion within 2 hours after landing. These arms required 22 to 23 hours to transport from their Havana depot.

That these heavy arms, including Russian-made jet fighters and 40-ton Stalin tanks had been unloaded from 13 Soviet freighters only 2 weeks before.

The arrest of 60,000 people and the jet planes and mammoth tanks had more to do with the failure of the Cuban people than any real and unreal amount of sympathy with the invaders. The day when a people could revolt with pitchforks has passed for good.

Given these same weapons, Batista may not have been overwhelmed by Castro—regardless of the people's sympathy.

The effect of the criticism so far is calculated to (1) discredit our intelligence agency and (2) create an opinion that the Cuban people really don't want to overthrow Castro and communism.

The effect of the criticism is not being directed against the traitor or traitors who sold us out.

Undercutting the operation of the CIA, and forgetting the Cuban as a lost cause will serve communism—as will keeping public attention away from the "smell" within our own ranks.

Perhaps we are mistaken or unreasonably harsh in our conclusions, but we are disturbed over past leaks—as when Gary Powers' U–2 flight was immediately tracked up entering Russian territory at 40,000 feet, and as only a few months ago when a precision-machine shipment from the United States to Russia was nearly allowed to leave the country—a shipment that would have placed them well ahead in the missile race.

Are they all mere mistakes.

FIDEL SCORES A WIN

It would appear—though a postive and final analysis is not yet possible—that rebel hopes of an uprising in Cuba strong enough to depose Fidel Castro have been dashed, at least for the immediate future.

It would also appear that the invasion of Cuba was not as massive as rebel reports would have us believe. Perhaps the purpose of the grand announcements was to stir resistance sentiment inside Cuba and lure new recruits to the anti-Castro movement.

Whatever the purpose of these optimistic communiques, the result of the victory of

the Castro forces is a bitter blow to the United States, in several ways.

This country is being blamed for the uprising against Castro, and the world apparently is convinced that U.S. undercover work was involved. Even our allies, unofficially, and in the press, are assuming we had a hand in the revolution.

As long as we are to bear the brunt of unfavorable world opinion and publicity we might as well have won the battle. We are now in the position of having been judged at least partly guilty, without having any gain to show for the loss.

Obviously, the Russians will make great propaganda capital out of their threats to us—to stay out of the Cuban revolution—and our alleged timidity to defy them. And Castro's successful defense against an invasion—which he has been predicting for many months—will only strengthen his hold on Cuba.

It discourages others who would rebel and it solidifies his power with some of the population, since defending one's country against invasion is a popular rallying cry, even for demagogues and dictators.

It seems, then, that we have suffered a heavy blow in the recent events in Cuba and it would appear that someone pretty high up the line underestimated Castro's real strength and overestimated that of the rebels. It would have been far better for the United States if the revolt had not been launched until success was certain.

Gallaudet: The World's Only College for the Deaf

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mrs. DWYER. Mr. Speaker, since 1957 I have been privileged to serve as a member of the board of directors, representing the House, of Gallaudet College, the world's only college for deaf students.

I have been greatly impressed during this period at the sound and steady growth of the college. Its new buildings, modern equipment, and growing faculty and student body testify to the wisdom of the Congress in helping to support this uniquely important institution. Under the leadership of President Leonard M. Elstad, Gallaudet has more than justified the confidence which Congress placed in the importance of its mission.

My most recent visit to the college, Mr. Speaker, took place over the past weekend when I attended its second annual open house in observance of Better Hearing Month.

I wish it had been possible for more of our colleagues to attend the open house, to witness the demonstrations arranged by members of the Hearing and Speech Center, to see at firsthand the processes developed to counteract the loss of hearing and to develop lipreading skills and speech proficiency. It was a source of great encouragement to see what can be done to overcome the handicap of deafness.

But the source of Gallaudet's progress is not alone in the highly refined processes and techniques they have developed. It soon becomes clear to even the most casual visitor that the college's outstanding work is the product, fundamentally, of a devoted faculty and an enthusiastic student body—men and women, boys and girls who will let nothing stand in the way of leading full and productive lives in a time when our country needs the brains and talents of all our people.

In the interests of achieving a greater awareness of the valuable work being done by the people of Gallaudet College, I include as a part of my remarks the following United Press International story which appeared in the April 18 issue of the Newark (N.J.) Evening News.

COLLEGE FOR DEAF STUDENTS IS UNIQUE

WASHINGTON.—A short distance from the U.S. Capitol is a unique college where lectures are given simultaneously by voice and in sign language.

It is Gallaudet College, the only college for the deaf in the world. There professors and instructors must help ideas penetrate the soundless world of every individual student.

In the classroom a professor speaks clearly and distinctly, just as though his students had normal hearing. At the same time, he moves his hands rapidly, using a combination of sign language and the manual alphabet. This is known as the simultaneous method. The student is able to read the professor's lips as he is speaking, yet this alone is an inaccurate method of comprehension. What the student misses by lipreading he is able to understand by watching the professor's hands spell the words or by his use of sign language.

USES FLASHING LIGHT

To attract student's attention, a professor uses a flashing white light. Nearly every room has two lights high on a wall. A flashing red light denotes danger. Deaf people are so sensitive to light that a flashing red light will awaken them from a sound sleep.

Gallaudet College is an accredited college operating as a private corporation, but it receives 70 percent of its operating funds from the U.S. Government through the Department of Health, Education, and Welfare. The remaining funds come from tuition and grants.

Students are drawn from all over the world. India, Korea, Canada, England, Hong Kong, Taiwan, and Vietnam are represented in the current student body, along with 47 U.S. States. Its modern buildings rest on a lush green campus. A varied program of instruction and an abundance of undergraduate activities are offered as in other colleges.

PLENTY OF ROOM

It has 391 students, the highest enrollment to date. The college has facilities to accommodate 1,000 students.

Amos Kendall, a member of Andrew Jackson's "kitchen cabinet" and later Postmaster General under Martin Van Buren, was responsible for its start. In 1857 Kendall found himself caring for handicapped children abandoned in the streets of Washington. At his farm 2 miles from the Capitol, he founded the Kendall School for the Deaf. He contributed a house and land, guaranteed the teachers' salaries, and later built a schoolhouse. He appointed Edward Minor Gallaudet to head the institution.

Seven years later, in 1864, Abraham Lincoln signed a special act establishing Gallaudet College as an institution with power to grant academic degrees.

Today students eagerly pursue courses in science, mathematics, social studies, romance languages and the humanities.

Participation in sports is compulsory for every student.

The college has an ultra-modern gymnasium and an Olympic-size swimming pool. Many students and faculty alike are looking forward to the ninth International Olympic Games for the Deaf which will be held in Helsinki, Finland, next August.

In the snack bar and lounge students gather to relax. They may be discussing their fraternities and sororities or a dance to be held on campus. The students enjoy dancing. They feel the vibrations of the music through the wooden floors.

"Right or Wrong," by Father Ginder

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. DAGUE. Mr. Speaker, when the National Catholic Action Weekly Our Sunday Visitor first began coming to my office I, as a Protestant, gave it scant attention since I do not like to be proselytized any more than I think others like to be indoctrinated with my views.

In a casual reading of a recent issue, however, I chanced upon the column by Rev. Richard Ginder and since that time I have looked forward with increasing interest to his weekly articles. Father Ginder takes them all on—regardless of station or creed—and what I especially like is his utter indifference to the political complexion of the subject at hand. It should also be noted that most of his discussions are on secular matters and I have not yet found in his writings anything that has ruffled my religious sensibilities, even slightly.

His column in the current issue of this weekly is entitled "Double Standard in Our Modern World," and is commended to the attention of everyone who believes that we cannot have it both ways—that we cannot fight communism in Cuba and then take it to our bosom in the Metropolitan Opera House.

RIGHT OR WRONG—DOUBLE STANDARD IN OUR MODERN WORLD

(By Father Ginder)

It is interesting to read in the current issue of Holiday that "when major decisions affecting Britain's national life have to be taken," the answer is provided by a triumvirate: the Archbishop of Canterbury, the Prime Minister, and the editor of the Times. It is this third person who interests me for it clearly shows that there must be two aspects to each problem.

First: "How shall we handle it?"

Second: "What shall we tell the people?"

Indeed, as one ponders the news of the day, the mind goes back uneasily to the subtle error of Averroes in the 12th century which so horrified St. Thomas Aquinas that he concentrated all of his massive genius in one mighty effort to crush it forever. But is it staging a comeback?

Averroes, a Muslim, was a brilliant student of Aristotle. But his thinking led him to

believe, somehow, in a double standard of truth. His followers taught that what is true in philosophy may be false in theology, and vice versa: "True for you but not for me. True for me but not for you."

WAY TO CYNICISM

If such a system were valid it could lead to complete cynicism in our daily affairs. The initiates, the enlightened, would be winking at one another and smiling behind their hands as they passed on the streets.

"We are in the know," they would be thinking. "The rest of the world, poor boobs are paying, suffering, dying for what they think is right, but we know better."

That is why one gets uneasy when one reads that the press is considered an ally of the ruling class in every national crisis. It means that the press is to tell not necessarily the truth, not what is in the best interests of the people, but rather what their rulers want the people to think.

For an example here in the United States: Instinct, common sense, all our past experience and education from first grade up, demonstrate that we can't afford to be shovelling out billions of dollars all over the world. The whole giveaway program has been discredited so often that one gets weary hearing about it.

Now the press and practically all of our elected officials know these facts, and yet they vote the same disastrous program through each year without batting an eye, pushing the country closer and closer to fiscal catastrophe.

There are not two systems of truth. That much is certain. But there must be certain facts that are being withheld from the public. It is likely that when a man enters life he is "briefed" by his party leaders and told, perhaps, that our whole economy depends on the Giveaway, that we have to go on making heavy machinery and trucks even if only to dump them into the ocean—else hard times will return. Inflation? That is the more remote of the two evils: "We can cross that bridge when we come to it."

Recently we have been reading a great deal concerning the Central Intelligence Agency which, we are calmly told, "fights fire with fire," fomenting rebellions, toppling governments, parachuting agents behind enemy lines, and operating generally along the standard lines of a Grade-B movie. The complaint, oddly, is not that their methods are "un-American" or "un-democratic," but that they have not been successful.

It is "patriotism" in the CIA—"subversion" in any other group.

You run into this double standard constantly. Watching "Mein Kampf" on the screen the other day, I heard the narrator protest that Franco had conspired against the "legally elected" government of Spain.

Is it evil to plot against a "legally elected" government? But Hitler's government was at least as "legally elected," and so was Mussolini's. From the context, however, I judged that the narrator would not appreciate that particular application.

EICHMANN AND KHRUSHCHEV

Again: While Eichmann killed only Jews, Khrushchev killed just as many without bothering to make any racial distinction. The one used gas, the other used mass starvation. The one is being exhibited to the world in a glass cage, the other is being wined and dined in every capital of the world. Why? Evil for Eichmann, but not for Khrushchev?

But the most painful appearance of this ambiguity concerns our present war with Russia. On the front page we are told that we have just received a terrible humiliation at the hands of the enemy in Cuba, while that same enemy is pouring arms into Laos. President Kennedy called a special meeting of the Security Council to decide whether or not our American boys should be sent to shed their blood in the Southeast. We are close to war. With whom? With Russia.

At the same time, "a happy throng" greeted a group of enemy "dancers" at the Metropolitan Opera House in New York—the Moiseyev Company: "The lively group from Moscow won the wild applause of a large audience of society, stage and movie celebrities, in a $15 a seat, mink-and-chinchilla atmosphere that almost rivaled the annual opera opening. The Star Spangled Banner and the Hammer and Sickle hung side by side."

Also, Rear Adm. S. B. Frankel was squelched by the Defense Department when he wanted to give a talk to the people of Houston questioning the value of negotiations with the enemy.

LOYALTY IN PEACE CORPS

Also, when it was suggested that applicants for the proposed Peace Corps take an oath of loyalty to our country as one means of excluding the enemy from membership, the proposal was voted down.

Also, while Dr. Linus Pauling goes on propagandizing for enemy objectives, he still seems to be well thought of, draws big crowds to his lectures, and continues secure on the faculty at Caltech.

Then there is always Cyrus Eaton. As far as I know, he has not yet been ostracized or thrown out of any of his clubs, despite his seeming preference for the enemy over our own country.

Dr. Robert Oppenheimer admitted giving aid and comfort to the enemy. He has never explained this. Yet he is still an honored member of the Institute for Advanced Studies at Princeton.

To the best of my knowledge, Owen Lattimore is still teaching at Johns Hopkins in Baltimore.

Alger Hiss was the subject of a benign writeup last winter in Esquire, and a man who swore to Hiss' integrity and good reputation at the trial enjoys Cabinet rank as our Ambassador to the United Nations. Mr. Stevenson has never repudiated his opinion of Alger Hiss.

In recent weeks, the U.S. Government has stopped interpreting enemy propaganda mailed from abroad. This moves at your expense, gentle reader. It goes postage free in this country—17½ tons in 1 week through the San Francisco post office alone.

The Government has stopped fingerprinting aliens because the enemy does not like it.

The Government has lifted the ban on products of forced labor, so that now the enemy stands to get real profit from his slave camps.

Apparently, the enemy is regarded as an enemy only when he actually shoves a gun into an American belly in Laos, in Katanga, or in Berlin. Otherwise, why, he is an utterly charming ballet dancer, pianist, or physicist.

St. Thomas would certainly have a hard time understanding.

Failure of Attempted Rebellion in Cuba

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "It Is Our Problem," which appeared April 21, 1961, in the Indianapolis Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT IS OUR PROBLEM

The Government and the public must face up to the fact that the smashing of the attempted rebellion in Cuba is a disaster. It would be foolish to console ourselves with explanations of why it might be considered otherwise.

The much-heralded invasion has been tried. The rebels could not make it stick. Much of the anti-Castro leadership inside Cuba necessarily will have been exposed during the period of fighting, and has been or will be destroyed. The mounting of the next attempt to overthrow Castro will be 10 times as difficult.

Castro has made good his boasts that he was ready to meet and crush any invasion. His stock and that of the Communists will soar throughout Latin America. Anti-American propagandists have been handed a windfall. Respect for the United States—and for U.S. strength—will be the butt of a new surge of attack.

Another fact to be faced is that the United States is involved. Manpower for the invasion was openly recruited on U.S. soil. Self-styled leaders of the rebellion have moved about U.S. cities openly and unhindered. Sympathy with the invaders was officially expressed in Washington. In the eyes of the whole world, the United States was at least a partisan, if not a participant, in this effort. The United States was defeated along with the starcrossed patriots who assaulted the beaches.

The interests of the United States are still bound up with whatever may be left of this rebellion, and with what may follow. The President has declared that the United States would stand on the Monroe Doctrine and its obligations to the hemisphere, and would not tolerate intervention in the rebellion by the Soviet Union or other outside powers.

Well, the Soviet Union, directly and through other Red powers, has intervened. The invaders were met with guns and planes and tanks that came from Communist plants in Europe and Asia. There are thousands of European and Chinese Communist technicians in Cuba.

If the invasion has been smashed and things become as they were in Cuba, more arms and more men will be sent to Cuba by the Communist powers.

What will the United States do about it?

If the Nation means to stand on the Monroe Doctrine, there is only one thing to do. The further arming and supplying of Cuba from Communist sources must be stopped. If it takes a blockade to do it, then a blockade should be established.

The hard question facing the President and Congress is whether the Communist intervention already accomplished in Cuba does not require, even now, steps to protect American interests and to renew the standing of the Monroe Doctrine.

Industrial Gains in Hungary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. MULTER. Mr. Speaker, the following is the fourth in a series of articles by Gaston Coblentz appearing in the

New York Herald Tribune. This one appeared on May 4, 1961, and continues his coverage of the Hungarian situation:

FIVE YEARS AFTER REVOLT, HUNGARY MAKES GAINS IN THE INDUSTRIAL FIELD

(Gaston Coblentz of the Herald Tribune's foreign staff has gone behind the Iron Curtain for a fresh look at the situation in the satellite nations. He started in Hungary, and this is the last of five articles on conditions there 5 years after the bloody suppression of the anti-Red uprising. His reports from other lands under the Communist yoke will continue tomorrow, from Rumania.)

(By Gaston Coblentz)

BUDAPEST.—Hungary has emerged, 5 years after the anti-Soviet uprising, as an important supplier of industrial equipment to the Soviet bloc.

The reconsolidation of Communist power in Hungary has simultaneously been marked by industrial advances that are currently bringing Western European businessmen to Budapest to obtain license rights to a number of Hungarian technical processes.

HUNGARY'S PRODUCTS

Under the recently more rational allocation of economic functions to individual satellite nations under the Soviet-sponsored Comecon, Hungary is producing principally the following items for export to the Communist world:

Electronics and instruments. In some electronics branches, the Hungarians are considered by Western experts to be producing equipment of advanced international standard.

Diesel engines, railroad passenger cars, some types of locomotives, and buses.

Automatic control equipment for such major installations as the huge projected Eastern European pipeline from the Soviet Union to East Germany. The remote control valves, flowmeters, and other items will be mainly supplied by Hungary.

Raw bauxite for aluminum production. Hungary is short of the necessary electric power needed for bauxite processing.

CHEMICAL PLANT CONTROLS

The Hungarian processes for which Western European industrialists are reliably reported to be negotiating consist, at present, mainly of a number of sophisticated new devices used in the automatic control of chemical plant operations.

Western interest in this and other developments has caused Budapest's few hotels to be fully booked for the 2-week Hungarian Industrial Fair starting on May 19. Rooms have in many cases been rationed to 2- or 3-day visits to accommodate a maximum number of persons.

EUROPE BANK DEPOSITORY

Meanwhile, in an unusual development, the Hungarian National Bank is reported by Budapest officials to have become a depository for short-term funds being placed abroad by some Western European banks.

Neither the identity of the banks nor the rate of interest being paid on the deposits was specified. However, the officials cited it as proof that the Hungarian National Bank has again begun to play a role on international money markets.

In addition, Budapest has some extremely knowledgeable Marxist economic theoreticians who follow business developments in the United States and the free world in remarkable detail.

SEE NO U.S. DEPRESSION

Through the offices of the Kadar government, this reporter was placed in contact with two of the leading Hungarians in this field and queried them at length on their interpretation of current business developments in America and Western Europe.

One of them was an old-line Stalinist, the other a more liberal Marxist. They were in agreement on the following in a joint discussion:

Contrary to earlier Communist theory they do not believe that the United States will inevitably plunge into another disastrous depression on the 1929 scale. However, they see a serious American recession ahead in the coming year, far deeper than any other of the postwar era. They judge that the root cause will prove to be American industrial overcapacity.

SEE DOLLAR EVALUATION

They believe that the United States will not be able to continue shouldering vast foreign-aid burdens and other large expenditures abroad without a resumption of the gold outflow. They regard a devaluation of the dollar as inevitable.

They do not consider that the Soviet Union will engage in a full-scale onslaught on the dollar by manipulation of its own gold reserves. They see the Communist economic threat to the United States in other important industrial and commercial areas.

Their conclusions may or may not prove correct, but their precise information and easy familiarity with American discount rates, capital investment trends, unemployment statistics and ratios, automation problems and the like was striking.

Henry J. Kaiser, Jr.

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. GEORGE P. MILLER of California. Mr. Speaker, last week, Henry J. Kaiser, Jr., the son of one of America's great industrialists, died. He was a victim of the dread disease, multiple sclerosis. In spite of his affliction, Mr. Kaiser devoted his life to the improvement of his community, and encouraged public interest in welfare, education, and safety programs that would be of great benefit to the people. At the same time he was doing this, he was diligently carrying on his job as a high executive in his father's corporation. His life was truly exemplary, and his death brings a void to his community, our State of California, and the United States.

I would like to have incorporated in the RECORD an editorial from the May 4, 1961, San Leandro Morning News, which presents a fitting eulogy of Henry J. Kaiser, Jr.:

HENRY J. KAISER, JR.

The death of Henry J. Kaiser, Jr., youngest son of the internationally known industrialist, is a great loss to the entire community.

A victim of multiple sclerosis, young Kaiser, nevertheless, gave the best he had to the industrial empire which his father headed, and of which he was a working vice president and director of Kaiser Industries Corp.

He was named Oakland's outstanding citizen for 1960 for his many interests in the welfare programs of not only Oakland, but the entire bay area.

Under his direction, the people of Oakland rallied from defeat of a school bonds election, then went on to win the election. Young Kaiser sparked the city's interest in better schools and better school support, through an independent organization which was set up to spotlight the needs of Oakland schools.

The merit of a man is not in what he says, but in what he has accomplished. And Henry J. Kaiser, Jr., has accomplished much for the betterment of the community. He was a leader who was respected by all who came in contact with him and loved by all who knew him.

A New Lobbying Technique

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. CURTIS of Missouri. Mr. Speaker, during the last Congress, I took the floor to discuss in some detail the then current proposal which was being advanced to put medical care for the aged under the social security system—CONGRESSIONAL RECORD, March 24, 1960, page 6066 and the following pages. In the course of that speech I made reference to post cards which had been printed by the Committee on Political Education of the AFL–CIO, post cards picturing two fine looking old people and quoting, out of context, the Bible by use of the phrase "Cast me not off."

In this Congress we have another proposal to put medical care for the aged under social security, H.R. 4222, the so-called King-Anderson bill. Once again there has begun a post card campaign in support of this measure, a campaign which, I feel certain, can once again be laid at the doorstep of the COPE. The technique has changed; no longer do the post cards bear the picture of the handsome old couple and the printed message. There is a new, stereotype message, it asserts that the writer "personally" knows some older people who do not have adequate medical care.

In the past, when proponents of the social security approach to medical care said they had personal knowledge of elderly persons who were unable to afford medical care, I have taken great pains to look into these assertions. I shall do so again with these post cards, asking for specific in the cases of which the signers of these form post cards have knowledge.

I have the same desire as any other Member of this House to see these elderly people in our society receive adequate health care, health care in the finest tradition of the American society which now enjoys the greatest health care program of any society at any time. I believe, and this belief is based upon the experience I have had in studying other cases cited to me in which it was claimed that an individual or group of older persons was without adequate medical care, that upon careful investigation of those situations in which it is asserted that an elderly person cannot obtain proper health care, it will be found that any failure is in the administration of an existing program and not in the absence of a program to fit the need.

I am anxious that the cases which these post cards cite, cases of elderly people without adequate medical care, be carefully studied and that the cases be put before the proper authorities so that the programs which now cover these situations can be put into effect in the particular instance. I believe that by a thorough study of the assertions that there are those without proper care under existing health care programs we can get closer to the heart of the real problem in health care and the financing of it and frame policies by which we can assure the benefit of our great American health care system is extended to all of our citizens.

I would like at this point, Mr. Speaker, to insert in the RECORD a mimeographed sample from which post cards in this new campaign are being prepared. The writer is urged to write his Congressman using the suggested wording. One of my constituents, perhaps unwilling to put this message in his own handwriting, sent the sample instead:

SAMPLE, FRONT OF POSTCARD (ADDRESS)

Hon. THOMAS B. CURTIS, House Office Building, Washington 26, D.C.

SUGGESTED LETTER NO. 1

Date _____

DEAR CONGRESSMAN CURTIS: I feel that it is most important that H.R. 4222 be passed. I personally know some elderly persons who are not getting proper medical care at this time because they cannot afford it.

Sincerely yours,

_____
(Write in your name)

_____
(Write in your address)

SUGGESTED LETTER NO. 2

Date _____

DEAR CONGRESSMAN CURTIS: I feel that it is most important that H.R. 4222 be passed. I personally know some other elderly persons besides myself who are not getting proper medical care at this time because we cannot afford it.

Sincerely your

Freedom, Si, Communism, Never

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a most impressive editorial from a recent edition of the celebrated Worcester (Mass.) Gazette entitled "The Meaning of Communism." It is refreshing that the able editorial of this paper which makes many valuable contributions to contemporary thought on public issues should have drawn attention in this admirable editorial to the morals and concepts of family life against the Communist backdrop.

When fundamental Marxist beliefs are considered, it will be seen and recognized by fair, impartial commentators that, as the editorial points out, the Marxist virus is imbedding itself deeper into Soviet society, and this trend appears most ominously in the field of family relations which are, in contemplation of Western civilization, the very foundation stone of free, democratic society.

It is unfortunate, indeed, that we have some thinkers and commentators among us who are willing to gloss over or make light of the various antidemocratic, antireligious, and antisocial ideas which are essential parts and working techniques of the Communist ideology. There are also those who do not believe that the Communist conspiracy constitutes a great threat to our democratic system, or our free enterprise system.

Even a cursory study of Marxism demonstrates certain fundamentals that are not only alien to but incompatible with free, democratic principles. The specious idea of class struggle, the materialistic conception of history, the fanatical hatred of and opposition to all forms of religious belief, the incessant warfare against the institutions of the family and other traditional patterns of freedom, the fostering of racial, and religious antagonism, offenses against international order and continual aggression, and threats of aggression, accompanied by nefarious infiltration of other weak governments and nations—all clearly reveal the Marxist system as one committed to hatred, animosity, violence, and enmity toward most of the most precious ideas upon which Western civilization rests, toward the human race itself.

The Soviet Marxist system is based on the theory that a man as such has no being or existence independent of the state, but is merely a puppet of the great, bureaucratic, absolute superstate which neither recognizes his existence as an individual soul, nor his basic rights as a human being.

Under this system marriage and divorce are reduced to post card status. Human relations between husband and wife, father and mother, sister and brother, and relatives and members of the family circle are either blatantly ridiculed and discouraged, or systematically prohibited with the thought that in time over the course of a few generations, filial love, and the instinct for family life can be suppressed and its great powers transferred to a superstate ogre.

People who are capable of holding to such beliefs simply do not know human nature. They fail to observe the conduct of the jungle beast, let alone the sacrifice that parents and members of families have historically made throughout the centuries in ways so graphic as to defy description. The idea of this seeming, gross oversight could not be better expressed than it is in this editorial. If we destroy the family institution there will be little, if anything, left of civilization.

The eloquent editors of the Gazette could do no better service to the country at this time than to continue their writings on the ghastly ideological deficiencies of the Marxist system and the debasement of human feelings and human values which it entails, not to speak of its dangerous penetration into the internal fabric of this Nation and much of the free world.

Let us awaken, Americans. Tomorrow may be too late.

Time and time again in my public utterances and statements I have decried the subtle and not so subtle attacks of organized communism on the family unit, upon our Western religious spirit and morality, upon our basic economic and social patterns and our entire way of life. I have repeatedly deplored the insidious growth and spread of Communist ideas in American educational, scientific, and secular life. But my warnings and urgent pleas seem too often to have fallen on deaf ears. Why will not the American people and their leaders be aroused to these great perils?

The article follows:

THE MEANING OF COMMUNISM

For the past few years, certain quarters have been hopefully promoting the theory that the Soviet Union is mellowing. Those who hold this view predict that time is softening the harsh Communist ideology and that greater wealth and freedom will eventually turn Russia into a sort of middle class, social welfare state with which we can coexist peacefully.

But recent indications suggest that this is at best a half-truth, if even that. Far from relaxing its hold, the Marxist virus is embedding itself deeper in Soviet society. In some respects, at least, the Soviet Union is becoming more like George Orwell's vision of 1984 than like the United States of America.

This trend is seen most ominously in the field of family relationships, which are the foundation and the key to the free, democratic way of life. The Soviet planners have correctly concluded that reactionary family ties are the biggest obstacle to "pure communism." And they have also apparently concluded that the answer is the virtually total separation of children and parents from infancy, with the children brought up in state-run collectives.

A recent article by Stanislav Strumilin, deputy chairman of the Soviet State Planning Commission, spells it out:

"Parents will be permitted to visit the children's premises and their living quarters as often as the rules allow. But a children's collective, when directed by an experienced pedagogue, is incomparably better equipped to give the greatest indoctrination to the child with the best social habits than the most loving and attentive mothers. Egotistic inclinations of the child will be snuffed out in the cradle. In place of this, all inborn social instincts and sympathies will be developed as the result of new conditioned reflexes formed in the process of daily comradely interrelationships."

To the Westerner, there is something obscene in this. The idea of tiny children being deliberately cut off from the loving care of their mothers, brought up through their formative years to think of the state as the source of all intelligence and goodness, without religion, without the warmth of family ties, without knowing the meaning of home, is abhorrent. The generation thus produced will surely be a new race of massmen, cut off from the human traditions that have shaped all civilization for thousands of years.

The Soviet state apparently is preparing to go through with this program, to separate children from their parents as early and as completely as possible. But in their rush to produce a breed of willing, instinctive automatons, will the masters of the Soviet people overreach themselves? Is there anything in Marx or Engels that can ease the ache in the lonely human heart?

Urban Renewal Work Slowed by Stringent Laws

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Kansas City Kansan, of April 23, 1961, concerning problems faced by certain urban renewal efforts. I respectfully call it to the attention of my colleagues:

URBAN RENEWAL SLOWED BY STRINGENT LAWS
(By Bob Snair)

President John F. Kennedy, who has been trying to uncover stumbling blocks delaying Federal urban renewal programs, can find one of the biggest obstructions right in his own backyard in Washington, D.C.

It is the estrangement between the Urban Renewal Agency and its parent organization, the Housing and Home Finance Agency. The HHFA's stringent requirements in sale contracts between cities with Federal urban renewal projects and developers has been a source of irritation to URA officials throughout the Nation.

A case in point is the Gateway project here. Reynolds Metals Co., a subsidiary of Reynolds Aluminum Co. submitted its offer to buy the residential portion of Gateway in September of 1959. Following a public hearing on April 8, 1960, the city commissioners accepted the offer.

One year has lapsed and the URA here still does not have a signed sale contract with Reynolds to nail down the transaction.

Price has nothing to do with the inability of the city and Reynolds to get together.

It is the HHFA which has insisted on having certain requirements written into the sales contract which Reynolds finds inacceptable. Since the HHFA guarantees financing, its approval must be obtained.

There are no standard sale contracts acceptable in all parts of the country partly because of the difference in State laws.

Many URA officials contend the Housing and Home Finance Agency does not understand the conception of urban redevelopment projects. The HHFA has become oriented to profitable suburban developments and is afraid to take risks involved in underwriting less profitable blight clearance projects, URA officials have said.

Kansas City, Mo., met with even more frustration in attempting to develop the Attucks Urban Renewal project. Attucks lay cleared for about 3 years before it was undertaken by the Reynolds Co. after two other contractors failed to get it started.

Reynolds Metals submitted an offer to buy Attucks about the same time it made the offer on the Gateway property. The Reynolds Co. decided to develop the Attucks project first, primarily because the land was already cleared and also because of Missouri's tax abatement laws.

The Reynolds Co. and Kansas City, Mo., still have not signed their sale contract for Attucks. Kansas City, Mo., URA officials believe, however, it will be signed within a few days as the result of some pressure on the HHFA from high government sources.

A URA official in Kansas City, Mo., said his organization met with a series of baffling delays in their attempts to execute a sales contract for Attucks. A contract acceptable to the URA and the developers never seemed to be suitable to the HHFA, he said.

Frequently the HHFA would return the contracts without giving adequate explanations why it was rejected, the URA official reported. When the URA pressed the HHFA for more information, they were unable to get a satisfactory explanation, he said.

The Reynolds Co., one of the biggest urban renewal developers in the Nation, is featured in an article in April 15 edition of Business Week.

The Reynolds Co. had said it would not start Gateway until Attucks is underway. Since that goal is near reality, Reynolds Metals is expected to start exerting more pressure to get a contract for Gateway.

Address by Irving Maness, Deputy Administrator of the Small Business Administration for Procurement and Technical Assistance, Before National Independent Dairies Association, April 11, Washington, D.C.

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. STEED. Mr. Speaker, at the recent convention of the National Independent Dairies Association, held here in April, an informative address was made by Mr. Irving Maness, Deputy Administrator of the Small Business Administration for procurement and technical assistance. He explained SBA procurement policy and its effect in the dairy field.

For 6 years prior to his recent assumption of his present position Mr. Maness did distinguished service as a member of the staff of the House Select Committee on Small Business.

His address follows:

ADDRESS BY IRVING MANESS

I am glad to be here today to meet with you members of the National Independent Dairies Association on the occasion of your fourth annual meeting.

When your executive secretary, D. C. Daniel, asked me to speak about our programs to assist small firms, I was only too glad to do so. For I know that you are faced with many problems, not the least of which is having to compete with giant concerns in the dairy industry.

As you may know, I took office less than a month ago as Deputy Administrator of the Small Business Administration for Procurement and Technical Assistance. But I hasten to assure you that I am no stranger to the problems of small business. For 6 years before assuming my present post, I was counsel to the House Select Committee on Small Business and chief counsel to the House Subcommittee No. 2 on Government Procurement Loans and Disposal and Subcommittee No. 3 on Foreign Aid-Foreign Trade and Basic metals.

So I have long been concerned with the problems of small business and I assure you that as Deputy Administrator of the Small Business Administration I share with Administrator John Horne a determination to make our programs of assistance to small firms as effective as we possibly can.

You will be glad to know that our determination to increase the amount of Government purchases awarded to small firms has the wholehearted support of President Kennedy. The President recently announced that his administration will try to increase by at least 10 percent the $3,444 million in military contracts allotted to small firms in 1960, with particular emphasis on defense contracts to small firms in distressed areas.

As many of you gentlemen know, one of the basic and continuing problems of small business is that of securing a fair share of Government purchases. This is important. When one considers that total Government procurement expenditures amount to $29 billion a year—that the U.S. Government is by far the largest single consumer of goods and services in our economy—then it readily becomes apparent that it is important for small firms to have an opportunity to share in this continuing investment in our national security.

For the fact of the matter is that about 96 percent of the businesses in our Nation are small businesses, and the continued welfare of our economy depends in great measure on keeping open the avenues of opportunity for small firms.

The larger firms have a very important role to play in our economy—no one, I think, would deny this. But the Congress has long been concerned that the smaller firms be given a fair opportunity to share in the purchases and sales of the Federal Government.

That is why in the Small Business Act, as amended, the Congress stated its intention that "a fair proportion of the total purchases and contracts for property and services of the Government (including, but not limited to contracts for maintenance, repair, and construction) be placed with small-business enterprises," and that "a fair proportion of the total sales of Government property be made to such enterprises."

As Deputy SBA Administrator for Procurement and Technical Assistance it is my job to make this program as effective as we possibly can, and I assure you that we have the full support of the Kennedy administration and of the Congress on both sides of the aisle.

We have developed a number of programs to carry out this objective. I shall not go into detail about these programs here, but we have pamphlets which explain these programs fully and, of course, our procurement specialists in each of our 55 offices throughout the country stand ready to offer their assistance.

But today I do want to tell you about how this program of procurement assistance applies to the small dairies, what we have done to help these small dairies sell their products to the Government, and some of the problems we have encountered.

The SBA and the principal Government buying agencies cooperate in setting aside suitable Government purchases to be made exclusively from small business concerns.

Class set-asides have been made by the SBA on Government purchases of dairy products including fresh milk at 24 Government installations. In addition to this, individual set-asides have been made at a number of other installations.

In recently looking over some of the preaward individual set-asides I find that sizable proposed Government purchass of milk and dairy products have been set aside for bidding by small firms at Government defense

bases in Missouri, Kansas, Colorado, and Wyoming.

But you small dairy operators must understand that in order to obtain such set-asides the Small Business Administration must be able to assure contracting officers that there will be sufficient competition from small business concerns to insure a reasonable price to the Government.

In the past we have often had to work very hard to interest small dairies in bidding on proposed Government purchases in order to obtain the necessary competition.

Many military bases, posts, camps or stations purchase their own requirements of dairy products and fresh milk. Others have military subsistence market centers make the purchases for them.

Joint set-asides have not yet been made on purchases of dairy products by military subsistence centers. However, an arrangement is now being negotiated with the Headquarters of the Military Subsistence Supply Agency for set-asides on perishable subsistence items, including dairy products.

When the details of this arrangement are completed we expect that a small business set-aside determination for each purchase by a market center will be made at the Headquarters in Chicago.

In all candor, I must admit that there are a number of military installations at which joint set-asides are not being made on dairy products. But let me explain to you just why this is so.

In the first place, our manpower for this type of work is limited. We have simply been unable to cover all of the many widely-scattered installations with our capable but limited staff.

But this is only part of our problem. As I said before, in many cases small business concerns—and this includes small dairies—hve not been competitive at many installations.

I cannot emphasize too strongly that we cannot make small business set-asides unless small business concerns will follow through and enter competitive bids. Quite often in the past we have asked small dairies if they would like to bid on a proposed Government purchase of dairy products and have gotten very favorable replies. But when the opportunity to bid is presented, when a set-aside has been made, they simply fail to respond with a bid.

In cases like this there is very little we can do.

Let me cite briefly a single case, which I have been assured is only too typical.

Two small dairies in a mid-Western State had come to the SBA and requested help in obtaining a share of Government business. We explained our program and they assured us they were interested and would follow through on any help we could give them.

Later we notified them of a proposed purchase of fresh milk by a local military installation and told them we were seeking to have a portion set-aside for bidding by small firms. The manager of each of these small dairies assured us that they would follow through and enter competitive bids. They were enthusiastic in their response.

On the basis of this assurance a set-aside was initiated by the SBA but was rejected by the contracting officials because they said they had assurance from only one small firm—which incidentally was not one of the two which had come to us for help in this instance—that it would enter a competitive bid.

So the SBA again talked with the managers of these two small dairies and again we received assurance that they would bid. On the basis of this we appealed the set-aside to the Secretary of the Service.

Our appeal to the Secretary was made on the assurance given us by these two firms that they wanted and needed this business and they were eager to bid.

Well, what was the upshot? Even after we carried an appeal to the Secretary of the Service, these two small dairies failed to submit bids.

When we later asked the managers of these small dairies why they had not submitted bids, what were their replies? One of them said, "The bidding forms were mislaid when we moved our office." The other said, "We received the bidding forms, but frankly we just forgot to bid."

There is an actual case. And I must say that at this installation our chances of getting set-asides for small business concerns are decidedly remote.

I have spoken to you today as straight forwardly as I know how. I have done this because I want to make it perfectly clear that our program of procurement assistance for small firms is a two-way street.

We are determined to carry forward this program of assistance to small firms as effectively as we can. And when we do get the wholehearted support of the small firms we are trying to help, we can and do get good results.

Let me say in closing that government and business are natural allies. We know that your success in business and our success in government are intertwined.

It is in that spirit that we shall forge ahead to bring in the months ahead a greater measure of participation by small firms in the supplying of the goods and services that our Government needs.

Birthday Greetings to Former President Harry S. Truman

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. RHODES of Pennsylvania. Mr. Speaker, I would like to take this opportunity to join with millions of my fellow citizens in paying tribute to former President Harry S. Truman on the event of his 77th birthday. It was a high privilege for me to have had the opportunity to serve as a Member of this body under this great American's strong and vigorous leadership.

As histories are written in later years, I am confident that they will place Mr. Truman among the greatest of our Presidents. He was a good President. It has been said that a truly great man is one who can walk with kings but never lose the common touch. Of no man was this more true than of Harry Truman.

President Truman was called upon to guide our Nation through the period of rebuilding a free and stable world—a world which knew the threat and danger of totalitarian tyranny.

TRUE TO HIS CONVICTIONS

Crucial decisions were made by President Truman with frankness and courage. He stood firm in his convictions and for economic, social, and humanitarian justice to which he was sincerely dedicated. He bravely withstood the smears and insults which throughout all history have been hurled at those who champion human rights and social justice. It is these qualities that will give Harry Truman a rightful place in history as one of our great Presidents.

While the duty of President Franklin D. Roosevelt was to lead our Nation through the war, it was the duty of President Truman to lead us through the long, hard peace which was always threatened by the perils of communism. I am sure that future historians will bear out my firm belief that Mr. Truman carried out his duty with vigor and strength.

When communism threatened Western Europe, President Truman answered with the Marshal plan. When communism threatened our Asian neighbors, President Truman met their challenge with firm and resolute action. When communism threatened Berlin, President Truman met their challenge with all the resources of our free Nation.

Mr. Speaker, I join with my colleagues and fellow Americans in extending to President Truman and his wonderful wife my best wishes for continued good health and many more happy birthdays.

Back-Door Spending

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my "Report From Washington," on the subject of "Back-Door Spending":

The following statement is taken from the U.S. Constitution:

"No money shall be drawn from the Treasury but in consequence of appropriations made by law."

When one tries to find out what governmental policies have contributed to our 48-cent dollar, he finds that a reckless unconstitutional procedure called back-door spending must bare a major share of the blame.

Back-door spending is the method by which many Federal agencies are able to get their hands on funds without annual review by House or Senate appropriations committees, or by Congress as a whole. Basically, it is of two types:

1. The agency is permitted to borrow money directly from the Treasury instead of being required to justify expenditures and obtain funds from the Appropriations Committee * * * or * * *

2. The agency is permitted to incur contractual obligations prior to review by the Appropriations Committee, which in effect reduces the appropriating process to a mere rubberstamp approval of money already spent. In this manner, billions of our tax dollars are authorized for expenditure with no control being exercised by the Congress. Congress has no chance to tell the agency, "You may spend so much." The spending is not counted in the budget. There is no revenue-raising, just borrowing.

If we played ball like this back home, the police chief, the fire chief, the public works director, and all the other city department heads would merely tell the finance director how much money he needed (or wanted) and the finance director would be obliged to comply with the request. The city council would have no say over how wisely the money

was spent, or if there was enough revenue to pay the total bill.

This is one of the major reasons why the Federal debt and limit is now at $288 billion and headed higher. This is the way Congress has lost control of Government spending to the agency directors with their insatiable appetites.

The effort of conservatives to stop this back-door spending of taxpayer's money has been dealt a severe blow with the passage of the so-called depressed areas bill—and $300 million of the money to be spent on this dubious project will be obtained through the back door. No budget accounting and no strings attached.

The chairman of the House Appropriations Committee, CLARENCE CANNON of Missouri, called it "financial duplicity, fiscal insanity."

Several other bills have contained this same back-door provision, notably the Latin-American $500 million foreign aid measure.

Shortly after the Rules Committee was packed, a resolution calling for a halt to the practice of back-door spending was submitted to the committee. It carried the signatures of 122 Members of the House, including mine, so here was an issue on which the House could work its will.

At this point it became clear that the purpose of the Rules Committee packing was not to allow legislation to reach the floor, but to prevent legislation from reaching the floor which the administration did not approve. The committee killed the resolution by an 8 to 7 vote.

The sooner we recognize that this has been a pure and simple power struggle, the sooner the Rules Committee fight will be placed in its proper perspective. The public should know that we did not experience a fight to abolish the power of the Rules Committee. It was a fight to place that power in different hands—those of the spenders.

A final last-ditch battle is underway to bypass the Rules Committee in an effort to stop back-door spending. A discharge petition is being prepared to take the issue out of the clutches of the Rules Committee and on to the floor of the House. It will require 219 signatures. I will sign the petition and am making every effort to influence others to do the same. I believe our future solvency is at stake.

New Developments at the Speculator Tree Farm

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York State Conservationist of February–March 1961 relating to the Speculator Tree Farm of the International Paper Co., located at Speculator, N.Y., in my district:

THE SPECULATOR TREE FARM—A MAJOR ADIRONDACK LANDOWNER BECOMES A COOPERATOR UNDER THE FISH AND WILDLIFE MANAGEMENT ACT

(By Robert G. Zilliox, regional supervisor for fish and game, New York State Conservation Department)

In September of 1959, the State Fish and Wildlife Management Board invited representatives of private and corporate owners of large timberlands to a meeting in Ray Brook. The objective was to discuss mutual problems and determine how and where the provisions of the State's new Fish and Wildlife Management Act could contribute to their solution and, at the same time, add to the opportunity for public hunting and fishing. This preview was followed by several meetings between the International Paper Co. and the department during the spring and summer of 1960. Specific problems were discussed and provisions for a cooperative agreement worked out.

Now, to shed a little light on the type of operation involved, a tree farm can be considered any privately-owned, taxpaying forest area, larger than five acres, scientifically managed and dedicated to the growing and harvesting of tree crops. Certain standards and procedures are required before a tract can be certified by the New York State Tree Farm Committee. Contrary to popular belief, certification as a tree farm does not entitle the landowner to any tax abatement "gimmick."

Nor is the Speculation Tree Farm a level piece of ground with waist-high trees over which deer heads are readily discernible. Rather, as the accompanying photographs show, this 29,400 acres of International Paper Co.'s land, located in Hamilton County near Speculator, is typical Adirondack big woods country.

Most of International Paper Co. lands in New York (including their Speculator Tree Farm) are open to the general public—and have been for more than 60 years. However, increasing hunting pressure and unsolved wildlife-forestry management problems set the stage for negotiations under Fish and Wildlife Management Act. International was interested in the orderly harvest of fish and game, the effects of big game population on timber resources and the Department was interested in the possible solution of these problems so as to keep these lands open to public recreation. The resultant cooperative agreement included the following management procedures:

1. Deer browse damage information. Deer browse surveys are presently in progress in this area by company personnel. The Department will provide advisory assistance in these surveys and aid in the analysis of survey data.

2. Hunter distribution and deer harvest information. The Department conducted four deer check stations per weekend for the first 3 weekends of the big game season. The record showed that approximately 5,000 man-days were spent hunting in the interior portion of the area and it is apparent a comparable amount of time was spent hunting the lands bordering Routes 8 and 30. Forty-two deer and three bear were checked through the deer stations, with an estimate of about 100 deer coming from the tract. Most of the deer taken were shot less than 2 miles from where the hunters' cars were parked. Check station data showed that 31 percent of the hunters stayed at hotels, motels, or leased camps; 39 percent traveled to and from home; 5 percent stayed at Department campsites; 9 percent camped on State land or in trailers; 2 percent slept in cars, and 14 percent were not classified. Approximately 11 percent of the hunters had party permits involving a possible 42 percent of the hunters in party permit hunting. Many hunters came from the Albany-Schenectady area. Southern New York and Long Island were also represented. Five percent of the total were out-of-State hunters.

3. Safety precautions for active logging operations. The Department provided safety zone posters which the landowner put up in areas where active logging operations were in progress.

4. Parking areas. The landowner provided strategically located parking areas and permitted the use by the public of its logging roads.

5. Mile markers. The landowner provided mile markers on the interior road network as a guide to the hunter.

6. Protective patrol. The Department provided full-time protective patrol and also aided in controlling camping, fires, and educating the public in use of the area. No hunting accidents, few conservation law violations and good cooperation from hunters highlighted the big game season.

7. Education toward proper land use. The landowner provided a detailed brochure and sportsmen's map of the area showing nearby Lewey Lake and Moffet Beach campsites, operated by the Bureau of Camps and Trails to provide camping facilities for tree farm and other hunters.

8. Identification of nearby State lands. The Division of Lands and Forests erected signs denoting State lands adjacent to the cooperator area.

9. Fisheries. Although the cooperative agreement received its inaugural during the hunting season, plans are in progress for lake, pond, and stream surveys of area waters during 1961. Some of the waters on the tree farm area are now being stocked by the Department; however, up-to-date management plans for all waters are needed.

Due to the road network and mile markers in the area, there were few lost hunters. However, midway through the big game season one hunter became separated from his companions and spent the night in the woods. Game protectors, rangers, and volunteers searched until 2 a.m., firing many shots in an attempt to guide him out to a road. Finding his way out the next morning, the errant nimrod's opening remarks to Special Game Protector Robert were: "I don't know if you guys know it or not, but there is a heck of a lot of night shooting going on in this country."

Some hunters were undoubtedly disappointed about the deer not being as numerous as the hunters on the area. The excellent sportsmen's map prepared and distributed by International Paper for the Speculator Tree Farm and the resultant publicity unintentionally contributed to the idea that the place was overrun with deer. At any rate, Ranger Page stopped to talk to a hunter who was reclining against a tree, sipping hot coffee and munching on a sandwich along the East Road. After listening to the hunter's pleasantries concerning a dearth of deer in the area, Page pointed up the road about 100 feet and casually asked the hunter what was in the road. Feverish activity on the part of the once reclining hunter failed to affect the health and mobility of an 8-point buck crossing the road.

The development and execution of the plans called for in the Tree Farm agreement was an excellent example of cooperation between various departmental units. Frank Moore, chairman, district board 10, likened the cooperation to the play of a well-drilled football team.

The significance of this agreement between the Department and International Paper is the concept and vision it embodies for the future of public uses of private lands in the Adirondack region. Here is a design for large Adirondack landowners beset with problems related to continued recreational use of private lands by the public. It should serve as a blueprint for other large landowners whose acres are presently closed to the general public. With the big game season ended in the Adirondacks, International Paper and Department personnel concur that the aims and objectives of the cooperative agreement have had a successful launching. Proper behavior, sportsmanlike conduct, respect for signs, buildings and equipment and observance of laws, rules and regulations will, in the last analysis, decide the fate of this and most other landowner agreements.

Appendix

Dr. Edward C. Welsh, Good Choice for Space Council

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article published in the New York Times on Wednesday, May 10, 1961, entitled "Behind the Space Scene."

The article is about Dr. Edward C. Welsh, who was recently named as executive secretary of the National Aeronautics and Space Council. In this capacity, Dr. Welsh will be the principal assistant to the Chairman of the Council, Vice President LYNDON B. JOHNSON, whom he will aid in drafting the Nation's space budget and step up the U.S. space effort.

It is universally recognized by now that the space age is the most challenging factor of our times. Under the circumstances, we are indeed fortunate to have a man of Dr. Welsh's caliber and background to assume a leading post with the Space Council. I wish to take this opportunity to congratulate President Kennedy and Vice President JOHNSON on the excellent choice they have made in selecting Dr. Welsh for this very important and responsible position. There is no doubt in my mind that he will render great service to our Nation.

The article about Dr. Welsh is as follows:

[From the New York Times, May 10, 1961]

BEHIND THE SPACE SCENE—EDWARD CRISTY WELSH

WASHINGTON, May 9.—For nearly 20 years Dr. Edward Cristy Welsh has belonged to the legion of public servants who from behind the scenes influence and direct public decisions but never receive public recognition.

The post-war reorganization of Japan's industry was largely the result of the handiwork of the 51-year-old economist, who started off as a university teacher and turned to Government service in World War II. The attacks of Senator STUART SYMINGTON of Missouri and his fellow Democrats on the defense policies of the Eisenhower administration were often based on the ideas and facts furnished by him.

Recently Dr. Welsh moved into a more open role as executive secretary of the National Aeronautics and Space Council. As the principal assistant to Vice President Johnson, the council chairman, he has been given the responsibility for drafting an expanded space budget, which is to accelerate the Nation's efforts in space.

As the alter ego for public officials, Dr. Welsh has two necessary attributes for any good staff assistant—a gluttony for work and an incisive mind which can digest vast amounts of material and then present it in condensed form for an official.

A slight man 5 feet 11 inches, 140 pounds, Dr. Welsh has a reservoir of energy that permits him to work up to 90 hours a week when a lively issue is boiling. As a physician told him after a recent physical examination, "You seem to be strung together with electrical wires."

In recent years, Dr. Welsh has been legislative assistant to Senator SYMINGTON—a job that has permitted him to become one of the best informed military experts on Capitol Hill.

His association with Senator SYMINGTON dates back a decade, when Mr. SYMINGTON, after resigning as Secretary of the Air Force, became chairman of the National Security Resources Board, and hired Dr. Welsh as his assistant.

Mr. SYMINGTON took Dr. Welsh along when he moved over to become administrator of the Reconstruction Finance Corporation and when he was elected to the Senate in 1952.

Dr. Welsh started his Government career in 1942 as regional price executive of the Office of Price Administration's headquarters in Cleveland, Ohio. After 2 years he was brought to Washington to become Director of Field Operations for Price Control and then Deputy Administrator for Price Control.

Early in 1947, at the invitation of General of the Army Douglas MacArthur, he became chief of the antitrust occupation government in Japan. Among his responsibilities were the dissolution of the Japanese cartels and financial reorganization of most of Japan's major companies.

At the conclusion of his work in 1950, he was cited by General MacArthur for "laying the foundation for private competitive enterprise in Japan."

Dr. Welch, who was born in Long Valley, N.J., in 1909, began his career as a university teacher and economist. After graduating from Lafayette College in 1930, he taught at Tufts College, the University of Cincinnati and 8 years at Ohio State University, where he received his Ph. D. in economics.

It was while on the faculty of the University of Cincinnati that he met his future wife, Carolyn B. White of Cincinnati. They were married in 1935. The Welshes, who have no children, are a working team, with Mrs. Welsh serving as his secretary.

Statement by Episcopal Convention

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement adopted by the Washington Diocesan Convention recently, with reference to the giving of invocations at our major national ceremonies.

For the interest of the Congress, I feel it is wise to publish the following statement in the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY EPISCOPAL CONVENTION

At the inauguration of President Kennedy four clergymen shared in the ceremonies. With the wide diversity of religious beliefs among the people of our country, it is understandable that those who planned the inauguration and that those who have planned other ceremonies of national significance would wish to have the major religious groupings of our Nation represented. We understand this and we appreciate the intention, but we do not believe it is necessary or wise. Such representation makes for imbalance in the ceremonies and reduces their total effectiveness.

We know that the members of each church group represented by a clergyman in a national ceremony are honored to have one of their church chosen to participate. We also know that a clergyman of any church, distinguished by his life and gifts, would bring honor and respect to members of all churches. This does not mean that there would not be some who would be troubled when their tradition was not represented. There would be. But it does mean that the number would be small; for in spite of the wide differences among religious people and in spite of all their human weaknesses, there is a fundamental mutual respect and a warm good will among them.

In the judgment of this convention it is not in the best interest of religion and it lessens the effectiveness of great national ceremonies to have the several major religious groups represented and participating. Furthermore, we believe that the common practice of having one clergyman offer a simple invocation at the beginning of the ceremony and another give the benediction at the end is sufficient and much to be preferred; therefore, be it

Resolved, That this convention send the above statement to the major religious faiths in Washington and to the Congress of our country for their consideration and for such action as may seem to them wise.

Economic Hashish

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, since even the deficit-spending minded Secretary of the Treasury, Mr. Dillon, has now stated that the recession is over, why do not we forget the kind of nonsense proposed by the President's Council of Economic Advisers. The following editorial in today's Wall Street Journal brings some kind of sense into the whole picture:

ECONOMIC HASHISH

Sometimes the statistical theorizings of economists get so involved they're funny. But when the economic policies of the U.S. Government come to be based on woozy theories, the thing ceases to be a joke.

We have in mind the President's Council of Economic Advisers, which has propounded an elaborate theory of an output gap between the economy's potential and its actual performance. The theory, described on this page recently by Mr. Otten, is a masterpiece of algebraic triple-talk. It is designed to prove a gap, reckoned at $40 billion at the end of last year, and so it does—assuming all its assumptions and mathematics.

Having demonstrated the gap, the Council logically concludes that the country faces not only temporary economic problems like the recession now evaporating, but a "persistent slack in production and employment, a slowdown in our rate of growth." We have it seems, "a problem of chronic slack in the economy—the growing gap between what we can produce and what we do produce." Especially since 1955, we learn, "the gap has shown a distressing upward trend."

If this were all just idle chatter, no one would particularly mind. But this great and growing "output gap" naturally becomes part of the justification for the Federal Government to fill it—with the tremendous new domestic spending the administration has already embarked on and with the even more massive public-works spending it has in mind. And since the slack is persistent and chronic, the Government has an excuse for trying to take it up indefinitely.

Fortunately, the United States still has respected economists who can recognize economic hashish when they smell it. One such is Columbia Prof. Arthur Burns, himself a former chairman of the Council of Economic Advisers. Mildly but nonetheless devastatingly, Dr. Burns has taken apart the gap his successors have so painfully constructed out of thin air.

Among other things, Dr. Burns shows that the Council is not relying on sound, far-reaching historical evidence in projecting its output gap. It rests its case importantly on the fact that unemployment at the business-cycle peak in 1960 was slightly higher than at the business-cycle peak in 1957. The Columbia economist suggests that this gives fragile support to the theory that "the gap between actual and potential output has a distressing upward trend."

Moreover, Professor Burns quietly notes that it matters a good deal at what period you start drawing a curve of potential output. The council chose mid-1955; for no more valid reason than it could have chosen the second quarter of 1957 or the second quarter of 1947—all periods of high employment. If the council economists had chosen 1957, their own reckonings would show a gap of only $20 billion instead of $40 billion.

And, Dr. Burns goes on, "if the curve had been started in the second quarter of 1947, when we likewise had a full-employment output, the gap would have vanished. In fact, we would then have to say that actual output in 1960 exceeded potential output by more than $2 billion."

We hope the council has the grace to say touche to that.

But perhaps the most significant part of the Burns analysis is not in exposing the council's statistical juggling to prove the point it wanted to prove. There is also the attitude behind such output gap theorizing. It is reminiscent of the dominant economic thinking of the thirties, which was that the U.S. economy had become stagnant or mature and therefore required increasingly heavy Federal spending to keep it going.

That theory was proved resoundingly false by events, but here it is again in different form, once again an alibi for massive Federal intervention. The urge to control the private economy never dies.

Not many of us are trained in the intricacies of economic theory, but it takes only common sense to see through the council's unamusing fun and games. We hope the President and Congress are not bemused by the latter-day stagnation theorists. Otherwise some of these people may at last succeed in bringing about Government-managed economic stagnation.

Watershed Man of the Year—John S. Wilder

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. KEFAUVER. Madam President, on April 18, 1961, the National Watershed Conference named as its Watershed Man of the Year a Tennessean, whose dedication to conservation and good farming practices is unexcelled. I refer to Mr. John S. Wilder, of Mason, in Fayette County, Tenn.

I am proud to add my congratulations of Mr. Wilder's achievements and to call attention to an editorial praising him which appeared in the Memphis Press-Scimitar on April 22.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHN WILDER IN MANY WAYS MAN OF YEAR

From a farm in the hills of northwest Fayette County, Tenn., a mild but enthusiastic and sincere young man has come forth full of ideas to improve the welfare of the farmer.

He began with the conservation of the soil, and then he turned also to the conservation of good farmers.

The man is John S. Wilder of Mason, Tenn., whom the National Watershed Congress has named Watershed Man of the Year. As a conservation-minded farmer, Wilder has done about all one man could to promote the idea of soil and water conservation through the collective action of all the landowners living in a single watershed.

He practiced good conservation on his own farm. He made effective speeches. He served on public boards and committees, eventually becoming president of the Tennessee Association of Soil Conservation Districts. He became a lawyer, and was elected to the State senate where he helped push through conservation legislation.

He did all these things modestly—without ever seeming to be pushing himself forward, only his causes. Nor have his interests been limited to conservation and to the farm alone.

He effectively brought city and farm folk together in an agri-industry effort.

He also went to bat for the little farmer and tenant who was being frozen out of business by increasing restrictions on cotton acreage.

We think that if some other institutions, as well as the Watershed Congress, would examine Wilder's record, they, too, would find reasons for naming him "man of the year" in other fields.

The Responsibility of Being a Republican

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. BEALL. Mr. President, on May 13, 1961, Congressman CHARLES MCC. MATHIAS, JR., of Maryland's Sixth District, addressed the annual convention of the Maryland Federation of Young Republicans in Hagerstown, Md.

I ask unanimous consent that this speech may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITY OF BEING A REPUBLICAN

(Delivered before the Maryland Federation of Young Republicans in Hagerstown, Md., Saturday, May 13, 1961, by Congressman CHARLES MCC. MATHIAS, JR., Republican, of Maryland)

Just one century after the Republican Party saw its first President inaugurated on the steps of the east front of the Capitol, the party is faced with the necessity to assess its maturity. In spite of valid cause for optimism in many areas, the Republican Party in Maryland and throughout the Nation will face one of its most crucial tests in less than 18 months. Our optimism can only be justified and the tests can only be met if we realistically assess the validity of our cause, the soundness of our principles and the maturity of our party. If the results of this self-examination give us the confidence that our dedicated work is an essential ingredient of national existence and progress, we can go forward.

In the first place, let us be honest with history. In many respects, the Republican Party has been a minority party since 1932. We have attained a majority in the House of Representatives at only brief intervals since that date. Without the tremendous personal prestige of General Eisenhower it is questionable whether we would have held the White House at any time since that date.

Although this record is not encouraging, many Republican leaders, newspaper editors and political commentators now predict that we have an opportunity to gain a majority in the U.S. House of Representatives in 1962 and to increase Republican membership in the 50 State legislatures. With proper planning, sound policy, adherence to principle and hard work, these prophecies can become reality. Nowhere is the promise greater for a Republican victory than in the State of Maryland.

The Monday morning quarterback can serve a useful purpose. While it may not serve the needs of the moment to review in detail the presidential election of 1960, it is possible to draw some conclusions that may guide us in the future. These conclusions take into account both our gains and losses on November 8, 1960.

Without trying to alibi the fact that we lost; we lost the White House and we lost

the House of Representatives; yet we did make the impressive gain of 22 seats in the House. Before examining some of the reasons for the loss, let us consider the factors which may have influenced the gain. Most of these 22 seats were won from Democrats who had earned the radical tag for extreme records far to the left of center of both political parties. At the same time, seven incumbent Republican Congressmen lost their seats and an analysis of these losses indicates that they suffered from either positions in the extreme right wing or from weaknesses engendered by factional fights within their district Republican organizations.

Comforting as the gain in House membership may be to the Republican Party, it is still necessary to realistically remember that in Congress the Republican Party ran behind Nixon and the Presidential ticket. John F. Kennedy won the White House by only two-tenths of 1 percent of over 68 million recorded votes. This is a plurality of less than a single ballot in each of the Nation's precincts. President Kennedy's plurality was 49.7 percent of the total recorded vote with Richard M. Nixon being credited with 49.5 percent. Cope, the political paper of the AFL–CIO, estimated that in 11 States a popular shift of a fraction of 1 percent would have resulted in a Nixon victory. The New York Herald Tribune has pointed out that excluding Dixie, Democrats outpolled Republicans in contested elections by a total of 26,950,000 to 26,-295,000

These figures indicate that the Presidency of the United States hung as evenly in balance as it is historically possible to imagine. This balance, of course, turned upon the personalities of the candidates, the campaign that they conducted and the assets and the liabilities that each brought into the campaign with him. But, if personality can sway a presidential election, we may assume that the collective election of the Congress reflects more accurately the reaction of the electorate to parties and platforms. In this respect, the Republican Party in congressional campaigns throughout the country did not equal the performance of Vice President Nixon. This is the gap that we must recognize and seek to close next year.

The New York Times in an article which appeared on May 7, 1961, analyzed the problem as follows:

"This raises the question of what new factors are in play to affect the long-term trend, and here everything is arguable." (The very short-range factor, how time and change will treat President Kennedy, is not arguable except by the most reckless knights of the crystal ball.)

The most compelling phenomena, as always for politicians, are voting statistics. These suggest—though not to Senator GOLDWATER'S satisfaction—that the electorate will take large doses of Republicanism of the liberal, internationalist persuasion, but has less and less taste for the party in traditional old-guard packaging.

In the 1960 elections, for example, Senator CLIFFORD P. CASE, running on a strongly liberal-Republican voting record, won by a majority of a third-of-a-million votes in New Jersey at the same time Kennedy was carrying the State for the Democrats. The two other Republican senatorial victories won with impressive ease also returned liberals—MARGARET CHASE SMITH in Maine and JOHN SHERMAN COOPER in Democratic Kentucky, by wide majorities.

Conservatives, by contrast, had difficulty everywhere except in New Hampshire and Kansas, and KARL MUNDT of South Dakota, that model of orthodox prairie Republicanism, barely squeaked through with a majority of only 15,000 out of over 300,000 votes cast.

The 1958 Senatorial elections were even more conclusive. Democrats won seats previously held by such stalwarts of conservatism as John W. Bricker of Ohio, George W. Malone of Nevada, Chapman Revercomb of West Virginia, William E. Jenner of Indiana, Charles E. Potter of Michigan, Edward J. Thye of Minnesota, Frederick G. Payne of Maine, and Frank A. Barrett of Wyoming.

Former Senator William F. Knowland, running for Governor of California on a platform endorsing the so-called "right-to-work" law, was humiliatingly defeated. The only new Republican Senators elected this year—KENNETH B. KEATING of New York, WINSTON L. PROUTY of Vermont and HUGH SCOTT of Pennsylvania—quickly identified themselves with the Senate's liberal Republican minority and have since been voting accordingly.

I do not know whether you will agree with Russell Baker, the author of this quotation, but I think that we have to recognize that he is expressing the opinion of many Americans both within and without the Republican Party.

I would personally take issue with Mr. Baker on one point. I would take issue with him to the extent that he attempts to draw a sharp line of division between elements within the Republican Party. To this concept I must address myself today.

I do not mean to contend that there will not always be variations of opinion within the Republican Party and I hope that the day will never come when this is not so. We shall always have Republicans who, by virtue of background, environment, and experience react differently to national issues. But such healthy variety of viewpoint should not inhibit Republican unity and a solid party front. Such party unity can, however, be only achieved when there is a firm adherence to the basic principles of the party and a willingness on the part of individual Republicans to slough off personal and sectional interests for the sake of advancing our ideas of government and policy. For those of us who feel deeply about public questions it is often a great sacrifice to realize that an abiding principle of the party would restrict the exercise of our own whim in such matters. As one who has felt it necessary to cast an independent vote on occasion in my brief career in the Congress, I feel peculiarly qualified to issue this call first to party responsibility and secondly to the resultant party discipline. I do not believe that my conduct in the past has been inconsistent with this challenge.

I speak of principles, you may well ask me to define what I mean. In other words, what is a Republican?

The answer is simple: individualism is the bedrock of our party. If we are a conservative party, it is that we are dedicated to conserving human freedom and human dignity above all else. As Republicans we recognize that human freedom does not originate in Annapolis or in Washington. Human dignity is not the product of legislation or bureaucracy. Liberty is a common goal of people and we as a party contend that it can only flourish in the soil of freedom, economic and human freedom. Nor can the seat of any government be the source of the wealth of nations. It is created in factories or farms, at desks and in the market places where thrifty, industrious Americans earn. Although some Democracts may choose to forget, it was Thomas Jefferson who said, "That government which governs least, governs best," and it was Woodrow Wilson who said "The history of liberty is a history of limitation of governmental power, not the increase of it. When we resist, therefore, the concentration of power, we are resisting the processes of death, because a concentration of power is what always precedes the destruction of human liberties."

Republicans are unshaken in the wisdom of individuals to determine their own personal and national destinies. We are Republicans because our party is more deeply endowed with a sense of integrity in public affairs. We are Republicans because we seek to speak as Americans not as members of special groups of economic or social interests which may be inconsistent with the larger interests of our Republic. We can become the voice of the Nation expressing the opinions and the aspirations of all the people; truly a collective voice rather than a mere babble of shrill, individual cries for preference.

Adherence to principle can cause hard decisions. I frankly mention the recent vote in the House of Representatives on the enlargement of the Rules Committee as an example of this. There we had a simple choice between an opportunity to embarrass a new administration, but to do so we had to deny the right of a representative assembly to control of its own legislative processes. For me the choice was compelling, but not easy. At no time in the protracted debate on this subject in the press and on the floor of the House did I ever hear anyone deny this simple proposition.

In Maryland we have a similar difficult but compelling choice. We have seen how a ruthless majority has ridden roughshod over the principles of representative government and ignored the demand for equitable congressional representation. The creation of the so-called Eighth Congressional District violates every concept of fair and reasonable congressional districting. I personally went to Annapolis and testified in favor of a complete and equitable redistricting of seats in the House of Representatives. When the general assembly ignored all the calls upon its sense of fairness and historical and constitutional policy on this question, I then announced my support of the petition for referendum on the Congressional Redistricting Act of 1961.

But at this point we have another decision to make. If we support fair representation in the Congress of the United States, it follows that we must support fair representation in the General Assembly of Maryland. This may be less popular among some Republicans but I say to you that the principle is the same and that we as a party will gain dignity, honor, and victory if we recognize the validity of the principle. From my personal experience in campaigning in one of the largest suburban communities of Maryland, I can assure you of the tremendous response that we will receive if we demonstrate that we are ready to act upon this principle.

What I have had to say amounts to a plea to all of you and to all of our fellow Republicans throughout the United States that by our actions and our words we make it clear to all our fellow countrymen that true Republican doctrine is as we know it.

This does not mean that we should compromise our principles and our convictions for the sake of a transitory success. It does not mean that we should become the feeble echoes of the cry of "tax and tax, spend and spend, elect and elect." It does mean that as the one political party which can genuinely represent a majority of the American people we must offer constructive opposition and reasonable alternatives to the proposals of the other party. It means that we must constantly evidence our concern for human problems and human rights. It means that we must persuade the American people that we do not regard power and responsibility as an end in itself but rather as an evidence of our conviction that human freedom rests on economic freedom.

In the light of recent events in Cuba, in Laos and around the world we must demonstrate that our respect for the individual is the most important political weapon in our struggle with the forces of communism. Our national purpose as stated in the Declaration of Independence is to proclaim "that

all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness." As this is the essence of the American spirit, it must be the essence of the Republican policy. As we recognize that there are human needs to be met, we can recognize that there are solutions to be found within the framework of our principles. We must know ourselves to be the party of responsible progress and we must be willing to organize ourselves to fulfill the responsibility of that role.

Science Lure in Kansas City at Work

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Kansas City Star of Tuesday, May 9, 1961, about the tour taken last week by the National Science Fair international finalists of the science based industries and institutions of the Kansas City area. I think my colleagues will find it interesting, and informative of the tremendous facilities offered by the Kansas City area for contributions to the onward march of science:

[From the Kansas City Star, May 9, 1961]

SCIENCE LURE IN KANSAS CITY AT WORK

National Science Fair-International finalists will get a unique, closeup look at Greater Kansas City science-based industries and institutions this week.

The youthful exhibitors see a wide array of products in various stages of manufacture—the normal procedure at most plants for visiting groups. They also will be taken "behind the scenes" to learn how basic science is utilized in production and research.

The tours will start tomorrow after the official opening of the fair.

Special tours and demonstrations have been arranged at 16 large firms with the assumption that the guests won't settle just to see production lines in action, according to Leo J. Roedl, executive director of Science Pioneers, Inc. That Kansas City organization is the cooperating sponsor of the fair. The officials also have been warned the youthful visitors may ask difficult, penetrating questions about the scientific facets, Roedl added.

EAGER TO LEARN

"Because of the extra reading and research they've done," Roedl explained, "these youngsters are experts in some phases of science. An ordinary tour wouldn't do. These kids want the opportunity to see scientists at work and to question them."

The Buick-Oldsmobile-Pontiac assembly plant, Kansas City, Kans., is representative of the companies that have designed tours especially for the teenagers.

The big plant has tours for thousands of visitors annually. But this is the first time a scientifically pointed visit has been arranged. To insure a smooth running program, those who will conduct the youths held four rehearsals.

The youngsters will see the assembly line as an exercise in applied mathematics. Fundamentals of trigonometry and algebra are parts of the problem that makes it possible for the scores of parts to mesh together at the right time and right place in the assembly process.

The basic problem faced by planners is to combine two seemingly opposite concepts—"custom" building—on a mass production line, they will be told. Theoretically the B.O.P. plant could produce more than 3 million different 1961 models, with no two alike.

The young scientists will hear how the probability theory is used in advance ordering of component parts and options based on expected customer preference. An explanation will be given on relative motion, which insures that parts on the subassembly lines coincide with the steadily moving final lines, even though some cars with extra equipment take longer to assemble than others, thus complicating the timing sequence.

PROCESS MUST MESH

Trigonometry determines the rotary speed required to move the assembly lines at the prescribed rate and linear programing provides the most efficient order of scheduling in the assembly process. A study of lead time will show how it is possible to place orders with suppliers as far in advance as is feasible, but to produce a car, once it is ordered, in a minimum amount of time.

"As soon as a buyer decides what kind of car he wants," an executive remarked, "he can hardly wait. We get it to him as quickly as we can."

Armed with such mathematical knowledge, control men can cut weeks out of the supplier plant lead time by considering it as a part of the huge production line, starting at the suppliers and extending across country by rail and highway.

After watching newly assembled cars go through final tests, the youths will return to the plant's conference room for a question-and-answer session.

An insight into how computer machines protect this country from enemy attack will be seen at the Semi-Automatic Ground Environment (SAGE) installation at the Richards-Gabaur Air Force Base.

SAGE, it will be related, links equipment at airbases, missile sites, radar, communications systems and other facilities with agencies that supply information upon which valid air defense decisions are based. The machines correlate the data and identify a track of an airborne object.

The youngsters also will have the option of touring the Truman Library in Independence and other Kansas City points of interest.

The other places to be toured:

Long lines department of the American Telephone & Telegraph Co.—How network television programs are carried to 675 stations throughout the United States; an "electric brain" that keeps a vigil on switching circuitry of direct dialing to 50 million telephones.

Sheffield division of the Armco Steel Corp.—Open hearth operations in which steel is made from scrap metal with the addition of certain alloys.

Chemagro Corp.—Biological and other research in the manufacture of agricultural chemicals, with emphasis on insecticides.

Gustin-Bacon Manufacturing Co.—Raw materials automatically "batched" in two-story-high machines, which produce glass "marbles." These then are melted and transformed into blankets, boards, molded insulation which are automatically faced with plastic, foil, fabric, and other finishes.

Linda Hall Library.—One of the largest special scientific and technical book collections in the United States, with more than a quarter-million volumes; many of the first editions of the classic milestones in science.

Midwest Research Institute.—Specialized laboratories for research in biology, chemistry, economics, engineering, physics, and mathematics.

Spencer Chemical Co.—Current research in synthesis, screening and development of pesticides; plastics equipment tests and evaluations; instrumentation in analytical analysis, production of nitrogen fertilizers, industrial chemicals, polethylene, and nylon.

Sugar Creek Refinery of Standard Oil.—Processes that include a combination crude and coking unit, fluid catalytic and thermal craking units, polymerization, blending, and finishing units.

Transworld Airlines overhaul and maintenance base.—The functional direction, coordination, and specialized training required for daily maintenance and servicing of aircraft over the entire system; the utilization of X-ray and supersonics in inspections.

Nike missile sites.—How the system works; a tour through the vans containing electronic equipment that guides missiles to their targets.

University of Kansas Medical Center.—The laboratories of microbiology, pharmacology, and pathology to show the work in progress on cancer, arthritis, and other diseases.

Vendo Co.—Testing and research on coin-operated automatic merchandising machines.

Weather Bureau.—The severe local storm forecast center, the National Radar Analysis Development Unit, the National Communications Center for the U.S. Weather Bureau Internal Teletypewriter Circuits, and the national severe local storm research project.

Hallmark cards.—The silk screen process in greeting card production and the world's largest art department with 350 persons at work.

The Late Gary Cooper: A Real American

EXTENSION OF REMARKS
OF
HON. ALPHONZO E. BELL, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. BELL. Mr. Speaker, the Nation has suffered a great loss in the passing of a distinguished citizen, Gary Cooper—actor, artist, business leader, husband, father, outdoor man; a real American.

He came to be a symbol of vigor, courage, and heroism in American life. He served as a source of inspiration to many of the youth of this Nation who admire such pioneer qualities of quiet strength of character, steadfastness, honesty, and fairplay.

He had a public career of the highest order of fidelity and service. He gave of both himself and of his resources, not only to many of the worthwhile charities, but to many of those who needed a helping hand in their strife for a better life.

His two Oscars—given for his performances in the title role in "Sergeant York," 1941, and as the courageous sheriff in "High Noon," 1953—doubtless rank among the most popular awards ever presented by the Motion Picture Academy.

Mr. Speaker, the manly qualities in American life that Gary Cooper so ably portrayed in such pictures as "The Virginian," "The Westerner," and "For

Whom the Bell Tolls," future generations will not only continue to enjoy, but what is more important, will continue to emulate and thus will find a source for renewed courage.

I am honored by listing myself among those who have been Gary Cooper's friends. I will miss him. The people of this Nation and of this world will miss him.

But at this sad time our particular sympathy goes out to Mrs. Cooper, the devoted wife who shared the trials and satisfaction of our friend's varied and eminently useful career.

Needed: Neutralist United Nations Dis-Armament Commission

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. WILEY. Mr. President, the arms race between the Communist world and the non-Communist world poses an ever greater threat to peace, either by premeditated war or by accidental war.

For almost 15 years, the world has talked of reduced—rather than increased—armaments.

Regrettably, however, the Communists adhere to a policy of aggression. Their aggression is ever toward ultimate triumph of communism, rather than the establishment of peace in a world of self-governing nations.

Consequently, progress has been literally impossible. The Communists have continued to block conference after conference. Militarily, they have reduced manpower only if such reductions were balanced—or perhaps stepped up—by increases of firepower by new weapons.

Because of the stalemate, I suggested yesterday, in a broadcast over radio station WGN, in Chicago, the establishment of a neutralist United Nations commission to attempt to set up universally recognized criteria for disarmament. I ask unanimous consent to have the text of the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY, OF WISCONSIN

Today, the United States and the non-Communist world, face major challenges, including efforts to find:

Ways to stop Communist aggression without sparking a third world war; a formula for negotiating differences between the non-Communist and Communist worlds; and, establishment of a climate of peace and law by which nations can, by self-determination, seek and attain their national destinies.

These are great and formidable challenges.

Around the globe—in Cuba, Laos, Berlin, the Congo, and elsewhere—Red troublemakers are threatening the freedom of peoples and nations.

What can be done about it?

Over the years, there has been a great deal of talk about disarmament. Unhappily, this has been difficult to achieve. Why? Because the Communists are committed to aggression rather than to disarmament and peace.

Time after time, Lenin, Stalin, and Khrushchev have restated their ultimate goals of world conquest. As recently as January of this year, Khrushchev, in a policy speech, reemphasized that if a takeover of the world, nation by nation, could not be accomplished peacefully, then force would be utilized to attempt to gain this objective. Despite an all-out addiction to aggression—military, political, ideological, however—the Reds continue to pay lip service to the cause of disarmament. Why? Because it serves as a smokescreen behind which to carry on their evil acts of aggression. Actually, too, they frustrate every effort to negotiate for realistic reduction of armaments. At the same time, they accuse—and all too often successfully—the United States and the Western allies of roadblocking progress in this field.

In the light of the Reds' sabotaging disarmament at the conference table—and indulging military-economic-political-ideological aggression elsewhere in the world—is there any hope for realistic negotiations?

Personally, I would like to be more optimistic. Unhappily, however, the picture is darkly clouded. Nevertheless, we must keep on trying: (1) to get agreement at the conference table; and (2) to mobilize world opinion on the side of realistic disarmament.

How can this best be accomplished? Perhaps by the following suggestion: The United Nations, I believe, could well establish a Commission on Disarmament comprised solely of neutralist nations. The commission would have the responsibility of hammering out a realistic plan of disarmament. The plan could be presented to the United Nations. Then, a vote of "Yes" or "No" would be required by the major powers. This would put all nations—including the Soviet Union—of the world on the spot—reflecting more clearly whether they were for or against disarmament. Regrettably, the smokescreen of charges and countercharges fired between East and West have made it difficult for nations of the world to clearly discern who is responsible for the obstruction of progress.

The traditional, major points of difference between East and West have focused upon inspection. Experience—both prior to, and following, World War II—should have taught the world, however, that treaties signed by tyrants are so much paper—unless self-enforcible. The Russians—like Hitler—have freely and recklessly torn up a great many treaties and agreements, after these have served their cause.

The establishment of such a neutralist U.N. Commission could not be expected to miraculously resolve the difference between East and West in negotiations. Nevertheless, such a body could, I believe, (1) develop criteria which would be universally recognized as fundamental to reduction of arms in the world; (2) present a clearer picture of who—namely, the Red bloc—has continually been obstructing progress.

Until a realistic system has been developed, we will need to continue (1) to maintain a strong deterrent power against massive attack; (2) develop more effective forces to cope with brushfire wars; (3) design techniques for stopping the infiltrative actions of the Reds in Southeast Asia, Latin America, Africa, and elsewhere in the world; and (4) gird ourselves for a long, difficult struggle—for the battle against the great and growing Red threat to freedom will not be easily won.

Project Hope

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. CONTE. Mr. Speaker, it is gratifying to see the progress made by the people-to-people program, Project Hope. This private medical mission from America to the underdeveloped nations of the world has received tremendous acceptance from the nations it is visiting.

As a member of the Massachusetts Committee for Project Hope, I bring to the attention of the House the accomplishments and future plans of Project Hope.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Boston Globe and the Boston Traveler of recent dates:

[From the Boston Traveler]

FLEET OF HOPE

You don't have to be young enough to join the Peace Corps to extend a helping hand and boost the free world's stock in underdeveloped nations.

A contribution to the current drive for funds to expand America's ocean-borne medical mission from one ship to a fleet of four would be a worthy alternative.

The success of the SS *Hope*—a converted Navy hospital ship—in bringing treatment to 15,000 Indonesians and training to scores of doctors and nurses in southeast Asia has opened new doors for reaching ordinary men, women, and children in the uncommitted nations.

What is being done in the port cities of the Orient can be done—with more ships—in South America, Central America, and Africa. That we need to do it is abundantly clear from the close study a team of Soviet doctors is making of the SS *Hope's* successful mercy mission as it steams from port to port.

[From the Boston Globe]

FUNDS FOR FOUR MORE SHIPS SOUGHT TO EXPAND U.S. MEDICAL MISSION

The mercy of *Hope*—an American hospital ship serving people everywhere—will blossom from a fleet of four such vessels if the current fund drive of Project Hope is a success.

The need for more ships was shown by the termendous success of SS *Hope I* in Indonesia, according to Dr. William B. Walsh, founder of the nonprofit project.

Dr. Walsh, in Boston to confer with leaders of the Massachusetts campaign, said more ships are needed to bring medical knowledge, supplies and service to people in South America, Central America and Africa.

SS *Hope I* will leave Indonesia for Vietnam in June, he said.

He said that reactions from the people of Indonesia toward the vessel have been enthusiastic.

"The prestige of America has been vastly improved all over Asia because of the medical mission," he said.

FIFTEEN THOUSAND TREATED

More than 15,000 patients have been treated, hundreds of operations performed, and scores of Indonesian doctors and nurses trained aboard the ship.

He told of the thousands of people who lined a beach when the SS *Hope I* came into port.

"They were waving banners of welcome," he said.

He said that a team of 10 Russian doctors followed the ship to several ports to observe the effects of Hope's program.

SS *Hope I* was one of six Navy hospital ships built during World War II.

It was taken out of mothballs and rebuilt last year.

Administration Spokesman Again Endorses Congressional Study of Fuel and Energy Resources—Assistant Secretary of Interior Addresses American Mining Congress

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 15, 1961

Mr. RANDOLPH. Mr. President, today in Cleveland, Ohio, the Honorable John M. Kelly, Assistant Secretary of the Interior for Mineral Resources, again stated the administration position favorable to a congressional study of fuel and energy resources, a resolution relating to which is pending in the Senate Committee on Interior and Insular Affairs.

Mr. Kelly's significant address was delivered at the 1961 coal show of the American Mining Congress.

His comments concerning coal research were pertinent and progressive, and I commend especially his remark that coal "is too large a resource, too valuable a national asset, to be allowed to lie fallow."

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of Assistant Secretary Kelly's remarks.

There being no objection, the text of the remarks was ordered to be printed in the RECORD, as follows:

REMARKS OF JOHN M. KELLY, ASSISTANT SECRETARY OF THE INTERIOR FOR MINERAL RESOURCES, AT THE 1961 COAL SHOW OF THE AMERICAN MINING CONGRESS, CLEVELAND, OHIO, MAY 15, 1961

Mr. Salvati, Mr. Elfred, Mr. Conover, friends and guests, most speakers begin their remarks with a word or two concerning their personal gratification at being invited to speak. Today, I say it with all sincerity because this is the first opportunity I have had to meet with a group representing our Nation's vital and essential coal industry.

I am making many new friends here today—new associations which, I am sure, will be close and lasting. Secretary Udall has asked me to convey his personal regards and his best wishes for a most successful show this year.

Although I have spent most of my adult life closely associated with the extractive industries—first as a mining engineer, and later in the oil industry—I was surprised to learn of the coal industry's achievements in production efficiency. The advances scored by your industry in this field are in themselves a tribute to your determination to expand existing coal markets and to find new ones.

This farsighted, self-enlightenment deserves commendation and support, and, I can assure you that such support and cooperation will be found in the Department of the Interior under the Kennedy administration.

This farsighted self-enlightenment dehealthy, prosperous coal industry is essential to the welfare and social progress of our Nation. We in the Kennedy administration appreciate its importance, recognize its complexities, and admire the ingenuity and imagination of those who direct it. We are familiar with some of your problems—and we are more than willing to help you do something about them.

Coal was the main source of our Nation's energy supply for 60 years or more, and it still contributes a significant part of our current energy requirements. In the years ahead coal will continue to have an important share of the Nation's energy market.

I am informed that we have perhaps three-quarters of a trillion tons of coal at our disposal, assuming mining recovery of as little as 50 percent of coal in place in the more available seams. Under improved technology, we can look forward with assurance that fully half again as much will eventually be available.

This is too large a resource, too valuable a national asset, to be allowed to lie fallow. The demands of this country—its growing population, its mounting standards of living, its international obligations and responsibilities—require that we make the best use of all of our resources, including coal.

Today, we are organizing the new Office of Coal Research in the Department of the Interior. This office will look hard and closely into many aspects of coal. It is always valuable to have a new pair of eyes looking at old facts, and this is our philosophy regarding the coal research program.

As I said earlier, you have already performed an amazing feat managing to hold your overall cost of operation steady, countering the trend of most commodities toward increased cost. In part, this has been possible through research—research in mechanical engineering without which we would never have the fantastic show of equipment here on the exhibit floors—research in the application of electronics for automation in mining and preparation, research in metallurgy, in hydraulics, in marketing, in new applications.

The time has now come to pool our research energies to attack old problems, to find new and better uses for coal—and to do it as promptly as possible.

We must look deeper into the problems surrounding the use of coal as an industrial commodity, as well as a fuel.

We must move ahead on the gasification of coal with the aim of producing a gas which can be mixed with natural gas for industrial and consumer use.

We must devote more energy to the creation from coal of a liquid fuel which could be utilized by oil refiners.

We must work harder to develop efficient, inexpensive new methods to transport coal.

These are but a few of the things which, I am sure, will be investigated by the Office of Coal Research.

While I have talked about the Office of Coal Research, I do not wish to leave the impression that this organization will affect the continuing growth and importance of the types of research conducted by the Department's Bureau of Mines.

As those of you here know full well, the Bureau of Mines has performed outstanding work and has made major contributions to coal technology for over 50 years. The work of the Office of Coal Research will complement the longer-term research of the Bureau of Mines by concentrating on projects showing promise of more immediate expansion of coal markets.

Both organizations will continue to grow in the future, in their respective approaches to advancing the technology of coal production and use.

In the short time available, it would be impossible to list the outstanding accomplishments of the Bureau of Mines. Whether you are engaged in the mining of coal, its preparation, or its many uses, I am sure the work of the Bureau has provided valuable technologic information and important statistical and economic facts.

The Bureau is now making real progress in its research in hydraulic mining. Very substantial progress is also being made in making gassy mines safer, in new and improved designs for a coal-fired gas turbine for electric generation, and in many other projects currently underway.

The Bureau of Mines makes its impressive contribution in many ways—in its pioneering of roof bolting, mine ventilation, and respiratory protective devices, for example. Permissibility, also, is a word familiar to those of you attending this show. The Bureau of Mines seal of permissibility can be seen on many pieces of equipment displayed here. Through the testing services of the Bureau, effective and efficient mining equipment has been developed—equipment which is dependable and safe.

At this time, I want to say a few words about the proposed study of fuel and energy resources which is pending before the Congress.

A few days ago, the Department of the Interior announced its formal endorsement of a balanced, long-range study. I am hopeful that this study will get under way in the current Congress.

In the past several weeks, I have made a number of appearances before various oil industry groups, and should like to repeat to you today the substance of my remarks to them regarding an energy and fuels study.

President Kennedy, Secretary Udall, and I firmly endorse a balanced, long-range fuels study which uses the test of the public good as its cardinal principle. In Secretary Udall's words, "We cannot in something as important as fuels and energy let policy be set by drift and default."

No one can dispute the right of the Congress of the United States to initiate such a study. Unthinking, blind opposition to an impartial, long-range study serves no useful purpose. Out of such a study will come the determination that sound and consistent Government policies are vitally essential in maintaining a healthy fuels and energy situation in this country.

We have much to gain from a thorough look at where we have been, where we are, and where we are going.

We need to know what public policies are necessary to assure an adequate, dependable fuel supply for the Nation in order to achieve a healthy, balanced development of the national economy. We need to know whether our present Federal, State, and local laws and programs promote the public interest in the wise development of our fuel resources. Finally, we need to know how to define in specific terms what the public interest really is, when confronted with the technical, economic, and international problems entailed in fuel resource development and use.

I think the proposed fuels study poses a real challenge to a major segment of our economy. Can we unite in exploration for a fuels policy that is in the public interest?

This is hardly the time to utilize the forum of the fuels study in a knockdown drag-out fight for competitive advantage.

The 1960's are going to be a period of many changes in the United States and in the world. As President Kennedy has expressed it, "We are crossing frontiers which

involve the struggle for freedom here in the United States and around the world."

This fact overshadows all other aspects of our national existence. Life in the years ahead will not be easy. Wishing for it, asking for it, predicting it, will not bring it to pass. Again, as the President has stated it, "Before my term has ended, we shall have to test anew whether a nation organized and governed such as ours can endure."

The outcome is by no means certain. The answers are by no means clear. All of us—in this administration, in the Congress, throughout our land—must forge the answers and buttress our determination so we shall not fail this new test of man's dignity and freedom.

What does this mean specifically to the coal industry?

It means simply that we must join—in industry and in Government—in a united effort to achieve our common objectives. We must work together in the knowledge that the ultimate and final test of our actions will be tested in the crucible of history.

Federal Support of Medical Education

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address on Federal support of medical education, which I delivered at the John Archer Society dinner, University of Pennsylvania School of Medicine, Philadelphia, Pa., on April 26, 1961:

FEDERAL SUPPORT OF MEDICAL EDUCATION

(Address of the Honorable JOHN E. FOGARTY, U.S. Representative, Second Congressional District of Rhode Island, at John Archer Society dinner, University of Pennsylvania School of Medicine, Philadelphia, Wednesday, Apr. 26, 1961, at 6. pm.)

Of the many responsibilities shared by all Members of the Congress of the United States, none is more important than the one I shall attempt to fulfill today.

I refer to the duty to render public reports on matters of national significance. There are several ways to do this. One of the best is direct, face-to-face discussions.

Because of the particular congressional role I have held for many years, I believe I have a special obligation to conduct such discussions before groups of physicians.

When that group is within so distinguished an institution as the University of Pennsylvania Medical School, that obligation becomes, instead, a privilege.

In Philadelphia, a Member of Congress cannot help but feel the presence of those early patriots who established the political foundations of the Republic. I am sure that physicians visiting this old city must, in similar fashion, feel the presence of John Morgan and William Shippen, who pioneered our great national structure of medical schools. Close behind these two we—both the legislator and the physician of today—can discern the heroic figure of Benjamin Rush, pioneer in mental health, who in spite of his busy schedule of medical practice and teaching, found time to help formulate the Declaration of Independence.

On down through the years we are reminded of other great physicans associated with this city and this school: men like Archer, Long, Osler, De Leon, and Barnes. Then we reach the contemporary scene and encounter figures such as Drs. Isidor Ravdin, Howard Rusk, Charles Mayo, and E. Vincent Askey, who in the same tradition, combine the talents of teacher, researcher, or practitioner of medicine with invaluable contributions to the larger national scene.

And thus I must blend my gratitude and pride for being chosen to present the annual lecture of the John Archer Society with a large portion of humility in the presence of a gathering which represents so vital a segment of our national history and of present-day imminence in medical science.

As chairman of the subcommittee of the House which has responsibility, among other things, for the annual appropriations for the U.S. Public Health Service, my work obviously has a direct impact upon the scope and directions of Federal, State, and local public health programs and the very important research programs of the U.S. Public Health Service. Less well known among physicians is the fact that the actions of my subcommittee have had, cumulatively, a far-reaching impact on medical education.

When I first became a member of my subcommittee, the research program of the Public Health Service was small, and limited principally to its own epidemiological and laboratory study of the communicable diseases. Funds for research grants and training awards to non-Federal investigators and institutions were relatively insignificant. This was but a reflection of the emphasis then being given to consolidating the great advances made against communicable diseases in the first three decades of the present century. Even then, however, the shape of our population and its environment was undergoing important changes, creating new health problems and needs for a new research effort.

Oversimplified, the two most significant changes were these:

1. Emergence of the chronic disease problem: Because of reductions in morbidity and mortality from communicable diseases—particularly among infants, children, and mothers—more people were living longer, and therefore becoming more susceptible to the chronic diseases such as cancer, heart disease, arthritis, and emotional disorders.

2. Emergence of environmental health problems: The longer average life expectancy, together with improved economic conditions and other factors, had greatly expanded our population. The flowering of U.S. technology and industry concentrated more and more of these people in our cities. At the same time it introduced an entirely new set of health problems—air and water pollution, ionizing radiations, food additives, a deluge of new drugs and synthetics, an alarming increase in accidents on the streets, in the factory, and in the home.

Thus, almost from the beginning of my service on the subcommittee, we have had to devote more and more attention to national needs in these two areas of chronic diseases and environmental health.

Back around 1945 and 1946 we felt that the Nation should begin learning more about the cause, prevention, and treatment of chronic disease. This required some redirection and strengthening of the Public Health Service's own research. More important is the fact that expansion of research in universities and medical schools was considered imperative.

According to their own representatives, the size of the needed expansion was clearly beyond the resources of the universities, foundations, voluntary health agencies, and other private sources. In concurrence with the advice of experts in and out of the Government, we determined that a gradual, year-by-year buildup of a Federal grants-in-aid program, would be required. The mechanism to be used was the National Institutes of Health of the Public Health Service—an organization with experience in the granting field and a tradition of first-class medical and biological research.

So much for philosophy and background. Now let us look at what has happened. The simplest and quickest measurement is in terms of the dollars that have been spent to bring our Nation unquestioned world leadership in medical and biological science. Taking as our baseline the last prewar year, the total national investment in this work has risen from about $45 million in 1940 to around $715 million in 1960. In 1940 Federal support of such research was 7 percent, or $3 million. In 1960 the Federal share was 53 percent or about $380 million, most of which was provided through the National Institute of Health.

Here I should like to point out that although the percentage of non-Federal funds has greatly decreased in relation to Federal funds, there has, nevertheless, been a remarkable increase in the actual amount of non-Federal assistance to medical research—from $42 million in 1940 to an estimated $335 million in 1960. It seems to me this affords clear proof that Federal funds have stimulated rather than suppressed private expenditures in medical research.

Most of these Federal funds have been appropriated for research and training related to specific diseases such as cancer, arthritis, neurological disorders, cardiovascular diseases, and the like. However, very sizable amounts have, of necessity, gone into study of basic medical and biological questions. Overall, the great bulk of the research up until now has been oriented toward laboratory rather than clinical phases.

As to results, a gathering such as this would know, far better than I, of the remarkable array of new concepts, drugs and procedures that have already come forth. You, better than I, know of the still greater advances which lie ahead simply because the greatest part of the work of the past decade has been of a fundamental nature and therefore provides the building material for tomorrow's new clinical developments and the substance of tomorrow's medical education. The research construction program has had the same effect on the physicial plants of our schools.

Now I must look at the other side of the coin. The very scope and vigor of our national research effort, not only in biology and medicine, but in many other scientific fields, has either created, intensified, or at least revealed certain problems.

It is easy for us to forget the national proliferation in these other fields of science, paralleling the growth in biomedicine, but involving vastly greater Federal funds. These other research interests of the Federal Government also have had to be advanced primarily through project grants and contracts, largely with the same institutions who are the mainstay of our health-related research.

I am sure you are familiar with the administrative problems; with the rigidities; and with the tendency toward creation of imbalances between research and teaching functions that have been reported from many institutions, as resulting from the volume of project research.

I have heard it said that our national concentration on direct project research grants and contracts carries an inherent danger of causing the universities to lose control over such factors as the relative emphasis their faculties shall give to fundamental versus applied research. Some authorities feel the very independence of many universities is threatened.

These possibilities are a matter of grave concern to my committee, as I know they are also to other segments of the Congress having similar interests in preserving a

healthy research and educational structure in our Nation.

As one approach to a redress of the present trend as it relates to medically oriented research, the Congress recently authorized NIH to explore methods for a new program of general research grants to universities and similar institutions. These general grants would augment rather than replace the project grant system. Our thought was that reasonably large sums made available for institutions to use as they saw fit, in meeting particular internal problems, would help them achieve their own institutional goals, objectives and standards of excellence.

The Congress has not yet approved the details of this new grants program. However, the principle is sound and the need seems to be well established. I am hopeful that something concrete will be forthcoming in the near future.

Another problem growing out of the emphasis on laboratory research during the past decade has been the need for more funds, facilities and projects for clinical research facility grants program was established last year by NIH as a result of recommendations by the Congress.

Totally, the program aims to provide support for a variety of basic and clinical research efforts on a broad variety of diseases and fundamental biomedical problems. The similar clinical facility programs of the NIH categorical Institutes are to be concerned primarily with a particular type or group of diseases, such as heart disease or cancer.

Behind the original congressional action were the considerations that (1) clinical research has been insufficient because of a lack of adequate means to provide the careful observation and control needed for research in the complexities of human biology; and (2) that valuable research in animals or chemical laboratories often has not been carried over into studies in human patients because of a lack of proper research facilities and conditions. One of the principal reasons for these deficiencies has been the high costs of clinical research.

A clinical research facility is defined as a resource within a medical institution, aimed at enhancing the quality and quantity of clinical investigations. It is a discrete physical unit or research ward of about 10 to 20 beds in a hospital, but apart from the general care wards, with a stable, well-trained nursing and dietetic staff to provide precise control and observation, and with directly supporting specialized laboratory facilities.

The grant funds pay for the renovation and equipment of the centers, the costs of the care of research patients (including specialized nursing, diet kitchens, and other services), supporting laboratories and certain staff salaries.

In those facilities, scientists can carry on coordinated investigations in a wide range of diseases and basic scientific problems. NIH cites as an example of such cooperative work, the problem of transplanting human tissues and organs. Advances in both the basic sciences, such as chemistry and immunology, and in the clinical sciences, such as surgery and internal medicine, are necessary before important advances can be made in transplantation techniques.

Good progress has been made in getting this clinical program under way. First-year grants averaging about a half-million dollars each have been awarded to 19 institutions in every part of the country. A number of other very promising applications is being studied by NIH and its advisory groups and action on these should be forthcoming soon.

AID TO MEDICAL EDUCATION

While not created by the large-scale investment in medical research, the third problem I wish to discuss was intensified by it. Furthermore, the continuation and future expansion of that research effort will be jeopardized if this third problem is not solved. And finally, full public benefit from the results of the medical research program will depend to a significant degree on how well that problem is solved.

I refer to impending deficits in both the quantity and quality of new physicians that our country must have if we are to maintain and improve our present high standards of medical practice.

Studies made by my committee and by other responsible groups over the past 2 or 3 years indicate that our medical schools are losing ground in the competition for superior college students.

During the current fiscal year approximately 10,000 predoctoral fellowships in the physical, life, and social sciences, psychology, engineering, the arts, humanities, and education will be awarded by four Federal agencies—the Department of State, the National Science Foundation, the Office of Education, and the National Institutes of Health.

These fellowships provide a stipend of from $1,800 to $2,500, plus $50 allowance for each dependent, and travel allowances. Full tuition is paid to the institution which the recipient chooses to attend, and in some instances an additional subsidy to the institution is provided.

We all know that college enrollments are rapidly increasing. However, the number of college students applying to medical schools has dropped at a time when the number of college graduates has been increasing. Furthermore, the quality of applicants is said to be decreasing. These trends offer a serious threat to the necessary increase in the number of physicians in the future. It is a threat also to the quality of future graduates.

Against this decline of medical school applications is the widely held belief that, today, this country has a relative shortage of medical manpower. We believe that shortage will become acute in the years ahead unless action is taken.

One of the several expert committees that have been studying this problem reported last year that it found four principal reasons for the impending physician shortage:

1. The tremendous increase in population in the past 20 years—from 132 million in 1940 to 180 million in 1960;

2. We have not expanded our production of physicians at a sufficient rate to meet the needs for medical care of the increasing population in an addition to the augmented needs for teaching and research;

3. The shift in the U.S. population distribution resulting in a greater percentage of the very young and very old who require the greatest amount of medical care;

4. The demand for health services resulting from our rising standard of living, wide expansion of hospital and medical insurance, and the increasing health-consciousness of our people.

In addition there are such factors as the great length and cost of medical training and the fact that many other satisfying and intellectually stimulating scientific careers with high prestige and adequate finanical reward have developed during the past 20 years.

This same study found the average cost of 4 years of medical school to be approximately $11,600 for those graduating in 1959. Since scholarship support has been meager, many students hesitate to shoulder a large loan, and the curriculum is so demanding that few students can carry a part-time job without considerable sacrifice of time needed for their studies. Thus the choice of medicine as a career has been to a considerable extent influenced by financial factors, and many promising college graduates who would have liked to study medicine have been discouraged.

To help remedy this situation it has become apparent to me that (1) the Federal Government must provide direct assistance to the teaching functions of medical and related schools; (2) that the Federal Government should supplement private, industrial, and State sources in providing scholarship, fellowship, and loan assistance to medical and dental students as it now does to Ph. D candidates in the basic sciences; and (3) it should relieve the serious financial and administrative imbalances between the research and teaching functions of the medical schools.

Several legislative proposals now being studied in the Congress are designed to meet these needs. I would like to describe very briefly my own bills which I believe would go a long way toward helping meet our national requirements in this area.

On January 25 of this year I introduced a bill which would provide for a 10-year program of grants for education in the fields of medicine and dentistry to be administered by the U.S. Public Health Service. Under this program each accredited degree-granting medical and dental school would receive a block grant of $100,000 each year, together with $500 for each student, plus $500 additional for each student enrolled in excess of average past enrollment.

For schools providing only 1, 2, or 3 years of professional training in medicine or dentistry, block grants of $25,000, $50,000, and $75,000, respectively, would be awarded. With these funds the schools could meet the costs of establishing, maintaining, or enlarging their teaching staffs and of maintaining, acquiring, and operating the necessary equipment.

I should like to emphasize that these funds are intended primarily to meet the costs of new or expanded instruction programs. Special training projects outside the regular curriculum which are financed with other public funds or private grants are excluded. The same exclusion applies to the costs of research and to the operations of any hospitals.

My bill applies a few conditions for institutional eligibility for Federal grants that I believe you will agree are entirely reasonable and desirable:

1. The school must be either a public or a nonprofit private institution located within the United States.

2. The school must provide reasonable opportunity for the admission of out-of-State students.

3. During the period it is receiving Federal payments, the school must make every reasonable effort to maintain its income for operating expenses from sources other than the Federal Government at a level equal to that which existed before receiving the Federal funds. In the case of a new school, similar efforts should be made to obtain such non-Federal operating income at the highest possible level.

4. The school will submit from time to time such reports as the Surgeon General may reasonably require to assure that these purposes are being carried out.

To advise the Surgeon General on the policies and regulations under which the program would operate, there would be established a National Council on Education for Health. The Surgeon General would be ex officio chairman and the Commissioner of Education an ex officio member. The council membership would include 10 leaders in the fields of health sciences, education, or public affairs. Four of the ten would be persons actively engaged in an appropriate field of professional education.

A companion bill was introduced by me on the day after the first bill was offered. This second legislative proposal is designed to provide Federal funds which would stimulate and supplement non-Federal scholarship funds for medical and dental students. Each State wishing to participate would es-

tablish a commission on medical and dental scholarships, or designate an existing agency to serve as the State commission. The commission would develop a plan covering certain broad eligibility requirements which are spelled out in my bill, and which stipulates that the annual stipend paid any individual would not exceed $1,250 of Federal funds or one-half the amount of the total awarded to the student. My plan also provides that, insofar as possible, 75 percent of Federal funds awarded the State commission must be used for medical and 25 percent for dental scholarships.

Another important requirement is that the State commission review annually the educational progress being made by each scholarship recipient.

To finance this program the bill calls for an appropriation of $5 million for the first fiscal year beginning July 1, 1961; $10 million for the next fiscal year, and an equal amount for the next 8 years.

The Surgeon General will be advised on policies, regulations and administration of this program by a National Advisory Committee on Medical and Dental scholarships. This group will include the Surgeon General, who shall also serve as Chairman, the Commissioner of Education, and 10 members appointed by the Secretary of Health, Education, and Welfare. Three of these shall be recognized authorities in the field of professional education, three shall be teachers or practitioners in medicine or dentistry, and four shall represent the general public.

Since my bills were introduced, others having the same general objectives have been proposed in response to the request made by President Kennedy in his health message of February 9, that over the next decade the capacity of medical schools be increased by 50 percent and of dental schools by 100 percent.

I am particularly impressed with a provision of one of these which would help expand teaching facilities of our medical schools by means of matching grants of Federal money for construction purposes. This provision follows in principle the methods under which the research facilities of the schools and universities have been helped to expand by Federal grants in recent years. This particular bill would also extend and strengthen this latter program of research construction for another three years, an action I heartily approve.

I believe the needs for strengthening the medical schools in their teaching function are so clearly apparent that this Congress will take affirmative action of some kind. Whatever that action may be, I will do all in my power to make certain that it does not lead to Federal control.

Now I would like to discuss briefly the impact upon graduate and continuing medical education of these existing programs of Federal aid to medical and biological research, including the recently initiated clinical research facilities program.

NIH and the American Hospital Association have recently completed part of a study on how much research is being conducted in hospitals throughout the country. They found that in 1958, over $125 million was being spent on research in more than 850 hospitals—1 out of every 8 in the United States. Twenty-three averaged $3 million a piece; 58 averaged over $1½ million; 62 averaged about $158,000 on research; and 145 were spending over $50,000 annually.

Now my committee has been told by experts that clinical research in a hospital setting is a very painstaking and precise matter. Care and study of the research patient demands much more of the physician-investigator, of the interne and residents, and of every hospital department than does the care of the usual nonresearch patient.

We also understand that the viewpoints and methods of scientific inquiry acquired by students and house officers participating in laboratory and clinical research enhances their ability to practice a superior kind of medicine throughout the rest of their professional lives.

The surprising amount of clinical research already in progress in hospitals and the large expansion now being undertaken should, in my opinion, not be overlooked in any consideration of the impact of research on medical education.

Of the same nature, but perhaps to a different degree, is the impact of the new knowledge resulting from these research programs on the continuing education of physicians having little direct exposure to the organized research process itself.

It seems to me their already difficult task of keeping up with the latest scientific developments in clinical medicine will become even more difficult. In this connection it would appear that more study should be given to improved and expanded methods of medical communications. I expect the professional societies and the medical centers will need to develop more and better kinds of short refresher courses and symposia; more extensive use of new educational media such as closed circuit TV programs may have to be explored.

All of these concerns would seem to be applicable in even greater measure to the schools in their need to keep their curriculums abreast of the rapidly expanding flood of new knowledge.

This brings me back to the need for direct Federal aid to the medical schools and to the greater numbers of superior students needed by medicine and the Nation.

I accept the proposition that medical research, medical practice and medical education are interdependent, and that anything affecting one in an important way will have discernible effects on the other two.

The medical research potential and performance of our country has been greatly enhanced, so much so that it bears little resemblance to what existed before.

With respect to medical practice, the new knowledge and tools coming out of that research already have added greatly to the physician's ability to help his patients. Still greater advances are in prospect.

Thus it follows that the third component—medical education—will have to be helped if we expect it to keep in balance with research and practice, and with the needs of our exploding population.

The Federal Government should not be expected to do the whole job. But it should do its share by reinforcing the efforts of the medical profession and the schools, the foundations and other important elements of our society having a direct interest in maintenance of medical education.

I am committed to the principle that teaching at every level and in every field of science must remain free of central domination. It must retain flexibility to meet rapidly changing scientific patterns and the particular needs of diverse geographical areas. Also, it must truly reflect the wishes of the scientific and academic community. All of these requisites are served best when governmental financial responsibility is shared by nongovernmental funds and interests, and is guided by nongovernmental advice. My bills stress this factor, and I believe, reflect the wishes of all who know the importance of maintaining the integrity of the teaching of medicine and science.

Fifteen years of experience with the NIH research grants, research training and research construction grants programs have demonstrated that Federal assistance need not bring Federal control. Instead, these programs have nourished freedom rather than restricted it. They have helped stimulate a volume, scope, and quality of medical research in this country that has no parallel in history.

By following the same principles I believe we can accomplish the same objectives in Federal aid to medical education.

I can conceive of no more appropriate setting than this city and this school of Rush and Morgan for a careful reexamination of our national methods and goals of furthering teaching and research in science and medicine. These men were physicians who not only helped form a new Nation and its first medical school, but were also participants, with men like Franklin and Jefferson, in laying the foundations for the age of reason and its superstructure, the age of free science pursued by free men in free institutions of learning.

The First Hundred Days in Foreign Affairs

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, May 15, 1961

Mr. KEATING. Mr. President, the first hundred days of the Kennedy administration have been interesting and in some fields very eventful. In the field of foreign affairs, no one can deny that the President has been busy.

Mr. President, I have here an excellent article by Paul Martin, chief of the Washington bureau of the Gannett News Service. It compares the first hundred days of the Eisenhower administration, when President Eisenhower forcefully outlined a program for peace, with first hundred days of this administration, when President Kennedy has been faced with an increasing number of difficult decisions, involving peace and war around the globe.

Mr. President, the new administration has the strong support of all Americans in any and all steps necessary to preserve our country's security, as soon as we hear what actions are going to be taken, what policies pursued to advance the course of freedom in this hemisphere, in Europe, and in Asia.

Mr. President, I ask unanimous consent to include in the Appendix of the RECORD the fine article of Mr. Martin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY'S 100 DAYS

(By Paul Martin)

WASHINGTON, May 3 (GNS).—The Kennedy administration started out with high hopes of being able to "get along with Khrushchev."

President Kennedy called for a new beginning in relations with Russia. In his January 20 inaugural message, he said: "Let us never negotiate out of fear—but let us never fear to negotiate."

The first exchange between the 43-year-old President and the 67-year-old Soviet dictator took place immediately after the inauguration.

It was carried out in Moscow by notes and diplomatic conversations when U.S. Ambassador Llewellyn Thompson held an unusual

2-hour conference with Khrushchev at the Kremlin on January 21.

Administration spokesmen told newsmen that word had been sent to Khrushchev that Kennedy would need a breathing spell of around 6 months to get his Government organized.

If the Communist tried to pull any fast ones in the meantime, it was said, the new Democratic administration would feel compelled to react more positively than the outgoing Eisenhower regime.

Former President Eisenhower said at Blue Springs, Ga., on January 24, that he thought Soviet professions of peace were insincere. It would be infantile to accept them, he said, until Russian words were accompanied by deeds.

During the 1960 political campaign, Kennedy was critical of Eisenhower for his handling of the Paris Summit Conference, personal diplomacy, "missile gap," Cuba, disarmament planning, and nuclear test ban negotiations.

Kennedy said he would have "expressed regrets" to Khrushchev over the U–2 spy plane incident.

After the change of administrations, the Russians returned the two American RB–47 fliers who were shot down July 1 over the Barents Sea, permitting Kennedy to make the announcement of their release at his first televised press conference January 25.

Ambassador Thompson was summoned from Moscow. The new administration began a high-level review of Soviet relations February 11. Parties to the White House discussions included Vice President Johnson, Secretary of State Dean Rusk, Roving Ambassador Averell Harriman, and Soviet experts Charles "Chip" Bohlen and George Kennan.

Since then, Kennedy has undergone a disillusioning process in relations with the Sino-Soviet bloc. It is the same kind of ordeal that former Presidents Truman and Eisenhower went through during the first 15 years of the cold war.

Eisenhower made a major foreign policy address to the American Society of Newspaper Editors on April 16, 1953, in which he called on the Soviets for "deeds, not words." Ike invited the Russians to join the United States in diverting resources from the arms race, to a war on poverty and disease. He asked: "What is the Soviet Union ready to do?"

Among other points, Eisenhower called for (1) an honorable peace followed by free elections in Korea, (2) an end to Communist attacks on the security of Indochina and Malaya, (3) an Austrian peace treaty, (4) a free and united Germany, (5) full independence for "captive nations" of eastern Europe, (6) step-by-step disarmament, (7) international control of atomic energy, and (8) a limitation or prohibiton of nuclear weapons.

Eight years later, most of these points have not been realized. But the Eisenhower speech was hailed at the time in many countries as a stroke which seized the "peace offensive" from the Soviets. Winston Churchill called it a "massive and magnificent statement."

Eisenhower said on February 25, 1953, he would be willing to meet Stalin any time or place if it would improve chances for world peace. The old Russian tyrant, who negotiated the wartime Yalta, Teheran and Potsdam agreements with Roosevelt and Truman, died on March 5.

Stalin was succeeded by a five-man Presidium headed by Premier Malenkov, and Deputies Beria, Molotov, Bulganin, and Kaganovich. Khrushchev was not even mentioned then, whereas none of the other five holds a position of power in the Soviet Union today.

When Eisenhower took office in 1953, the Communists had 40,000 Vietminh guerrilla fighters massed to invade Laos. The Vietminh radio said they would create a revolution in Laos and Cambodia, to bring about Communist control over all of Indochina.

In the 3 short months that Kennedy has been President, he has been confronted by major foreign policy crises in Cuba, the Congo, and Laos. And the Russians are acting just as truculently about negotiating a nuclear test ban agreement at Geneva as they did with Eisenhower.

The President has issued a series of stern warnings to Khrushchev. He warned the Russians at his February 15 press conference that the United States would defend the U.N. Charter by opposing any attempt by any government to intervene unilaterally in the Congo.

It was disclosed in March that the United States would have to absorb virtually the entire costs of the U.N. Congo operation, including $50 million for 1960 and an estimated $120 million in 1961, since the Soviets, France, and Latin American countries refuse to pay their share of the U.N. apportionment.

With maps and charts at his March 23 TV conference, Kennedy warned Russia that the United States would not tolerate the loss of Laos to the advancing Communist Pathet Lao rebels.

On April 3 the administration issued a white paper on Cuba written by Harvard historian Arthur Schlesinger, Jr., under Kennedy's personal direction.

This document called the Castro regime "a Soviet satellite," said Castro was "a clear and present danger" in the Western Hemisphere, urged Cuba to "sever its links with international communism," promised "full and positive support" to any future democratic government in Cuba.

After a poorly planned and inadequately supported invasion of anti-Castro Cubans resulted in failure, Kennedy made a speech to the ASNE on April 20 in which the President said:

"Our restraint is not inexhaustible; Cuba must not be abandoned to the Communists, and we do not intend to abandon it either; we and our Latin friends will have to face the fact that we cannot postpone any longer the real issue of survival itself."

There are no indications that these Presidential warnings have intimidated or deterred Khrushchev.

One month after the 1960 election, the Communists resumed a march in Asia that was halted by the Korean war and the 1954 Geneva agreement partitioning Indochina.

Soviet planes began supplying arms and ammunition to Communist rebel forces in Laos by airlift from the Vietnam stronghold at Hanoi.

The British Ambassador in Moscow on January 21, with approval of the Kennedy administration, submitted a proposal to the Kremlin to call a cease-fire and convene a new 14-nation conference similar to the 1954 Geneva meeting.

Communist pathet Lao forces continued to gain, while the Soviets delayed a reply. On March 10, nine battalions of Red troops launched a major offensive in central Laos.

The New York Times reported massive shipments of Soviet arms to the rebels, including heavy artillery, armored cars, machineguns, mortars, and ammunition, accompanied by North Vietnamese military advisers.

By March 18, the Communists had advanced to within 22 miles of the royal capital at Luang Prabang.

Kennedy ordered an increase in U.S. military aid to Laos. The decision was taken at a series of White House meetings March 20–21, including Vice President Johnson, Secretary of State Rusk and Undersecretary chester Bowles, Defense Secretary McNamara, CIA Director Allen Dules, and Chief of Naval Operations Adm. Arleigh A. Burke.

The President flew to Key West, Fla., to meet British Prime Minister Macmillan on March 26. Kennedy returned to confer with Soviet Foreign Minister Gromyko at the White House the next day. U.S. intentions of supporting the Lao Government were impressed on Gromyko.

Rusk flew to the SEATO Conference at Bangkok, March 27, 28, and 29. The Philippines, Thailand, and Pakistan strongly supported the United States, but Britain and France opposed taking military action in Laos. The Conference issued a communique saying vaguely that if peace efforts failed, SEATO members would "take whatever action may be appropriate."

The Russians finally replied on April 1 to the British note of January 21. They agreed to an international conference, failed to say when a cease-fire would take effect in Laos, claimed that the question of a future government was an internal matter for the Lao themselves to settle.

The Communists recognize the former neutralist premier, Souvanna Phouma, who recently visited Moscow, Peiping, and Hanoi, but turned down an invitation to come to Washington. A coalition government would likely turn Laos into another Communist state.

By the end of Kennedy's first 100 days, the Soviets, still talking peace, had not agreed to a cease-fire in Loas, nor a nuclear test ban at Geneva, nor an end to Communist subversive activities in Latin America staged from Castro's Cuba.

The President was faced with the dilemma in southeast Asia of (1) yielding territory to the Communists in an area the United States is pledged to protect, or (2) getting American Armed Forces involved in another Korean-type war.

Kansas Firm Thanked for Space Role

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Kansas City Kansan of May 5, 1961.

The article relates the role played by the Midland Manufacturing Co. in America's recent successful man-in-space venture. I am proud that this firm in my district was associated with the effort, and am pleased to call this article to the attention of my colleagues:

MIDLAND THANKED FOR ROLE IN FLIGHT

Midland Manufacturing Co. here, which made crystals used in radios and rockets on Comdr. Alan B. Shepard's space capsule during his history-making flight, has received congratulations for its contributions to the space effort.

The firm, at 3155 Fiberglas Road, in Fairfax, supplied highly specialized crystals to the Motorola Military Electronic Division at Scottsdale, Ariz. Motorola built the receiver and transmitter for the space capsule.

Harvey Humann, Midland manager here, said, "We provided them with very specialized, highly rugged units that take much shock and vibration." He said Midland crystals also were used in the controls of the space capsule's retro rockets, used to guide it back into the earth's atmosphere.

"The crystals are not production items, they are made by technicians in our laboratories here, and were designed by our engineering department," Humann said.

He added that Midland has supplied crystals to several contractors working on Project Mercury for the National Aeronautics and Space Administration.

Congratulations to Midland were sent by Motorola, which in turn, had been thanked by NASA officials.

The 1961 Minutemen

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, in an article by Earl Mazo, in last Saturday's New York Herald Tribune, the President wired the 14th Annual Convention of Americans for Democratic Action that their members are "today's minutemen." In today's New York Herald Tribune, under AP dateline of May 14, it is reported that this same convention adopted a resolution calling for "immediate initiation, together with our allies, of negotiations toward diplomatic recognition of the Peiping regime and its accreditation to the United Nations as the Government of China."

History informs me that the minutemen were patriots who were willing to bear arms immediately to annihilate tyranny. The ADA wants to embrace tyranny. Perhaps the President should reread his history or stop referring to the ADA as "today's minutemen":

START TO OPEN PEIPING TIES, ADA URGES—HIT KENNEDY ON JOBS AND PLANS FOR GROWTH

WASHINGTON, May 14 (AP).—Americans for Democratic Action today urged a start toward recognition of Red China and described as inadequate the Kennedy administration's employment and economic growth plans.

The ADA adopted a resolution calling for "immediate initiation, together with our allies, of negotiations toward diplomatic recognition of the Peiping regime and its accreditation to the United Nations as the Government of China."

Concerning domestic matters, the self-styled liberal organization said it sees the new administration "drifting into the worst mistakes of the Eisenhower years—that is, improvisations for segments of the economy without adequate regard to long-range requirements of full employment and economic growth."

LONG-RANGE OBJECTIVES

The ADA resolution then recommended a number of long-range objectives, including "expanded support for negelected segments of the economy, notably, housing, urban redevelopment, water conservation, depressed areas," and "constantly expanding consumer purchasing power for a rising standard of living."

Before adjourning its 14th annual convention, the group reelected Samuel H. Beer, Harvard professor, as chairman; Mrs. Franklin D. Roosevelt, as honorary chairman; Richard C. Sachs, New York, treasurer; Roy Bennett, New York, assistant treasurer, and Paul Seabury, University of California professor, as chairman of the executive committee.

The Red China resolution said recognition of the Peiping regime and its accreditation to the U.N. should not be done "as gestures of moral approval of its past actions but as a means of establishing the normal channels of international communications."

TO INCREASE DATA

"Such steps would increase our access to information on Chinese affairs and the possibility of affecting Chinese foreign policy," the resolution added.

Concerning Formosa, the Red China resolution said:

"The admission of China to the United Nations should be linked to the condition that the inhabitants of Formosa shall themselves democratically decide whether they shall be admitted to the United Nations as an independent nation or that they shall rejoin mainland China."

The resolution added that "recognition of Communist China and its accreditation to the United Nations does not mean abandonment of Formosa."

"Until a U.N. solution is reached," it added, "the United States of America's treaty pledge to defend Formosa would be unaltered, with the explicit understanding that this pledge does not include the defense of Matsu and Quemoy." These are islands a short distance offshore from Red China.

KENNEDY TO A.D.A.: COUNTRY'S LIBERALS ARE 1961 "MINUTEMEN"

(By Earl Mazo)

WASHINGTON, May 12.—President Kennedy today proclaimed liberals to be the Nation's "Minutemen leading the way" to peace, progress, and the good life in the space age.

Only a "progressive America" can master this era's national and international challenges, added the Democratic Chief Executive, who at one time or another has been characterized by various political friends and foes as a "liberal," a "conservative," or a "moderate."

Mr. Kennedy's salute to America's liberals was in a message to the 14th annual conventional of Americans for Democratic Action, a national organization of anti-Communist liberals. It was distributed at a press conference by Samuel H. Beer, the A.D.A.'s national chairman. A Harvard history professor, he was hailed by President Kennedy as "my good friend Sam Beer."

HAILS ADMINISTRATION

For his part, Mr. Beer pronounced the Kennedy-Johnson administration "a brilliant, progressive administration."

"I like very much all they are doing," said Mr. Beer, "but there is much more to be done."

The spirit of good feeling that pervaded the session seemed to extend even to Vice President Johnson, who has stated that he would feel "uncomfortable" having the A.D.A. on his side.

Principal speakers at the 3-day convention will be Arthur M. Schlesinger, Jr., a Kennedy adviser on the White House staff, and Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, majority whip in the Senate. Both are national vice-chairman of the organization.

In his personal word of greeting to the delegates, Mr. Kennedy stated, in part:

"You are meeting at a time of unprecedented danger, not only to our Nation but to the democratic way of life. As the danger is great, so also must be the efforts we make to meet and master it. For if there is one thing that is certain it is that this is no time to stand still; rather it is a time for movement, for action, for change, and thus for liberalism.

CALLS FOR "MOMENTUM"

"With liberals as today's minutemen leading the way, it is high time to recover the historic momentum of the American Revolution—the democratic social revolution as against the revolutions of nihilism and totalitarianism.

"We must build a society in which no one is held back by race or religion. We must create a healthier and stronger world community by supporting democratic development and changes everywhere. We must push forward relentlessly to achieve just and lasting agreements which will reduce the threat of nuclear war.

"There are risks and costs to a program of action. But they are far less than the long range risks and costs of comfortable inaction. A progressive America—and only a progressive America—can refute and roll back the challenge of Communist totalitarianism and rise to the challenges and seize the opportunities that surround us all today."

Emptiness

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. KEFAUVER. Madam President, on Sunday, April 30, I was privileged to attend the morning worship service at the First Baptist Church of Newport, Tenn., and to hear a challenging sermon by the pastor, the Reverend Harold A. Collins.

Taking his text from Matthew 12: 43–45, the Reverend Mr. Collins spoke about "Emptiness"—that great void in the lives of many Americans who, chained by materialism and transitory comforts, lack the will to take their stand on the side of right in the crucial battle between Christian and Communistic ideals.

I ask unanimous consent that the text of his sermon be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

EMPTINESS

(By Dr. Harold A. Collins, First Baptist Church, Newport, Tenn., April 30, 1961)

Matthew 12: 43–45.

Isn't there a strange feeling when one examines an empty house? My, how soon they get that "rundown look" and actually deteriorate. Ugly weeds take the yard, spiders knit their amazing webs to shade the windows, insects and rodents take over the house.

Jesus described the dangers and wretchedness of an empty life with the analogy of an empty house. A man just can't go on living when he is empty—he must be filled with something. And the truth is that unless he is filled with righteousness and goodness, evil will rush in to the vacuum like water rushes to a lower level. A vacuum is a dangerous situation. Weather experts explain twisters and foul atmospheric conditions as a situation where a near vacuum and a low pressure area develop. There is a rushing of winds with changing temperatures into the empty area.

An empty mind, an empty heart, an empty life react like an empty house. Such a life is potentially dangerous.

Politically, much of the unrest and danger in our world today are due to the vacuum created by World War II. Prior to that war, evil men had seized control of the masses of people. In the war those leaders and governments were removed. The national houses were swept clean, but nothing with

strong moral and spiritual principles replaced them. Communism found a vacuum throughout much of the world, into which its evil ideas and powers flowed. Wherever there is emptiness: empty stomachs, empty wallets, empty heads, or empty hearts, the Reds move in quietly and effectively. Now the United States has been aware of the dangers of empty stomachs and wallets and has spent billions of dollars in economic aid for needy countries. Yet much of the aid never reached the neediest people. Greedy government officials in the aided countries drained much of it into other canals. And when our aid reached the needy in those countries, the United States received little credit, most of it going to some local political party in power.

However, we are now realizing that filling stomachs isn't enough. We have done little to fill their empty minds and hearts with something they can live by, hope in, and cleave to. Into these empty minds the Communists have poured their doctrine and propaganda. With every loaf of bread they gave, went a book to read on communism. We in the West have not shouted our beliefs. One could conclude that we have none of which which are proud. On the other hand, a few Reds believing something and preaching something, even though it is based upon a denial of God, have overwhelmed the drifting majority of the masses. This always happens. Only a few do the real thinking for the masses, even in democracies, and a very few who really believe something can win the drifting masses.

There are at least two actions that the free world must take immediately if it isn't already too late. One is to unmask the Communist lie. The truth and reality of communism must be made plain to the whole world. Communism in its basic philosophy is evil. God is denied. Yet they preach a classless brotherhood and a comradeship of man. There can be no brotherhood of man if there is no fatherhood of God: There can be no real freedom, truth, love, and respect apart from a holy God who has created and is running a moral world. True, the Communists speak of truth, trust, honor, and welfare. But these things are not the same things to the free countries. To the Reds these things are relevant; they get their basic meaning from their relationship to the Communist state. Ours come from our understanding of the one true God as revealed in Jesus Christ.

Of course, the denial of God is the basic evil of communism. The second evil in importance is the denial of individual worth and rights. The latter thought is tied directly to whether there is a belief in God. Even in a democracy there is no natural power for the right consideration and treatment of the individual. This power comes from God. Take Christian principles away from our democracy and nothing that is lasting is left. In all Communist writings nowhere does one find real significance for the individual. Everywhere he is a number in the masses, a member of the party, and has value only as related to the state. In communism the individuals exist for the state; in democracies the state exists for the individuals. Karl Marx, himself, in the first volume of "Das Kapital" wrote: "I speak of individuals insofar as they are personifications of economic categories and representatives of special classes of relations and interests."

We in America have not been in the exposing business when it comes to this evil that has already engulfed about a half of the world. We are afraid of being prejudiced, of being bigoted, of being unfair. But when a building is on fire, or an evil beast is stalking a helpless child, you do not think in terms of prejudice and fairness to all things involved. Christianity is positive in its approach, but t is also committed to fight evil wherever it is. The Apostle Paul wrote: "Put on the whole armor of God that you may be able to stand against the wiles of the devil. Take and use the sword of the Spirit, which is the Word of God. We fight not against flesh and blood, but against principalities and powers, against the spiritual hosts of wickedness in high places" (Ephesians 6: 10 ff).

We in America have been treating communism about like we treat alcoholic beverages. We do not think beverage alcohol is very bad. Why, it does have some good qualities like relaxing troubled minds and nerves, dialating the restricting blood vessels, making for real comradeship and fun. But suddenly the liquor seizes and enslaves the social drinker. Millions are having both their own lives and the lives about them destroyed by this evil. Yet we do not want to be narrowminded, and, consequently, we do not take a positive stand against it. We do not stand against anything that is evil; we just make a big joke out of it and let it have its way.

It is that way about communism. We say: "Let the people decide for themselves," and little do we realize that the masses of people cannot even read and write. They hear but cannot detect the lies of communism. And the greatest tragedy is that we make little effort to point out these lies to them and to tell them about democracy, freedom, and the value of the individual. Only after we have made these Christian principles plain to them, can we say "now let them decide for themselves." If all they know is communism, they have nothing to decide between.

The second action for the democracies is to flood the world with what we do believe. We believe in the worth of the individual. But it isn't enough just to believe it. We must preach this belief and our other beliefs to the masses of the world. We believe in the sacredness of human personality—the individual who laughs, cries, doubts, and hopes. We believe every person has the right to dream his own dreams, to work out his own life, to choose his own profession, to meet at will with his friends and neighbors, to speak what is on his mind without fear, to worship God as he pleases, and to criticize his government and leaders without fear of death. These beliefs are basically religious; they are born in the Fatherhood of God. Our Declaration of Independence does not talk about mere human rights—it talks about human rights endowed by our Creator. This is the difference between communism and Americanism — Christian principles! These principles underly the whole concept of our democracy.

The individual is of supreme value because of the conviction that all men are significant in the eyes of God. We believe that the voice of wisdom may often come from ordinary men and not only from the expert. This is based on the belief that God's Spirit is given to all believers. We believe that government can only be by free discussion in which all views can be expressed and heard. We believe the rights of the multitude must be respected. This doens't mean that the minorities are allowed to do whatever they like. It is a denial of the infallibility of the 51 percent.

These are beliefs that are very important. We must invade the entire intellectual world with them.

Charles Malik, Foreign Minister of Lebanon, has pointed out this failure. Said he to America: "You have in your traditions certain invaluable beliefs about man, society, history, human destiny, and the nature of God, beliefs that you should not be ashamed of. You should export them to the world. You export material goods, but not ideas and beliefs. First you must rediscover them yourselves and believe in them profoundly. The Communist believes in communism and honors it by exporting it. My fear is that you may not know the infinite value of your civilization and that you don't believe in them strongly enough to give them to the rest of the world."

Finally, before we can sell these beliefs to the world, we must show the peoples of the world that we practice what we preach. The church should encourage a devoted patriotism at all times. Yet the church cannot encourage a nationalism that justifies "my country, right or wrong."

There is no doubt that all too frequently we have made ourselves the laughingstock of world opinion for having so many contradictory practices. There are our frightening crime rate, our social injustices, our obsession with sex as portrayed in obscene and pornographic materials and cheap motion pictures exported to the world. There is our exaltation of things material, our strange standards of success. Isn't this true that if these practices continue unabated, it will be unnecessary for communism to wage either cold war or hot war against us. We will fall apart from within. We will rot to death.

How empty are our lives? Only God can fill the emptiness of individual lives and of the world. Only God can help us and save us. Only God can dispel the closed room, the dead end, the empty feeling.

Let's learn from Thomas Calhoun Walker, who was born a slave in 1862. He had everything against him, but he grew up to be a fine lawyer and citizen. He tells about when freedom came after the war. His family lived in a little shack and knew extreme poverty. He says that he would often be awakened during the night by his father praying so very earnestly that he almost shouted. He prayed: "O God, please take care of my chillun, 'cause I don't know how."

None of us know how to take care of our children, our brethren, our country. God can help us. Let's ask Him.

Pennsylvania Is Meeting Its Responsibility in School Construction

EXTENSION OF REMARKS
OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. GOODLING. Mr. Speaker, yesterday it was my privilege to address a group of students, teachers, parents, educators and other citizens of one of the communities in my district of Pennsylvania. The occasion was the dedication of a new high school at York Springs, in the Bermudian Springs Joint School System.

Because I, as a former schoolteacher, and school director for many years, feel very strongly on the subject of school and education, I ask consent that my address be made a part of my remarks in the Appendix of the CONGRESSIONAL RECORD.

ADDRESS OF HON. GEORGE A. GOODLING AT DEDICATION OF HIGH SCHOOL, BERMUDIAN SPRINGS JOINT SCHOOL SYSTEM, YORK SPRINGS, PA., SUNDAY, MAY 14

I think it significant that you dedicate this building on the day we honor the mothers of America.

The mothers and schools of today will pretty largely determine the shape of the world tomorrow.

One hundred years ago, April 12, 1861, members of the Confederate Army shelled Fort Sumter. Recently I was privileged to visit Charleston, S.C., and this fort which became the first target in a tragic era of civil conflict and hatred—which, unfortunately, did not end with the surrender at Appomattox, on April 9, 1865. Adams County bears mute testimony to this strife since many regard the Battle of Gettysburg as the turning point of the war.

The years 1861 to 1865 were years of crisis. Since that time we have had similar critical times: 1914–18 and the First World War; 1941–45, the Second World War; 1950–53, the Korean conflict. Today we are living through a continuing, highly tense cold war with Russia, Communist China and Socialist Cuba.

We have achieved a remarkably high level of scientific and technological knowledge—for peaceful as well as warlike purposes. How we use this knowledge will depend pretty largely on you and me. With every scientific advancement, life appears to become more complex and highly mechanized. We use our cars to drive a block. Our children are transported to schools. Electrical appliances tell us when to get up, furnish music in the process, perk the coffee while we shave with an electric razor, tell us when the evening roast is cooked to our specifications, stop the washer when the clothes are clean, show us what others are doing on our TV screen, heat our houses, cool our food and drinks; jet airplanes transport us at 600 miles per hour, and so it goes.

Six days ago I stood within 3 feet of the man whom we know definitely and without any question of doubt whatsoever, was in outer space and returned safely. A prior claim by another country has never been fully substantiated to the satisfaction of some of us.

The splitting of the atom was the first step in the preparation of the atom bomb—a device which could either destroy all mankind or result in undreamed of technological advances. With each advance tensions rise and it will require all of our intelligence, conscientiousness, and strength to avoid war and with it, the possibility of total annihilation.

How will we meet this challenge and what bearing do wars, spacemen, and atomic bombs have on dedicating a new school building? Each can have a tremendous impact—not only on Adams County and the United States but on the entire world. All are involved in these new discoveries and the accompanying threats to our lives and well-being. Those of us who are older are attempting to deal with the world's problems of today, but age ultimately takes its toll and others take our places. This school has been construoted for one purpose—to better prepare those who follow, to meet life's many challenges and obstacles, and I predict these challenges will multiply with each advance in knowledge. This high school and the adult community of the Bermudian Springs school system have the responsibility for training students to better meet these challenges.

This new structure is another expression of our American ideals and traditions. We believe that obtaining an education is the privilege of every American, regardless of race, creed, or color. John Adams, our second President, expressed the views of most of us when he said: "The education here intended is not merely that of the children of the rich and noble, but of every rank and class of people, down to the lowest and poorest. The revenues of the state would be applied infinitely better, more charitably, wisely, usefully, than even in maintaining the poor. This would be the best way of preventing the existence of the poor."

Theodore Roosevelt expressed a similar sentiment: "From the lowest grade of the public school education in this country is at the disposal of every man, every woman, who chooses to work for and obtain it. Each one of us, then, who has an education has obtained something from the community at large for which he or she has not paid. The man who accepts it (education) must be content to accept it merely as a charity unless he returns it to the State in full in the shape of good citizenship."

Public education has expanded from an isolated, poorly supported concept to a nationwide system controlled by each individual State and I might add, parenthetically. I trust the individual State concept will remain.

After spending half a lifetime in some phase of public education, I become intensely weary and my blood pressure rises on many occasions when calamity howlers, for political expediency or for some other personal or selfish reason that cannot be justified, continually condemn our system of education. Their remarks are an insult to every loyal, conscientious administrator, classroom teacher, and school director. I want to be the first to admit our system is not perfect, but what, I ask you, is?

I like a phrase coined in the last political campaign—"A record is not something on which to stand but on which to build." You people in education have compiled a good record but, that is not enough. You must and will, move forward.

In January I was driving from Washington to my home. It was the day on which an educational task force appointed by the President, made its report. The chairman of the committee, Dr. Hovde, president of Purdue University, was being interviewed on radio. He remarked quite casually that a Federal outlay of $2½ billion per year would be required to give American education a significant uplift. What that significant lift should be, he did not say. When asked how the committee proposed to raise this money he replied even more casually, they had not gotten around to that.

Sometime later Governor Lawrence was quoted as having said, and I quote: "We must come face to face with the chaotic, frequently obsolete, educational system which surrounds us." Just when did the Governor become an authority on public education? He also quoted Dr. McMurrin, U.S. Commissioner of Education, as having "called many of our schools flabby and soft." I should like to ask the educators present, what is a soft and flabby school?

This week a publication, Decade of Experiment, came to my desk. It is a report of the Ford Foundation for the Advancement of Education. The following is the first sentence in the publication: "In the middle of the 20th century the American educational system—a distinctive feature of our democratic life and one of which we have been traditionally proud—finds itself in crisis."

On the opposite page is a statement made by Walter Lippmann in 1954: "Our educational effort today is still in approximately the same position as was the military effort of this country before Pearl Harbor."

To what period do these dispensers of gloom refer? A product can only be evaluated after it has been tested. The end product of every school system is its citizens. Ten, fifteen, or twenty years from now an honest value can be placed on your efforts here today and in the days to come. Didn't the school systems of a decade or two ago produce the Alan Shepards and thousands like him? Let's quit being calamity howlers and talk of accomplishments.

This building has been erected to meet the demands of an ever-increasing school population as well as to improve the standards of the education being offered. A phenomenal growth on high school population has recently occurred. In 1905 one-third of those enrolling in grade school entered high school and only about 9 percent of an age group graduated. By 1930 over 75 percent entered with 45 percent graduating. Today those figures are higher.

There are reasons for this change. The non-high-school graduate has a difficult time finding employment. Our expanded courses such as vocational education, tend to keep students in school longer because they realize in this days of automation some knowledge of mechanization is essential.

The little red schoolhouse was a landmark and served a distinct and useful purpose in a pioneer society in thinly populated areas.

However, with the tremendous growth of urban areas, a complete revamping of our school system seemed desirable. Smaller districts were consolidated and were thus able to offer advantages not possible previously.

Larger units in themselves do not necessarily mean improved education. It does mean an expanded curriculum, easier administration and better physical facilities. Stone and mortar do not make a school. You now have the physical facilities and it becomes the responsibility of teachers, administrators, students, parents and that maligned group of men who have a thankless job and whose reward comes only in the knowledge of a job well done—and I mean school directors—to provide the best education possible for the children of this community. In building a better educational system here, you make your contribution to a better America—this in turn, helps build a better world. The starting point for all of this is the individual citizen and that citizen dare not be a mediocre one of he is to make his contribution to society. He must be equipped to take his place in an extremely diversified world and become a conscientious, contributing citizen. He must maintain a vital interest in all that occurs around him.

Someone has said, "the success of democracy rests on wise citizen participation in public affairs and on respect for the individual wherever his talents lie."

My experience in Washington sometimes makes me fearful there are those who would take away our individual freedoms and rights and in their place substitute rule from a central point. We do not want all roads leading to Washington. That day can come only if we fail to exercise our God-given rights and remain strong as individuals.

We are still a relatively new country and the opportunities for discoveries and advancement have never been greater. To meet the mounting challenges, we must produce citizens capable of maintaining the strength and integrity their country demands. This can only be accomplished if all take advantage of educational, social and political opportunities offered. This school, and every similar one throughout this great State, is another indication of our vast resources available to interested individuals, and may I remind you all this has been done at the State and local level and I trust will continue to be done in that manner.

Our hope and future strength lies in an educated populace which will form an intelligent, dedicated citizenry.

May I wish you, citizens of this community, parents, teachers, students, members of the school board, good fortune and success in all your endeavors.

An 18th Century Ideal in a 20th Century World

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. BEALL. Mr. President, on May 5, 1961, Hon. Theodore R. McKeldin was installed as an honorary member of the Clarence Darrow Chapter of the Phi Alpha Beta fraternity of the University of Maryland Law School. In addressing the chapter, the former Maryland Governor chose as his topic "An 18th Century Ideal in a 20th Century World."

The ideal, in this case, is the first amendment to the Constitution.

Too often we lose sight of the principles upon which our country was founded. In this troubled world, we tend to see only our weaknesses. Governor McKeldin's words are reassuring and give us cause to look back with pride on the principles which have helped make the United States a great Nation.

I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN 18TH-CENTURY IDEAL IN A 20TH-CENTURY WORLD

Address of Hon. Theodore R. McKeldin, Governor of Maryland, 1951–59, Clarence Darrow Chapter, Phi Alpha Delta Fraternity, University of Maryland Law School—Installation as Honorary Member, Officers Club at Fort Meade, Md.

Ideas no less than men, have their time and pass. They are born, flourish for a season, lose their vitality with the passage of time, grow more and more feeble, and die.

We see this plainly enough as regards trivial ideas—Davy Crockett caps, Elvis Presley haircuts and similar fads—but it is also true of profound philosophies and theological systems. They pass much more slowly, but they pass.

It is therefore no sacrilege but, on the contrary, an act of reason and prudence to take a fresh look, from time to time, at the ideas that we have inherited from the past, including those that we customarily take for granted as fixed and eternal.

Take, for example, those early amendments to the Constitution that we are accustomed to describe as the Bill of Rights. Ten amendments were adopted and came into force together in 1791, 2 years after ratification of the original Constitution, but of the 10 only 8 comprise the Bill of Rights; the 9th and 10th merely clarify the reservation of powers not granted in the Constitution.

There is no question as to the value of these amendments in 1791. They were demanded by public opinion at the time, and without a solemn promise that they would be added the Constitution would never have been ratified by nine States; so in a sense it is true that the Constitution itself was brought into being by these amendments.

However, this is 1961 and a great many ideas that had vital force in 1791 are now dead and gone—for instance, the idea that it was lawful to assert property rights over another human being, and the idea that a man could vindicate his honor by shooting a detractor in a duel. It is a legitimate inquiry, therefore, to ask how the ideas set forth in the Bill of Rights have stood the test of a hundred and seventy years. Are all, or any of them still valuable enough to make the very existence of the Government hinge upon their support?

First, let us examine these eight propositions, stripping away the legal verbiage and considering only their substance.

They are first, freedom of worship, speech, press and assembly.

Second, the right to keep and bear arms.

Third, freedom from the necessity of keeping soldiers in a man's house.

Fourth, freedom from arbitrary searches and seizures.

Fifth, freedom from prosecution except after indictment by a grand jury, with no double jeopardy, no forced self-incrimination, no punishment except by due process of law, and no confiscation without compensation.

Sixth, the right to speedy, public trial by jury at home with witnesses for both defense and prosecution compelled to appear, with all counts in the indictment clearly stated, and with the right to counsel.

Seventh, the right to trial by jury in civil suits, the jury to be the final judge of the facts.

Eighth, no excessive bail, nor cruel and inhuman punishments.

One thing stands out conspicuously in all eight propositions. It is a deep suspicion of all government, including the American.

Bear in mind, if you please, that this was the generation that had formed the American Government. The Constitutional Convention had labored hard and long to make it a perfect government. The convention was the most brilliant collection of political thinkers ever assembled on this continent, and one of the most brilliant ever assembled in the world. If any group of men were ever capable of forming a perfect government, that was it; yet they were so little satisfied with their work that 16 of their number failed to sign it, and the rest did not oppose the adoption of further articles specifically forbidding the Government to practice the outrages enumerated in the first 8 amendments.

Was the generation of 1791 unduly suspicious? Complacent patriots say yes, and cite the fact that the American Government has been reasonably trustworthy for the better part of two centuries. Granted; but how much of its decency was due to the bridle and curb that the Bill of Rights put upon it?

The best answer to that is to look around at other nations that also have overthrown monarchy, but without putting similar restrictions on the governments that have replaced the kings. The survey is not reassuring. In country after country, in Germany, Italy, Russia, Spain, China, and a dozen smaller nations it has been demonstrated that 20th-century governments are quite capable of repeating the tryranny of Nero at his worst. The injustice and cruelty of absolute power have not changed in all the centuries that history has been writen. Nor should we lay the flattering unction to our souls that we Americans are by nature better than others. Occasionally the law has broken down in this country; and when that happens an American mob can be just as vicious as a mob in any other country. If American officials could escape the control of law there is little reason to doubt that they would be as bad as Nazi brown-shirts and Russian secret police.

The mere fact that we are living in the 20th century is no proof that safeguards against domestic tyranny are useless.

But granting that some safeguards against arbitrary power are still needed, what about the specific safeguards mentioned in the eight amendments?

As a matter of fact, one has been pretty well abrogated. The right to keep and bear arms has been sharply restricted, not by the National Government, but by State and local governments through the police power. But the restrictions apply to small arms that would be of little use against the Government anyhow. The kind of arms the writers of the amendment had in mind cannot be kept and borne by a private citizen because they are too big and expensive—imagine trying to keep a tank, or an antiaircraft gun on private premises.

Of the other seven, one, freedom from having soldiers quartered in one's house, has not been tested, because the necessity has not arisen.

Six remain, of which five are concerned with securing the right to a fair trial of persons accused of crime. There can be no doubt that these sometimes help the guilty to go unwhipped of justice; but they were based on Blackstone's dictum, "It is better that 10 guilty persons escape than that one innocent suffer." It is a sound dictum, because when one innocent person suffers the law itself becomes guilty; and when the law loses the respect and confidence of the people, all government collapses. As society grows more complex, equal justice becomes more difficult, and these safeguards do not lose, they gain importance.

This brings us to a single article of the Bill of Rights, the first. It guarantees freedom of worship, speech, press and assembly, but I shall waste no time today talking of the value of those rights. Instead, I invite your attention to the way in which they are guaranteed. The first amendment decrees that on certain subjects "Congress shall make no law." This is a tremendously important phrase. As touching conscience and opinion, Congress shall not make even good law. As touching freedom of speech and assembly, it shall make no law abridging either, but as touching men's beliefs and opinions it shall make no law at all, good, bad, or indifferent.

If Congress can make no law, the executive can enforce none, the judiciary can interpret none. All three branches of the Government are forbidden to enter this field. It is an area of life into which the jurisdiction and authority of the United States do not extend. For his beliefs and opinions an American citizen is accountable to no earthly power, but to God alone.

This idea, that there are parts of a man's life over which no Government, not even a democratic Government established and maintained by the people, has any just power is the very heart and soul of American freedom; yet it was not originally an American idea. As Lord Acton pointed out long ago, when Christ said, "Render unto Caesar the things that are Caesar's, and unto God the things that are God's," he drew the distinction. Deciding which things are Caesar's and which are God's is a matter of detail; the important thing is that Caesar does not possess all, and when he attempts to seize all, he becomes a tyrant and should be resisted by all who are resolved to be obedient to God.

Here is the fundamental principle of the Bill of Rights. You could destroy the other seven amendments completely, but if you leave this one, sooner or later all the others will be restored; but abandon this one and all the others will eventually fall because they will have no solid foundation in logic and reason.

When we, the people of the United States, said Congress shall make no law about even one subject, we asserted the dignity of the individual against all princes, potentates and powers of this earth; and it is upon the dignity of the individual that the whole concept of political freedom rests. To maintain social order in a crowded world we are compelled to yield much of our freedom of ac-

tion; but while we retain freedom of thought and freedom of speech, we are not the slaves of Caesar.

As regards any other item of the Bill of Rights, while I have strong opinions, I am willing to debate the matter. I am willing to concede that the importance of the other articles varies from time to time. The right to keep and bear arms, for instance, is obviously not as important today as it was in 1791; and the right to keep soldiers out of the house is not important as long as nobody is trying to put soldiers in the house. On such things as these the passage of time has had some effect.

But the first amendment is in the 20th century exactly what it was in the 18th, exactly what it was when Christ distinguished the things that are Caesar's from the things that are God's, exactly what it was when Socrates, granting that the law of Athens had the right to put him to death, denied that it had the right to keep him from speaking the truth.

As long as Americans hold this principle more valuable than property, or bodily freedom or even life itself, the things that it implies will stand; and as long as its implications stand this country will remain the land of the free and the home of the brave. But if we abandon it, the tread of our regiments may shake the earth, our fleets may cover the seas, our flights of bombers may darken the sun, but we shall nevertheless be on the road to extinction, the road that Assyria and great Babylon trod, the road to oblivion, where all too soon we shall be "one with Nineveh and Tyre."

Senator Keating Delivers Address at 75th Anniversary of Temple Israel in Binghamton, N.Y.

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ROBISON. Mr. Speaker, Temple Israel in Binghamton, N.Y., recently celebrated the 75th anniversary of its founding. On this important occasion the principal address was delivered by New York's junior Senator, Mr. KEATING.

In his remarks, Senator KEATING paid tribute to those who have participated in the wonderful work of the temple and who have helped make it such an important part of the Binghamton community. In addition, he surveyed the situation in the Middle East and pointed out the dangers of American neglect of problems in that area.

Senator KEATING has traveled to Israel and other Near East points frequently in recent years and his remarks, therefore, have special significance. Under unanimous consent, I include them at this point in the RECORD:

REMARKS OF SENATOR KENNETH B. KEATING, OF NEW YORK, AT 75TH ANNIVERSARY OF TEMPLE ISRAEL, BINGHAMTON, N.Y., APRIL 23, 1961

Mr. Chairman, Rabbi Hurwitz, distinguished guests, ladies, and gentlemen, my pleasure at being with you tonight is the deeper, the greater, because of the very special event that you mark and commemorate this day. The diamond jubilee of the founding of Temple Israel Congregation is indeed a meaningful and heart-lifting anniversary. Each of you must feel a great warmth of pride as you meditate on the significance of this magnificent milestone in the long and distinguished history of your beloved spiritual and religious home. But, in the truest sense, this is a pride, this is an honor, not yours alone. It is shared with the entire community, and with the good people of all faiths who are your neighbors and friends. For this synagogue has not only been in the community for three-quarters of a century, it has been of the community—a vital part of its life and culture, a source of its spiritual strength, an element of the growth and vitality that are the common heritage of citizens of all faiths, of all races, of all walks of life in this fine community.

That is why it is so fitting that the civic leaders of Binghamton should be with us tonight. Their presence symbolizes the recognition of the fact that this congregation—this golden thread that has been woven into the tapestry of community life for 75 years—represents not your pride alone, but the pride of all who have enjoyed the radiation of its influence.

Rabbi Hurwitz, this night is especially rich in meaning for you. I would take this opportunity to wish you many more yearly harvests of the spiritual satisfaction that makes the hardest work seem light.

As we celebrate the 75th anniversary of the founding of Temple Israel, our thoughts turn inevitably to another anniversary that is being celebrated this month, an anniversary that is of deep significance to all free peoples the world over.

I am referring, of course, to the 13th anniversary of the independence of the State of Israel. April 20 marked the passing of another year of independence, of effort, and of successful striving for Israel.

Conceived in farseeing idealism and born of war and concentration camps, Israel has grown to manhood. The Bar Mitzvah year has come, and in celebrating it, we all must acknowledge that Israel has taken its place as an adult in the family of nations. The secret behind the progress which has been made in this small state surrounded by enemies lies to a large extent, I believe, in the great spiritual force which has been supplied through the centuries by the Jewish religion. Never losing hope, despite the obstacles and inertia of centuries, never losing faith despite what must have appeared to be the hostility and indifference of the whole world—the Jewish people have been inspired to build a country where freedom will be unchallenged.

For generations, the members of the Jewish religion, although segregated throughout Europe in ghetto-like conditions, have made their tremendous contributions to culture and intellectual development. In the United States, citizens of the Jewish religion have shown in their fellowship and common effort with citizens of all other faiths a determined ambition for civic and national progress. The same spirit which has contributed so much to the intellectual climate of European nations has carried over first to the United States, and now in similar measure to the new State of Israel.

Politically, the prospects for Israel's survival seemed small indeed in 1948 when it emerged, ravaged and war torn, from an unhappy British mandate. Enemies stood on every side. Its friends were far away and deeply preoccupied with the world problem of containing Communist aggression. It was the supreme accomplishment of the people of Israel, with continuing assistance from the United States, that they passed through the night of despair and turned their attention at once to the new day that dawned for Israel.

At once, with an energy and enterprise that must be the envy of all nations, the people of Israel threw themselves into the tasks that faced them. They held off the surrounding enemy, and they built in the barren desert a fruitful home for their people.

Economically, the obstacles must have seemed well nigh insuperable. A small country, with an even smaller area of arable land, Israel nevertheless threw open its doors to the oppressed of other lands. Regardless of nationality, background, or political views, refugees to Israel were made welcome on the grounds of the common faith which has been shared for generation upon generation. The economic problems were deliberately subordinated to the sense of moral purpose and destiny.

What was the result? Over the last 13 years, the population of Israel has more than tripled, from less than a million in 1948 to over 2 million in 1961. At the same time, per capita income has nearly doubled, the amount of cultivated land has more than doubled, the gross national product has tripled, the acreage under irrigation has been increased fivefold, and agricultural production has increased more than seven times. These are the economic accomplishments of the people of Israel. It is a record to be proud of.

Moreover, the technical skills and energies behind this achievement are being generously shared with other newer nations in Africa which can benefit by the help of Israeli experts.

If it be true indeed that "the Lord helps those who help themselves" there can be no doubt that the State of Israel has merited, many times over, the divine assistance and protection which I believe it has surely enjoyed.

There are undoubtedly limits to what one small country, surrounded by enemies, can do to bring about the peace which we know would benefit not only Israel but the whole Middle East and indeed the whole world.

It behooves the United States above all, as the leader of the free peoples of the world, to press more vigorously for negotiation and settlement of the problems of the Middle East. In general the Government of the United States has been rather remiss in its treatment of Middle Eastern problems recently. There has been no action taken to stop blockades, reprisals and boycotts against American Jews in the Middle East. In fact, we have continued to supply foreign aid, derived from the taxes paid by all American citizens, to these very countries which discriminate against Americans.

Furthermore, we have made no positive steps to stop the Arab boycott of Israeli and other cargo ships passing through the Suez Canal, even though such a blockade is in violation of the principles laid down by the United Nations and recognized by all nations. I myself have several times called this whole question to the attention of the State Department, most recently last month. But the reply is always the same and it is always disappointing—the U.S. Government is always exploring methods by which Arab blockades, boycotts, and other restrictions can be ended, but somehow it never seems to find anything. And it never seems to feel the time is ripe for a more vigorous initiative.

Obviously, at the moment, there are other parts of the world which demand our urgent attention and our most concentrated efforts. But, I can virtually guarantee that if we do wait until a crisis arises once more in the Middle East, it will be too late.

In the meantime, I fear that Middle Eastern problems are being neglected. Just last week, for instance, the United States lost a critical vote in the United Nations Special Political Committee merely because friendly delegations had not been informed of the vote or kept up to date on U.S. policy.

So what was the result? A resolution supported by the Arab States, and the Soviet Union was passed which would urge the General Assembly to safeguard the property rights of the Arab refugees who fled from Israel during the 1948 fighting.

It is certainly ironic to see the Soviet Union trying to look out for property rights of Arab refugees. What about the property rights of Hungarian refugees or Tibetan refugees? In fact, what about the property rights of Russians themselves where the Communist dictatorship has seized all land and vigorously preaches the evils of private property and capitalism. The whole Soviet position on this matter is absurd, but it is most unfortunate that the U.S. delegation to the United Nations was not more on the ball to prevent this propaganda play.

In short, I feel there is a real danger that the Arab-Israeli problem, neglected by our Government today, will emerge as a crisis again at some point in the future.

Then we would have to pay the price of our neglect. Our prestige is suffering today because we neglected until 1952 the whole field of missiles and rockets until then and therefore allowed the Russians to put a man into space ahead of us.

We are at a disadvantage in the Far East because we allowed the Chinese Communists to seize control of China more than 10 years ago. It is clear that mistakes of the past are going to come home to roost. I do not want to see the same thing happening in the Middle East in 1970 because we neglected to handle the problem with proper care and attention in 1961.

Today as we look toward Israel, the most immediate point of interest is the Eichmann trial. It reminds us, more poignantly than we like to admit, of the sad and recurrent theme of man's inhumanity to man. The horrors of the Nazi regime are over, crimes that were committed against the Jewish people and indeed against all mankind are now being revealed in their true horror.

I think the revelations of the Eichmann trial must be not only a reminder of the brutalities of the past, but also a warning for the future.

These brutalities still exist in other parts of the world—in Cuba, where innocent men are sent without trial to the firing squad; in Tibet, where a whole religion is being wiped out by alien dictators; in Eastern Europe, where freedom is quelled with threats and imprisonment; and even in southeast Asia, where Communist terrorists murder their own countrymen at the bidding of Peiping and Moscow.

The horrors of the Nazi regime were beyond belief. And in reminding themselves of the past the people of Israel and indeed of all the free world should render thanks unto the Lord that these days are past for them. But murder, brutality, and persecution will continue on the earth as long as Communist and other dictatorships exist. And, to paraphrase the immortal words of Abraham Lincoln, it is rather for us the living—and for us the free—to be here dedicated to that noble cause for which freedom-loving men have ever given the last full measure of devotion—that government of the people, by the people, and for the people shall not perish from the earth.

Local Support Strong for Area Development

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. EDMONDSON. Mr. Speaker, there can be no doubt about local interest in and support for area development, after a remarkable meeting held yesterday afternoon in Muskogee, Okla.

In response to a letter inviting their attendance to discuss the program, more than 100 mayors, city managers and other county and local officials of Oklahoma's Second Congressional District met for more than 3 hours.

Federal officials attending the conference said last night they had never attended a more enthusiastic and constructive meeting of local officials.

Tomorrow, because of the widespread interest in this program, I will submit a more detailed report on the Oklahoma area development meeting.

Under aggressive and enlightened New Frontier leadership, the tremendous area development program just passed by the Congress is off to a flying start—and the people are ready and eager for action at the earliest possible date.

Social Studies and Humanities Held as Important as Science

EXTENSION OF REMARKS

OF

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. MACGREGOR. Mr. Speaker, much emphasis has been placed upon the sciences during the last few years as this Nation has made a substantial effort to increase the effectiveness of its educational program. I propose that we take note of the imbalance developing between the sciences and the social studies and humanities and then seriously contemplate the wisdom of such a development. Dr. Paul H. Giddens, a noted educator from Minnesota, recently commented upon this development and its implications for citizen understanding of the complicated social, economic, and political problems facing our democracy today. I commend his words to you:

SOCIAL STUDIES AND HUMANITIES HELD AS IMPORTANT AS SCIENCE

(By Dr. Paul H. Giddens)

Within the last 60 years the United States has been transformed from a relatively simple agricultural state into a highly industrialized nation.

As this industrial revolution progressed, it required a greater and greater number of highly trained and educated men and women for all kinds of positions in business and industry.

To meet the demand, more and more emphasis was placed upon the teaching of science in high schools and colleges and universities.

Corporations, business firms, and foundations made grants for scientific research and established scholarships and fellowships at leading universities to further graduate study in the sciences.

In more recent years the development of the atomic bomb gave further impetus to the study and teaching of science. The launching of Sputnik I and other space satellites by the Soviet Union resulted in putting huge sums of money into the study of science in high schools, undergraduate colleges, and in graduate and professional schools.

The need for excellence in science training and basic research, for more and better educated scientists, and for more money to assure excellence is understandable, necessary, and widely recognized.

It is distressing, however, to note the great and rapidly growing imbalance between the sciences and the social studies and humanities and the lack of appreciation for the latter.

Compared with science, there seems to be relatively little interest in or financial support for the study of economics, government, history, English, foreign languages, philosophy, sociology, psychology, and other liberal arts subjects.

Relatively little money is being spent to encourage gifted high school and college students and high school and college teachers in the social studies and humanities and provide them with opportunities similar to those in the sciences. For students and teachers in those areas, this neglect is a cause for low morale.

Worse yet is the fact that no one seems to be greatly concerned or alarmed over the disparity that continues to increase. It is particularly surprising that businessmen, of all people, do not show more interest than they do in providing financial support to strengthen the study of economics and government.

The need for emphasizing the social studies and humanities is just as great and pertinent to our survival as science. How can we possibly operate our democratic form of Government successfully unless we have citizens and leaders who have a knowledge and understanding of the complicated economic, social and political problems that confront us?

How many citizens have sufficient knowledge to vote intelligently and make a rational decision on such current issues as taxation, inflation, civil rights, the farm problem, medical care for the aged, the flight of gold, foreign aid and the regulation of business by government?

We are even less prepared to make intelligent decisions on foreign policies and international issues. If we are to deal successfully with the thorny international problems that plague us and avoid war, there must be greater emphasis placed upon the study of the nature of communism and the history, language, economic system, politics and government, religion and philosophy, and the culture of Russia, Europe, Africa, the Middle East, Far East and Latin America.

If we are unable to cope successfully with these domestic and international issues, all of which have their roots in the social studies and humanities, spending more money on science will not enable us to survive. There must be as much emphasis given to the study of human affairs as to science.

Turnpike Benediction

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item from the Lawrence (Kans.) Daily Journal-World of Monday, May 8, 1961.

In my hometown—Lawrence, Kans.—is one of the outstanding schools in the

Nation, Haskell Institute. It provides top-grade training and education and leadership for the young Indian men and women of America. Haskell Institute also enters into the community of Lawrence, and indeed, the State of Kansas. For example, Dr. George Smart, Haskell religious activities director, has provided a brief prayer which will be used by and in connection with the Kansas Turnpike. It is a good prayer for all automobile travelers, and I take pride in bringing it to the attention of my colleagues, together with the news item about it:

TURNPIKE ISSUES PRAYER—PRESENTED BY DR. SMART AT MARKER DEDICATION

Kansas Turnpike officials, impressed by the benediction given by Dr. George Smart of Haskell Institute April 10 at the dedication of an historical marker at the Lawrence service area, are placing copies of the prayer in all the turnpike restaurants.

The Haskell religious activities directors' words will be printed on "table tents" to be placed on all tables and counters at the six pike restaurants.

KTA officials hope the safety message will do some good and that the patrons will carry off the cards. The cards are expected to be placed sometime this week.

The benediction is:

Lord, grant a steady hand and watchful eye,
That no man may be hurt when we pass by.
Thou gavest life: let none who drive a car
Be careless once, life's gift to steal or mar.
Teach us to use our cars for other's need,
Nor miss this world's beauty, through love of speed.
Shelter those, dear Lord, who bear us company,
From accident and all calamity.
Guard trooper and traveler on this pike,
Safe be father, mother, and tiny tyke.
With courtesy and joy we'd go life's way
And reach, without mishap, our destiny.
Amen.

H.R. 7036: A Bill To Prohibit Strikes at Defense Facilities

EXTENSION OF REMARKS
OF
HON. DAVE MARTIN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. MARTIN of Nebraska. Mr. Speaker, I have today introduced a bill which would outlaw any strikes, work stoppages, or slowdowns at any defense facility or any plant or enterprise in connection with the national defense or security of the United States.

The recent hearings in the Senate have disclosed the scandalous events which have taken place at our missile installations. Strikes, slowdowns, and work stoppages have greatly curtailed our program—a program which is costing the taxpayers billions of dollars.

The shocking disclosures have made every American citizen sick at heart, and has caused a sense of frustration for our well-being. I think it is high time that legislation be introduced and passed, which would make unlawful these tactics.

The work stoppages have resulted in the loss of over 162,000 man-days of work during the last 5 years at our missile sites. It has resulted in much overtime pay which has resulted in workers on the job receiving more pay than our top scientists. This is a ridiculous situation, as every American well knows. Without these labor abuses, the United States would probably have been first with a man in space. Labor unions are disregarding their responsibilities. There is involved here too much urgency—yes, even our own survival—to allow these irresponsible actions to continue.

The danger from communism is too real and too great to tolerate this condition to exist further. Action to correct these abuses is needed now. We are in a desperate fight to maintain our freedoms against the evil forces of communism. The hour is late, action is needed now.

Beware Government Dictation

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, I urge attention to the following, foresighted article by David Lawrence, which appeared in the Washington Evening Star on May 11:

FEDERAL THREAT TO BROADCASTING—WARNING BY MINOW SEEN RAISING ISSUE OF POSSIBLE GOVERNMENT DICTATION

(By David Lawrence)

Is the Kennedy administration about to take over the radio and television stations of the country and make them obey the Government's dictation as to what they shall put in their programs?

If so, then will there have to be a soft-pedaling of some of the criticisms usually launched against Nikita Khrushchev's methods of controlling public opinion?

These questions are asked because of the amazing speech just made by President Kennedy's appointee as Chairman of the Federal Communications Commission, Newton N. Minow. He spoke before the annual convention here of the National Association of Broadcasters.

If Mr. Minow's speech is carefully analyzed, it can only mean that broadcasting companies in America hereafter will be under the constant threat of Government confiscation and punitive measures. This could readily lead to the use of Government influence to get publicity and favorable treatment politically for whatever administration happened to be in power in Washington.

Mr. Minow takes the position that, because the Government issues licenses to broadcasting stations, it has the right to decide whether a station is giving good programs to the public. It's the same thing, in effect, as saying to a newspaper or other publication that, if it doesn't provide what the Government might set up as the standard of news and feature content, then second-class mail privileges granted by the Government may be taken away as a punishment.

There is nothing in the Constitution which says and agency of the Federal Government may tell any medium of communication what shall be published or broadcast. Indeed, the Constitution specifically says that Congress shall make no law abridging the freedom of the press. Both radio and television are integral parts of the press.

There are, of course, areas in which the Government can exercise supervision so as to avoid collision on wave lengths, for example, and it can inquire also into the character and integrity of the applicant for a license, or his sense of responsibility in business. But no chairman of the FCC heretofore has claimed the wide power that Mr. Minow now claims. He said directly to the broadcasting companies:

"As you know, when your license comes up for renewal, your performance is compared with your promises. I understand that many people feel that in the past licenses were often renewed pro forma. I say to you now: Renewal will not be pro forma in the future. There is nothing permanent or sacred about a broadcast license.

"When a renewal is set down for hearing, I intend—wherever possible—to hold a well-advertised public hearing, right in the community you have promised to serve."

This means that whatever passions or emotions prevail at the moment will guide the FCC in its decision whether to renew or reject a license application. Where is there any such power in the Constitution? It was to prevent the pressures of mob rule, or even the threats of an intolerant majority in Congress, that the Constitution specified that no control over the press can be exercised by the Government.

But who is to define now the standard that shall be applied by the FCC? Who shall judge how much entertainment, how much information, how much editorializing done by a radio or television station is just the right combination? Yet Mr. Minow says:

"We all know that people would more often prefer to be entertained than stimulated or informed. But your obligations are not satisfied if you look only to popularity as a test of what to broadcast. You are not only in show business; you are free to communicate ideas as well as relaxation. You must provide a wider range of choices, more diversity, more alternatives. It is not enough to cater to the Nation's whims—you must also serve the Nation's needs. The people own the air."

Who speaks for the people? Who interprets their wishes or their "whim"? The people have never delegated to the Government any power to decide for them what is or is not a good program, content or entertainment content—or what is a satisfactory publication. Can the Federal Government tell a newspaper it is printing too many comic strips or giving too many columns of space to murder trials or crime or scandals because all this theoretically doesn't "serve the Nation's needs"?

Mr. Minow makes the usual disclaimer that any governmental censorship is intended. What the FCC chairman proposes, however, is broader than censorship. No particular program or particular declaration or particular form of speechmaking will be ordered suppressed—that's censorship. Instead, a whole broadcasting company would be suppressed and put out of business and its source of revenue taken away altogether unless that company toes the mark and conforms to the doctrines of the administration which happens to hold office when a broadcasting license comes up for renewal. This is a form of dictatorship which it is surprising to see advocated under a so-called liberal administration.

Challenge in Latin America

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. MAILLIARD. Mr. Speaker, I was very much interested in an article entitled "Challenge in Latin America," by the distinguished Spanish diplomat and author, Salvador de Madariaga, which appeared in the Saturday Review issue dated March 25, 1961.

The opening portions of this article, it seems to me, point up a problem in our future Latin American relations which my colleagues in the House might find of interest and value. Consequently, I am quoting the first six paragraphs of this article:

CHALLENGE IN LATIN AMERICA
(By Salvador de Madariaga)

For a person alive to the dangerous state of world affairs, and therefore to the importance of preserving friendship and respect for the United States, a trip through Latin America is a strange experience. Wherever he goes he will be struck by a widespread and intense anti-American feeling, particularly among students and professors as well as the professional classes. It seems to me that the international situation is the very worst for such a situation to develop at the very doorstep of the United States; for we are witnessing a great movement toward political liberty and national independence on two other continents in circumstances which by no stretch of imagination can be said to contribute to a stable order. At such a time, the world can ill afford to set a third continent in turmoil.

We are everywhere seeing the forms of liberal democracy jeopardized. It is being twisted and tortured by foreign oppression in Communist-dominated countries, as in Eastern Europe, or by a homegrown form of oppression, as in Yugoslavia or in Spain; it is being exposed to the hazards of inexperience and of a more vigorous than intelligent nationalism, as in a number of newborn Asian and African nations. Disorder and confusion are the inevitable dust clouds in the wake of such agitated events. And disorder and confusion are as favorable to communism as they are injurious to liberal democracy.

The affairs of men are ruled by a kind of law of sociological gravity that forces them to fall toward chaos if not held at a certain level of order by an intelligent hand. This intelligent hand is what we call government. It is plain that in a number of cases too high for the peace of mind of the world the hand that keeps the affairs of men from falling into chaos is neither strong nor intelligent enough to fulfill its task. It follows that in wide areas of the world, circumstances are being created that favor communism, since communism thrives on disorder and confusion while liberal democracy requires calm and the rule of the law.

Such being the general picture, we must look on the considerable progress made by communism in Latin America as a serious threat to our civilization, particularly as such progress is observable mostly among the intellectual classes. In the United States, one gathers the impression that the intellectual is an oddity, a freak, at times a joke. His opinions are heard with polite deference and soon forgotten. As for his chances of a political career, they simply do not exist. A flavor of intellectuality has barred Adlai Stevenson from access to the White House, and one wonders whether Mr. Kennedy's success may not be due to the keen intelligence he devoted to hide his intellectuality (I am not saying "his intelligence") from his suspicious voters. The situation may be evolving. To be a Harvard professor is no longer a disqualification for becoming a member of the Presidential Cabinet; but to have published a book of poems might still be so.

In Latin America, however, a man may be writing poetry on Friday and become President or Minister of Foreign Affairs the following Sunday. Nor should one suppose that this phenomenon is limited to that form of power which derives from actual political functions. It cannot be doubted, for instance, that the high reputation which Pablo Neruda enjoys as a poet considerably enhances his power over Chilean public opinion as a Communist leader.

No more grievous mistake could therefore be made by the public opinion of the United States than to shrug its shoulders at the pro-Soviet and anti-American wave that is sweeping intellectual circles in Latin America. From the ranks of these pink professors, poets, doctors, and lawyers, the men will be recruited who will actually govern Latin America not merely 10 years hence, but maybe next year, maybe next month. The issue is immediate and urgent; and we must waste no time in facing it.

Polk Brothers Honored as Brand Name Retailer of the Year

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. PUCINSKI. Mr. Speaker, on May 4, Vice President LYNDON JOHNSON was principal speaker at the annual brand names dinner in New York at the Waldorf Astoria Hotel, during which one of my constituents, Mr. Sol Polk, president of Polk Bros., was honored as "Appliance Store Brand Name Retailer of the Year."

This is undoubtedly the highest award that American brand name manufacturers bestow upon a retailer in this country, and needless to say, I am extremely proud that a merchant in my congressional district received this coveted award this year.

The full significance of this annual award dinner in New York I believe can be focused by the fact that our Nation's Vice President did take time out from his very busy schedule and, by his presence as principal speaker, signify his own respect for the great contribution to the American economy that the name brand manufacturers and dealers of this country are making.

This is the first time since the founding of the Brand Names Foundation, which annually issues this highly respected tribute to American merchants, that the Brand Name Retailer of the Year Award has been presented to a retailer of the Midwest.

Mayor Richard J. Daley has eloquently expressed the pride experienced not only by the people of my district, but by all the people of Chicago, when he wrote Mr. Polk the following message upon learning of this great honor bestowed on Polk Bros.:

I extend to you my warmest congratulations. It is edifying when a native Chicagoan, or a Chicago enterprise, wins just acclaim for integrity and ability, as some of this glory is always shared by Chicago as a whole, adding, as it does, to our reputation for growth, enterprise, opportunity.

Recalling the humble beginning of the Polk Bros. organization some 25 years ago and observing your growth to a group of large marts covering Chicagoland, I am sure that you and your brothers and sister who make up your executive group well deserve the award which has been bestowed upon you.

Mr. Speaker, several hundred stores from all parts of the country compete for this Retailer of the Year Award. It is like TV's Emmy, or the motion picture industry's Oscar, something like winning the world's series, or bowling a 300 game, or running a 4-minute mile. It is one of the highest honors in the retailing business, and I am sure that in accepting this award, Sol Polk received it with a feeling of deep appreciation not only because he has brought a great distinction upon the retailing firm he heads, but also because his firm reflects so eloquently the high standards of merchandising throughout Chicagoland.

I am sure that all the merchants of Chicago were indeed honored to know that one of their associates was singled out for this great national honor. But the full significance of this award can be realized only if we fully understand what a great contribution American retailers are making toward the survival of free enterprise in this country.

At a time when many of us are deeply concerned over the problems which are being created throughout this country because American workers are being displaced by foreign imports competing for their jobs, it is encouraging to know that firms like Polk Bros. and thousands of other American retailers exert a profound effort to encourage the purchase of American-made name brand products in this country.

Recently I stated that the movement of durable consumer goods across the counters of America is the best way to sustain our Nation's economy. Sol Polk and his brothers and sister have made a tremendous contribution which can be felt not only within the immediate area of their retail stores, but throughout our Nation, in promoting sales campaigns which help move the products of American workers from factory to consumer and which have brought them this outstanding award this year. By their outstanding techniques of merchandising name brand products, Polk Bros. helped produce a sufficient demand in the appliance manufacturing field so that thousands of Americans can continue at their productive jobs.

The American retailer is the backbone of economic survival for the United States. It is only when he devises methods to continue the flow of commerce across his counters that we can look with confidence to a high standard of employment in our Nation. When his business suffers, it is not long before

the workers in American factories, manufacturing the goods and appliances which are sold at the retail level, begin to curtail their workweek and ultimately suffer long layoffs.

In the struggle for survival we frequently hear a great deal of discussion about arms and military weapons to protect the security of our country. Too often we overlook the fact that as important to our survival and security is a sustained economy because people who have an opportunity to earn a living and an opportunity to share the comforts of a bountiful nation will not easily fall prey to the prophets of false ideologies.

Polk Bros. clearly exemplifies the high standards of American merchandising. In their 26 years, this firm has risen from a small store located in the very heart of my congressional district to one of Chicago's leading merchandising establishments. It is particularly significant that they have accomplished this by their purchase and distribution of trademarked products and by publicizing the values of American engineering, ingenuity, research, and integrity of brand name manufacturers.

Mr. Speaker, in paying tribute to Sol Polk as retailer of the year, I am sure that America's industry is also paying tribute to his brothers, Morris, Sam, and Harry, and his indefatigable sister, Mrs. Goldie Bachmann-Luftig, as well as the entire staff of this awe-inspiring firm.

We in Chicago are proud of them all because working as a closely knit family, the Polk's have inspired new vistas for all retailers in America's second largest city and throughout the Nation.

Plight of the Sheep-Raising Industry

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. CHURCH. Mr. President, last week the President announced a seven-point program for the textile industry. This is a primary concern to Idaho, because of our large sheep-raising industry, which in turn is dependent upon textile manufacturing for its market. A flood of foreign imports of low-priced woolen cloth and clothing has had a very adverse effect upon this industry.

Senator JOHN O. PASTORE's Subcommittee To Study the Problems of the Domestic Textile Industry made several recommendations which were considered by the President's Textile Advisory Committee and the President prior to the announcement of the seven-point program.

One of these recommendations was that quotas be imposed on wool textile imports. I heartily seconded these recommendations when they were made, as did Mr. M. C. Claar, Secretary of the Idaho Wool Growers Association, and many sheep producers who wrote me from Idaho.

In his seven-point program, the President said he planned an international conference of principal textile exporting and importing nations. It is my understanding that the President believes that such a conference might lead to a new system of voluntary quotas on textile imports from abroad.

Because this problem is a pressing one in our economy, as well as being "serious and deep rooted," as the President said in announcing the program, I am most hopeful that the administration will move promptly toward the calling of such a conference.

The entire sheep-raising industry, not only of my State, but of the Nation, has been imperiled, and if relief is not forthcoming, we may lose this vital and historic segment of our economy.

Just how serious this situation has become in my State was recently related in the Twin Falls (Idaho) Times-News, one of Idaho's outstanding newspapers, and I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHEEP, WOOL MARKET TROUBLES FORCING AREA OPERATORS INTO CATTLE BUSINESS

More than a year ago, a buyer of Australian feeder lambs stood at a California dock watching the last of more than 20,000 of his imported lambs coming down the unloading ramp. Many shiploads of live lambs had preceded this ship and many others were to follow it.

At the same time, across the United States, sheepmen were protesting strenuously that imported sheep were underselling domestic lambs. Quarantines were placed against the imported sheep by health authorities, but imports continued. The tariff of 3.5 cents the same amount placed against imported sheep in the 1930's, was too small to protect the domestic sheep industry.

The Californian buying Australian lambs predicted "Within 5 years, there won't be a sheep industry left in the United States."

Already the sheep industry, across the United States and in Idaho, is suffering. Sheepmen are losing money on each lamb and ewe, labor costs are rising, and the situation seems so hopeless to many sheepmen that Magic Valley bands are being placed for sale.

Dennis Burks, Rupert, manager of the Flat Top Sheep Co., watched Angus heifers grazing near a stock pond and said, "This is the first time cattle have grazed on the Flat Top Ranch. It has been only sheep before and the only cattle that grazed here were those that came through the fence from a neighbor's pasture."

With Burks was Eugene Gulick, Buhl, who had located 20 Angus bulls to be used in the new 600-head cattle herd, and John Muirhead, also Buhl, foreman of the Dan Cavanagh Sheep Co.

Muirhead pointed out he, too, is planning conversion from an all-sheep operation to at least half cattle.

Burks said for the first time in Flat Top history he had not purchased replacement ewes this year. Normally, he purchases 2,000 yearlings each year as replacements.

Among other reasons for not buying replacements, the company's owner, Mrs. Mary Brooks, Chicago, daughter of the late Senator John Thomas, Gooding, was absolutely convinced the U.S. sheep industry is doomed.

Five other prominent sheepmen from this area each representing a different type of operation, were interviewed about their attitude toward the current sheep situation, and the consensus is gloomy.

The five are Rex Taylor, Burley, who with two partners runs about 8,000 head of lambs on the open range near Pocatello; Pete Cenarrusa, Richfield, who with his brother and Frank Somsen, Hailey, runs about four bands of sheep and trucks them each winter to Blythe, Calif.; Charles Coiner, Hansen, one of a family that feeds out from 20,000 to 35,000 lambs a year; John Noh, Twin Falls, range operator, breeder, and a director of the American Sheep Producers Council; and Leonard Winkle, Filer, Suffolk ram breeder and farm flock operator.

Today's sheepmen are harassed by the lower prices being paid for imported frozen lamb and live lambs. They find manufacturing mills for their wool are closing down at rapid rates because of competitive synthetic materials and imports of woolen fabrics from Japan and Australia. Their historic grazing privileges on desert and forest lands are being curtailed. And they are finding lamb consumption isn't increasing despite an increasing demand for red meat.

The industry is worth $70 million in Idaho, and it brings an annual revenue of more than $22 million, spent mostly within the State for taxes, grazing fees, labor, equipment and feed grains. (The Flat Top Sheep Co. alone spends from $175,000 to $200,000 each year for hay and grain for lambs and ewes.)

Replace part of this industry with cattle, and the new revenue still won't equal the current income. In Idaho, the Federal Government owns 68 percent of the land, and much of it is unsuited for anything but grazing. Without grazing, the income derived from this land would decline sharply.

Allotment cuts on public grazing lands have contributed to problems of Idaho sheepmen. They agree that some ranges had to be restored but they disagree that some of the cuts had to be so severe. In some cases cuts have been as high as 80 percent, and many sheepmen feel the Forest Service is trying to get them out of the mountains within the next 10 years.

Lately, they have read hostile statements about grazing advisory boards by Stewart Udall, Secretary of the Interior, and Karl S. Lindstrom, Director of the Bureau of Land Management. They have been asserting that livestock people are too narrow in their attitudes toward multiple use of public lands.

Thus sheepmen and cattlemen are feeling more than ever that the Government agencies are out to eliminate public grazing areas. Without these areas they feel their operations will have to fold and their base properties, which are used only to supply winter quarters and feed for the livestock, will turn out to be worthless, insufficient to maintain economical-sized units the year around.

Packers and buyers from chainstores now demand a grade of lamb that is more costly to produce than a few years ago. The percentage of fat on the lamb mustn't be excessive; the weight of the lamb shouldn't be more than 100 pounds, and it takes either a continual source of lush grass to produce such a lamb, or only the best grains and hay in the feedlot.

In addition, sheep producers are confronted with increased competitions from other "speciality" meats such as processed frozen fish, turkeys, and broilers.

Red meat consumption is going up and it has been calculated that the average per capita demand is 160 pounds per year, but lamb consumption isn't going up.

Between the end of World War I and the Korean war, the highest peak of lamb imports was 7 million pounds, in 1951. It dropped to 1 million pounds in 1956 and 4 million in 1957.

In 1960, the United States imported 40 million pounds of frozen lamb from New Zealand and thousands of live lambs from Australia. The live lambs arrived for a cost less than domestic lambs can be produced. Foreign frozen lamb undersold American lamb by 15 and 20 cents per pound at the meat counter.

The outlook this year is worse than ever. The Idaho Legislature sent a memorial to President John Kennedy this winter asking for assistance and understanding about the domestic sheep industry.

The U.S. Tariff Commission has been requested by the National Woolgrowers Association to raise duties on lamb, but the request was denied. Since sheep producers are not in the slaughtering business, the Commission would not accept their proposals about regulating frozen lamb.

While domestic sheep numbers have declined from 50 million sheep in 1942 to 34 million this year, Australia's sheep population has risen from 103 million in 1927 to 150 million, New Zealand's from 25 million to more than 50 million.

The wool situation has not fared any better in recent years, with imports crowding domestic wool raisers into a corner.

In 1954, Congress passed the National Wool Act to stimulate sheepmen to produce 300 million pounds of shorn wool annually. Congress stated wool was essential for the Nation.

Wool production increased to 265 million pounds in 1960 as a result of the act, but tariff rates against foreign wool materials haven't been increased to keep out lower priced goods.

Put all these together—lower wool prices, lower lamb prices, low lamb consumption, increased operating costs, grazing costs and imports—and it spells disaster for American sheepmen.

Choice lambs this spring should be near the high peak for the year, but instead they are selling for 17 cents a pound. A year ago they were selling for 22 cents.

Charles Coiner, lamb feeder, bought 70-pound feeder lambs a year ago for 19.25 cents and lost money. Earlier this year he bought lambs for 16.25 cents and had to sell them at 16 cents. His feed cost to put on a pound of gain is 20 cents.

Coiner doesn't see how he can pay more than 14 cents for feeders and even then has a good chance of losing.

Coiner says the reasons for the poor price are many. "Perhaps the most important is that lamb distribution throughout the United States isn't spread wide enough over more areas and counters. I hate to get out of the sheep business. It's the only thing I know. But I suppose I can convert the yards to handle cattle if the situation lasts another year."

Says Burks, Flat Top Sheep Co., "It cost us $28 last year to carry a range ewe through the year, feed, her replacement, labor and other items. The figure would be higher if we included other depreciations and taxes. We need to get $20 a 100 for the lamb to break even. And last year we lost $2.50 per head."

Last year, the Flat Top ran more than 5,500 ewes, 2,000 yearling ewes and about 8,000 lambs on private and public grazing lands till September 1.

Burke said Mrs. Brooke agreed this year to purchase 600 head of black cows and heifers, a conversion he never dreamed would take place so fast. Cattle can come off poor range looking fair and then be fed to look well. Sheep, especially lambs, have to be on lush, green forage to fatten.

Moreover, a fat lamb can't be held more than 10 days after ready for market regardless of price, because the price drops rapidly as the lamb begins to get heavier than the 100 to 110 pounds. A rancher can hold cattle longer, even 30 days on fat steers.

Burke said advertising on lamb and wool has been ineffective. If the situation doesn't improve, he plans to buy another 400 black cows and run 1,000 head, allowing the ewes to run a few years until they're worn out.

John Muirhead, Cavanagh's foreman, says Cavanagh wants to convert entirely to black cattle and abandon the sheep operation he has had 30 years.

Muirhead plans some 600 cows and about 3,500 ewes. Presently, there are about 6,000 ewes and 100 head of bred heifers on the Cavanagh spread.

Muirhead says the grading system has raised havoc with the sheep operation. He sells 65 percent of his lambs as Choice, and about 35 percent as feeders. Not too many years ago he sold 80 percent Choice and 20 percent feeders.

He also feels sheepmen are being crowded off the range. To try to find a solution, he kept lambs in the feedlot 2 years instead of sending them out on the range with the ewes. One year he fed 3,600 lambs and the next 4,000. However, he lost money last year and broke even the year before.

Rex Taylor, Burley, trails sheep toward eastern Idaho in the spring, lambing on the open range near Bannock Creek, west of Pocatello. He says his costs have risen sharply while the price has gone down.

Taylor used to trail all the way to Bannock Creek but now trucks most of the way because the desert has been cut up into fenced off farms. Another cost is his recent acquiring of more forest range to handle his sheep. His allotments had been cut.

Taylor hopes the sheep industry will see better days and will ride with it for another year or two to see how matters develop. He runs cattle and may expand this operation later. He feels the wool situation is particularly bad, and if it weren't for the incentive program he feels the situation would be intolerable. He would like to see lamb promoted strongly throughout the country.

Pete Cenarrusa, Blaine County representative and chairman of the appropriation committee in the State legislature, runs four bands of sheep. He trucks them to Blythe, Calif., in mid-December, and lambs there in January and February. During the first 2 weeks in April he trucks his sheep and lambs back to Magic Valley.

Cenarrusa says his sheep and lambs gained more than enough on the lush feed in California until this year to compensate for the hauling.

Counting his dry ewes, last spring he sold 143 pounds of lamb per ewe. The normal operator sells 133 pounds and Idaho's average is 123 pounds of lamb per ewe. Alfalfa pastures in California cost him 4 cents per head daily until this year when he had to pay 6 cents.

Freight rates of $5 per head for the trip down and back have gone up in recent years. Coupled with the increased cost for pasture, this has nullified some of the advantages.

In view of the costs and lower price for lambs this spring, Cenarrusa says this is the first time he would have done just as well keeping his sheep in Blaine County during the winter.

He also feels imports are wrecking the sheep industry. Unless there's an improvement soon, he and his two partners will have to become cattle operators. He estimates his cost to carry a ewe through a year is $32 per year. An $18 lamb will not allow him to break even.

Leonard Winkle, Filer, Suffolk breeder who sells many stud bucks to range operators, says prices for his stock have fallen considerably.

The only optimistic note was voiced by John Noh, Twin Falls, who runs sheep on the range and has been breeding a faster-gaining strain of sheep.

When he attended the directors' meeting of the American Sheep Producers council in Denver last March, Noh was the only one who didn't feel the sheep industry was practically dead.

However, he points out many sheepmen didn't buy whiteface ewe lambs for replacements this year. As a result, Noh said, many ewe lambs went to the feedlot for fattening and helped account for the 10-percent increase in fat lambs reported selling out of feedlots.

Noh thinks lamb prices will pick up this spring, but in spite of his optimism, he is going to start building up his cattle operation just as a precaution.

No Need To Get Moonstruck

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. HARVEY of Indiana. Mr. Speaker, I would like to insert at this point in the RECORD, an article from the Christian Science Monitor of May 10, 1961, entitled "No Need To Get Moonstruck":

[From the Christian Science Monitor, May 10, 1961]

NO NEED TO GET MOONSTRUCK

One question which hovers in the aftermath of the Alan Shepard space flight is whether the United States now should go all out to beat the Soviet Union in a race to be first to put a man on the moon.

There are historical reasons why Russian rocket building is ahead of America in load-carrying capacity, just as there are reasons why American space exploration has contributed and is contributing most to overall knowledge of what exists beyond the earth's atmosphere.

Soviet technicians were faced with the demand to build a rocket engine that would carry an atomic bomb 5,000 miles. When they did, that kind of an engine would send a satellite to or around the moon. American engineers and physicists developed the hydrogen bomb, which would do the work of an atom bomb but at a fraction of the weight. Hence, militarily the pressure to build a rocket engine of a million pounds thrust was off, and Western researchers turned their attention to the nearer reaches of space.

But the first sputnik and the orbital flight of Yuri Gagarin showed the propaganda value that Communist spokesmen could and did reap from space exploits. This has led some to feel urgently that the United States, even with a late start, must at all costs overtake the Soviet Union in the specific competition aimed at sending a man to the moon and back.

There is, however, such a thing as what Benjamin Franklin called "paying too much for your whistle"—that is, spending so much for one gewgaw that you deny yourself more substantial objects the money would have bought.

Or to use another figure of speech, the shotput is not the only event in this track meet. There are other contests, many of them, for which history and informed scorekeepers will award equal points. The development of weather and communication satellites, space platforms, and eventually of gear to enable men to do useful work on the moon or a planet may be likened to the

broad jump, the sprints, the mile run, the low hurdles, or the javelin throw in the interstellar competition.

So far as international law on the claiming of new lands or continents on earth may apply, the Russians would by no means acquire title to the moon simply by landing the first man there. Not only discovery and exploration but also colonization is required to establish a territorial claim.

Describing the orderly basis on which Project Mercury proceeded, Commander Shepard said, "There were times when we could have rushed the program, but we chose not to * * * because we felt we had a well-laid-out, well-designed, reliable program."

The thought applies reasonably well to the overall program of the National Aeronautics and Space Administration, leading up to the Saturn rocket which will eventually hurl a 6-ton payload to the moon. To endeavor to speed up that program by crash projects to beat the Russians might, it is estimated, cost anywhere from $6 to $40 billion—and with no assurance then that a hammer-and-sickle ship still would not get there first.

In athletics, no matter what exertion may be involved, the competitor who is relaxed usually does better than the one who tenses up. And so does the fellow who knows where his own prowess lies rather than who tries necessarily to excel in the other fellow's chosen department.

Era of Appeasement

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Gould Lincoln, which appeared in the Washington Evening Star on May 11, points out, further, the softening of our defenses against Communist aggression, being brought about by this administration:

THE POLITICAL MILL—DIPLOMATIC DETENTE WITH CUBA

(By Gould Lincoln)

Is an era of appeasement upon us—as it was when Hitler came into supreme power before World War II? In Hitler's day, the United States was not involved in the appeasement of the Nazi leader. Today, however, the seeds of appeasement seem to have been sown in this country—and the appeasement runs to Communist leaders in Soviet Russia, in Red China, and now to the Communist-directed government in Cuba—to Fidel Castro. So far this appeasement trend has not involved in any way President Kennedy and the Government of the United States. But pressures are being brought to bear. And they are pressures of various kinds of intensity.

For example, an open letter, published in the New York Times May 10, addressed to the President of the United States, signed by 68 college professors and two "intellectuals," proposes that the United States "seek instead [of intervention] to detach the Castro regime from the Communist bloc by working for a diplomatic détente and a resumption of trade relations (between this country and Cuba)." Probably many, if not all, of the signers of this open letter would resent being called "appeasers." It is difficult, however, to characterize their proposal as anything except appeasement in view of the stand taken and by Castro's actions toward the United States and its citizens, along with Castro's recent statement that his government had become completely "socialistic" in the sense the word is used by the Communist Russians. A détente—a relaxing of strained relations between nations—as asked by the professors so far as Castro is concerned, appears naive in the extreme and completely unrealistic.

A member of the Senate Foreign Relations Committee, questioned about the open letter to the President, commented: "The signers of the proposal show a failure to recognize the facts of life. The Communists—and Castro has announced his Communist form of government—do not compromise. They may talk of coexistence. What they work for constantly—and they never relent—is a Communist-dominated world, including the United States.

BLAME UNITED STATES FOR CASTRO

The college professors seem to imply that we, by our actions after Castro took over in Cuba 2 years ago last December and January, forced Castro into the arms of Russian Premier Khrushchev and the Chinese Reds. When Castro came to this country soon after his successful revolution, largely at the invitation of the press, he was guest at a luncheon given in Washington by the National Press Club. Repeatedly he was asked by newspapermen at that luncheon if and when he proposed to hold a popular election and so give the Cuban people an opportunity to select their own rulers. In each and every instance, he replied that he could give no time for an election—that it was a matter which would have to be determined later. Now he has given the answer almost immediately after the recent invasion of Cuban freedom fighters had been crushed. No elections.

SEE NO GOOD IN FIRMNESS

The statement prepared by the college professors insists that the struggle against communism in the Western Hemisphere will not be won by brandishing the big stick, and that the effort to destroy Castro fails to come to grips with the meaning of the recent Cuban experience and seriously endangers the pursuit of our most vital interests in world affairs. It puts the blame on the CIA for the invasion disaster. This has become an increasingly favorite pastime of those seeking to find a scapegoat for the fiasco. It attacks the U.S. Cuban policy of more than a year, which was to crush Castro. The open letter says, too, that Castro may well be a threat to the security of the Americas. "But," it continues, "this is not primarily a military threat." The real danger Castro presents, is one of subversion and the example of his own brand of social revolution in other Latin American Republics. The professors couldn't be more correct. But the remedy they propose does not take into account either the kind of man Castro is nor the fact that Khrushchev will never allow Castro, even if he should have a change of heart, to become reconciled to the United States—unless it is for the purpose of throwing dust in our eyes while he builds up a really powerful military threat, capable of blackmailing us in the end.

Propaganda for dealing gently with Castro is not confined to college professors. More than a year ago the Fair Play for Cuba Committee was organized to work among college students—a pro-Castro organization. It sent a delegation of students to Cuba last December to take part in the second anniversary of Castro's gaining control. Members of this group apologized to Castro for the conduct of the United States and returned home singing praises for what Castro has done in Cuba.

The college professors signing the open letter to President Kennedy are all from the Boston area; 41 of them at Harvard and the rest at MIT, Boston University, and Brandeis. It remains to be seen how soon college professors and intellectuals in other sections of the country will join in such proposals.

Progress at This Session of Congress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. WILEY. Mr. President, Congress has now passed the midway mark in this session. In a weekend address over Wisconsin radio stations, I was privileged to review some of the progress, as well as some of the jobs left to be done.

I ask unanimous consent to have excerpts from the address printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM RADIO ADDRESS BY SENATOR WILEY

Today, we live in a pushbutton age. In Congress, however, the right buttons have not been pushed to create the kind of fast-paced progress anticipated in this era of the New Frontier.

Now, it is true that the problems are complex. And the instruments of accomplishment are sometimes unwieldy.

As of now, the major legislation—and some of it very controversial—passed, included:

Increase in minimum wage and extension of coverage to workers;

Area development program for communities suffering from economic depression;

Extension of unemployment compensation benefits;

Approval of additional Federal judgeships.

However, midway in the session, this is not a startling record.

What are some of the major fields in which action is still needed? These include:

Speeding up the space program;

Strengthening our defenses; this involves also reexamination and improvement of our global effort to combat communism, not only in the military, but also on the nonmilitary fronts;

Reexamination of the farm problem to try to find realistic solutions to production-consumption imbalance;

Needed improvement and expansion of our educational system;

Carrying forward the highway construction program, if possible, on a pay-as-you-go basis;

Equitable revision of our tax system to better serve, not stunt, economic growth and progress;

Liberalization of social security, including realistic efforts to meet the health needs of our aging folks.

These measures and a long list of others still await final consideration in Congress.

LEGISLATION OF SPECIAL INTEREST TO WISCONSIN

In addition, there are a number of pieces of legislation of special interest to Wisconsin. These include:

(1) Appropriations for improvement and expansion of our port and harbor facilities and flood control:

(2) Congress has failed, in my judgment, to provide realistic legislation to enable the Menominee Indian Tribe—now terminated from Federal control and constituting our 72d county in Wisconsin—to meet the great economic, health, sanitation, educational, and other problems confronting them. Early this session, I cosponsored legislation for extension of Federal control until a proper foundation could be laid for tribal control over their affairs. Unfortunately, the Congress too long delayed consideration of such legislation.

Now it appears that the best that may be achieved is legislation to (1) extend as-

sistance in the field of education, health, and sanitation until the tribe itself can handle these matters; (2) provide loans to help meet the tremendous financial obligations; and (3) authorize Uncle Sam to keep a watchful eye on the financial affairs of the tribe to attempt to assume its economic stability.

Unless these minimum actions are taken, however, the tribute will find itself hard put to meet its obligations and fulfill the needs of the Menominee Indians in years ahead.

(3) Next, we find that there has been a failure to act expeditiously on my bill S. 1515 to provide $10 million supplemental funds for the school lunch program for the current fiscal year.

Unfortunately, the Department of Agriculture has too long delayed a report on the bill—holding up action in Congress. As a result, the program is now suffering serious curtailment. In the light of these facts, I contacted, not only the Appropriations Committee, but the Secretary of Agriculture to "prod" them for action.

(4) The appropriation of funds for expansion of research facilities at our Forest Products Laboratory in Madison, also, is of major interest to Wisconsin.

Regrettably, the House of Representatives cut out $300,000 for much-needed expansion of the research facilities. In the Senate, however, I urged reinstatement of these funds. In my judgment, this is essential, not only for our forest interests, but for the economy of Wisconisn and the Nation.

INVEST IN AMERICA

Now turning to another topic: A great many of you will recall that during the past week there have been nationwide observances held to encourage more folks to invest in America. This is indeed a sound, most worthy project. Today, there are more than 13 million shareholders in publicly owned corporations. In my judgment, however, this number can and should be greatly expanded to include more people. Why? Because by sound, confident investment in our job-creating free enterprise system we can—

More quickly lick such problems as unemployment and business and industrial slowdowns;

Successfully meet the Communist challenge to our free enterprise systems; and

More effectively fulfill the evergrowing needs of a fast-expanding population.

Investing in America, however, means more than just investing our money for a profit. Rather it means also dedicating the time, thought, energy, and resources to building a stronger, better America to meet the growing challenges of the future.

NEEDED: GREATER PUBLIC EDUCATION ON FREE ENTERPRISE

The economy, in my judgment, could be greatly strengthened by instilling in our people, particularly youth, a greater understanding of the working principles of our free enterprise system.

Today, unfortunately, there is an abysmal lack of such knowledge.

To a large degree, too large, I believe, people still believe—in a vague, distorted way—what, in effect, the Communists are saying about us, that is—

That big business attempts to bleed the public for profits;

That labor represents a class struggle against the capitalists; and

That our society is essentially one of conflicts, rather than of cooperation in efforts to fulfill our needs, individually and nationally.

Now, it's true that, in the past, there have been conflicts, and abuses of power.

Today, however, the enlightened interests are becoming more and more aware that the broad, long-range interests of management, labor, consumer, and the Nation can be best served, and are being best served, by cooperation, rather than by antagonism and conflicts of interests.

Management, traditionally interested, to a large degree, in profits, more and more, looks after the human needs of their workers; for a happy, well-paid employee is a more productive worker; and also a market for more products of the economy.

Labor, also has a vested interest in the success of the business upon which jobs are dependent.

The public, as consumers, as well as investors (exemplified by the 13 million shareholders of publicly owned corporations) has a real interest in the success of job-creating, commodity-producing enterprises, as well as the welfare of the American worker.

The American people, however, in school and by adult education, need to be better informed of ways in which we, as individuals, can contribute to further strengthening our free enterprise system.

Only if this is done, can we successfully meet the ever-growing needs of a fast-expanding population, as well as the challenge of the Communists.

NEEDED: SPEED UP U.S. SPACE PROGRAM

During this past week, also, we witnessed one of the great "breakthroughs" in our space program: that is, the successful suborbital flight of Cdr. Alan B. Shepard into space. This was a historically significant step forward in freemen's efforts to explore the universe.

The American people, I believe, can be justly proud.

Now, however, we look forward to success, with, we pray, a minimum of setbacks, in our next step of launching a manned spacecraft into orbit around the earth.

In the world stadium, nations are carefully watching the contest between the major protagonists of freedom and communism in space exploration, the United States and the Soviet Union. Although we didn't plan it that way, this is, indeed, a real space race.

According to experts, the cumulative scientific-technological value of our accomplishments far exceeds that of the Soviet Union.

Nevertheless, we cannot ignore nor underestimate the psychological impact which Russian "firsts" in space have had upon the minds of the world.

Regrettably, the U.S. timetable has run only a short distance behind Communist launchings. After the first sputnik, for example, we shortly orbited not one, but many satellites—now outnumbering the Soviets by about 40 to 15.

Recently, the Soviets reportedly orbited the first man in space. Now, we have successfully conducted a suborbital flight.

With such a relatively short lag in timing, it would appear that by only a slight speedup of our program we could demonstrate to the world that we can accomplish space feats not only equal to and greater, but also faster, than the Soviet Union.

"The question is not: Will we do these things? Rather, the issue is: When will we do them?

"Will we do them before, or after, the Soviets? In my judgment, we should do it before.

"We recognize, of course, that space feats are basically scientific-technological-military accomplishments rather than weapons of propaganda warfare.

"Nevertheless, we cannot ignore the tremendous psychological impact which Soviet triumphs have had upon the world.

"The task now is to first, predetermine the next major accomplishments in space; and second, as possible, set up the timetable so that the United States can get the maximum benefit not only from the accomplishments themselves, but also from the great psychological impact of firsts in the space race," Senator WILEY concluded.

Caliber of American Movies in Latin America

EXTENSION OF REMARKS
OF

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. SHRIVER. Mr. Speaker, in recent weeks the administration, the Congress, and the people of this Nation have evidenced great concern regarding our problems in Latin America. We are seeking through various programs to strengthen our ties with our neighbors, and to meet the challenge of communism which has established a beachhead in this hemisphere.

One of the programs which, I believe, can contribute to the development of a better understanding of the United States and of the social and economic problems of Latin America is the educational exchange program for university students administered by the Department of State.

Recently, it was my privilege to join with other members of the Kansas congressional delegation in meeting with a group of students from the University of Kansas who were in Washington for a briefing at the Department of State prior to participating in an exchange program at the University of Costa Rica in San Jose.

Several weeks later I received a letter from one of the students who is a constituent of mine. In the letter the student expressed to me concern over the reactions and the experiences she has had as a result of American films distributed and shown there.

I would like to place in the RECORD an excerpt of the letter from this Kansas student in Costa Rica:

The subject which weighs my mind is perhaps not in your field, but perhaps you would do me the favor of referring it to the proper persons. I am deeply concerned with the caliber of American movies which are allowed to be sent to Latin America. In the 8 weeks that I've been in San Jose, there have been only four presentable movies," "Spartacus," "The Big Fisherman," "The Wild River," and the "FBI Story." The rest have been either horror movies, such as the "Seven Brides of Dracula," or what are called "rave" movies, which must be advertised "for adults only." These include "Summer Place," "Because They're Young," and others which deal with misplaced love, adultery, and unfaithfulness. These, of course, draw great crowds and are therefore very profitable for the movie companies, but you can't imagine the harm they do to the American image. This was really brought home with a jolt when one of the boys in our group was asked confidentially how university men ever studied when they "had girls in" every night. And we girls must chaperon each other on dates because of this mistaken image of American college life.

Isn't there some type of censorship for movies which are sent out of the United States? How can we expect these people to respect an American people such as the sex maniacs, monsters, and adulterers they see in these films—which are practically the only ones they come in contact with, excepting tourists (and I shall say no more on this subject).

Now I am certainly not advocating, and I know that this student does not want, Government censorship of films, newspapers, magazines, or other media produced by private enterprise and distributed overseas.

However, I believe that we should expect the members of the great American film industry to heed the counsel of Mr. Eric Johnston, president, to the board of directors, Motion Picture Association of America, who has spelled out a guideline for decision by the motion picture industry. He said:

This is the decision to be vigilant in responsibility, alert to the sensitivities of others. To be aware of public values, both at home and abroad. In that atmosphere, any subject can be treated, all faithful to the American scene.

In that atmosphere, we will continue to make an endless variety of motion pictures, each conveying an impression of one facet of our life, and in totality presenting our people as a nation believing in charity and in justice.

Consumer Interests

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mrs. NEUBERGER. Mr. President, on the 24th of March I introduced, and was joined by 15 of my colleagues, Senate Resolution 115, to establish a Select Committee on Consumer Interests. It was my conviction that the consumer needed a responsible public forum to which he might bring his purchasing complaints with some prospect that if deceit, fraud, or shoddy practices were shown that something might come of it. For too long has the consumer been buffeted about in the market place, the victim of false packaging, watered foods, inferior goods, foisted off on him by such terms as convenient, economy, or time saving.

To highlight the significance of the problem the consumer faces, I ask unanimous consent that the following article by Sidney Margolius entitled "Neuberger Bill Would Handcuff Real Experts at Fooling Public," from the AFL–CIO News of May 13, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO BUY—NEUBERGER BILL WOULD HANDCUFF REAL EXPERTS AT FOOLING PUBLIC

(By Sidney Margolius)

Would you like a cop with muscles to help make sure you aren't deceived, by real experts at deceiving, when you go out to buy?

You'd have a powerful policeman on your beat if the U.S. Senate would approve Senator MAURINE NEUBERGER's proposal to establish a Committee on Consumer Interests. The committee would investigate, inform, and figure out legislation to halt the many gay deceivers who sharpshoot the public today.

The proposal is backed by 15 other Senators. But, ironically, there has been no public support. The proposal is idling away. It will die for lack of gas unless people start telling their Senators they want this committee.

Of all the proposals now being advanced in Washington for protecting consumers, this watchdog committee is potentially the most quickly useful, as shown by the success of the Kefauver subcommittee's investigation of drug prices. The drug hearings not only spurred efforts by unions and other groups to find ways of buying medicines at reduced prices, but actually have helped deflate drug prices. Ever since June, the Labor Department's consumer price index has shown a gradual decline in prices of prescriptions and other medicines.

Three leading deceivers currently begging for congressional investigation, and for your own awareness to avoid being fooled, are:

The increasing trend to what we can only call imitation foods—watered meats, ready-prepared foods with various cheap fillers, etc.

For example, the Kansas State Food and Drug Division is carrying on a running battle against products sold under such names as Chef's Delight, Dairy Spread, Protein Loaf, etc. Evan Wright, division director, says these products are, in fact, imitation processed cheese spreads. Such "cheese" products are sold all over these days.

Wright told this reporter that some of these products contain as little as 10 percent cheese and as much as 65 percent water.

Wright reported that State food and drug officials throughout the United States are opposed to the addition of excess water to smoked pork products. The U.S. Agriculture Department is holding public hearings in May in various cities to review the permission to add water to smoked ham granted by the previous administration.

The great amount of buyer-fooling packaging, making it difficult for you to know what you get for your money.

In June, a Senate Antitrust Subcommittee headed by Senator PHILIP HART, Democrat, of Michigan, is going to hold hearings on this trend to fool-the-eye packages. There's plenty to investigate, and you could waste a lot of money between now and June if you don't look for the tiny print stating the number of ounces.

Recently the Grand Street Consumers Co-op in New York showed a display of fool-the-eye packages which startled co-op store customers.

The co-op reported that All had dropped from 23 pounds, 10 ounces, to just 20 pounds, while the price remained the same. Similarly, Kraft caramels changed from a 16-ounce bag to 14-ounce, with the price still 39 cents. And, the co-op suggested, try to find the tiny 14 ounces on the cellophane caramel bag while you're being pushed by a crowd of other shoppers.

Are you also aware of the candy-mint boxes? The Food and Drug Administrattion recently won an important court decision in a case against Delson Thin Mints. The evidence showed that less than half of the total volume of the container and only 75 percent of its practical volume was filled with mints. The remainder of the usable space was taken up with hollow cardboard dividers and end pieces. The court held that you have a right to expect that a non-transparent container of food is reasonably full.

Deceptive interest rates—the most dangerous fooler of them all: Senator PAUL DOUGLAS, Democrat, of Illinois, "truth in lending" bill has been reintroduced with the cosponsorship of 20 other Senators. The bill would require that you be told the true annual interest rate when you buy on time or borrow money.

As this department has warned many times, rates quoted by banks and finance companies, such as $6 or $7 per $100, are actually true annual interest rates of approximately 12 or 14 percent. Rates quoted by small-loan companies, such as 2 percent a month, are actually 24 percent a year.

Vance Austin, managing director of the Credit Union National Association, warns consumers that passage of this bill is vital. "It's necessary to know the annual rate you pay for credit so you can compare different deals," he advises. "If the price tag clearly shows the simple annual interest rate, you'll be able to make an intelligent comparison of fees charged by different lenders and installment sellers."

Rural Areas Development Program Is at Crossroads

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, on May 15, Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, pointed out to 750 Rural Electric Co-op leaders meeting here in Washington how their cooperatives can be utilized as vehicles for carrying out the rural areas development program. Under leave to extend my remarks, I would like to include Mr. Ellis' speech in the RECORD:

VEHICLES OF OPPORTUNITY

We've come a long way toward a realistic rural redevelopment program since our NRECA annual meeting in Dallas. And we still have a long way to go.

At Dallas, you instructed us to help to get the necessary legislation passed. This we have done. You said you wanted the primary responsibility for administering the rural portion of the program lodged in REA. This we are still working on, and we're hopeful.

This can be a fine program—the finest for rural America since the REA program began. Or it can be just another "talking" program, with lots of ideas, lots of studies and investigations and lots of pilot projects—but little action or few practical results.

It seems to me we're just about at the crossroads now. Pretty soon the program will start to go one way or the other.

Which way it goes depends upon a lot of things, and upon a lot of people. It depends in part on the administration, in part on the Congress, and in part on you—and by "you" I mean you personally, your rural electric system, your statewide organization and your National Rural Electric Cooperative Association—for all this is you.

Let's look at the unique role each must play.

The administration must set the pace and call the shots. The basic program and the money to set it up have been authorized. Now the program must be implemented with bold policy decisions and firm delegations of authority. If the administration is slow or timid, this program will bog down before it ever has a chance to get started.

Unless firm administrative delegations are made quickly, the program will settle down into months of haggling between departments and agencies which are unable to agree among themselves on who will do what—and be dissipated into thin air. We've already seen evidence of this.

And finally, once the delegations and basic policy decisions have been set, the administration must provide dynamic and imaginative leadership and this spells promotion.

It will not be enough for the administration to announce that these funds are now available, and any community, corporation, or individual who can qualify invited to apply.

The Federal Government must provide exactly the same kind of leadership it exerted in getting the rural electrification program started. Rural areas development will need the same kind of promotion and technical help the old REA Applications and Loans Division used to provide in creating and furthering our systems. We need and must have men of that same stripe—men who are willing to ride the roads day and night to get new organizations started and stir the imagination and enthusiasm of the people to set their sights high and keep them there.

None of us would be in this rom today and most American farms and rural homes and institutions would still be unelectrified if the REA program had not been actively promoted and supported by the Federal Government after the basic legislation had been passed.

And in my opinion unless that same kind of assistance is given now to this new program, there will be no rural redevelopment as we have envisioned it. We have the lesson of the past. I hope we have the intelligence to profit from that lesson.

On Congress will rest the responsibility for passing new legislation to implement the basic bill and for providing the necessary funds. What Congress has done so far is take the first step toward making a real rural redevelopment program possible. Under the initial legislation a few of the most depressed rural areas can get some help, including financial. Many, many others which need help will not be able to qualify for the financial aid. The funds authorized in the bill will only be a drop in the bucket compared to the total need.

There are other kinds of help, other than financial, that all communities can get, of course, and I will return to that later.

Experience in the initial program will soon reveal what new legislation will be needed. Congress must then follow through to strengthen and perhaps reshape the program.

Assuming efficient administration, then it follows, I believe, that what you do will be more important than anything else to the success of this program.

For regardless of how wisely and boldly the administration and the Congress act, the work is going to have to be done by the local people. All we will have at best in the new program will be opportunity—a real opportunity to rebuild our areas. The same kind of opportunity we had after Congress passed the REA Act. The act didn't electrify rural America, it merely made it possible. It still took people to do it locally—organizations of people locally, some power districts but mostly cooperatives.

With all its monumental effort, REA itself could never have done the rural electrification job alone. The managers, directors and members of the local rural electric systems did that—supported by the membership. Supported, too, by nearly all organizations working in rural America, both Government and non-Government.

The RAD program begins its life with one great asset the rural electrification program did not have. RAD will have the support, cooperation, and leadership potential of the network of rural electric cooperatives and power districts, dynamic, locally controlled corporations, which blanket the areas of greatest need. Let's refer to all of them as cooperatives. In these cooperatives there is a great pool of experienced community leaders, efficient managers and other personnel, and a tradition of unselfish public service.

The local people who own and run the rural electric cooperatives are experienced in running businesses with assets of millions of dollars. They're experienced in working with government agencies, in dealing with other businesses and industries and with other organizations of people. They know the requirements of success.

You are those people. It's inconceivable to me that the new RAD program will not be so designed to utilize your talents and your demonstrated interest to the fullest. Secretary Freeman has indicated that he intends to do just that.

If the rural electric systems are not utilized as vehicles for carrying out the RAD program, I can't see that it has any real chance of success, for they are the ready-made vehicle of opportunity. I do not say that your individual systems should actually administer the program at the local level, but I believe you will have to play the major role in whatever form the local administration takes.

The major difficulty in running a program like RAD in rural areas is the lack of local governmental machinery for administration. The cities are organized down to the block level. City officials, with their staffs are capable of administering such programs. The cities are actually corporations themselves, chartered by the States. Their governmental operation at the local level is both broad and complete.

Nothing like this exists in the rural areas. There is no formal governmental structure, no staff. So there is no effective way for the rural people to help themselves, for example to pool their collective credit, except through some organization of their own—such as the rural electric system or some similar undertaking.

It has seemed to us that one solution to this problem might be the creation of a new type of cooperative, a Rural Development Cooperative, with broad authority to carry out many kinds of projects to aid rural areas. These cooperatives would have the power to borrow government funds, to develop local industry, to build rural community facilities and perhaps to assist with various government credit programs. They could even assist individually owned enterprises, including, say, an incorporated local industry.

Certainly your experience and know-how would be invaluable in the establishment and successful operation of such institutions. If in some instances, State enabling acts are necessary, it can be done, I am sure, just as the electric co-op enabling acts were passed.

Perhaps the job can be done in some other way, too. I hope this conference can develop other ideas—all ideas possible at this time. I do know this. Rural areas are going to have to have better organization before they can do much toward helping themselves. Maybe it's even time for rural and farm leaders to rethink the traditional governmental concepts as they affect rural areas. The city people do not hesitate to rethink along these lines anytime it's to their advantage. In some cases they're abolishing the county concept altogether. They do this very effectively—by eliminating the county through annexation of the territory as part of the city. Or by turning the whole county into a city form of government. At least one such county borders the District of Columbia.

And throughout the Nation, of course, the towns and cities have changed the traditional concept of the politician-mayor. In many places these days the mayor is just a ceremonial figurehead. The business of the city is run by a professional manager. And so is the county to which I referred.

If rural people are to keep pace economically with the cities in our present complex society they have got to have some kind of organization or governmental structure to carry out their desire to help themselves. Only thus can they have dynamic local government. Only thus, for instance, can they pool their collective credit and get decent credit terms as a public group.

The need for help is clear. NRECA President Yarbrough talked about it last night. The mass exodus from rural areas continues, because better-living opportunity lies elsewhere.

There is a point below which any community tends to disintegrate and the people, who can, move away; and conversely, there is a point above which the community tends to hold together and other people move in.

And it's in an effort to help our communities hold together and improve that you have supported these rural redevelopment activities. That's why you're here today in such numbers to find out what you can do.

I'm sure all of us recognize, as President Yarbrough said, that the present program is no panacea. We have not suddenly discovered the magic key that will solve all the problems of rural America. What I feel we have done is take that all-important first step. Much, much more remains to be done.

Since this is primarily a rural electric audience, I also want to emphasize that success in this area will intensify some of our other pressing problems—in particular the problems of power supply and territorial integrity.

As I said at our national meeting in Dallas, these three overall problems cannot be separated. We need bold, giant steps in each area.

And while the new REA Administrator, Mr. Clapp, is here, I want to say publicly to him, as I have done privately and in my magazine column this month, how encouraged we are by the fine policy statements he has made on each of these problems. It's good to know that REA stands foursquare behind its borrowers, and that the REA Administrator speaks out bodly and courageously in areas that have been controversial.

This meeting got off to a fine start last night, and I'm sure you will find today's program interesting and informative and well worth your trip here. I hope, too, you will remain over for the next 2 days and participate in the George W. Norris centennial program. I think you will not find these two meetings unrelated. You are all invited.

Now I want to join you in hearing our experts tell us about rural area development.

The Right Time for Courage

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, as Marguerite Higgins, in today's New York Herald Tribune, points out, the time for a nation's courage to show itself to the world does not depend upon the "right" time or the "wrong" time, when this courage is based upon fighting for principles:

THE DOCTRINE OF WRONG WARS
(By Marguerite Higgins)

WASHINGTON.—If there is a wrong war, just what is a right war? Remember Korea? It was the first of the wars that the Defense Department generals led by Omar Bradley dubbed as the wrong war at the wrong time in the wrong place—a doctrine that is as false as it is dangerous.

For the basic premise of this doctrine—that, for democracies, there can be right wars at the right place at the right time—is completely contrary to the realities of our world.

Who chooses the time, place—and very often—the kind of battle? The passing years haven't changed the facts of war very much and in the 20th century it is still the side that starts the fight.

But by accepted Western doctrine, neither the United States nor anybody on its side would strike first in a fight against the Kremlin and its allies. And since the Communists strike first, gaining the right of choice, why should they ever confront the West with anything but the most disadvantageous terrain, the most confused picture and the grimmest of alternatives?

In Korea, as in Laos, the Communists attacked in terrain which the Pentagon viewed with dismay and at a geographical point so remote as to cause the planners to concentrate on ways of staying out instead of getting in. ("Let's not get bogged down on the mainland of Asia," the saying went.)

In Korea, as in Laos, it was said that the native army just won't fight.

In Korea, as in Laos, charges were made that corruption and apathy in the government made the country scarcely susceptible of rescue.

But in Korea—and not in Laos—the United States intervened, for the State Department and the White House overruled the military reservations and for two main reasons: nonintervention—failure to at least try and help a protegé—would have shaken the faith of all of free Asia in the value of American protection; second, an unopposed Communist victory would have emboldened the Kremlin to who knows what further aggressions.

In the case of Korea, Washington was able to act on the international and psychological merits of the case. In Laos when the moment for intervention came and went (and it may yet come back), President Kennedy could not help but be restrained by factors external to the immediate Asian situation—the need to repair the damage done to his administration's image by the Cuban affair.

But was Korea a "wrong war," as some polemicists now claim in arguing, of all things, that what happened there is a reason for not going into Laos?

It's true that in the first terrible days in Korea we began to learn how much we had underestimated the Communist enemy and the word "Dunkirk" was no stranger to our typewriters. But we did learn. Our forces rallied and—lest we forget—our armies were grinding back those Communists, including those awesome sounding but not awesome fighting Chinese hordes and it was they, the Communists, not we who publicly sued for peace. It was acting Soviet Foreign Minister Malik, not Secretary of State Acheson, who made the truce plea.

And without the lessons of Korea—half-learned though they may be—where would America be now? In the month before the Korean war broke out, President Truman had said America was "stronger than ever in peacetime history" and General Bradley had told Congress that the U.S. economy "cannot afford" a defense budget of more than $13 billion a year.

Yet within 3 days of the outbreak of the Korean war we found out that American bazookas were no match for Soviet tanks and within a year of Bradley's dictum the U.S. defense budget was pushing $50 billion a year. What Korea should have taught America is that it has the capacity to afford anything whatsoever necessary to its survival, if it also has the will.

A decade ago this was written of Korea: "Despite its many tragedies, we know now that it is fortunate for our world that it resisted Red aggression at that time and in that place. Korea has served as a kind of international alarm clock to wake up the world * * * nothing can make up for the licking we took in the early days. But those men in their icy graves will have died for something vital if their warning galvanizes us to the point of becoming so strong, that we will win, at the least possible cost, the struggle we cannot escape because the enemy will not cease attacking."

Today to me these words, which are my own, are sadly disturbing. For who can help but wonder whether our Nation will ever be so galvanized, especially when the false doctrine of wrong wars is being given as valid reason for the wrong deed: retreat at Communist gunpoint?

At Least With Pruning Shears

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, since the Ways and Means Committee is now considering the extension of the 10 percent discriminatory Federal excise tax on automobiles, I should like to call to the attention of my colleagues a very lucid discussion of this tax. This is an editorial by Publisher Robert B. Powers, of Ward's Automotive Reports, which will appear in the forthcoming Automotive Yearbook. Mr. Powers' editorial follows:

AT LEAST WITH PRUNING SHEARS

No family possession has as great a dollar tax levied on it as the essential family car.

In the typical State close to $700 out of a $2,500 car goes for taxes—Federal and State.

With 50 percent of new cars purchased by families earning less than $5,000 a year, it is small wonder that the average family car becomes something of an heirloom before it is traded in for a new car—or for a safer used model.

Of the 55 million cars on the roads and highways of the United States, more than a third—18 million—are 4 years old or more. Of these, 1,164,000 are pre-war models. Many of these cars are not safe to drive or to meet on the road.

In 1960 the garages of the Nation received 61 million emergency calls. The bulk of these calls was for battery, tire, electrical, brake failure—failure due to a great extent—to neglected repairs or make-shift repairs.

Many of these failures were accompanied by death, injury, and property damage.

The annual loss in the United States in life and in the wages of the injured reads like the casualties of a world conflict and the annual appropriation for foreign aid.

Much of this economic and human loss can be traced to the reluctance or inability of the family bread-winner to pay for a new car, a better used car, or to make expensive car repairs.

We can understand why a legislative tax committee scrounging in all corners of our national life for more tax dollars would be reluctant to recommend—especially in this tax-hungry emergency year—the elimination of the annual $4 billion take on the punitive 10 percent Federal auto excise tax.

Creative legislation, as we have pointed out before, however, could make up these tax billions—and more—by a general manufacturers' tax of 3 or 4 percent.

Over the years congressional tax committees have been snipping away at the conglomerate Federal excise tax structure. And usually only as a result of persuasion by a well organized pressure group.

Last year was another "crisis year" as far as the annual search for more tax money was concerned. Congress nevertheless saw fit to cut in half the Federal tax on certain saloon and night club tabs.

On another year, the amusement industry was benefited by a somewhat similar preferential tax reduction treatment.

Despite our arrival on the New Frontier, with its promise of dealing with neglected problems, this is probably not the year to expect Congress to produce a new, simplified and more equitable tax structure.

There is some urgency, however, in getting out the pruning shears and assisting in the correction of a national problem that reaches into the lives and pocketbooks of a large segment of our population and into the Federal Treasury as well.

It is this never-ending problem and concern to make the highways safer from controllable hazards. Assuring greater safety with and from aging cars in need of repairs could be a giant step.

To the head of a household of five or more earning less than $5,000 a year, an extra Federal tax dollar or two on a tire or a battery, or a connecting rod, often makes the difference between his taking a chance with life or playing it safe.

A government so rightly concerned with the welfare of the unemployed, the underprivileged, the underpaid, should be equally concerned with their safety on the streets and highways.

Removing the Federal excise tax, at least from replacement parts, tires and batteries, could spur millions of our population to stop playing Russian roulette on the highways with the family car.

The dollar loss to the Federal Government would be made up—and more—by keeping workers on the job instead of on the hospital bed.

Mr. Legislator, as the saying goes—"It doesn't cost, it pays." And this is the year for action—at least with pruning shears.

The Mind of John F. Kennedy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. MULTER. Mr. Speaker, the following article appeared in the May 8, 1961, issue of the New Republic. It presents a clear and incisive portrait of the President's intellect and his method of gaining information—the importance of which is recognized by all of us. Information is probably the most important single item in government: without it none of us could function in the decisionmaking situations inherent in our way of life:

THE MIND OF JOHN F. KENNEDY

(By Frederic W. Collins [1])

One of the most stylish weddings of this or any other year united the mind of John F. Kennedy with the Presidency of the United States. While the intensity of the courtship

[1] Veteran Washington Correspondent Frederic W. Collins wrote this article—before the unsuccessful U.S.-supported landing of Cuban exiles—as a picture of "what seem to be continuing qualities of mind, a picture which is not altered by a single transitory event."

had been observable to the whole public for a year and more, it was not evident until after the ceremony just how deeply the mind was in love with the job. Ambition, extroverted self-esteem, and the other routine motivations of politicians can explain the pursuit, but the unflawed happiness the mind finds in its union with the Presidency is something that makes this Presidency new and different.

A large body of expert testimony about the quality and properties of the Kennedy mind is available in Washington, largely because the President attracts to himself people who are interested in—as a spectator sport—among many other things, minds. Out of this expert testimony, separate properties of the Kennedy mind can be isolated and described on authority. Some of the principal ones, in summary, are these:

A compulsive instinct for inquiry, effectively used. Utter independence. A range of concern which thrusts the Presidency far out and deep down in the Government. An insistence on extracting decisions from a sum total of original materials instead of from alternatives precooked by staff. An ease of decision, including decision on what needs to be decided, and when. A talent for suspended judgment, strikingly described as "an ability to live with chaos." An instinct for the relevant. A sense of personal responsibility equaling the most rigorous doctrine of command responsibility. Sharp, drift-free tuning which permits movement from the problem to another without overlap or confusion.

An all-encompassing political sensitivity ranging from the world to the ward. An unflagging intent of action. A zest which confers absurdity upon all the melodramatic and maudlin folklore about the loneliness, anguish, and burdens of the Presidency.

These are the properties of the Kennedy mind, and I am by no means one of those ready to conclude, on the strength of the admittedly serious error of his administration in the Cuba case, that they are not the intellectual qualities of a potentially distinguished President.

Kennedy's extraordinary curiosity is linked to an expressed belief that getting information is one of the greatest difficulties confronting a President, that the more people he can see and the more widely he is exposed to different ideas, including clashing ideas, the more effective he can be. Obviously, he has two main ways of getting information: reading, and talking with people. His reading has been rather fully described. His art in discussion is perhaps even more impressive, and less well known.

To Kennedy, it is said by those close to him, conversation and discussion and meeting people are always a means of finding something out or putting into a head something he wants there, or both. One expert on such matters, impressed by Kennedy's skill as an interviewer, called him "the best reporter in town."

One recent day he had as successive visitors G. Frederick Reinhardt, Ambassador designate to Italy, and Lord Louis Mountbatten, Chief of the British Defense Staff, accompanied by Gen. Lyman Lemnitzer, Chairman of the U.S. Joint Chiefs of Staff.

Kennedy had already had two sessions with Reinhardt. This was a farewell. In the environment of their conversation were such circmstances, not spoken of, as the fact that Kennedy is a Catholic, that the United States has no emissary to the Vatican; and that Reinhardt, accredited only to Italy, will in Rome be in the heart of the Vatican's relationship with Italy and the rest of the world. Kennedy gave Reinhardt no explicit instructions. He interviewed him: About his knowledge of the Vatican, Vatican-Italian relations, the role of an ambassador to a capital encompassing the Vatican State, his knowledge of Catholicism, his views on Italy, the governmental problems of Italy, and four or five leading Italian political personalities. It did not seem to be a catechism, but a searching and probing for information. When Reinhardt didn't know an answer, Kennedy did not make it embarrassing but slid the question off as a passing thought; Reinhardt, for his part, no doubt understood he would do well to get the answers for his own need. Kennedy knew the Italian background and knew the Reinhardt background as a career officer. He was educating himself—and the Ambassador. In respect to a preconceived State Department opinion, Kennedy said, "Better challenge that before you act. Let's see if it's still right this year."

In the talk with Mountbatten, who preceded Reinhardt, Kennedy had ranged from Hong Kong to Berlin by way of NATO and such specific problems as nuclear arms for NATO. In each case he got an opinion from Mountbatten. In turn, Mountbatten got a vivid impression of what was in Kennedy's mind. While the President of the United States cannot dictate NATO policy, Kennedy certainly planted ideas in the Mountbatten mind which would color his thinking and are probably bound to affect policy.

The interview demonstrated the retentiveness of Kennedy's mind. With Mountbatten, he discussed Berlin contingency plans. It had been 6 weeks or more since the Kennedy mind absorbed that information, but it was immediately on call in detail as if, it was remarked, he had been working on it for 20 years. Examples of his power of retention abound. In one press conference he remarked that he was "somewhat familiar" with the disarmament conversations which took place in Geneva "from 1928 to 1929 through 1933–34," when he was in his teens. Various persons independently call that understatement, and testify that Kennedy has almost total recall of that voluminous record. When he first took it in is not known, but it is assured he brushed up on it in the campaign.

The judgment has also been made that through unrelenting inquiry, Kennedy, when he came to interview Robert S. McNamara for the post of Secretary of Defense, was able to employ a broader knowledge of Pentagoniana than Dwight Eisenhower could claim after 37 years in the Army—part of it in the Pentagon—and 8 White House years. The comparison draws malicious chuckles, but is meaningful just the same.

Kennedy's interest in differing opinions and currents of information is so great that he has formalized arrangements for making sure he gets them. That is one of the things the operation conducted by McGeorge Bundy as his special assistant, and Walt W. Rostow as Bundy's deputy, is all about: To give Kennedy information on State Department and Defense Department matters independent of what the Departments provide. This looks awkward and dangerous on an organization chart, but it is asserted that Secretary Rusk and Secretary McNamara know and accept the purpose of the arrangement and there is no resentment.

The importance of information to Kennedy is demonstrated by a converse example. The clumsiest move he has made, the nomination of his friend Earl E. T. Smith, former Ambassador to Cuba, as Ambassador to Switzerland, resulted from a failure of information. Somewhere down the line in the State Department an officer did not make the significant association between Smith's service in Cuba and the present Swiss function of representing U.S. interests there. It is amazing that Kennedy did not make the association himself, or pick it up in his seine, and catch on to the prospect of Swiss resentment. But the failure was complete all around, up and down, and had to be marked as a Kennedy error.

His curiosity may be the most important characteristic of his method of conducting the Presidency. It is indispensable to solo decision. When a matter comes before him, he is the one man who has read all the lessons, heard all the arguments, commands all the information. No one could write down for him all the considerations involved. He has acquired them for himself from all his sources, or he doesn't have them.

There is evidence that Kennedy consciously wills it that way. The speed and vigor with which he brushhooked his way through the committee growth in the Government reflects his resistance to, and his rejection of, preordained decisions, his refusal to choose among alternatives formulated elsewhere than in his own mind. There is dependable testimony that Kennedy understands, as Churchill understood, the danger built into any organization that alternatives will be so defined by staff as to mean the staff is dictating executive decision. Any President learns that the Presidency is not a collective office. Kennedy seems to have known this instinctively at once.

Kennedy's solo performance as a decider arises also from a sense of personal responsibility which has been developed, it must be assumed, by his whole background, upbringing, and training. To those around him, it is symbolized by the physical mass of the papers on his desk, and displayed in his insistence on knowing the name and the face of every person in the pattern of responsibility centered in himself. He takes all the responsibility which is his, and expects others to take all which is theirs. But, as in the case of a ship's captain, the total responsibility for the whole system comes, in his mind, to lie upon no one but himself.

One of the happiest gifts of the Kennedy mind, for its own sake, may be a talent for deciding what needs to be decided. He may make a decision when it is ready, or when it is easy and might as well be got out of the way, or when it is to his advantage to do so. He does not make others which do not need to be made (which is different from deferring decision), which saves a certain amount of wear and tear. But he is evidently quite capable of making decisions when all the circumstances say the act of decision will be most difficult.

Laos was one such situation which came to require decision under pressure. It was on his desk when he walked into the White House. It had been a major subject of discussion between him and President Eisenhower in their first meeting during the transition, and the major subject of their meeting on January 19, the day before inauguration. Kennedy put a task force to work on the subject. He read the intelligence reports every day and could see that the situation not only was not solving itself but getting worse. He began to ask questions: "We're backing Phoumi—who's for Souvanna? Why not have him on our side? Isn't there any plan except to sit and watch the British wait for a note?" Early in March he called a conference of his Government from which there issued some 20 decisions setting military and political measures in motion to support a central decision that the United States should take action. At that point there was no emergency, but the clear prospect that one was develing unless action occurred. Ambassador Thompson was instructed to talk with Khrushchev, Ambassdaor Stevenson to talk with Gromyko. Then, as the week of March 20 began, Kennedy conducted a review of what had been done, including steps taken to convey to the Soviet Union a sense of the seriousness with which the United States viewed the situation. He then decided it was time to tell the public, time to tell Congress, and time for him to talk with Gromyko (which he did on the 27th).

Secretary Rusk and Secretary McNamara were sent to the Capitol to brief the leadership of Congress and report back on their reaction. He had a press conference scheduled for Wednesday the 22d, which he moved to the 23d and into prime time at 6 p.m. He himself decided on the map presentation as the best means of dramatizing what he was talking about. He himself rejected any reference to Laos as a "small country" (it is the world that is small) and spoke of it as "three times the size of Austria." He himself designed and edited his statement to fulfill a prescription of no threats, but clarity and firmness. He rejected the idea of a fireside chat in favor of a press conference at which he could offer "warning and knowledge" to the public.

If that is a history of multiple decisions of first magnitude, it is also, to those who observed it, an example of the Kennedy "ability to live with chaos." That quality can also be observed in domestic affairs. Waiting for Congress to act is almost by definition the art of living with chaos. The strategic decision to discard the enticements of a razzle-dazzle first 100 days until Congress had been brought more effectively under the Kennedy influence reflected the same capacity. The deferring of broad Federal actions to get at the bedrock problem of the lagging growth rate is another example—a recognition of the "education gap" and "the vote gap" represented by the public's failure to share Kennedy's urgency about the economic gap, and the shortage of congressional votes to support his proposals for closing it.

But in daily practice, this quality of Kennedy's mind is shown to those around him by the fact that whatever his first inclination may be, he is always ready to listen to the last person—provided that person is counted worth listening to—even though what he says may be contrary to a fairly strong first inclination in the Kennedy mind. This suspension of judgment produced a mental picture of Kennedy listening to arguments within his own mind as he listens to a presentation. If he is listening to hard data on a new weapon, he is also listening to inner advice from other parts of his mind about its effect on the budget, its meaning in politics, its influence on relations with allies, and the probable reaction from adversaries. But he does not stop listening to the data, because if the weapon is no good, none of his projections from it mean anything.

This marshaling of related considerations is also what is meant in describing Kennedy's mind as political in the most all-encompassing sense. The whole of politics, in other words, is to such a mind a seamless fabric, in which a handshaking session with a delegation of women is an exercise directly related to hearing a report from a task force on Laos.

The bounds of Presidential concern in the Kennedy government are not yet fixed, but certainly they extend further out and deeper down than usual. It is not at all unusual for him to telephone direct to an assistant desk officer in the State Department—not a desk officer, but an assistant—and put a question. Before hanging up, he tells the officer to let Secretary Rusk know the call was made. The relatively small matters with which Kennedy concerns himself in detail show up time and again in his press conferences.

Very recently, for example, he reported the sale of a surplus Navy building in West Virginia to a private firm. The idea was that this was a step in economic redevelopment. It seemed to reporters to be awfully small potatoes for a President to be handling, and there is, indeed, a question whether at some point the expanding boundaries of Presidential interest do not run into the law of diminishing returns.

But it takes only an ordinary knowledge of government to suggest that such broad-ranging Presidential interest notifies every worker, however far out and low down, that he may for all he knows be working within the area of Kennedy's concern, and that he had better give that some consideration. One result is that Kennedy gets to govern the whole Government to a new high degree, and therein lies one of the promises that this Presidency might outmatch the permanent residue of wilfulness, stubborness, lethargy, and mere bad habits existing in this and any other bureaucracy.

The Kennedy instinct for the relevant is a quality which perhaps has to be taken on faith, but its existence is unanimously testified to by those who deal with him. If it is a big problem, they see him taking hold of something on the edge that matters, and following it to the center.

But there is no question about his ability to keep problems separate and move from one to the other and back again. To describe him as being seized of a problem would be wrong. When he is working on problem A and problem B requires his attention, it does not intrude upon him. He is not distracted. He accomplishes a complete transfer of his mind from one to the other. And when he goes back to Problem A he knows where his place was without a bookmark. The afternoon the Congo crisis boiled up in the United Nations, Kennedy was engaged in a conference in his office on a supplemental appropriation request, a distinctly complicated piece of business. In the middle of it he got a call from Adlai Stevenson at the U.N. He moved from a side chair to his desk—and from one subject to another. After listening to Stevenson a bit, he broke in to ask, without any trimmings: "What about Gizenga? What about his legitimacy?" (As an example, by the way, of instinct for the relevant.) His conversation with Stevenson over, he moved back to his side chair and with a purely pro forma "Where were we?" picked up on the appropriation bill with an immediate series of informed and penetrating questions.

Saturday, March 25, was an extremely busy day for Kennedy. He dispatched a message to President de Gaulle on Laos. He made a quick decision to fly to Palm Beach to see Prime Minister Macmillan. He had conferences on both those subjects and on his meeting with Gromyko on the coming Monday. Forty-five minutes before takeoff for Palm Beach, he found himself with nothing to do. Quite evidently dismissing all the other matters from his mind, he set himself at the task of dotting i's and crossing t's—and doing some undotting and uncrossing—in a message on oceanography he wished to send to Congress the next week.

Kennedy obviously could not do so much without employing a rigorous order of values and priorities. Not everything a President does is of first importance, and matters of lesser importance must be restricted in the exactions they may make upon him. The appointment of Charles M. Meriwether, of Alabama, as a Director of the Export-Import Bank, probably fell within the category of lesser matters in the Kennedy scale. Meriwether's association with political champions of white supremacy in Alabama campaigns kicked up a fuss. There were, on the other hand, orthodox political reasons for the appointment. Kennedy resented the criticism; he was unusually brusque in response to press conference questions about the appointment. It may be justifiably speculated that his resentment resulted not from thin skin, but from a feeling that he had given the matter the consideration it was worth, had exercised in other appointments at each level the appropriate degree of care, had exercised maximum care in those of most vital importance, and ought to be criticized on the total performance, not on one time at bat. On the other hand, the broader philosophical proposition that southern politicians will never change if national preferment is bestowed on them despite their adherence to rejected ideology does not seem to have played any part in his decision.

The Kennedy mind's inherent intent of action pervades his whole operation. His virtual abolition of the Cabinet as a formal joint council, his abandonment of the formalism of National Security Council meetings and procedures, his excision of committees, his dismantling of the Operations Coordinating Board as an elaborate follow-up instrument for the NSC, were all aimed in some degree at closing the gap between decision and action. He is not interested in statements of the problem that carry no action consequences. The purpose of his conferences is to balance out the general considerations that relate to a course of action. Under him, the NSC is not a place for generating big papers on broad objectives here and there in the world. It is a place in which policy is exposed to final discussion, where the President confronts a problem and then finally a decision.

His procedures are high speed. Pick up the phone and ask McNamara what he thinks. Pick up the phone and ask Rusk what he thinks. Don't wait for them to get a staff report. Ask somebody going by what he thinks, if his opinion is worth anything. Or let him speak up if he has an opinion, and he ought to have, that's his job. If there has to be a conference, call in the people who belong in it and forget the table of organization, the NSC and the Cabinet. Out of an ad hoc conference of weight equivalent to the NSC, there recently flowed 17 action memos. These chits, recalling the "Action This Day" memos emitted in torrents by the wartime Churchill, may result from a meeting or Kennedy may generate them on his own. Dictated to a secretary, they flow through McGeorge Bundy's office. A paper control was hastily established to keep track of them. It amounts to little more than numbering, and distribution of copies to those who "should know," apart from the addressee. They assume action, eliminating the need for ponderous follow-up.

The Kennedy "task force" intends action. It is not, like a study commission, an elaborate means of putting off action. It is focussed on a problem; its activity forms around that problem and the need for action. Kennedy uses them often: On Laos, Cuba, Vietnam, NATO, minimum wage policy, integration in Federal employment, and so on.

Heading a task force on NATO, Dean Acheson was not expected to write a book, but to produce ideas for action. He perhaps found this out the hard way. When he was still 2 weeks from a final draft of his report, Kennedy began pressing. The result was a rough draft in 4 days, because it was in the rough draft stage that Kennedy wanted to get aboard. Then there was a conference—McNamara look into this, Rusk write a report on that, let's take this paragraph out because it's not really intelligent. Following the conference there were reviews by the departments. There were injections of Kennedy ideas, and when reports from the departments were received, the report had the form of a list of proposals which, it was remarked, the United States could put down on the NATO Council table the next morning. There is no handsomely-bound Acheson study cluttering the Kennedy desk.

One of the cumulative effects of Kennedy's constellation of mental attributes can be summed up by saying that this is a President who has no advisers. The term is used, even by Kennedy, and will go on being used. The fact is, however, that the highest func-

tion of his councillors is to tell him what questions he needs to have the answers to before making a decision. They give judgments, conclusions, opinions, analyses, and information, but there is not one who on any occasion is contributing any more than a part of the mix of materials from which Kennedy's mind will get a decision.

There were a couple of interesting sidelights, in a recent TV interview, on Kennedy's monopoly of decision. He paid warm compliments to a book, "Presidential Power," by one of his assistants, Professor Richard E. Neustadt. But with obvious deliberation he stopped short, when asked, of conceding any specific point on which his conduct of the Presidency had been guided by it. Again, paying equally warm compliments to his Council of Economic Advisers, he remarked, "I'm dependent on the Council for their views of what action we should take." The phrase "their views" carries its own notice that those views are only a part of the material on which Kennedy decides "what action we should take." It is quite evident right now that a host of other considerations, including political realities, go into the mix.

Kennedy's mind is such, indeed, that he tends to advise the "advisers." This happens all the way from minor politics to international affairs. A political aide presenting the pieces of a problem to Kennedy will get back one of his 1–2–3 responses which may mean go ahead as you propose, but will provide reasons for the action which had never occurred to the aide.

Kennedy rejected the implications of the long bilateral negotiations the predecessor Administration had conducted with the Germans on how to get their help in easing the U.S. balance-of-payments problems. (And Douglas Dillon, one of his "advisers" as Secretary of the Treasury, had taken part in those negotiations.) "This is wrong," Kennedy told his "advisers." "It is politically impossible for the Germans to ask their people to give money to the rich Americans. This is a crucial, fundamental imbalance affecting the whole alliance, and it has got to be solved on alliance principles. That's the only way to get acceptance for it among Germans." That approach opened up a wide new assortment of means, which became the basis of fruitful negotiations with the Germans.

The Kennedy mind, at the decision point, seems to close its intake valve and retire within its cranium to be utterly alone with itself, if only for a split second. At that point, it appears to be separated effectively from all the apparatus which has been pouring materials into it. The decision which emerges may run contrary to the weightiest considerations advanced by the associated minds he values the most: From pre-Presidential days there are the examples of his entering the Wisconsin and West Virginia primaries; from Presidential days, the most compelling example is the retardation, for political reasons, of an economic program which as an intellectual concept had won his commitment in full.

A second cumulative effect of the properties of the Kennedy mind is to avoid handling of problems within compartments. Decisions made wholly within the Kennedy mind are made within the whole context of Government and politics, which is the only place the whole context exists, and where compartmentalization can be avoided. It follows that a pattern of policies thus conceived shows an integration not to be achieved by the most elaborate coordinating mechanism in the Government outside the mind.

Kennedy is conscious of, and working on, the problem of how he transmits his power so that it will not be blunted and negated in the Government. The expansion of his area of concern, the direct contact with people at all levels of the Government, the uprooting of committees, the very speed of his activity, the action memos, are ways of dealing with the problem. He himself has said that one of his methods is to gather as many people as he can and then stimulate them.

To close-in students of his Presidency, Kennedy's deliberate generation of rival currents of information and judgment, is a means of transmitting power. In their judgment, Kennedy does not derive an inner satisfaction, such F.D.R. enjoyed, from setting people at cross purposes. But the means by which he obtains independent perspective through clash of opinion or multiple streams of information are also a means of inducing productive tension in the Government. That, and the energy Kennedy puts into the Government from his own supply, combine as the main propulsive force of this Government.

It is also a conscious policy of Kennedy's to make the existing departments and agencies more effective by giving them more responsibility. This is particularly true of the State Department, which in his view has suffered a serious attrition of stature, prestige, and leadership in the public mind in recent years, but it is true of all. It explains Kennedy's observation that while he finds plenary Cabinet sessions a waste of time, the Cabinet will become more than ordinarily important as his administration goes on.

The capacity of the Kennedy mind to sustain the evident intensity and speed of its activity is a question which obviously interests the public, watching him on television to see whether he looks tired or whether his tongue get tangled up.

One answer is that busy as he may be, he has more leisure than anyone else working for him in the top echelon. But it may not be wholly a matter of physical stamina. His load will build up like a coral reef, but faster and in larger increments.

When he becomes preoccupied with Cuba, Laos will still be on his desk, and when he becomes preoccupied perhaps with Berlin, Cuba will still be on his desk beside Laos. There are only so many hours in a day, and only so much energy in Kennedy. The forecast is that there will have to be a shift in emphasis, with the scope and number of his personal involvements in policy shrinking, although the absolute aggregate mass of policy within his direct concern may not. The men around him now generating ideas will find themselves more and more engaged in managerial tasks relating to activities already under way and stubbornly continuing.

But Kennedy's capacity to sustain action is certainly supported by an extraordinary zest. There is nothing he dislikes more, it is testified, than a nice, orderly day with five appointments neatly spaced. With the first 15 minutes he has free in the morning he subpenas Robert from the office of Attorney General for a conference in the presidential office. Then he keeps filling in the gaps in the appointment list until he has guaranteed himself a 12-appointment day of continuous action. A man lacking zest for his job does not deliberately and even joyously fill in gaps in his workload.

The Kennedy mind being what it is, a Kennedy concept of the presidency has already evolved. It is that the Presidency of the United States is conducted by the President. When he says "we," as he usually does, he means "me and my mate, the Presidency."

POSTSCRIPT

As to the role of Mr. Kennedy in connection with the defeated April 17 expedition in Cuba, the point may be made that the event endorses this analysis of the Kennedy mind far more than it might impeach it.

To begin with Kennedy in the Cuban case faced preordained alternatives. A rebel force in being, on the shores of the United States, and by decision other than his own, was a preordained alternative. Its very existence forced a choice between other preordained alternatives: Whether to let it go or not let it go. By no act of Kennedy's, the matter had become, before he took office, one he could not handle in his own way; that is to say, while a policy can be rescinded, an armed force of fervently motivated men, under another flag, cannot.

Second, and perhaps most important of all, there was a failure of information—specifically, accurate information as to the potential of sympathetic internal uprising in Cuba. If an opinion may be ventured, it would seem a pity if Kennedy, on the basis of results in one situation which may literally have defied his best efforts, were yet to change his way of doing things. The carryover of preordained alternatives on his desk will dwindle with some speed. He must overhaul his feedlines of information. His procedures of decision can then be thoroughly tested in an environment of his mind's own creation.

To Use the Past

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, former President Eisenhower has the respect and admiration of every American citizen and I believe everyone will appreciate the editorial that appeared in the Washington Evening Star on May 4:

THOUGHTS WHILE RIDING

Dwight D. Eisenhower's first magazine article since leaving the White House provides a fascinating and not at all surprising insight into the unpretentious personality of the former President.

Writing in the current issue of the Saturday Evening Post, General Eisenhower recalls his thoughts of last January 20, when he ended, "with mixed feelings of satisfaction and regret," almost a half century of public service. He has learned once more for example, how to dial a telephone and how to drive a modern automobile—small chores that had been done for him for so many years. And he writes humorously of the "puzzlement" obviously bothering others about how to address him—as Mr. President, as General, as Ike or even just Mr. Eisenhower.

But it was during his automobile ride with Mrs. Eisenhower, over the familiar route from Washington to Gettysburg, that a lot of memories and a lot of questions, about small matters and large ones, went through his mind. Perhaps most typical of his personality and his longtime sense of duty, perhaps most predictable of any decision he will be called upon to make, is his "simple conclusion" to the question of "what next?" as they arrived at the front door of the Gettysburg farmhouse. These are his own words:

"There is little reason for me or anyone else to think and talk of or to live in the past, smugly hugging to himself memories of successes or futilely bewailing setbacks. The task is to use the past and its experiences to help us peer more clearly into the future and to do our best to make it better.

"This, in my own way, I shall try to do whether I talk or write about farming, Federal aid and grants, mutual security, governmental organization, foreign relations or of political doctrines, political parties or, in fact, just plain politics.

"I think it will be fun; I hope it will be useful."

For our part, we hope it will be fun. And we have no doubt that, out of that half-century of service and of study, General Eisenhower's further reflections and opinions will be most useful.

Israel: A Demonstration of Freedom With Responsibility

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mr. RANDOLPH. Mr. President, it was my privilege on Saturday, May 13, 1961, to have been a participant in the ceremonies at Clarksburg, W. Va., commemorating the 13th anniversary of the State of Israel. This bar mitzvah anniversary observance, which afforded me a stimulating and enriching experience, was sponsored by Louis Hiller Lodge No. 727 of the B'nai B'rith, the Sisterhood of the Tree of Life Congregation of Clarksburg, and the Clarksburg Chapter of Hadassah.

Mr. S. J. Birshtein, a prominent civic and business leader of Clarksburg, conducted the gathering as master of ceremonies and reported that the subscription of $15,000 in bonds for Israel was the best in recent years.

Rabbi Elihu E. Elefant, spiritual leader of the Tree of Life Synagogue, offered an inspiring invocation, and warm welcoming addresses were delivered by Mr. Hyman Rosen in behalf of the B'nai B'rith and Mr. Donald Berman, chairman of the Clarksburg Israel Bond Committee.

Among the dramatic highlights of the evening was the lighting of 13 candles for each of Israel's years as an independent state, and one for growth. The participants in this ceremony were Mr. Jake Berman, Mr. H. A. Caplan, Mr. Abraham Chapnick, Mr. Leonard Gotlieb, Mr. Ray Kramer, Mr. Jack Marks, Mr. Albert Rosen, Mr. Jack Schwartz, Mrs. Jack Schwartz, Mrs. A. Robert Marks, Mrs. Sarah Markowitz, Mrs. George Rosen, and Mr. Maxwell Samuel.

Mr. Steve Gaynor, prominent vocalist and comedian from Pittsburgh, added the lighter touches to an evening of encouragement and inspiration.

It was my pleasure on this occasion to confer awards on the two winners of a community essay contest on Israel commemorating the bar mitzvah of Israel, Mr. Robert Lees, age 14, and a student at Central Junior High School, who received the junior award, and Miss Barbara Birshtein, age 16, a junior at Washington Irving High School, winner of the senior award.

Dr. Isadore Buff of Charleston, State chairman of bonds for Israel, and Mrs. Buff were among the honored guests at the celebration, as were also Mr. and Mrs. Julian Blackman, community and State civic leaders from Portsmouth, Va., and Mr. W. G. Stathers, a leading Clarksburg attorney.

As speaker of the even, I was introduced by the Honorable Howard Caplan, a close personal friend and former U.S. attorney for the northern district of West Virginia. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD my remarks delivered at the bar mitzvah celebration of the State of Israel in Clarksburg.

There being no objection, the remarks will be printed in the RECORD, as follows:

ISRAEL: A DEMONSTRATION OF FREEDOM WITH RESPONSIBILITY

(An address by Senator JENNINGS RANDOLPH, Democrat, of West Virginia, commemorating the 13th anniversary of the State of Israel bonds for Israel rally, 8:30 p.m., e.s.t., Clarksburg, W. Va., Saturday, May 13, 1961)

Seldom has the ancient ceremony of the bar mitzvah been more symbolically appropriate than this year in its application to the State of Israel. The Jewish nation, the source of much of the greatest moral and religious philosophy of Western civilization, now observes the "coming of age"—the traditional acceptance of moral responsibility—of the State of Israel.

There has probably been no state, not excepting even our own United States, which has achieved statehood with a higher degree of moral consciousness and national self-awareness than has the State of Israel. And the Christian world is reminded today by the State of Israel—as it has been in times past by the Jewish people themselves—of how far we have often strayed from our own moral commandments. Thus, though it is a grim connection to make, there is an almost poetic justice in the Eichmann trial being held in Israel during the year of its bar mitzvah.

For this trial, which is being conducted with the most scrupulous regard for judicial process, is not animated by the desire for vengeance against the man Eichmann. There can be no mortal punishment or vengeance suitable to the ghastly crimes for which he stands accused. Nor is it a trial merely of the Nazi system and the German people who supported it during its days of power. Western civilization itself is, to some extent, on trial. For the Nazi system prospered in one of the most advanced nations of the Western World, and it had its apologists even in the United States and in England. Thus, each of us who, as an adult during the thirties and forties, did less than his utmost to combat the disease of nazism, shares a portion of the guilt for the crimes for which Eichmann is accused. In this sense, the State of Israel, in the year of its bar mitzvah, probes the moral responsibility of the Western World.

The American poet, Robert Frost, during his recent visit to Israel remarked half facetiously that he "looked upon Israel as an American colony." Though it would not do to overstate the point, as in most of Frost's remarks, there is the pungent taste of truth in this one. I refer not only to our official and early recognition of the State of Israel, nor to that country's substantial financial support from Americans of Jewish faith.

Equally important is the hold which Israel has upon the imagination of millions of Americans of every faith because so much of the Israel experience seems related to our own national experience. Like the United States, Israel has drawn its population from the exiles and refugees of many lands—the "ingathering" of the past 13 years, which has almost trebled the population of Israel, being one of the great and dramatic achievements of this century.

And as the United States, the first great democracy of the modern world, was viewed with dislike and anxiety by the monarchies of Europe, so Israel, the first experiment in democracy in the Middle East, is feared and disliked by the Arab autocracies.

Finally, Israel shares the American "frontier experience" in the form of the Negev desert, which comprises half of the entire country. This region, as forbidding as the most wild and barren regions of the American west, has already begun to yield to the genius of Israeli science and the courage and industry of Israeli pioneers.

Thus, as Americans and as participants in the great enterprise of Western civilization we are committed—within certain limitations—to the support of Israel for moral, political and practical reasons.

First, we have been politically involved in the support of an independent and peaceful development of Israel since our support of the United Nations partition out of which the State of Israel emerged. This was further sealed by President Truman's immediate recognition of Israel on May 14, 1948, only a few hours after the final withdrawal of the British forces.

But American political support of Israel is not solely a matter of our keeping trust with past resolutions to serve the rightful and legitimate interests of Israel. We have strong and compelling practical reasons of our own self-interest in our desire to see Israel prosper and flourish in peace. As a cultural enclave of the West, it offers our best hope for the development of democracy in a section of the earth torn by centuries of oriental despotism, intrigue and tribal rivalries. Israel thus offers the best hope for political stability and orderly progress in the Middle East, and hence, our strongest defense against the infiltration of Soviet power.

Though the Middle East has temporarily yielded the headlines to Cuba, Laos and Vietnam, we know that as long as that region is a battleground of the cold war, Russian interests are served by instability and by pitting Israel and the Arab nations against one another, while we must seek to maintain political stability and develop friendship with the Arab nations without sacrificing the claims of Israel.

Another eminently practical reason for our support of Israel is the increasing importance of its role of technical assistance and guidance to the lesser developed countries of Asia and Africa. Commenting on the contributions of foreign specialists to the development of such countries as Ghana, Nigeria, Liberia, Ceylon, and the Philippines, one observer recently remarked:

"Perhaps the most sympathetic figure among these rivals experts is the Israeli, sunburnt, stripped for action; he too comes from a poor land which is making itself richer by sweat and ingenuity. Many in Asia and Africa would prefer to go into partnership with Israel, whose problems are more nearly related, and who, therefore, sees solution in more realistic terms."

In addition to such technical assistance, Israel has provided training in Israel for a significant number of students and civil servants from Asia and Africa. The variety of training and education ranges from a special "in residence" study of Israel cooperative villages by 30 Burmese officials and their families to Japanese scientists doing advanced research at the Weizmann Institute of Science and other Asian and African students engaged in postgraduate studies of mathematics, medicine, architecture, and economics.

A third form of cooperation between Israel and the new states has been the establishment of joint economic enterprises in which Israel provides managerial experts and tech-

nical training for the local personnel, participates in the work, and contributes a substantial share of the capital. Typical of such ventures are the Black Star Line, an Israel-Ghana shipping company, and the Ghana National Construction Co., in both of which companies ownership is vested 60 percent in the Government of Ghana and 40 percent in Israeli principals.

The contributions of Israel to the development of the new states and to the extention of democratic forms of government is perhaps best expressed in the words of an African official from Senegal upon the completion of his tour in Israel, when he declared:

"Naturally many of us are overawed by the Soviet experiment. It's a very tempting road to rapid modernization for an underdeveloped country. But we couldn't stomach the forced labor that goes with it. We don't think parliamentary democracy as it is practiced in certain Western countries can work in Africa, yet most of us are anxious to retain the basic principles of a democratic society. In Israel we see a whole nation working hard for the same goals under a democratic system of government."

Thus, the people of Israel, by virtue of their contest with a harsh and formerly barren land, and out of their heritage of democratic idealism which has withstood the centuries of privation and suffering, may assume a role of leadership among the underdeveloped countries which the larger and more prosperous Western democracies are denied.

But equally binding as our political and practical commitments to Israel, is the debt we owe to Jewish culture and tradition for having first awakened the moral consciousness of Western man. In the history of the Western World perhaps the first truly civilized answer to the question of what each of us owes to his fellow man solely for the sake of man's humanity to man was that given by the writer of Leviticus: "The stranger that dwelleth with you shall be unto you as one born among you, and thou shalt love him as thyself; for ye were strangers in the land of Egypt" (Leviticus 19: 34).

The intellectual and spiritual contributions of Judaism were the source of the early nourishment of that which is most precious in Western civilization. The idea of the dignity and integrity of the individual expressed in Job's despairing cry that "I will not sacrifice my integrity"; the ideal of social justice, served in varied ways and by such diverse personalities as Moses and Spinoza, and the belief in the brotherhood of all men as the children of one Creator—these values have shaped the aspirations of Western man and were the source of much of Christianity and Mohammedanism.

Not only did the Jewish people animate Western moral and religious thought by giving the world their own Book in the Old Testament, but it was the Alexandrian Jews who translated the Book of Law, the Pentateuch, into Greek.

It was these Jews and succeeding generations who kept alive the knowledge of classical Greek during the early Middle Ages when the light of learning had been virtually extinguished in Europe. And it was in large part through Jewish philosophers in the service of Moslem courts that classical learning was reborn in Europe, thus laying the foundation for the Renaissance.

This Jewish devotion to the life of the mind—so strong as to have been thought by many Jews and non-Jews as a hereditary trait—has placed the civilized world in lasting debt. Negligible as a political power in the world at large, and representing less than 1 percent of the world population before World War II, the Jewish people have supplied a leadership far out of proportion to their numbers in every field of human arts and sciences.

Of the 257 Nobel Prizes awarded in the first 50 years of this century, 34 were awarded to Jews. Though the intellectual achievements of Jews have been the product of individuals rather than of a group, they have in large part resulted from mobilizing the individual's resources in response to the oppression of the group. This capacity, perhaps more than any other, has been responsible for keeping the Jew alive as a cultural and national identity through 2,000 years of the dispersion.

Nor is there any indication that the well springs of Jewish creativity have been dried by the creation of the State of Israel. To name only one instance: the desalination of sea water on a practical and economic basis—which may well prove to be the greatest scientific boon to mankind in this century—has been further advanced by the scientists of Israel than by those of any other nation.

But whatever the source of Jewish creativity, the modern world would be far poorer but for the artistic and scientific contributions of Jews. Indeed, it is not overstating the case to observe that of the four men who have framed the problems of our century, three were Jews. I refer to Charles Darwin—the only gentile—Karl Marx, Sigmund Freud, and Albert Einstein.

Whatever one may think of the conclusions they reached, the works of these four men opened new ways of thinking and gave an indelible and distinctive stamp to the modern world.

Thus, as legatees of Western civilization and as brothers of the human race we are morally obligated to the cause of a Jewish national homeland. We are thus compelled, not only as an acknowledgment of our debt to Jewish culture, but as insurance against the persecution and oppression which has marked the life of the Jew in Diaspora.

Spinoza, among the most gentle and noble of our great philosophers, once wrote that "A free man thinks of nothing less than of death; and his wisdom is a meditation not of death, but of life." Thus he set forth the text of Israel. For certainly no people has offered its martyrs more bravely or in greater numbers than the Jew. The Christian martyrs of the Roman Empire are numbered in the thousands. The Jews cannot name or number their martyred millions in the world of Christendom, culminating—to the eternal shame of all men—in the ghastly and bestial crematoria of the Nazis.

There has been a further difference between the lot of the Christian martyr and that of the Jew. The Christian died secure in his faith in the reward of immediate afterlife. The Jew received no halo and no promise of reward; and though the idea of an afterlife acquired some popularity after the Dispersion, it has never been the article of faith, the flaming conviction for the Jew that it is for the Christian.

Thus, if Jewish martyrdom had meaning, it was related to the continuity of Judaism and the hope of the ultimate rebirth of a Jewish national homeland. In the moving words of the ancient lament, "If I forget thee, O Jerusalem, let my right hand forget her cunning—let my tongue cleave to the roof of my mouth, if I prefer not Jerusalem above my chief joy." For this reason also, the free nations of the West—which call themselves Christian—must help justify the nameless martyred millions of Jews.

The two millennia of the Diaspora are drawn to a close. But the epic struggle of the Jewish nation is not at an end, but a new beginning. The State of Israel, as it observes its Bar Mitzvah, has a man's work to do. In the words of Mrs. Golda Meir, Foreign Minister of Israel, in her eloquent address to the United Nations in 1957, "The deserts of the Middle East are in need of water, not bombers. The tens of millions of its inhabitants are craving for the means to live and not for the implements of death."

Israel has shown the way. There, in a desolate and alien land the broken victims of the Nazi horror and destruction brought only their faith and the invincible spirit of free men and women. The desert has retreated under the steady advance of fields of cotton, corn and wheat; forest and vineyard are covering the once barren and eroded hills; and the new city of Eilat has become a thriving port and Israel's outlet to Africa and the Far East.

Under the inspiration of the example of Israel, and with the support of the free nations of the West, these acts may be duplicated in the other countries of the Middle East, and thus bring that region to a new level of civilization. In this way also Israel will serve the spirit of freedom and responsibility.

Foreign Policy

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. RHODES of Arizona. Mr. Speaker, in this study of the administration's first hundred days, there is not, I believe, a more significant or important trend indicated by acts and omissions than that which lies in the area of foreign policy.

We are living in an age in which the very structure of our civilization, the lives of our people and their offspring yet unborn, the whole future course of history particularly as it has reference to the continuation of the principles of this Republic, are being determined by the conduct of our foreign policy.

Indeed, Mr. Speaker, there has never been a period in the lifetime of our Nation in which our lives and liberties, our goals and hopes, were more dependent upon the delicate strands woven into the fabric of our relationship with other nations, with other ideologies rooted deep in the foundations of foreign states.

Thus, Mr. Speaker, the activities of the President and his subordinates in this most sensitive area must be based upon sound, indeed, upon faultless judgment. The lessons of recent history must be ever present in the minds of those who guide the ship of state. This is not, Mr. Speaker, a time for innovation for the sake of innovation, a time to ignore the realities of the situation solely to provide an outlet for the ever-busy minds of those within the administration whose penchant for social experimentation has blinded them to the cold winds that swirl about the fringes of civilization.

With these facts in mind, Mr. Speaker, an examination of the first 100 days of this administration reveals not a parallel with the first 100 days of the New Deal, but rather a trend that brings to mind discomforting thoughts of the 100 days to Waterloo.

Let us examine the drift of American foreign policy since January 20. Has it followed the course charted by the

dictates of past experience? Experience which has taught all reasonable men that any embraces shared with the ravenous Soviet bear will ultimately result in benefit to the bear and the bear alone.

The acts of the Kennedy administration in these first 100 days indicate that it has not.

Much has happened since January 20. The Republican Members of this body have not sought to exploit recent disasters for the very obvious political benefits that might be gained. I do not intend to depart from this policy.

However, Mr. Speaker, I believe that there is a very legitimate question that can be raised over the trend toward appeasement that has manifested itself since the administration took office.

Many of the old Acheson appeasers have reappeared on the scene still befogged by the notion that softness is the best reply to Soviet aggression.

Their hands have been visible in such instances as the release arranged by the State Department and the Attorney General of a Soviet spy caught redhanded in the process of committing espionage against the United States.

Communist propaganda, much of it not bearing the label of the Soviet Union from whence it comes, has been freed from restrictions and permitted to flow into the mainstream of American thought and opinion.

One of the more disquieting aspects of this trend toward appeasement has been the tendency of President Kennedy to make ringing declarations concerning our determination to resist Communist aggression while so many of those formally dedicated to appeasement are still in the background of this administration.

This, I submit, is disquieting since it causes the American people to believe that we are adopting the hard attitudes they favor when, as a matter of fact, precisely the opposite is true.

It is unfortunate, but obviously true, that the hard words are a facade whose only supports are the bean-pole and cornstalk braces of indecision, wishful thinking and the almost Freudian desire to have all the world love the United States regardless of the cost to our national security.

Consistent rumors and vague statements that dart in and out through the dense undergrowth of the English language by administration figures such as Adlai Stevenson, Chester Bowles, and J. K. Galbraith have characterized the administration's attitudes on the question of Red China.

This single question, Mr. Speaker, contains more omens of trouble to come than any other problem now in existence. It illustrates the trend toward softness better than any other subject recently discussed in the Nation's press.

For some years, the U.S. Government has, through the strongest diplomatic pressures, prevented the admission of Red China to the United Nations. Such pressure was necessary since many of our fellow U.N. members were being subjected to relentless campaigns at home demanding admission at all costs.

Because Ambassador Stevenson, Chester Bowles, and J. K. Galbraith, each high in the Kennedy administration have been less than concise in their expressions on the subject, doubt has been sowed around the world as to our real sentiments on the question. Already, the Brazilian and Commonwealth nations have let it be known that they will not support our position any longer.

Mr. Speaker, any signs of a weakening of our position on this matter, and I submit that the failure of many administration officials to take a forthright and unmistakable stand on the subject is, in fact, a sign of weakness, and will inevitably lead to admission of Red China into the U.N. and the ultimate crippling of that body as an instrument of world peace.

We find scant comfort in Mr. Kennedy's description of the Associated Press story out of London on April 12, which said, among other things, that the President had told Prime Minister Macmillan that he would need "12 months to prepare the American people" for the admission of Red China, as inaccurate "in that it stated that we had changed our position on the moratorium."

Mr. Speaker, it may be that my command of the English language is inadequate and leads me to mistaken conclusions, but this statement does not appear to disavow the body of the story—the brainwashing of the American people into accepting a betrayal of the people of China—and it leaves open the real question, the administration's true attitude on the matter.

Admission of Red China to the United Nations, Mr. Speaker, would lead to the eventual loss of all Asia. It would be a betrayal so cynical in its nature that the entire free world would be put on notice that the United States does not stand by its friends—that it only appeases its enemies.

Nor can we find solace in the continual reference by the administration to the legitimate Government of China—the Republic of China—as the Taiwan or Formosa Government. This, I submit, is a harbinger of a two-China policy and I put it to you, Mr. Speaker, that such a policy also represents betrayal.

Mr. Speaker, I am proud to say that the Republican Policy Committee of the House of Representatives took a firm stand in opposing admission of Red China to the United Nations only 3 weeks ago. This stand, contained in a statement of policy unanimously adopted, was carefully documented.

Another area that causes great concern is that in which lies the question of a nuclear test ban.

This shameful masquerade has been going on for years, and it has failed to bear any fruit whatsoever. In the meantime, we have crippled our nuclear capabilities by continuing a unilateral ban on safe underground testing so vital to the development of new fallout-free small weapons. If we are to survive, Mr. Speaker, we must resume such tests immediately should the Soviet Union fail to reach an agreement with us within the next several weeks. Any other course is madness and I cannot avoid calling to mind the injunction that "whom the gods would destroy they first drive mad."

Mr. Speaker, I have tried, in these brief remarks, to point out a disturbing trend toward appeasement which is a product of these first hundred days. There are other instances where this trend has been manifested. The return to secret diplomacy is one such instance. Another is the tendency of our Ambassador to the United Nations to ally himself against our friends and allies in NATO and to join with the Soviet bloc in the vague and unrealistic hope of impressing certain underdeveloped nations whose populace, by virtue of an appalling mass illiteracy and ignorance, is far beyond being impressed by such sophistry as votes in the United Nations. Further, Mr. Speaker, I submit that our votes on the Angola question have now laid us open to a similar situation regarding the Panama Canal Zone.

Mr. Speaker, in closing permit me to sound a warning—if the trend toward unrealistic, wishful thinking and appeasement so manifest in these first hundred days is not corrected at once there may well be a very limited number of 100-day periods left to us during which we can enjoy our liberty and its concomitant blessings.

Facts as Seen in South America

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Olathe (Kan.) News of Wednesday, May 10, 1961, pertaining to the state of affairs in South America. A penetrating editorial, it needs no further introduction:

FACTS AS SEEN IN SOUTH AMERICA

The Presidents of two of the more important nations of South America have felt the revolutionary winds sweeping their part of the world, as well as Africa and Asia. In acknowledgment they have joined in this statement:

"The preservation of representative democratic institutions and the consolidation of the principles of freedom and dignity of the human being require with the greatest urgency, an effort of great scope to accelerate development of Latin America and eradicate the ills which afflict the greater part of the peoples of the continent."

Lofty words, those, which convey to the erudite the problems and the immediate needs of these countries. They are couched in such beautiful bureaucratese, that they are only pious expressions with no determined purpose behind them. Rather than inspiring the masses of hungry peasants they rule, to the latter they will be incomprehensible.

Were these heads of states practical politicians and were they effectively to counter the threats of fidelismo and of communism, they would say more simply:

The landed estates will be broken up and divided among the people. Equitable taxes will be assessed and collected from the rich. Law will demand the payment of reasonable minimum wages. Unemployment, sickness, and retirement insurance programs will be established immediately.

Broadcasters Versus Minow

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 15, 1961

Mrs. NEUBERGER. Mr. President, few recent speeches have been cause for as much cheering as the forthright and challenging message delivered last week by Mr. Newton N. Minow, Chairman of the Federal Communications Commission, to the broadcasters convention. Tired eyes and bored minds all across our Nation perked up at the news that the viewing public might soon be freed from the tyranny of the TV ratings and that the future holds out the prospect of a bit more qualitative return for their devotion to the medium. I ask unanimous consent that Mr. John Crosby's article from today's Washington Post, entitled "Broadcasters Sure To Challenge Minow," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BROADCASTERS SURE TO CHALLENGE MINOW
(By John Crosby)

NEW YORK.—Newton N. Minow, the Chairman of the Federal Communications Commission, has done the unforgivable thing for a man in his position. He has watched television. Already, the wiseacres on Madison Avenue are spreading the word that the man's an amateur in broadcasting. If he were a professional, he would go yachting with the broadcasters whose affairs he regulates (as did one of his predecessors) or drink with them and be rewarded with a fat legal job after his tenure of office is over.

Minow's tough talk to the broadcasters, probably the toughest speech ever made by an FCC Chairman in office, will be followed—you mark my words—by a fog of propaganda from the broadcasters which will follow these lines: first, it is un-American for the chairman of a regulatory commission to regulate; second, it is a violation of the first amendment for the Chairman of the FCC to look at television (none of the others did) or to harbor opinions about it; third (this has been the battle cry against the critics the last couple of years, he doesn't understand the economics of broadcasting. (The broadcasting industry earns a mere billion and $100 million a year with a mere $222 million profit, and how can you expect anything good for that kind of money?)

Trying to put good programing on is considered censorship and maintaining the general level of mediocrity is freedom of the press. That's the way these guys argue.

The charges Minow made against TV programing—"A procession of game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, western badmen, western goodmen, private eyes, gangsters, more violence and cartoons. And endless commercials"—have all been made before by TV critics and by various other editorial writers and just plain people.

But this blast is different because it comes from the head of the FCC, a man usually seduced or intimidated or both by the lobbyists and propagandists of the broadcasting industry. There was the clear threat that if the broadcasters didn't do something about cleaning their houses, licenses would not be renewed. Well, I've heard that before and nothing has ever happened. We shall just have to wait and see.

While everything Minow said was not only true but glaringly obvious (and it's very difficult to state the obvious), the remedies are not so simple, so long as the business is run the way it is. I mean personal sponsorship of particular programs. If I were a manufacturer of toothpaste, which sponsored a television program, I'm afraid I too would go along with the mob and sponsor a private eye or a situationer (as they call them) or some other popular program. It's asking too much of the toothpaste manufacturers to sponsor an unpopular program, although many of them do just that—more's the wonder of it.

It's the system that's wrong. No single sponsor should have the ownership or responsibility of any single program. And I'm willing to venture the prediction that no amount of railing from either critics or FCC chairmen is going to change the dismal picture of TV programing. No cigarette sponsor is going to give a tinker's damn about what other programs are on the air, only his own. The solution, I'm convinced, is the British system with the insertion of ads as in magazines. The station or network can then take its total revenue and bring about some semblance of unity and sanity in its total programing.

"The squandering of our air waves is no less important than the lavish waste of any precious natural resource." I'm pleased he put it like that, waste is the proper word for it. Television is a national treasure and it should be used for something besides the waste of time. It should not be used as a soporific, draining the national energy and blanking the national imagination.

Newton Minow is a courageous man to state these glaring truths.

Now let us see how the broadcasters plan to grapple with these uncomfortable truths and the man who uttered them. As for the threat not to renew a license just because the licensee asks for it in perpetuity, we should all live so long as to see a single license revoked.

Welcoming Hand

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Camden Chronicle, Camden, S.C., of Wednesday, May 3, 1961:

WELCOMING HAND

Nations and peoples abroad want American dollars, and have received them in vast quantity since World War II. Now another element is added. We need and want more money from abroad—more pounds, more francs, more marks, and the rest. Over a period of time, our payments abroad of all kinds have materially exceeded foreign payments made to us. The result is the balance-of-payments deficit and a reduced gold reserve.

A campaign is underway to increase American exports, as a means of remedying the situation. This is vitally needed. So is another step. Free world economic recovery has given great numbers of peoples the means of traveling. Governments have relaxed or eliminated currency restrictions. And the jet airplane has dramatically shrunk the globe.

But there are serious catches. American visa and entrance permit laws are completely out of key with the times. They were designed, apparently, to keep people out—not to induce them to visit us. The redtape is all but endless, and most of it is clearly useless.

We alone, of all the major nations and many of the small ones, are without a foreign tourist and information service. There's no convenient way for interested foreigners to obtain authentic data concerning what they'll find in the United States.

Let's lower the bars, as most free world countries have done, and hold out the welcoming hand. And let's spend the small sum of money that an adequate foreign information service would cost. We'll get it back many times over.

Law Day, U.S.A.

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis B. Heller, justice of the city court of the city of New York at Law Day ceremonies on May 1, 1961, in trial term, part XXI, of the Supreme Court of the State of New York, county of Kings:

The COURT. Members of the jury, counsel and litigants, I should like to make a few comments. As you know today, May 1, by proclamation of the President is a day that we reaffirm our complete dedication to our form of government and the supremacy of law in our lives. The justices of this court met this morning to bring this message to public attention, and I observed that the members of this jury attended toward the end of the ceremony. Each justice this morning is expected to make a few comments. Mine shall be very brief.

Law Day, U.S.A., is a very significant event in these troubled times during which nearly everything we do is in some measure controlled by the ideological struggle between the free world and the doctrine of communism. Equal justice under the law is one of the foundations of our freedom. There is no system which does more to uphold our freedom than the court system, and both judges and lawyers feel a deep sense of responsibility to the public and the great body of the law. We never relax in our efforts to make its significance understood among the peoples who come here to seek justice. We, therefore, pause this morning before entering upon the business of the court, to reflect upon and remember with pride the great heritage of liberty, justice and equality under the law, which our forefathers bequeated to us, and which we must vigilantly guard.

The principle of guaranteed rights of individuals under the law is the heart and sinew of our Nation and distinguishes our system from the type of government that rules by might alone.

The Veterans of Foreign Wars of the United States conceived the idea of celebrating Law Day a good many years ago so that the world could know that our faith and our ideals of democracy will never permit us to lose the courage to uphold them. Dedication to the principle of government under law and loyalty to our country go hand in hand. Good citizens obey the law and good citizens are always loyal to their country.

This day is set aside nationally to show the world that we are united in our determination to oppose any encroachment on our freedom, and this has now become a part of our yearly ritual. And today we all know how close we are to encroachment.

The President in signing the proclamation declaring Law Day has used his pen as a launching pad to blast off a new type of moon into the sky. This moon illuminates human freedom as our offer to the world and that ideal can be more meaningful than any satellites in these days when the strength of man resides in his mind, his brain, and not muscles.

I am sorry to have to state that in this morning's newspaper I noted that in Cuba, Castro has declared that Kennedy will be burned in effigy. Well, there is an old saying that he whom the Lord would destroy he first makes mad.

I have had the great honor, and I feel it very deeply, to have served in the House of Representatives for a number of years with the President of the United States. During this period I learned a little about the problems of the world, and I had an opportunity to observe the President at close range. May I assure all within the hearing of my voice, and believe me this is not to be understood as being a political speech. It is not. I want to assure you that we have a truly dedicated and learned and courageous man as our President, and he will serve this country and the world with intelligence and understanding. We are in safe hands. Let us, therefore, rededicate our thoughts and actions to Americanism to the hilt of its institutions and ideals, to an eagerness to defend it against all enemies, to undivided allegiance to the flag and a desire to secure and guard the blessings of liberty to ourselves and posterity.

Thank you very much.

Toward a Better Educational System—Dr. Marcella R. Kelly

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. CONTE. Mr. Speaker, in this day of emphasis on the quantity of education that America provides for her children, I am pleased to bring forth an example of the work being done to better the quality of that education. We find a trend, too often, to teach young Americans how to fit into our social structure with the result that they assume no real identity at all, satisfy themselves with little more than economic security, and contribute less, eventually, than if they were robust individuals.

Dr. Marcella R. Kelly, asssistant superintendent of schools in Holyoke, Mass., has devoted her life to education. Even more than this, though, she has made a lasting contribtuion to a vital area within the realm of education. She has developed comprehensive programs to give our youngsters the theoretical and factual background of our democratic way of life. They are programs of citizenship and responsibility, rather than security and conformity. They expose the individual principles fundamental to our way of life.

Dr. Kelly and her curriculum have received national recognition. The Freedom Foundation, 2 years ago, acclaimed her elementary school citizenship instruction. This year, Dr. Kelly is 1 of 12 recipients of the Freedom Foundation's American Educators Medal.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled, "An Award Well Earned," from the Holyoke Transcript Telegram of May 11, 1961, which commends and thanks Dr. Kelly:

AN AWARD WELL EARNED

Holyoke proudly applauds Dr. Marcella Kelly on the occasion of her being honored by the Freedom Foundation for her work as an educator in the field of good citizenship. That Dr. Kelly should be 1 of a select group of 12 school administrators chosen from throughout the country for educators medals is most gratifying if not completely surprising.

Dr. Kelly has done conspicuous work in the whole area of citizenship training. The program carried out in our public schools under her initiative and direction has been widely recognized. Holyoke schoolchildren experience in a quiet and sensible way the lessons of respect for the rights of others, recognition of differences among people, and the duties of democracy.

It has been a healthy and refreshing change from the older emphasis on social adjustment as the path to self-centered success. Citizenship training puts responsibility in the place of conformity and a friendly interest in other people in the place of the search for popularity. And one significant aspect is that the children themselves have liked it. It means something to them.

Dr. Kelly's achievement in this area has been the community's good fortune, and the honor now bestowed upon her reflects credit on the schools that have demonstrated her planning so successfully. We add our congratulations to the many that are coming her way today.

Lt. Gen. William Howard Arnold

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. EVERETT. Mr. Speaker, a few weeks ago Lt. Gen. William Howard Arnold, retired after a distinguished career. At the time of his retirement he was commanding general, 5th U.S. Army, headquarters in Chicago, Ill.

General Arnold was born in the Eighth Congressional District at Dyersburg, Tenn., on January 18, 1901. He graduated from the U.S. Military Academy in 1924, and also the Infantry School, and the Command and General Staff College.

Prior to World War II he served with various infantry units, including a tour of duty at Tientsin, China, 1934–36. He was a member of the staff and faculty, the Infantry School, Fort Benning, Ga., from June 1938 to October 1939.

In April 1943 he proceeded from headquarters, IV Corps at Fort Lewis, Wash., to the South Pacific Theater of Operations. As Chief of Staff, XIV Corps, he participated in the campaigns of Guadalcanal, New Georgia, Bougainville, and the Bismarch Archipelago.

He assumed command of the American infantry division in November 1944, leading it in combat in the Philippines and in the occupation of Japan, remaining in command until deactivation of the division at Fort Lewis in December 1945.

After his return to the United States, General Arnold served in various War Department staff capacities until his assignment August 13, 1950, as Chief, the Joint Military Mission for Aid to Turkey. He was then assigned, on May 1, 1953, to Austria as commanding general, U.S. Forces in that country. He returned to the United States following withdrawal of occupation troops in 1955.

General Arnold assumed the post from which he was retired of commanding general of the 5th U.S. Army in Chicago on November 1, 1955.

He received the following citations and decorations: Distinguished Service Medal and oak leaf cluster, Silver Star, Legion of Merit with oak leaf cluster, Bronze Star Medal with "V" device and oak leaf cluster, Air Medal, Army Commendation Medal, American Defense Service Medal, Asiatic-Pacific Campaign Medal with arrowhead and four stars, American Campaign Medal, World War II Victory Medal, Army Occupation Medal—Japan, National Defense Service Medal, Philippine Liberation Medal with star, Philippine Legion of Honor Degree of Chief Commander, Philippine Independence Medal, Philippine Presidential Unit Citation, Combat Infantry Badge, War Department General Staff Badge, National Order of the Legion of Honor France Degree Officer.

It has been an honor and pleasure to know General Arnold and he has certainly contributed much to the U.S. Army.

We wish him the best of everything in the many years to come.

The Perils of Appeasement

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Edgar A. Mowrer, which appears in the Long Island Press, May 12, dramatically points out the perils of the present administration

policy of appeasement to the Communist tyrant:

WORLD AFFAIRS: FIRM STAND AGAINST REDS DEMANDED

(By Edgar A. Mowrer)

Evidence of a deep and basic division in the American people is mounting. Recently in discussing the John Birch Society, I observed that unfortunate as it was for members of the society to disqualify themselves as fighters against communism by their attacks on democracy, desegregation and the civil rights that are the basis of American civilization, their presence showed the deep and abiding anxiety of increasing numbers of Americans at successive administration's unwillingness to refuse further concessions to Moscow and Peiping.

At the base of this division lies a simple choice—either you understand that the United States is in a war (cold but genuine) which requires victory, or you don't.

If you admit the existence of war you start playing to win, not just bumping back Communist advances. If you don't know we are at war you try to capitalize on the Americans' desire for peace to scare them into successive surrenders by threats of atomic destruction.

You argue that Cuba and Guinea are not really Communist. You insist that the Russians have just as much right to have a missile base in Cuba as we have to have bases in Italy or Turkey or wherever. (This is the same as saying in 1944 that the Nazis had as much right to land on Cape Cod as we had to invade Normandy.)

In other words, you try to ignore the existence of the key fact of existence today—Communist aggression.

Such talk is not merely found in the mouths of pro-Russians like Linus Pauling and Cyrus Eaton (to mention only a pair of prize exhibits). No, it exists in attenuated form even around the White House.

Adlai Stevenson is quoted in the Boston Herald as having said that we "cannot save some countries from going Communist" (why not?) and "ought not be too upset when one of them vanishes behind the Iron Curtain." He also argued, according to Holmes Alexander, who wrote the story that "we ought to stop overstressing the Communist conspiracy." (I hope this story is inaccurate.)

Stevenson is also believed to have been the chief influence that caused President Kennedy in advance of the Cuban invasion, to make the public declaration of no American support, which broke the back of the anti-Castro Cubans' morale.

In fact, certain highly placed advisers came to Washington with three assumptions—all of them mistaken. One was that quiet diplomacy and greater civility would be reciprocated by the Communists. A second was that there existed large areas of potential agreement with the Russians. A third was that the neutrality of certain newly independent nations would strengthen the free world. (Nonalinement of areas and peoples once under anti-Communist control—its exactly what Khrushchev and Mao want, too).

As a result, the foreign policy of the new administration has been fainthearted from the beginning.

President Kennedy made the finest, most stirring declarations heard in many a day. Many of us were thrilled and eager to support him in what looked like a call to win the cold war. But he has retreated in Cuba and Laos.

Secretary of State Rusk has talked big at Oslo, reiterating our resolution to defend our rights in Berlin at any cost. Who believes him? Let Khrushchev offer a new summit to discuss Berlin, and who believes Mr. Kennedy will not come running?

How To Fight Communism

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. PUCINSKI. Mr. Speaker, I have received considerable mail from my constituents asking what is the most effective way to fight communism. Much has been written on this subject, but I believe an editorial which appeared in the Chicago Sun-Times very eloquently summarizes a most effective approach to this entire problem.

I believe this editorial deserves most thorough attention from all of us. Mr. Speaker, the editorial follows:

HOW TO FIGHT COMMUNISM

The arguments that have welled up in the debate about the John Birch Society are reminiscent of the arguments made during the heydey of the late Senator Joseph McCarthy. Now, as then, they show an appalling misconception by a frightening number of well-intentioned Americans about communism—and about the American system of free speech and opinion as well.

When Senator McCarthy was active, his supporters angrily answered criticism of his methods by saying: "McCarthy is fighting communism. Anyone who is against him helps the Communists."

The same theme runs through many of the letters we have received from readers in praise of the John Birch Society since the Sun-Times printed a series of articles on the history, goals and methods of the organization. (Up until noon Friday our letters count was 43 for the society, or critical of our articles, 92 against the society or in praise of the articles.)

The Birch Society was founded as a secret organization by Robert Welch, a former candy manufacturer, who once labeled President Eisenhower and other eminent Americans as tools or agents of communism. Welch believes that social security and the Federal income tax are Communist schemes to soften up America for Communist conquest.

Welch is entitled to hold these views and to preach them, if he wishes. He and his followers may, if they wish, hold the view that Chief Justice Earl Warren, of the U.S. Supreme Court, should be impeached because of the Court's school segregation decision, which Welch believes was brought about by Communists to foment civil war.

By the same American right to free speech and opinion, other Americans are entitled to disagree with Welch and to consider him and his followers as crackpots, without being subject to abuse, gossip, and community ostracization. These are precisely the methods and weapons used by Communists to impress their views on communities; in Red China, for example, brainwashing and ostracization are employed to force acceptance of communism.

Americans have a right to voice opinions critical of Welch and his associates without, in turn, being accused of being anti-anti-Communist, whatever that means.

Because the Sun-Times told the story of the Birch Society and its members, some of its sympathizers wrote in that we were discrediting other good anti-Communist organizations, such as the American Legion, the Knights of Columbus, etc. This is manifest nonsense. The Birch Society is discredited in the minds of its critics because it pursues the methods used by Communists themselves. Moreover, as Attorney General Robert F. Kennedy said last week, the Birch Society is making no contribution in the fight against communism and is, in fact, a hindrance in the fight.

And how, the Birchists argue, should the Communists be fought?

A good answer for the question will be given in Chicago starting tomorrow when some of the Nation's most important industrialists, educators, military, and professional men meet here to conduct the Seventh Annual Military Industrial-Educational Conference of the Institute for American Strategy. They will discuss and exchange ideas on the most fundamental step in fighting communism: Teaching what communism is—and isn't—and what democracy is.

Americans can't fight communism if they don't know what it is or what democracy is. There is an ignorance on those subjects in the United States that is appalling. That ignorance is reflected in support for Welch.

The conference to be held tomorrow at the Hotel Sherman will tackle the problem of dispelling ignorance by improving methods of teaching communism and democracy at the high school level.

This is the same objective recently set forth by the American Bar Association. Some of the cooperating agencies of the conference to be held in the Hotel Sherman are the American Legion, Freedom Foundation at Valley Forge, Loyola, De Paul, and Notre Dame Universities, the Chicago Association of Commerce and Industry, Armour Research Foundation, and the Armed Forces.

When we say that this organization is taking an effective and important attitude toward fighting communism—as distinguinished from an organization such as the Birch Society—we will have in mind some of its basic tenets. Here in the words of Dean John H. Fischer, Teacher's College, Columbia University, a member of the institute's educational advisory committee, are some appropriate observations:

"There are Americans * * * whose attitude toward communism is under all circumstances to avoid it. * * * To follow such a policy in schools would make selective ignorance a goal of education. * * *

"A somewhat more aggressive approach, rooted in fear rather than hope, sees communism as a menace to the unwary and would counter the danger by teaching Americans to hate it. Those who espouse this line are unwilling to trust students ever to reach reliable value judgments through the objective study of facts and principles involved. These people prefer to teach for the specific purpose of inducing a predetermined negative emotional response.

"The unfortunate practice of using the word 'Communist' as a political epithet will not be eliminated unless it is recognized and attacked through education. One of the outcomes of our teaching should be the development of an awareness on the part of students that a person is not to be labeled a Communist merely because his views on racial segregation may be somewhat more liberal than his Senator's, or because he sees merit in the TVA. The silly nonsense that calls an experimental school report card in a primary school a machination of the Kremlin should be exposed for what it is. In order to understand the actual threat of communism, Americans must learn to distinguish between the Leninist and the liberal, between what is communistic and the nonconforming."

This is a primary lesson not only on communism but democracy. To be effective, this lesson must be learned and believed. Members of the Birch Society who do learn it, we expect, will change their procedures

or resign and join up with an organization such as the Institute for American Strategy, which is helping, not hindering, the fight against communism.

Those Fundraising Letters—The Difference Is—One Is a Democrat, the Other a Republican

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. PRICE. Mr. Speaker, a leader of the Republican Party made headlines over the weekend with a typical political press release criticizing Democratic solicitation of Government personnel to attend a dinner celebrating the President's birthday.

The interesting point is, I do not recall the same gentleman having made similar protest when the Republicans resorted to the identical practice when they were in control of the national administration. I dare say, the gentleman's own Republican Party went much farther. But there was no cry of indignation from the gentleman.

The nationally recognized columnist Drew Pearson, sizes up the way some people look upon these situations in his news column of May 11. Mr. Pearson has been around Washington for a long time. He is thoroughly qualified to make a factual appraisal of the Republican attempt to stir up a controversy over a political fund raising dinner—an institution both parties rely on to provide operating expenses.

Mr. Pearson's column follows:

WHAT ICKES WOULD HAVE SAID

(By Drew Pearson)

WASHINGTON.—When a friend of the Secretary of the Interior was found writing letters to oil executives to raise money for President Kennedy's birthday dinner, this town shook with consternation. Secretary Udall covered his head with sackcloth and ashes. President Kennedy acted as if someone had been caught taking a vicuna coat. And part of the press gyrated as if Udall had been caught with his hand in the gold vault at Fort Knox, Ky.

There was once another Secretary of the Interior, the man who served longest in history, named Harold Ickes, also in charge of the Public Works Administration, who was severely criticized because an aid wrote several thousand letters asking PWA personnel to buy copies of Ickes' book, "The Old Curmudgeon," Ickes did not run for cover.

Ickes was also War Petroleum Administrator and once brought howls of anguish from the press when he permitted his Government limousine to tote eggs from his farm at Olney, Md., to Washington, D.C., while he was driving to work. Ickes took the nitpicking in his stride.

Those were days when the President—F.D.R.—was surrounded by vigorous Cabinet officers like Henry Wallace, Harry Hopkins, Henry Morgenthau, who took the rap, sometimes undeservedly, for their chief while the President went unscathed. Eisenhower used the same technique. He got a vicuna coat as well as Sherman Adams, but few people remember that.

This is tried and proven political technique—not only for Presidents, but for military commanders and heads of big electrical companies which get caught violating the Sherman antitrust laws.

Harry Truman didn't use the technique. He stood up and took full responsibility for firing General MacArthur instead of the Defense Department. And Kennedy took full responsibility for the fiasco in Cuba, though obviously he inherited much of it.

This is laudable. However, there is something to be said for the other technique of having the commander in chief stay behind the lines, away from the shot and shell, while subordinates get wounded in the frontline. Wounds are necessary in battle.

THE OLD CURMUDGEON

If Old Curmudgeon Ickes had been Secretary of the Interior when the Republican press howled about the recent letters of political solicitation sent by a friend to oilmen, he would have held a press conference and spoken as follows:

"I have in my hand a photostat of a check for $5,000 signed by Howard Keck of the Superior Oil Co., and made out to the Eisenhower dinner committee. It is dated January 10, 1956, which was right in the middle of the debate on the natural gas bill.

"Mr. Howard Keck and Superior Oil," Mr. Ickes would have continued, "are the very same people whose lobbyists got caught trying to bribe Senator CASE of South Dakota during the gas debate.

"I am a bit surprised that the press would howl so loudly about some letters written by a friend to raise some money for the birthday dinner of one President when they completely ignored this check for $5,000 contributed—and cashed—for the anniversary dinner of another President.

"Perhaps the difference is that one is a Democrat, the other a Republican.

"But after all $5,000 in the hand is a lot more important than a lot of letters in the bush.

"The protests over these letters are the kind that should have been made over a tractor with a radio set which was given to a certain farm," the old curmudgeon would have continued, "or over that planting of Norway spruce with $300,000 worth of other gifts, including a putting green, which were donated to that certain farm.

"I am curious as to why the press gets in such a lather over letters raising money for a President's birthday dinner which were certainly not secret, but doesn't let out a peep of protest when a former President of the United States permitted three oilmen, Alton Jones of Cities Service, Billy Byars of Temple, Tex., and George Allen, to pay the entire cost, secretly, of his Gettysburg farm.

"I am especially curious about this, since never in history has any President permitted so many rich rewards—tidelands oil, the stacking of the Federal Power Commission, permits to drill for oil in wildlife refuges—to be handed the oil industry.

"'Of course' the venerable Secretary of the Interior would have said 'oil contributions are the accepted way of political life. If the Republican Party did not get its contribution of $152,600 from the Rockefeller family of Standard Oil or its $216,800 from the Pew family of Sun Oil, or its $100,150 from the Mellon family of Gulf Oil, as it did in the last Eisenhower election, it would feel robbed and cheated.

"So perhaps these soliciting letters sent out by a Shell Oil man, which is Dutch, aren't so bad. After all, Dutch Oil has little or no concessions to seek from the Department of the Interior."

Thus would have sounded off the man who served as Secretary of the Interior longer than anyone else in history.

Small Business Administration Steps Up Programs, To Help Small Business

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. FARBSTEIN. Mr. Speaker, I commend to the attention of our colleagues an address by Mr. Irving Maness, Deputy Administrator for Procurement and Technical Assistance, Small Business Administration, before the first meeting of the Temple University Government Contracts Association, Temple University, Philadelphia, Pa., May 10, 1961. Mr. Maness' remarks indicate that the new leadership of the Small Business Administration has taken bold and decisive steps to improve the economic climate for the Nation's small business concerns.

The address follows:

ADDRESS BY IRVING MANESS, DEPUTY ADMINISTRATOR FOR PROCUREMENT AND TECHNICAL ASSISTANCE, SMALL BUSINESS ADMINISTRATION, BEFORE THE FIRST MEETING OF THE TEMPLE UNIVERSITY GOVERNMENT CONTRACTS ASSOCIATION, TEMPLE UNIVERSITY, PHILADELPHIA, PA., MAY 10, 1961

Since I am here in Philadelphia tonight, I think it is appropriate to quote Benjamin Franklin: "No nation," he said, "was ever ruined by trade." Trade is what we are here to talk about tonight; more specifically, how small business can increase its share of trade with the Federal Government.

You people, I know, are not novices on this subject. Stanley Cantor has informed me that Temple University has been offering a course, "negotiating and administering Government contracts," since 1955, and has now taken the further step of sponsoring the Temple University Government Contracts Association.

I congratulate Temple University, Mr. Cantor, and you members of the newly formed Government Contracts Association. You are all experts in the field of Government contracts procurement; you are gathered here to pool your knowledge and to work together to do a more effective job of obtaining Government contracts for your firms and performing them efficiently, and on time.

Administering a Government contract is most important. It does no good for the individual small firm, or for the Government, to have a contract that is not properly carried through to completion.

But I have no intention tonight of delivering a long discourse on the highly complicated subject of Government contracting. This is a field in which you are experts.

What I propose to do is to tell you briefly about the Small Business Administration's many programs to help small business, including Government contracts assistance, and beyond that to tell you something of the change of climate in Washington that I think is going to open up great new avenues of opportunity for small firms to trade with the Federal Government.

Trade cannot exist without opportunity. Too often in the past the small fellow who was willing and eager to add his productiveness to help meet his country's productive needs, has not had an opportunity to do so. That is now being changed.

You have all read in the papers recently of vigorous antitrust action being taken by the Government, and of steps being taken to stamp out identical bids and other collusive

bidding practices. Your Government is also taking vigorous action to open up a larger share of Government contracts to small firms, and to create a climate in which small business can play a more vigorous role.

In his state of the Union message, the President said: "We cannot afford to waste idle hours and empty plants while awaiting the end of a recession. We must show the free world what a free economy can do—to reduce unemployment to put unused capacity to work, to spur new productivity, and to foster higher economic growth within a framework of sound fiscal policies and relative price stability."

I can assure you that the Small Business Administration agrees completely with his aim, and is determined to use its resources to help achieve the President's goal.

Here are some of the recent steps we have taken in the Small Business Administration to make our programs of assistance to small firms more effective.

President Kennedy's recent directive to the Department of Defense to step up the share of military procurement going to small firms by at least 10 percent has given a great boost to our joint set-aside program. In fiscal 1960, out of total military purchases of $21.3 billion, small firms received only $3.44 billion. This must be increased substantially, and I am happy to note the encouraging help we are receiving from high officials of the Pentagon.

We are already off to a good start. During the first 3 months of this year, nearly $300 million in prime Government contracts were awarded to small firms under the joint set-aside program of SBA and the procurement agencies.

This represents an increase of 67 percent over the value of contracts awarded small firms under this program during the same period of last year.

This encouraging increase is due in large measure to closer working relationships and cooperation between the SBA and the military and civilian purchasing agencies of the Government.

During March SBA procurement representatives stationed in major military and civilian purchasing installations throughout the country cooperatively earmarked $165 million in proposed purchases for exclusive award to small firms. Included in these set-asides were $11.4 million in research and development contracts.

This is a good beginning. I can assure you that we are planning additional steps to make this major program of assistance to small firms more effective than it has been in the past.

Certificates of competency issued by the SBA during the first quarter of 1961 nearly doubled in number with an increase of more than 700 percent in contract value over the same period of 1960, and will result in about $2.8 million in savings through purchases of low bidding certified small firms.

Through the issuance of certificates of competency the SBA offers an appeals procedure for the small firm or group of small firms whose low bid on a Government purchase, or high bid on a Government sale or lease, is rejected for reasons of financial ability or productive capacity.

By law, a Government contracting officer must accept a certificate of competency issued by SBA as conclusive, without requiring the small business or group of small firms to meet any other requirements as to financial ability and productive capacity.

Government contracts awarded to small firms are closely tied to another small business need—adequate financing. In many cases small firms have recourse to advance payments or progress payments to help them finance production under a Government contract. But when this aid is not available, SBA stands ready to help finance small firms to provide them with adequate funds to carry to completion any Government contract they may have.

SBA also makes loans to small firms to finance business construction, conversion or expansion; for the purchase of equipment, facilities, machinery, supplies or materials; or for working capital. In the field of financing, small business, SBA is also setting new records. Business loan inquiries and applications are the highest in SBA history. Loan approvals are also up sharply. During March we approved nearly 500 loans for more than $21 million, a 39-percent increase in dollar value and a 60-percent increase in number over February. Final figures are not yet tabulated for April, but from all indications there will be a large volume of small business loan approvals for that month.

To expedite action on this heavy volume of loan applications, SBA has given its regional directors additional authority to approve loans locally. The new policy permits SBA regional offices on their own to approve direct business loans to small firms up to $50,000 and bank participation loans up to $100,000 or $150,000, depending upon the amount of the bank participation. The average SBA loan is about $43,000, so nearly 80 percent of our business loans may now be approved more speedily, since Washington approval is not needed.

SBA is also taking steps to speed-up its program of licensing and helping finance small business investment companies. By the end of this year we confidently expect that more than 300 of these investment companies will be in operation, and they will stand ready to provide at least half-a-billion dollars in equity financing and long-term loans to small firms.

The SBA is making a special effort to give as much aid as quickly as possible to major surplus labor areas. Interest rates of SBA business loans and on loans to State and local development companies have been reduced to 4 percent in these localities. In areas where surplus labor is not a major problem, the interest rate remains at 5½ percent. Priority is also given to loan applications in these labor surplus areas, and to firms in these areas seeking Government contracts.

Another step we have taken to help provide greater aid in these areas is a revision of our small business size standards. Our modified size standards permits loans and Government contract assistance to firms which are up to 25 percent larger than those eligible under the established standards, provided the firms are in major labor surplus areas.

This makes SBA assistance available to a larger number of firms in these hard-hit areas, and it is our hope that this increase help will aid small firms in these areas to expand their operations, modernize their facilities or purchase new equipment, thus stimulating business, jobs and income.

I have touched only very briefly on SBA's many programs of assistance to small business and of our efforts to help restore a forward movement to our economy. We in the Small Business Administration believe that a start has been made toward our goal of making our programs more effective. Our efforts to increase the flow of Government military procurement contracts and subcontracts to small firms are continuing and much remains to be done before our immediate objective of at least a 10-percent increase in prime contract awards to small business is achieved.

SBA is planning meetings in Washington and around the country with national, county, and local groups to bring facts to the public about its State and local development company program. Under this program a local community, working through a publicly owned and controlled development company, can provide the initiative and initial investment to help established small businesses expand and modernize and to assist new small businesses to get started. The SBA, in turn, can lend the development company the major part of the funds it needs to help small enterprises.

For example, if a community needs $100,000 to help expand an existing firm or establish a new business and provide jobs, all it has to do is raise $20,000 through a local development company, and the SBA can provide the remaining $80,000. We believe that this program offers a great potential for sound economic growth.

I should like to emphasize that our free enterprise system is our strongest bulwark against communism. A vigorous and thriving small business economy is basic to a real free enterprise system. It is imperative that we encourage and foster small business. The ingenuity and inventiveness or small business is essential to our economic well-being.

Beyond that, we must bear in mind the importance of small business to our national security. Our productive capacity must be maintained and expanded for peace and for possible war, as well. Our larger plants would be the first targets for an enemy aggressor. The smaller plants might well have to bear the brunt of our productive needs in such times.

We must be strong militarily, morally, and economically. We are confronted with challenges on all three fronts.

I have faith that we can meet these challenges and, in the words of President Kennedy, "move forward." This administration is pledged to do what needs to be done to fulfill the high promise of the future.

With the help and cooperation of all Americans, the President's goal can be achieved and our economy can flourish again to the point that full employment and well-being can be enjoyed by us all.

Long Arm

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. DERWINSKI. Mr. Speaker, as the Nation braces each year for a new onslaught from the tax-hungry bureaucracy we have developed in Washington, it is well for us to realize that the money appropriated by the Congress must first be raised through the sweat and blood of the Ameriacn workingman. The inconsistency of the New Frontier in piously promoting what it terms social progress while at the same time breaking the back of the taxpayer with these huge spending schemes is indefensible. An outstanding community newspaper of my district, the Southwest Messenger Press, in an editorial this April 20 entitled "Long Arm," discusses the effect of our crushing tax structure and makes the most effective point that reductions in nonessential governmental spending would certainly be in order:

LONG ARM

Another income tax time has cone and gone. And millions of us feel a sad flatness in the pocketbook.

Once the income tax was a rich man's tax—people of small and moderate earnings

paid little or nothing. But now, as Citizens Public Expenditure Survey observes, "the long arm of the Internal Revenue Service reaches out to nearly everybody."

Here's the cold statistical story: Of the total Federal tax, people who earn under $5,000 a year pay 21 percent. The $5,000-$10,000 group pays 39 percent. The $10,000-$15,000 earners pay 11 percent. The $15,000-$50,000 people pay 17 percent. And the real big income group—$50,000 and over—pays only 12 percent.

This isn't because the rich are favored—income tax rates reach a top bracket of 91 percent. It simply reflects the fact that there are not enough wealthy people to foot the bill for government—but there are millions of individuals in the modest income brackets. So, inevitably, the latter must pay the great bulk of government costs. And they, collectively, would gain the most from reductions in nonessential governmental spending.

Hon. A. R. Stout

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herewith a letter from the president of the Waxahachie Junior Chamber of Commerce, Mr. Glenn H. McDaniel, transmitting a resolution adopted by that organization relative to the fitness and competency of the Honorable A. R. Stout for a Federal judgeship. I share their feelings in this matter and it gives me great pleasure to submit their letter and resolution:

WAXAHACHIE, TEX., *May 5, 1961.*

Hon. OLIN TEAGUE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN TEAGUE: The members of the Waxahachie Junior Chamber of Commerce have, for the first time in the history of the organization, drafted and voted unanimously in favor of the attached resolution concerning the appointment of a dedicated public servant, Hon. A. R. Stout to Federal judgeship.

It is the opinion of our membership that no other man in our State has better exemplified the part of the Jaycee creed, which states: "We believe that Government should be of laws rather than of men."

The elevation of Judge Stout to the Federal courts will certainly be in keeping with the trend and action of the present administration in choosing the most capable people for the positions to be filled.

Sincerely,

GLENN H. MCDANIEL,
President, Waxahachie Junior Chamber of Commerce.

RESOLUTION BY WAXAHACHIE JUNIOR CHAMBER OF COMMERCE

Whereas it is imminent that the New Frontier is on the brink of bringing forth a progressive enactment to benefit the citizens of Texas by enlarging the Federal trial bench in Texas; and

Whereas the citizens of Texas, the New Frontier, the bench, and the bar of Texas all deserve and demand that the prospective Federal appointees be mellowed with the wisdom of judicial experience; be with ability supplied and wed to the principle that justice therefrom is the demand; and be born to the notion of fairness to all;

Now, therefore, the Waxahachie, Tex., Junior Chamber of Commerce humbly proposes a man stanchioned in the ground of judicial competence, namely, the Honorable A. R. Stout.

Judge Stout stands as a prolific contributor to scholarly legal publications as the author of the definitive branch's Texas Annotated Penal Code; as the presiding officer of the Texas Judiciary Association; and as a rampart to the cause of informal justice.

But beyond the call of duty goes our judge, who, because of his policy for the education of the prospective litigants and juror, contributes his abilities and patience thereto in bountiful qualities.

Having submitted the name of a jurist of sterling quality, the Waxahachie Junior Chamber of Commerce submits itself to the wisdom of the administration and to the will of God.

Respectfully submitted.

GLENN H. MCDANIEL,
President.

Importation of Surplus Foreign Military Rifles

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions by the Massachusetts State Senate urging the Director of Civil and Defense Mobilization to take appropriate action to protect the domestic rifle industry from the importation of cheap, surplus, foreign military arms.

The problem, which affects a much greater area than just Massachusetts, and suggested solutions to it, are concisely stated in the resolution. I, as well as other Congressmen from Massachusetts, New York, and Connecticut, have long been urging action on this matter:

RESOLUTIONS REQUESTING THE DIRECTOR OF CIVIL AND DEFENSE MOBILIZATION TO TAKE ACTION TO HALT THE FLOOD OF SURPLUS FOREIGN MILITARY RIFLES INTO THE UNITED STATES AND TO PROTECT THE DOMESTIC RIFLE MANUFACTURING INDUSTRY

Whereas an overwhelming rise in the importation of surplus foreign military rifles has occurred in the past 5 years, and the influx of said rifles has caused an alarming decline in the sale of domestic rifles, seriously affecting the rifle making industry in this country and in the Commonwealth of Massachusetts, and has resulted in hundreds of skilled craftsmen being forced into the ranks of the unemployed; and

Whereas the importers of surplus foreign military rifles, pressing the advantage of the low costs of foreign labor, can convert surplus military rifles to sport or hunting rifles at a very low cost thereby placing them in a position which enables them not only to undersell but also to imperil the domestic rifle manufacturing industry: Therefore be it

Resolved, That the Massachusetts Senate respectfully urges the Director of Civil and Defense Mobilization to take such action, including the submission of legislation to the Congress of the United States, as may be necessary to protect the domestic rifle manufacturing industry; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the State secretary to Mr. Frank Ellis, Director, Office of Civil and Defense Mobilization, Washington, D.C., and to each Member of the Congress of the United States from this Commonwealth.

Senate, adopted, May 1, 1961.

IRVING N. HAYDEN,
Clerk.

A true copy.
Attest:

KEVIN H. WHITE,
Secretary of the Commonwealth.

Speech of Theodore R. McKeldin to the State Council of Maryland Daughters of America

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. GARMATZ. Mr. Speaker, last week in Baltimore, the State Council of Maryland, Daughters of America, held their 66th annual meeting in Baltimore, under the leadership of Mrs. Nellie Miller, State counselor; Mrs. Alfred Chesney, associate State counselor; Mrs. Alline Allison, vice counselor; Mrs. Charlotte Hallock, associate vice counselor; Mrs. Marion Rogers, State secretary; Mrs. Margaret Durner, assistant State secretary; Mrs. Mabel E. Cox, State treasurer.

The principal speaker at their Monday session was Theodore R. McKeldin, former Governor of Maryland. His comments on the conduct of those present at a convention in Washington the previous week are very timely and especially noteworthy, because he is not a member of the political party to which Senator CLARK belongs. His remarks show the stature one can reach when ignoring partisan politics, and it is a pleasure to insert them in the RECORD:

ADDRESS OF THEODORE R. MCKELDIN STATE COUNCIL OF MARYLAND DAUGHTERS OF AMERICA, 66TH ANNUAL STATE SESSION, EMERSON HOTEL, MAY 8, 1961

Within a few hours of this meeting the Walters Art Gallery will be entertaining a distinguished guest, Senator CLARK, of our neighbor State of Pennsylvania.

Senator CLARK is not of my political faith, and I have no idea what line of argument he will take tonight, but I bespeak for him here in Baltimore a more courteous hearing than he received last week in Washington. He was greeted with boos, while applause was given a speaker who called for abandonment by the Government of social security, farm price supports, securities and exchange controls, and other social welfare legislation.

Senator CLARK responded by advising the hecklers to grow up. It was good advice, for any man who expects, or wishes for repeal of all the progressive legislation of the past 30 years is childish. I don't want that kind of reputation hung on any part of Maryland, so it is my hope that when Senator CLARK appears here tonight he will be given evidence that he is in a different atmosphere.

As for Maryland Republicans, we are so far from imagining that we can put the clock

back that we incline to accept the sober words of Senator CLARK's party leader. President Kennedy in a letter to the very audience that booed Senator CLARK, said, "To meet the hard, tough issues ahead, we need all our resources and all our energy, for freedom in these critical days will not be maintained by default."

There is a statement of grim truth. "Freedom in these critical days will not be maintained by default." Neither will it be maintained by Democrats alone. The combined efforts of wise men of all parties, of all creeds, and of all races will be needed to carry us safely through "these critical days." Therefore I confess that I am exasperated when I find men old enough to be grayheaded still preaching economic and social theories that were exploded by the time the 19th century ended.

It is childish, but it is also dangerous, for boys' minds will never be equal to the man-size thinking that the 20th cenutry requires.

For instance, we are all rejoicing today in the splendid achievement of Commander Shepard, the first American to travel in the edge of outer space.

Yet it is to be doubted that most of our people realize fully the way in which this feat excels. We have proved to the world that we can produce a hero as brave as any that the Russians can show. The flawless performance of the rocket proves that we have engineers as ingenious and as competent as the Russians' best. The work of the launching crew at the beginning, and of the rescue crew at the end of the project proved that our Armed Forces can develop a disciplined efficiency as good as anybody can show.

All of which is fine, all of which should arouse our pride and enthusiasm. But all of it simply shows us equal to the best in the world. Where we excelled, where we were better than the best, was in the openness of the operation. Within 20 minutes of the end of the project the President of the United States announced that all scientific knowledge gained thereby will immediately be made available to the whole scientific world.

Shepard did not take that appalling risk for America alone. What our man learned was learned for mankind, and may be applied at once by anyone who can use it. For it is not and never has been the purpose of this Republic to seek to dominate the world by force. Therefore we reject the idea of amassing secret knowledge by which we may lay an ambush into which our rivals may fall.

We are not without ambition, but not that kind of ambition. We aspire to lead, but not as the slave dealer of long ago used to lead a coffle of wretched victims loaded with chains.

Theodore Roosevelt, asked what character in fiction he would rather be, astonished the reporters by answering, "Mr. Greatheart." Most of them had never heard of Mr. Greatheart, but when they looked him up they understood what Roosevelt meant. Greatheart is a character in Bunyan's Pilgrim's Progress, a strong man who walked in front on the perilous way to the Celestial City, while the women and children followed. His right arm was powerful and his sword was terrible, but it offered no menace to the weak and defenseless, only to the fiends and dragons that lusted to prey upon them.

In that saying Theodore Roosevelt offered an ideal to America in these critical days. Greatheart's sword must be swift and sharp and of the finest tempered steel; his eye must be ever alert, and his heart as stout as those of Mr. Yuri Gagarin and Alan B. Shepard. Yet with all that, he would not be Greatheart unless his purpose was to clear the way for all mankind to march toward a better world.

When we announced that what we may have learned, at great cost and greater risk, about the physical universe will not be kept to ourselves but made available to all men we gave evidence of that purpose; and that is the point at which we gained not equality, but superiority. For our rivals have not been wise enough to understand, or bold enough to adopt this policy.

I am keenly aware of the burden that the armament race imposes upon us, and I heartily wish that it might be reduced. But the sword of Greatheart must be sharp, and of the finest metal that the world can supply; which means that it must be costly. We may not enjoy it, but we can and we must pay the price of being well armed, for that price will not destroy us.

Nor do I believe for a moment that the fiends and dragons that lurk along the way will ever prevail against Greatheart, as long as his purpose holds. What I do fear is some forgetfulness of that purpose. The physical power of America, however great, will offer no menace to the world as long as it is the firm purpose of America to lead the way toward an organization of the world that will serve liberty and justice rather than power and avarice.

For mind you, Theodore Roosevelt never for one moment claimed that he was Greatheart, only that he aspired to be. Yet the mere aspiration served to make him such a man that, although he has been 40 years dead, he yet can stir the generous impulses of American youth as few figures in our national history ever could.

I am not such a utopian as to believe that the United States of America can reform the world. Not to any man or any nation is power given to achieve that feat; it is reserved to God alone, and He has not seen fit to exercise it. But I am utopian enough to believe it possible for civilization to advance. I believe it has advanced, painfully, slowly, and with dreadful setbacks, but definitely. I believe, furthermore, that an intelligent policy on the part of this Nation can speed that advance, not as much as idealists demand, but more than cynics will admit. But an intelligent policy means influencing others more by practice than by precept, by example, rather than sermonizing.

That is why I am exasperated when I hear men who claim to be intelligent denouncing every effort to eliminate bondage and injustice in this country. For the sermonizer who adjures the world to "do as I say, not as I do," has not the faintest aspiration to have this country play the role of Mr. Greatheart.

Of course we can't be perfectly successful, or even perfectly consistent. Of course we are going to encounter many failures, and probably backslide from time to time. Yet if we maintain the purpose, if at the bottom of our hearts we truly aspire to be Mr. Greatheart, our failures will never be complete, nor our backslidings ruinous.

It is the possible failure of purpose that is our danger and our only fatal danger. If we sincerely believe that our strength is given us not to lord it over the world, but to clear the way of the world toward freedom and justice, I firmly believe that that strength will not diminish, but will endure and increase. If we hold to that purpose, I believe that we will establish a leadership based on trust, not on fear; and that leadership will be "a stronger thing to endure and stand than the square stones of Rome."

The President's grim warning is true. "In these critical days freedom will not be maintained by default." Nor will it be maintained by men who are themselves not freemen, but slaves to their own passions and prejudices, in bondage to ancient error and outworn theory, bought by their own money and held in thrall to their bank accounts.

It will be maintained by men who do aspire to establish their country as the Mr. Greatheart among the nations. That aspiration may be feeble, at times. It may often flicker and grow dim. We may occasionally betray it by foolish action. But if it is genuine, it will not fail of its effect upon the world. It may never bring us, as the ships of Tarshish brought to Solomon, "gold and silver, and ivory and apes and peacocks," but it will bring us a power over the hearts of men that will long outlast our day; and the name of America will stir the generous impulses of youth when you and I have long returned to dust.

Chicago Has Largest Polish Population in the United States

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. PUCINSKI. Mr. Speaker, I would like to take this opportunity to call the attention of my colleagues to an excellent article by Mr. Stanley Pieza which so graphically describes the Polish-American community of Chicago and which appeared in Chicago's American on May 6.

Americans of Polish descent have played an important part in the development of America's second largest city, and I believe Mr. Pieza has magnificently caught the full depth of this contribution.

Mr. Speaker, Mr. Pieza's excellent article follows:

CHICAGO HAS LARGEST POLISH POPULATION IN UNITED STATES

(By Stanley Pieza)

You can have a tour of Poland—right in Chicago.

If you go northwest by bus or auto from the Loop you will be attracted to the copper spires of St. John Cantius Holy Trinity and St. Stanislaus Kostka Roman Catholic Churches—and then you are in the heart of Chicago's old "Little Poland." Autos zip by on the recently constructed Northwest Highway, which bisects the picturesque neighborhood.

With an estimated 750,000 population of Polish immigrants and their offspring, Chicago continues to be the second largest Polish city in the world. Only Warsaw, Poland's capital, with a population of 1,142,000, is larger.

Today the Poles reside in every section of the city, and there are still at least 70 Chicago Polish communities and each having a church or cultural center. The Poles make up the largest ethnic group in Chicago.

If you take a walk in the triangle of Ashland and Milwaukee Avenues and Division Street, you are in what is still known as the old heart of Chicago's Poles. Here now you see the faces of Chicagoans of many origins, but still mostly Polish. Some 25 years ago this center was solid Polish. The population movement to the edges of the city and suburbs is changing the heart of Chicago's Polish community—but slowly, stubbornly.

Standing at the triangle, you will hear the sounds of the Polish language as men and women gather to talk. Some of the business signs are also in Polish. Less frequently, however, you'll see a shawled aged woman walking with a mustached man—as did first Polish immigrants.

In front of you parade some of the prettiest women of Chicago, blue-eyed blonds whose antecedents come from Poznan, and the brunettes whose fathers came either from Galicia or Cracow.

BALL IS ANNUAL EVENT

Donna Marie Winiecki, 20, daughter of Mr. and Mrs. Sigmund L. Winiecki, 4040 West 55th Street, a typical Polish-American girl, is a candidate for national honors during a presentation May 28 of Polish National Alliance debutantes, according to Mrs. Frances Dymek, PNA vice president and general chairman of the annual Polish Constitution Day parade.

A bevy of pretty Polish-American girls participate each year in Legion of Young Polish Women's White and Red Ball, an annual social highlight among local Poles.

Fortifying the old heart of Chicago's Poland are the magnificent public buildings of the Polish fraternal organizations: Polish National Alliance, 1520 West Division Street; Polish Women's Alliance of America, 1309 North Ashland Avenue; and at 984 Milwaukee Avenue, the headquarters of the Polish Roman Catholic Union of America. In the vicinity are also the publishing houses of the two Polish language dailies: the Polish Dziennik Chicagoski and the Polish Daily Zgoda.

In the neighborhood are also Holy Trinity and Holy Family High Schools, old Gordon Technical High School, and the new St. Stanislaus Kostka High School for girls.

There also are restaurants where you can get Polish sausage and sauerkraut, rolled beef a la Zagloba, Polish dumplings, filet mignon Warsaw style, and soured milk with boiled potatoes.

HUMBOLDT PARK MECCA

It is from this triangle that thousands of proud Americans of Polish ancestry tomorrow will parade to Humboldt Park and gather at the equestrian statue of Gen. Thaddeus Kosciuszko, hero of two nations. This site is the patriotic mecca of America's Poles. Each year Chicago's Poles parade to mark Poland's historic freedom constitution and to rededicate themselves as Americans.

The Poles of Chicago are happy and smiling neighbors. They are in small businesses, in small and large industries, and among them are bank presidents, engineers, doctors, artists, dentists, scientists, politicians, baseball players, janitors, tailors, steelworkers, butchers.

The magic words to make quick friends among them are:

"Jak sie masz?" "How are you?"

"Bardzo dobrzie, dzienkuje." "Very well, thank you."

It is in the fourth generation where the Polish fathers of the preceding generations are making tireless efforts to keep Polish language and culture alive. The fraternal organizations conduct special schools in which language, songs and customs of Poland are taught the young. The Polish language is also taught in the parish schools and in some public high schools.

Some of the Polish youngsters of the Polish Alma Mater fraternal organization, with headquarters at 1645 Milwaukee Avenue, have adapted themselves so much to the Polish language that "they even play baseball in the sand lots shouting at each other in Polish," according to Val Janicki, 1159 Milwaukee Avenue, president.

POLISH HISTORY DRAMATIC

Polish history in Chicago is a dramatic one. Polish immigrants came here to work. They were strong and able and factories and docks wanted them. They brought with them a strong faith in God and they were happy to become Americans for they found the country of their adoption a land of opportunity.

With the increase in population, the Poles became active in organization work, cultural achievements and started in business, industry and establishing building and loan associations. Since they were believers in strict economy they saved their money so that today there are four out of five Polish families who own their homes. Soon they sent their sons and daughters to college and they became doctors, teachers, engineers, priests and nuns. They also built homes for the aged and orphanages.

DISTINGUISHED CHICAGOANS

Many distinguished statesmen and civic leaders have emerged from Chicago's Polish community, among the early ones being Stanley Kunz, who was the first Pole to be elected to the state senate and to Congress, and John F. Smulski, lawyer and banker, the first to be elected to the office of city attorney. In 1906, Smulski was elected State treasurer. Among the great members of the bench was Edmund K. Jarecki, Cook County judge. Serving as county judge today is Thaddeus V. Adesko, another outstanding American of Polish ancestry.

Other Chicagoans of Polish descent serving as political leaders are U.S. Representatives JOHN C. KLUCZYNSKI, Democrat, District 5; DANIEL D. ROSTENKOWSKI, Democrat, District 8; EDWARD J. DERWINSKI, Republican, District 4; and ROMAN C. PUCINSKI, Democrat, District 11.

Judge Walter La Buy, 71, another Chicagoan of Polish birth, recently retired as Federal district judge after 17 years of service.

There are also John C. Marcin, city clerk; Francis S. Lorenz, county treasurer; Matthew V. Bieszczat, municipal court bailiff; Theodore A. Swinarski, superior court clerk; Judge Thomas E. Kluczynski, circuit court; Judge Sigmund Stefanowicz, superior court; Frank Bobrytzke, county commissioner; Bernard J. Korzen, probate court clerk; and Municipal Court Judges Eugene Wachowski, Casimir Cwiklinski, Chester Strzalka, and Walter Kowalski.

Chicago also became the center of Polish organizational activity in the United States. The oldest of these is the Polish Roman Catholic Union, founded in 1873, now numbering 182,000 members and its assets reaching over $43 million, according to Stanley Turkiewicz, president. In the PRCU Building is housed the magnificent Polish Museum of America, which contains a full memorabilia of Ignace Jan Paderewski, famous pianist and Polish statesman, and in whose memory the U.S. Post Office last year issued an 8-cent postage stamp. Paderewski has left an everlasting influence on Chicago's Poles.

ALLIANCE IS LARGEST

The Polish National Alliance, largest Polish fraternal organization in the world, has a membership of 340,000 and its assets reach over $110 million, according to Charles Rozmarek, president and one of the outstanding Polish-American leaders. The organization also maintain Alliance College in Cambridge Springs, Pa. The PNA annually sponsors the Polish Constitution Day parade and program with the cooperation of the other Polish organizations and church groups.

The Polish Women's Alliance of America, founded by Stephanie Chmielinska in 1898, has 91,000 members, according to Miss Adelle Lagodzinska, president.

The Polish Alma Mater, organized 64 years ago by the Reverend Francis Gordon, Costa Rica, has 10,000 members.

In the two World Wars and the Korean conflict, the Polish Americans were among the first to respond. There is not one casualty list that does not contain some names of U.S. servicemen of Polish origin.

Chicago Poles have given their best to their beloved city, their United States, and to the country of their forefathers.

The Press and Federal Deposit Insurance

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD the following editorial from the American Banker entitled "The Press and Federal Deposit Insurance":

THE PRESS AND FEDERAL DEPOSIT INSURANCE—EDITORS OF THE NATION FULSOME IN PRAISE OF FDIC

Every time an insured bank closes there is an outpouring of editorial comment in the Nation's press. The closing of the Sheldon, Iowa, National Bank, following disclosure of an embezzlement of more than $2 million was no exception. Comment is almost uniformly favorable, viz:

"The consolidation Sheldon residents can have is that it has afforded an opportunity to observe a Government agency which operates smoothly, efficiently, and very courteously, and treats individuals as if they were indeed individuals and not merely a sort of nuisance. We are referring, of course, to the very fine relations the public is having with the FDIC at the Sheldon National Bank. There is a great deal of praise throughout the community for their excellent work"—(Sheldon, Iowa, Mail).

"Another demonstration of the speed with which the Federal Deposit Insurance Corp. works is furnished in Sheldon, Iowa. The insurance officials were right behind the police in moving into the bank which suffered a $2.1 million loss from embezzlement. An entire new generation of Americans has grown to adulthood without ever having seen or suffered from a run on a bank"—(Ogden, Utah, Standard Examiner).

"Thanks to the FDIC, Sheldon, Iowa, is 'back on its feet' financially. Economic recovery for most of the people in Sheldon was swift, thanks to the Federal Deposit Insurance Corp."—(United Press-International report 6 weeks after the Sheldon National Bank closing).

"Discovery of the theft ($2.1 million Sheldon banks defalcation) did not create a panic among depositors. They knew they were secure, and within 10 days after the bank was closed, the FDIC began paying off in full up to $10,000. As evidence of public calmness and confidence, many depositors took the money they received and went up the street to place it in another bank, also insured. This is one of the bulwarks of the Nation's economy, providing an absolute guarantee against a run on a bank ever again"—(Henderson, N.C., Dispatch).

"It takes something like that astounding $2 million embezzlement to recall that for nearly 30 years, the Federal Deposit Insurance Corp. has stood ready to reimburse depositors up to $10,000. Since the FDIC law was enacted, there have been 429 bank closings, and 99.7 percent of depositors were covered by deposit insurance"—(Newport, R.I. News).

"This importance of the protection afforded bank depositors by the Federal Deposit Insurance Corp. has been dramatically demonstrated in the collapse of the bank at Sheldon"—(Des Moines, Iowa, Register).

"When Money Vanishes, Federal Bank Agency Appears Like Magic"—(New York Daily News headline on Sheldon, Iowa, post closing report).

"The FDIC is probably the best reason for people's confidence in our banking system and the safety of their money. When people have confidence in banks there is little danger of panic"—(L.A.C. in the Long Beach, Calif., Independent).

"Before FDIC, depositors usually lost money if a bank failed. Uneasy depositors could cause a run on strength of a rumor. However, the FDIC has changed all that"—(Champaign, Ill., Courier).

The public, speaking through its newspaper and magazine editors, obviously is satisfied with the manner in which the FDIC operates to protect depositors' interests.

A step in the direction of educating the public with regard to this agency's efficient function should be taken by banks through utilizing these laudatory comments and expressions of confidence in their promotional efforts.

To Stand or To Retreat—That Is the Question

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following article by Edgar Ansel Mowrer:

CONFLICT DEEPENS IN UNITED STATES

(By Edgar Ansel Mowrer)

Evidence of a deep and basic division in the American people is mounting. Recently in discussing the John Birch Society, I observed that unfortunate as it was for members of this society to disqualify themselves as fighters against communism by their attacks on democracy, desegregation, and the civil rights that are the basis of American civilization, their presence showed the deep and abiding anxiety of increasing numbers of Americans at successive administrations' unwillingness to refuse further concessings to Moscow and Peiping.

At the base of this division lies a simple choice: either you understand that the United States is in a war (cold but genuine) which requires victory, or you don't.

If you admit the existence of war you start playing to win, not just bumping back Communist advances. If you don't know we are at war you try to capitalize on the Americans' desire for peace to scare them into successive surrenders by threats of atomic destruction.

You argue that Cuba and Guinea are not really Communist. You insist that the Russians have just as much right to have a missile base in Cuba as we have to have bases in Italy or Turkey or wherever. This is the same as saying in 1944 that the Nazis had as much right to land on Cape Cod as we had to invade Normandy.

In other words, you try to ignore the existence of the key fact of existence today—Communist aggression.

Such talk is not merely found in the mouths of pro-Russians like Linus Pauling and Cyrus Eaton (to mention only a pair of prize exhibits). No, it exists in attenuated form even around the White House.

Adlai Stevenson is quoted in the Boston Herald (May 1, 1961) as having said that we "cannot save some countries from going Communist" (Why not?) and "ought not be too upset when one of them vanishes behind the Iron Curtain." He also argued, according to Holmes Alexander, who wrote the story that "we ought to stop overstressing the Communist conspiracy." (I hope this story is inaccurate.)

Stevenson is also believed to have been the chief influence that caused President Kennedy in advance of the Cuban invasion, to make the public declaration of no American support, which broke the back of the anti-Castro Cubans' morale.

In fact, certain highly placed advisers came to Washington with three assumptions—all of them mistaken. One was that quiet diplomacy and greater civility would be reciprocated by the Communists. A second was that there existed large areas of potential agreement with the Russians. A third was that the neutrality of certain newly independent nations would strengthen the free world. (Nonalinement of areas and peoples once under anti-Communist control is exactly what Khrushchev and Mao want, too.)

As a result, the foreign policy of the new administration has been fainthearted from the beginning.

President Kennedy made the finest, most stirring declarations heard in many a day. Many of us were thrilled and eager to support him in what looked like a call to win the cold war. But he has retreated in Cuba and Laos.

Secretary of State Rusk has talked big at Oslo, reiterating our resolution to defend our rights in Berlin at any cost. Who believes him? Let Khrushchev offer a new summit to discuss Berlin, and who believes Mr. Kennedy will not come running?

Faintheartedness in the White House has encouraged a whole host of defeatists to emerge who have been lying low since the unhappy McCarthy days. One such is a certain Taylor Adams of New York City, a defender of Castro's Cuba, who concludes an attack on me with the question: "Why are you people always obsessed with this 'free world and freemen' stuff?" Why, indeed?

* * * * *

In any case, the dispute over how to deal with communism—defeat it or try to mollify it with sweet words and continual concessions—is not going to stop. For the proponents of conciliation turn the situation exactly upside down: far from preserving us from a nuclear catastrophe, faintheartedness and retreat are making world war III ever more certain. At some point, after the loss of 2 or 10 more Allies to neutralism or communism the American people are going to brush aside the fainthearts and pro-Communists at home and decide to defend their heritage of freedom.

Los Angeles Board of Supervisors State Need of Parking Space for Federal Buildings in Los Angeles

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and the attention of my other distinguished colleagues, a letter I have received from the clerk of the board, Board of Supervisors for Los Angeles County, concerning the great need for parking areas adjacent to Federal buildings.

BOARD OF SUPERVISORS,
COUNTY OF LOS ANGELES,
Los Angeles, Calif., May 12, 1961.

Members of the Los Angeles County Delegation to Congress.

GENTLEMEN: At the meeting of the board of supervisors held May 9, 1961, on motion of Supervisor Kenneth Hahn, an order was adopted respectfully requesting President John F. Kennedy, Senator THOMAS H. KUCHEL, Senator CLAIR ENGLE and the U.S. Congress to take corrective action regarding parking requirements in metropolitan areas.

It was brought to the board's attention that it is generally the practice of the Federal Government not to provide parking when new Federal buildings are constructed It is requested by the board of supervisors that the Federal Government institute a policy of complying with requirements of local governments in metropolitan areas, in practice as well as in spirit, in providing adequate parking facilities not only for citizens and taxpayers who must travel to conduct business in Federal buildings, but also for employees working in these buildings.

Respectfully yours,

GORDON T. NESVIG,
Clerk of the Board.

Attorney General Robert F. Kennedy Pays Tribute to Poland's Constitution

EXTENSION OF REMARKS

OF

HON. THOMAS J. O'BRIEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. O'BRIEN of Illinois. Mr. Speaker, Sunday, May 7, by proclamation of Mayor Richard J. Daley, Chicago officially observed the 170th aniversary of Poland's inspiring constitution.

More than 150,000 Chicagoans participated in a colorful parade and a program in Humboldt Park in tribute to this magnificent Polish document, which in 1791 brought to the people of Poland and to the European Continent for the first time the principles of dignity and self-rule, which only 2 years earlier had been incorporated into the Constitution of the United States.

I am sure I speak for all of those who participated in Sunday's inspiring program that we were indeed proud to welcome as the main speaker for this event in Chicago the Honorable Robert F. Kennedy, Attorney General of the United States.

I should like to call to the attention of my colleagues the inspiring remarks delivered by the Attorney General in tribute to Poland's Constitution of 1791. His remarks reflect to a great extent the sentiments expressed here in Congress by more than 100 of our colleagues last week, when on May 3 we honored the Polish Constitution here in the House of Representatives. I am sure it is a source of great pride to all Americans of Polish descent that the Attorney General of the United States would join in this tribute.

Mr. Speaker, Attorney General Kennedy's remarks, delivered in Chicago on Sunday, follow:

ADDRESS BY THE HONORABLE ROBERT F. KENNEDY, ATTORNEY GENERAL OF THE UNITED STATES AT THE POLISH CONSTITUTION DAY OBSERVANCE, CHICAGO, ILL., MAY 7, 1961

I want to express my deep appreciation and gratitude to all of you for inviting me here today because I know I am among people who are dedicated forever to love of country and liberty. It is a great honor to join with you in celebrating the 170th anniversary of Poland's adoption of a constitution which gave meaning and noble expression to liberty and the fundamental rights of man.

The history of Poland goes back many years—many more than that of the United States, but almost since the day the Declaration of Independence was drafted in Philadelphia, the history of Poland and the United States have been entwined. These close ties have existed between the Poles and the Americans because of mutual respect for each other.

Casimir Pulaski was 29 years old when he came to America as a volunteer to serve in the Continental Army. He participated with distinction in the Battle of Brandywine and formed his own cavalry unit which was known as Pulaski's Legion. Pulaski was with the ragged American Army during the cruel winter at Valley Forge and lost his life leading an attack against the British defenses at Savannah, Ga. Though he died fighting for America's freedom, I cannot help but believe that he also was fighting for Poland's freedom.

Thaddeus Kosciusko, another Polish volunteer, was one of the most popular officers in the Continental Army—by all accounts. He was Washington's adjutant, built the fortifications at West Point and later served as a strategist and fighting officer in the recapture of Charleston, S.C.

After the United States had won its independence, Congress awarded him American citizenship, the rank of brigadier general and a large land grant. But Kosciusko returned to Poland and a few years later fought to defend the constitution which we honor today. In 1794, when Polish patriots again sought to win their freedom by fighting, Kosciusko returned from exile to lead them—and again distinguished himself—only to be overwhelmed by vastly superior forces.

Kosciusko still was pleading the cause of Polish independence in 1814—at the Congress of Vienna. He was then 68 years old, but the same democratic spirit which burned brightly in Jefferson and Lafayette—also was unquenchable in him.

And down through the years to the Second World War—Poles and Americans have stood steadfast for the cause of liberty. The Poles, under Lt. Gen. Wladyslaw Anders, had the distinction of capturing Cassino and its historic abby which blocked the Allied advance in Italy for so many months. I visited Monte Cassino several years ago and climbed up the steep, rocky hillside where the Polish soldiers fought their way forward. I will never forget the inscription on the memorial to the Polish soldiers who are buried there:

"We Polish soldiers, for our freedom and yours, have given ourselves to God, our bodies to the soil of Italy and our hearts to Poland."

These very same principles of freedom for which these gallant Polish soldiers died at Cassino, should be an inspiration to free people everywhere in the world today.

I might add that on this same trip in 1955, I visited Poland, too, and after traveling through the Soviet Union, it was inspiring to see that the people of Poland still stand and yearn for the principles of freedom and meaningful democracy.

So, the ties between our countries, beginning with Pulaski and Kosciusko, go to the present time and it just wasn't a coincidence that the President, in his state of the Union message, mentioned one country—Poland—because he has the same admiration and affection for the Poles than I do.

We continue to be interested in and have concern for the welfare of the Polish people and we have attempted to maintain our close ties with them. In doing this, we have developed cultural relations and exchanges. We have developed economic programs which are of assistance to the Polish people.

What we need are:

1. More flexibility in giving assistance to Poland and other countries behind the Iron Curtain.

2. Strengthen the economic and cultural ties between Poland and the United States.

3. Increase the exchange of students, teachers, and technicians.

4. Explore with the Polish Government the possibility of using our frozen Polish funds on projects of peace that will demonstrate our abiding friendship for and interest in the people of Poland.

Recently, we have been disturbed by a number of hostile statements made by Polish leaders. However, we believe that the Poles favor, as we do, the continuing development of constructive relations between the two countries and we hope that they will avoid words and actions which would impede such development.

The Polish people will know that the American people and the American Government will continue to seek friendly relations. They also will know that we will work unceasingly to defend freedom and individual rights as heirs of a noble heritage—in the spirit of 1791 as well as in the spirit of 1776.

Senior Citizens' Month

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. ANFUSO. Mr. Speaker, recent developments in the city of New York hold out the promise for greater understanding and better treatment for its senior citizens. On May 3, 1961, New York City began a month-long program of activities in connection with Senior Citizens' Month.

Under leave to extend my remarks, I wish to insert into the RECORD the text of a radio address over station WNYC opening Senior Citizens' Month. The address was delivered by Mr. Theodore Charnas, chairman of the citizens committee on aging of the Community Council of Greater New York, and also coordinator of a self-regulating program of proprietary nursing homes. Mr. Charnas reports on important developments that have taken place in New York City to help the city's older citizens. These developments may well serve as an example to other communities throughout the United States. I commend his address to all my colleagues, and especially to all those interested in the problems of the aged:

TALK GIVEN BY THEODORE CHARNAS IN CONNECTION WITH SENIOR CITIZEN'S MONTH OVER WNYC, MAY 3, 1961

Respect for age is fundamental in our tradition. All of us know the fifth commandment—honor thy father and thy mother. We all understand that this means an obligation not only to our own parents—but to all parents—to all older people. We all know that the Declaration of Independence says that all men are endowed with inalienable rights—and that these are rights to life, liberty, and the pursuit of happiness—and we understand too that this means that all men—the old as well as the young—the sick as well as the sound—are entitled to life and liberty and the pursuit of happiness.

I think we would all agree that the greatest asset of any society—especially in a democracy—is its citizens, its people, all its people. A community must realize a fair return from all its people. If it doesn't the community is not receiving a fair share on its investment. On the other hand, a community must make its maximum contribution to all its citizens. If it doesn't, some are being cheated.

At the beginning of Senior Citizens' Month, it is appropriate that we should pause and ask why are we so concerned with the problems of our older citizens?

More than 2,00 years ago during the Golden Age of Greece, the life expectancy of the average Greek was 25 years.

In 1900 in our country, the average life expectancy was 47 years. Only one person in 25 could expect to reach 65 years of age. Then a wonderful thing happened. People began to live longer. By 1940 the average life expectancy was 63 and one man in 14 could expect to reach 65. By 1955 the average life expectancy for men reached 68 and for women 72. One out of every 12 men could expect to reach 65 and 1 out of every 8 women could expect to reach 65 years of age. Today that life expectancy is even greater.

In 1900, 96,000 reisdents of our city—about 3 percent of the population, were 65 or older. Today, more than 750,000—almost 10 percent of the population are in this group. There are almost 1½ million over 60 years of age who live in New York City.

Now what kind of life is our society offering our older citizens? What are people doing with the additional years with which we have been endowed? As our population increases and life is prolonged, we have more and more aged, more and more chronically ill, more and more older people who need help to make their lives more complete and more meaningful.

How does a great community like ours in New York City plan for its older citizens? Who does the planning? How is planning structured in a community with about 1,200 health and welfare agencies of which more than 200 serve the aged?

Thirty-five years ago New York City had an alms house and a haphazard system of private homes for the aged. There was no public old-age assistance. There was little thinking in terms of recreation, employment, housing, geriatric medicine. The New York Association for Improving the Condition of the Poor, the Catholic Charities of the Archdiocese of New York and of the Diocese of Brooklyn, and the Jewish Social Service Association were each developing a point of view in making provision for the needs of older people. And as the thinking of these agencies developed and crystallized, they came to realize that a community-wide framework must be established to deal with the many problems of the older person.

In 1925 the Welfare Council of New York City, now known as the Community Council of Greater New York, was established. Until then our services for the aging could best be described in terms of Mark Twain's definition of the dictionary—interesting but terribly disconnected.

The council played an active part in the promotion of the old-age pension of 1930. It issued the first statement on acceptable minimum standards on homes for the

aged some 20 years ago. It played an important role in public housing, which led to the construction of the first 50 apartments for older people in the Fort Greene housing project. It made intensive new studies on the multiple problems affecting older people. It took an active part in stimulating the growth of such facilities as the Goldwater Memorial Hospital. It played a vital part in the enactment of the nursing home legislation and only very recently, in December of 1959, it conducted a regional conference preliminary to the White House Conference on Aging, which was magnificent in terms of representation and good, sound, solid thinking.

At the same time the great Catholic, Protestant, and Jewish sectarian agencies were improving and extending their facilities and services for older people.

Then in 1949, a mayor's advisory committee for the aged was organized and charged with the duty of improving conditions affecting older people in New York City. It made a monumental study of living arrangements for older people in a public housing project—the Vladeck study. It was a vehicle for the exchange of information between voluntary groups and city agencies. It published many valuable papers. It inaugurated and assumed responsibility for Senior Citizens' Month in New York City.

But it is especially in the last 12 months that we have achieved extraordinary advances in planning for older people of New York City.

During these past 12 months, many fine voluntary homes for the aged and the chronically ill have developed plans for enlarging and improving their facilities. They are planning to bring within the scope of their services more and more older men and women who will continue to reside in their own homes but have the opportunity to make use of the facilities of these institutions. They have begun to study and make provision for the senile and they are employing newer and better techniques in the care which they provide.

During the past few months responsible private nursing homes have accepted a recommendation of the city administrator and they have voluntarily adopted a program of self-regulation. The homes which subscribe to this program are elevating their standards and improving their services. The planning includes new central services which will be furnished to member homes, the availability of expert guidance in several areas of service, special courses for administrators, and the adoption of a code which must surely result in better care for residents of the nursing homes which subscribe to the program. This voluntary effort should be applauded by the community and it will undoubtedly be encouraged by the city administration which suggested this constructive program.

During the past 8 months we have seen the creation of the first citywide planning agency for our older people.

In October of 1960 the mayor's advisory committee on the aged and the committee on welfare of the aged of the community council merged into a Citizens Committee on Aging for the City of New York under the auspices of the Community Council of Greater New York. Thus, for the first time, we have responsible community planning on a citywide basis.

The objectives of the committee are to promote community education on the needs of the aged and on the concepts of aging; to develop a master plan for programs and services to the aging; to foster the development of recommended programs and services; to sponsor new legislation and review proposed legislation; and to coordinate community activities on proposed legislation which concerns older people.

The committee consists of 105 members who are leaders in the community, of these 60 are lay people. It numbers among its members a representative of the mayor and of each major city department concerned with old people. In addition to 30 experts serving on the committee, the subcommittees have involved 50 additional experts in the various fields in which these subcommittees are involved. The membership includes representatives of health and welfare agencies, clergy, members of the city council and the State legislature and the judiciary, the junior league, board of trade, commerce and industry, labor, fraternal organizations, and each of the great sectarian agencies.

The citizens' committee is independent, notable for its membership, ably staffed and completely flexible and with a program of the broadest possible scope. It holds tremendous promise for the future.

Since its beginning last October, the citizens' committee has functioned with remarkable efficiency. A number of committees have been hard at work isolating problems and evolving programs to meet the demonstrated needs. The committee on legislation has analyzed and made itself heard on proposed bills. The committee on retirement planning is working out a program to stimulate employer interest in preretirement programs. The committee on health is especially concerned with facilities and services for the senile and for the mentally ill. The income maintenance committee is analyzing the public assistance program. The housing committee is preparing a brochure outlining funds available from Federal, State, and city agencies for private builders and organizations undertaking to house old people. The committee on services is preparing a recommendation for the mayor at his request, on information and referral services.

And finally Mayor Wagner has announced a program of action for the aged which describes steps to be taken by the city government to provide a network of services for the aged. He has called for the assumption of greater responsibilities by the community and has asked the citizens' committee to cooperate with city government. The mayor made this announcement at the first meeting of the citizens' committee on aging last October. The mayor will address the next meeting of the committee on May 9 at city hall and he will then make a further statement about his action program. This meeting will be the occasion for the formal opening of Senior Citizens' Month and the presentation of a scroll to Mrs. Eleanor Roosevelt.

What are we really trying to achieve?

We want the older person to have pleasant and agreeable shelter. We want him to have economic security. We want to make provision for his physical and mental health. We want him to have recreational activities which will deter the degenerative effects of old age. We want him to have a meaningful old age with dignity and self-respect. And isn't this really what we want for ourselves?

What can we ask of the community?

I believe that the older person has a right to the sympathetic understanding of the entire community—not only during Senior Citizens' Month but all the year round.

I believe that the planning and the programing can flourish only if we have a climate which is hospitable to this planning and programing. We must all understand that everyone of us is involved in the process of growing older. And we must teach our children and younger people to respect the experience and the contributions of our elders. We must make it possible for our older people to find dignity and self-respect and the awareness of being needed. Only when we have learned to honor our fathers and mothers and to respect all fathers and mothers can our programs come to fruition. And only when we conscientiously strive to give older people their rights to life, liberty, and the pursuit of happiness will we be able to say that we have planned well.

We all have a stake in this business of getting older. Let us try to make life more complete for our older men and women and for ourselves as we grow in years so that we can say with the poet:

"Age is opportunity no less than
Youth itself, tho' in another dress,
And as the evening twilight fades away,
The sky is filled with stars visible by day."

We Must Stop This Slide

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and the attention of my other distinguished colleagues, a timely and pertinent editorial appearing in the Huntington Park, Calif., Daily Signal newspaper, for Tuesday, May 9, 1961:

WE MUST STOP THIS SLIDE

Never in peacetime has American power suffered such damage as by the Cuban invasion fiasco coupled with the all but completed loss of Laos to the Communists.

Since we back the invasion that failed communism is more firmly entrenched to fester in Cuba and its potency to filter into other lands in our hemisphere has been increased.

In Laos, which we talked loudly of holding, a new strategic gateway is rapidly falling open to the Communists. But far more important that the geographic conquest is the psychological effect so easy a victory must have upon Khrushchev. We must surely expect him to strike now for a more valuable stake and the chances are good American troops will be needed to stop him.

An appraisal of our failures is essential if we are going to prevent the slide of many more nations into the Soviet orbit.

NEEDED: A REAWAKENED SENATE

Corrective action should be taken on four fronts. Presumably study of the CIA and Joint Chiefs of Staff responsibility in the Cuban debacle is already underway. Of more long-range value can be a closed-door, nonpartisan Senate investigation of the reasons why the administration made the decisions it did on Cuba and why it chose a course to drift on Laos.

Such an investigation is fundamental if the Senate is to return to its constitutional responsibility to watchdog the Chief Executive in his foreign actions. Certainly events of the last 2 weeks show that we have need of the Senate to act again in this role and to its full capacity.

Finally, it is probably a safe presumption that President Kennedy has realized that the methods he personally chose to reach his decisions were at fault. New types of judgments and new wisdom in his decision making are needed.

FORCE AND ONLY FORCE

Of all the guidelines which can be laid down from our present setbacks the most fundamentally useful was pointed out by Stewart Alsop in his column in this news-

paper yesterday. As Alsop wrote, Khrushchev really means it when he says, as he did a year ago, that "the world balance of power has now turned sharply in favor of the Socialist countries."

If President Kennedy becomes fully aware that Khrushchev means and believes this he will sweep from his administration all who counsel that a deal be made with the Soviets either to "settle" the cold war or to negotiate a disarmanent pact. As long as the Russians think they are winning only force or the determination to use force can halt them.

Wiretapping and the Rights of the Individual

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. KASTENMEIER. Mr. Speaker, recently the Assistant Attorney General, Herbert J. Miller, Jr., argued that the Justice Department should have added legislative authority to permit wiretapping. Perhaps one of the arguments Mr. Miller used in urging this new authority indicates the depth to which our conception of the rights of the individual have sunk. The Assistant Attorney General argued that "law enforcement officials should be as free as criminals use modern scientific methods."

I know that my colleagues agree that the powers of the State must be constrained lest they infringe upon the rights and privileges of the individual. Were we ever to allow the State the freedom of criminal methods, we would have lost the very meaning of the free society we so hopefully proclaim to the world and in which we have trusted throughout American history.

While I must personally register my strong objection to the demand for greater wiretapping authority, I think that other members may find the views of Prof. Charles A. Reich a sound and careful analysis of the problem. I would submit these excerpts from much longer testimony which was given on May 9, 1961; before a subcommittee of the Senate Judiciary Committee, to the consideration of the House:

STATEMENT BY CHARLES A. REICH BEFORE THE SUBCOMMITTEE ON CONSTITUTIONAL RIGHTS OF THE SENATE JUDICIARY COMMITTEE

My opinions about eavesdropping and wiretapping reflect a long time interest in the fields of constitutional law and property, the principal subjects that I now teach. They are views which many of my students tell me are old-fashioned, but that you will have to judge for yourselves.

Private property is to me one of the most basic institutions of a democratic country like ours. Without it individualism and freedom inevitably wither and die, no matter how democratic a government purports to be. One of the major purposes of our Constitution and Bill of Rights was to safeguard private property, and it should not be forgotten that the framers were mostly men of substantial property.

Among the most important attributes of private property is the right to possess it exclusively—to keep all strangers out. The householder may shut his door against the world. That is one of the proudest rights of an American—a right enjoyed by the householders of few other countries in the world today. It applies with equal force whether the intruder is a private trespasser or a Government agent.

This right of a citizen to shut the door against anyone, even the king himself, is part of our ancient heritage of freedom from England. One of the great ends for which men entered into society was to secure their property. By the common law every invasion of private property, no matter how minute, was a trespass, even if no damage was done. And the king's man, entering without sanction of law, was as much a trespasser as an ordinary man.

Eavesdropping and wiretapping are trespasses against the home. Let there be no question about that. They are much more serious trespasses than an unlawful search of the premises for they may continue over long periods of time and are usually unknown to the householder even after they occur. The householder never even gets a chance to fight for his privacy. Eavesdropping has always been regarded as despicable by those who believe in the privacy of private property, and wiretapping, while of more recent origin, is in no way different.

When eavesdropping and wiretapping are carried on by government against its people we have a condition that reminds me of what George Orwell foresaw for 1984, when Big Brother will be able to watch what each of us is doing at home. Spying by government against its citizens is odious to a free people, and I think the framers of our Constitution forbade it once and for all when they provided that the right of the people to be secure in their homes against unreasonable searches "shall not be violated."

As I understand it, there are two principal arguments in favor of legislation which would permit some eavesdropping or wiretapping. First, there is the testimony of many law enforcement officials that such methods are needed in order to track down organized crime. Second, there is the view that since wiretapping now goes on in defiance of the law, it is wiser to attempt to regulate it than to continue a largely ineffectual band. I do not think either argument justifies the legalizing of eavesdropping or wiretapping.

On the first point, my position, very simply, is that fundamental rights—the rights that make this country what it is—must not be abandoned no matter how strong the claims of law enforcement. Each of our fundamental rights—trial by jury, necessity of indictment by grand jury, the prohibition against coerced confessions, the right to bail, freedom of speech and press, may well make law enforcement less efficient. Necessity could be advanced as justification for giving them all up. But without these rights what would these enforcement officials be protecting? We would be a totalitarian country. I myself would rather have law enforcement less efficient than to move in the direction of abandoning our freedoms. At least law enforcement must stop short of destroying the very rights it is supposed to protect.

On the second point—existing wiretapping in defiance of law—I have two comments. First, have we ever tried really enforcing a ban against wiretapping? Have we ever made it a felony in explicit terms and set about jailing those who violate the law? It can be and is argued that present laws do not actually ban the interception of telephone messages. A law that clearly did so might be tried. Or, if prosecution of law enforcement officials is unrealistic and undesirable, have we tried banning the shipment of wiretapping equipment in interstate commerce—a prohibition that might reach the evil at its source. Similar bans have worked. We should not anticipate failure until we have made a genuine effort to succeed.

In the second place, is there any reason to believe that by permitting some wiretapping under regulation other types of wiretapping would be eliminated? If wiretapping goes on outside the law now, legalizing some types would hardly be calculated to change the situation. Instead, it would amount to a congressional declaration that wiretapping is not always bad. I recognize that it is proposed to enact new penalties against unauthorized wiretapping. But we have no assurance that these penalties would be enforced or are enforcible. If they are, this argues strongly that all wiretapping could be banned, and that there is no need to give even partial legislative section to lawlessness that now exists.

Mother's Day Service, Combined Church Schools, First Lutheran Church of Altoona, Sunday, May 14, 1961

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. VAN ZANDT. Mr. Speaker, on Sunday, May 14, 1961, it was my privilege to deliver the following Mother's Day address to the combined Sunday Schools of the First Lutheran Church of Altoona, Pa., as part of their annual Mother's Day service:

MOTHER'S DAY ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT MOTHER'S DAY SERVICE, FIRST LUTHERAN CHURCH, ALTOONA, PA., MAY 14, 1961

Holy Scripture reminds us that "he that honoreth his mother is as one that layeth up treasure."

The converse of this text for my Mother's Day message is to be found in Proverbs, chapter 14, verse 20: "A foolish man despiseth his mother."

The scriptural lesson here taught agrees with common experience and general opinion.

A man's value can generally be pretty well determined—by his relations with his mother—by the way he looks at her—speaks to her—speaks about her.

The attitude of an honorable and manly man toward his mother is an attitude of love and respect.

An affectionate regard for the wishes of his mother does no harm to a man's dignity and independence, and a protective chivalry helps a man to develop a firm courage.

Mother's Day is an excellent institution if we take it as an occasion to emphasize an attitude that reveals our conduct and speech the year round.

Thus we can observe Mothers' Day in an appropriate manner by giving some extra remembrance to one we never forget, and by displaying on Mothers' Day before the world a feeling that we show to our mothers and experience in ourselves, every day of the year.

Mothers' Day can be worthwhile, too, if it marks a turning point in our relations with our mothers, by providing a time of good resolutions which are adhered to in a conscientious manner.

It can be worthwhile if we write a letter and continue the correspondence, if we give needed help, resume close association,

apologize for past neglect and, above all, resolve to do better in the future.

On the other hand, Mothers' Day is a mockery if it is only an occasion of momentary attention after 12 long months of utter disregard for our obligation of love and respect.

Wear a carnation if you wish, but unless it represents an emotional tie, a relationship of affection and honor between you and your mother, it might just as well be a lowly cabbage.

The beauty of the carnation must represent the beauty of the relationship it is intended to symbolize.

To wear it honestly as the token of Mothers' Day you must mourn your mother if she is dead, or rejoice in her if she is living. Living or dead, she should be the object of your unfailing love and deepest respect.

Every mother has borne pain and undergone danger for her child. Mothers down through the ages have given years of effort to the physical care and sustenance, the intellectual development, and the moral training of their children. This display of deep maternal love is a free gift, expecting no sort of return or reward.

But though our mothers have freely given, with no thought of recompense, the gift itself demands at least the just recognition of gratitude and of whatever form of expressing that gratitude deemed appropriate to present circumstances.

For those who are grown up and have established their own families and independent way of life there is no one prescribed and proper form of relationship with their mothers.

In some families it has been found an ideal arrangement to have the mother live with them, helping with the household duties, thus being spared the expense of a separate establishment and benefiting by the consciousness of being needed.

In other families, where circumstances or personalities may differ, such an arrangement might be disastrous to family relationships. In such cases harmony and happiness might be best served by the mother's keeping a separate and independent living place, to whose upkeep her children might contribute if necessary. Some find the best answer in a flexible system of traveling and exchanging visits.

The basic necessity is affection at the core of the relationship, with the physical details to be adjusted by mutual agreement, and with regard to financial and other circumstances.

What is essential is the attitude of mutual respect and love that leads to cordial agreement and generous cooperation in establishing harmonious conditions of living.

This attitude is represented neither by the slogan, "Mother knows best," nor by the masterful declaration, "Now, mother, we know what is best for you, and you needn't trouble yourself—we'll arrange it all."

Respect should not be exaggerated into abject submission nor care and solicitude degraded into tyranny.

A mother is, first of all, a person entitled to recognition as an equal and independent personality, with her own opinions and preferences.

Her opinion on your affairs is to be sought with respect, listened to with courtesy and attention, and given its due weight in the formation of your decisions. Her opinion on her own affairs is paramount and decisive, except insofar as she may choose to defer to your opinion or preference.

Courtesy is the outward expression of the warmth of affection that must permeate family relationships. But courtesy does more than express that warmth of affection—it preserves and stimulates it. Mothers' Day affords the opportunity for an expression of formal courtesy from all of us toward our mothers.

The writing of letters, the wearing and giving of flowers, the special celebrations of the day such as dinners, parties, entertainments, all these are of value as acts of courtesy, as tangible, audible, visible assurances to our mothers of the warmth of our feelings for them.

This virtue of courtesy has been fittingly celebrated by the English Catholic poet, Belloc, in terms that associate it vividly both with religion and with motherhood:

"Of courtesy, it is much less
Than courage of heart or holiness,
Yet in my walks it seems to me
That the grace of God is in courtesy.

"On monks I did in Storrington fall,
They took me straight into their hall;
I saw three pictures on a wall,
And courtesy was in them all.

"The first the annunciation;
The second the visitation;
The third the consolation
Of God that was our Lady's Son.

"The first was of St. Gabriel;
On wings a-flame from Heaven he fell;
And as he went upon one knee
He shown with heavenly courtesy.

"Our Lady out of Nazareth rode—
It was her month of heavy load;
Yet was her face both great and kind,
For courtesy was in her mind.

"The third it was our little Lord,
Whom all the kings in arms adored;
He was so small you could not see
His large intent of courtesy.

"Our Lord, that was our Lady's Son,
Go bless you, people, one by one;
My rhyme is written, my work is done."

Courtesy is a form of politeness, but it is a stronger word than politeness, carrying with it the implication of real feeling, of gentleness and courage and kindness.

Courtesy goes with the "something more" of politeness, with the dramatic demonstration of affectionate respect.

Politeness, therefore, is suitable to our everyday relations with our mothers and courtesy is suitable to this special day.

Not a nod of greeting but a low bow, not a hasty kiss but a hearty embrace, not a friendly word but a gift, a flower, a speech of tribute.

This is a day for the plentiful and courteous bestowal of gifts and praises—upon our mothers. Let us be grateful and gracious in our observance of the occasion.

We ourselves know, and we can be assured our mothers know, how we feel about them. If our feelings are not such as are appropriate to the day let us labor to amend them.

If our feelings are, however, in tune with the spirit of the day, let us not shrink from giving full and enthusiastic expression to them in the confidence that a bold expression of devotion to the ideal of motherhood, and to one particular mother, will be beneficial not only to our personal relationships but to the community in general, and particularly to our young people.

Standing in this holy place, I am made strongly aware of the most fitting celebration of this occasion—the spiritual. The best and greatest gift we can give to our mothers is to pray, sincerely and fervently, both for their welfare and for our own fulfillment of their hopes for us.

Nearest to the heart of any mother is the hope that her son or her daughter will be a good man or woman. An endeavor to fulfill this hope in the development of our own characters should, therefore, be our resolve on this day for the coming year.

May God guide our consciences in the formation of this resolution and strengthen our wills in its performance.

The value of this day, in strengthening and renewing our relationship with our mothers, is great and lasting. From the natural human virtue of love between mother and child we rise easily and naturally to the love of God.

The value of such natural human emotions and virtues is eloquently celebrated in a familiar poem by Father Abram J. Ryan, which might well be taken as the keynote of our Mothers' Day observance:

"Better than grandeur, better than gold,
Than rank and titles a thousandfold,
Is a healthy body and a mind at ease,
And simple pleasures that always please.

"A heart than can feel for another's woe,
And share his joys with a genial glow;
With sympathies large enough to enfold
All men as brothers, is better than gold.

"Better than gold is a conscience clear,
Though toiling for bread in an humble sphere.
Doubly blessed with content and health,
Untried by the lusts and cares of wealth,
Lowly living and lofty thought
Adorn and ennoble a poor man's cot;
For mind and morals in nature's plan
Are the genuine tests of an earnest man.

"Better than gold is a peaceful home
Where all the fireside characters come,
The shrine of love, the heaven of life,
Hallowed by mother, or sister, or wife.
However humble the home may be,
Or tried with sorrow by Heaven's decree,
The blessings that never were bought or sold,
And center there, are better than gold."

Our Religious Heritage

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given at the annual meeting of the Religious Heritage of America, Inc., during the annual Washington pilgrimage which it sponsors:

OUR RELIGIOUS HERITAGE AND THE BLESSINGS OF LIBERTY

(Keynote address by the Honorable WALTER H. JUDD, of Minnesota)

Mr. Chairman, it is a great privilege to participate in the conferring of the Religious Heritage Awards to these distinguished men and women whose service to God and man has been so outstanding as to merit this recognition and tribute.

Your Washington pilgrimage comes this year at a time characterized by perhaps as great a confusion of emotions as at any period in American history. On one hand there is profound gratitude for the goodness of life that is possible for us in this land. On the other hand there is great uneasiness, uncertainty, perplexity, even anxiety and despair. Less than 15 years after winning a war with total, unconditional surrender of all our enemies, we are soberly asking, What can we do to survive?

We are profoundly grateful that no such thing has happened here as we saw happening in Hungary 3 years ago, in Tibet last year, and in Japan this week. But we are dismayed that such things can be happening to anybody anywhere on this globe in the

middle of the supposedly enlightened 20th century.

Can Korea go on indefinitely half slave, half free? Or Germany? Or the whole wide world? Down deep inside, we know the answer is "No."

I

Much of the reason for our confusion is that we have not understood the nature of the conflict in which we are engaged.

We have seen that it is a conflict of arms; who will win the missile race? Whichever side wins could compel the other to surrender or perish. Because of our religious heritage, we would not use superior power for that purpose. Because of their Communist heritage, the other side would so use it—Mr. Khrushchev reavowed that last month.

We have seen that it is a conflict of economic systems. Which will crack up first under the strain?

We have seen that it is a conflict of educational systems. Which will produce not only the smartest but the toughest minds?

We're beginning to see that it is a conflict, not so much of wealth and weapons as of wills. Which side will work the harder?

But many have not seen that the basic conflict is far deeper and more fundamental. It is a conflict between two totally different philosophies of life and, therefore, of government.

It is a conflict between wholly different sets of values.

It is a conflict between two wholly different concepts as to the nature of man; which means two different concepts as to the nature of the universe; which means two different concepts as to the nature of God—or whether there is a God.

We have not fully understood that most of all it is a conflict of faiths.

On one hand are those who openly proclaim that there is no God, that there is no moral order in the universe, and that man is merely an animal with a larger brain than others—the smartest of the animals, but nothing more. The conduct of the Communists which we denounce flows naturally and inevitably from that philosophy and faith.

During the 8 months in 1930 which I spent in an area under the control of the Chinese Communists in South China, and during visits behind the Iron Curtain in Europe in 1947, I learned—as did you who have had similar experiences—that Communists have no more scruples about wiping out a hundred, or a thousand, or a million human beings who stand in their way than you and I have about spraying DDT on some mosquitoes that are troubling us. And why should they hesitate or have scruples, if man is just an animal? If there is no God, then to whom can we expect men to consider themselves accountable?

On the other hand, our country and our free society were founded on the belief that there is a God; that there is a moral order in the universe; that there are moral laws which men and nations can no more violate with impunity than they can the laws of gravity or electricity; and that, while man is indeed the smartest of the animals, he is also something more—he is a child of God, and therefore, a part of God. Because he is a part of God, he is capable of becoming more and more like God, if willing to respond to God's loving quest for him, as your child is capable of becoming more and more like you, of whom he is a part, if he is willing to do so.

It is this, the divine in man, which we believe is different in character and kind from anything the animals have. It is this which is the unique and precious thing about man. It is this which we, at our best, have always believed it is the first business of a good government and a good society to protect and nourish and develop. It is this religious faith which is responsible for the unique values our civilization has developed. It is because our heritage is a religious heritage that the individual human being is considered by us at our best as sacred and of infinite worth.

Many in our country have assumed that the conflict between the Communists and free peoples is like that between the two major political parties in America. Both want the same good ends, but differ as to the best means to gain those ends—and keep them. But the world conflict is not over different means to the same good ends, different ways to attain the same good objectives; it is a conflict over objectives. Ours is peace; theirs is conquest. We want to end this world conflict; they intend to win it.

A truce to them, or a conference at the summit, is not, as we assume, a move toward real peace, which means a resolution of difficulties; rather, it is a politico-military tactic designed to win another victory. If they offer a truce in Korea, when their military operations there are no longer paying them dividends, it is not because they desire to end the struggle; it is only to shift to some other place like Indochina where they believe they can carry on the war more successfully.

"Peaceful coexistence" means that as long as we are stronger than they, we should be nice enough to allow them to coexist peacefully until they can become enough stronger than we so they can then compel peaceful submission by us.

And when they break up a conference at the summit as soon as they know they cannot divide the free world and score there another triumph, it is only to shift to some other place like Japan or some other tactic than smiles or threats, some tactic like subversion, which offers better prospect of success in advancing toward the never-changing goal of world domination.

The reason why it has not proved possible to get any real agreement with the Communist world, whether at Yalta or the United Nations, at Panmunjom or Geneva or Paris, is because the Communists are not pursuing the same goals as we at our best are pursuing.

And why are they not pursuing the same goals as we? Because they do not believe the same things as we believe—about man, and about the universe, that is, about God.

One reason for our difficulties is that we have been exposed so long and continuously to the Judeao-Christian body of ethics that we take its moral standards for granted. We assume that they are normal human standards. We tend to equate Christian with human. And since the men in Moscow and Peiping are human beings, we assume they will react as Christians do. When they do not so react, we are surprised, angry, and call them inhuman. But their ruthless behavior is not because they are inhuman; it is because they are merely human. We have almost forgotten that human beings, unexposed to moral teachings based on belief in a moral universe under a moral God, or with their spiritual natures unsensitized by a morally and spiritually regenerating religion, are predatory, like other animals. If this is not so, why should any men—including you and me—need a Saviour?

We cannot rightly condemn atheistic Communists for bertaying Christian values which they have never professed, and which, in fact, they denounce.

It is absurd to expect them to live as if this were a moral universe when they insist there is no such thing as a moral order in the universe, that there are no such things as right and wrong, good and evil, truth and falsehood.

It is absurd to expect them to believe that man has the capacity to make moral judgments, when their creed tells them that man is not a moral being, he is an economic animal.

In short, it is absurd to expect them to build up a heritage of freedom and to recognize and guard the unalienable rights with which we believe man is endowed by his Creator, if they do not believe there is a Creator.

II

All this means that we have not understood the world conflict because we have not understood the adversary. And a main reason why we have not understood the adversary is because we have not really understood ourselves and our own culture and heritage. We have almost forgotten that our heritage in this land is a religious heritage, predominantly a Christian heritage.

So, our first task is to reexamine our heritage, rediscover the essential elements and forces in it, rededicate ourselves to that heritage, fulfill it in our own land and time and generation, and share it with the world.

How did it begin? Our Pilgrim Fathers came to this land because they were determined to have religious liberty. They had discovered that it was not possible to have religious liberty without political liberty; and that political liberty could not be maintained without economic liberty, that is, opportunity for the individual to improve his lot, in accordance with his ability and his effort.

They had no precedent, no blueprint, but they had clear minds. They devised, for the first time on a major scale in all of human history, a system whereby people control government instead of government controlling people. It worked. It released the creative capacities previously unrecognized in all sorts of persons from all sorts of races, climes, and countries. It led to an unprecedented outburst of creative energy, imagination, effort, production, and progress.

As long as our people adhered to it they progressed, and prospered. Then, little by little, many came to forget the heritage in their preoccupation with the goodness of living which had become possible. They came to trust results more than causes; material fruits more than spiritual roots. They paid less and less attention to the textbook from which the heritage had come. They paid less attention to the counsel of the prophets of their heritage, ancient and modern. They paid less and less attention to its moral principles. Many began to believe that its possible to get good by doing evil, to get justice by bowing down before injustice, to get right by might, to get trust by being untrustworthy, to get peace by sacrificing our principles and other peoples' rights and territory.

Many came to think it is possible to get a brotherhood of man without first of all believing in the fatherhood of God.

Thus has our society come to its present confusion, division, uncertainty, despair.

III

All this tells us what we have to do. We have to return to our religious heritage—not in order to go back, but in order to go forward.

First, we must recapture our faith: faith that God is, that He and His power are available to men, that with God it is possible for man to build His kingdom on earth.

What we need in America today is to recapture a faith in our heritage and our faith comparable to the faith the Communists have in theirs.

For our free society to survive, we must qualify in our generation as a worthy spiritual instrument, as the founders of our heritage did so qualify in their time and generation.

Second, we must rediscover the principles of our Christian heritage. They are recorded in a Textbook, a sort of laboratory manual, which faithfully records the experience of those who have followed and those

who have rejected the principles. It makes clear that it is not possible to get good by doing evil, but that it is possible to get good by doing good. The latter is just as dependable as the former. It teaches that we cannot get peace by direct pursuit of it. Men have been trying that for 50 centuries and there still is no peace. Rather, peace is a byproduct that follows, if we seek first His kingdom and His righteousness, His right relations in the world. There will be "peace on earth" only when there is "glory to God in the highest."

Third, we must rededicate ourselves to the principles, and put them into practice—in our work; in our homes; in our social and civil organizations; in our churches.

With all my heart, I believe that the religious heritage which our forefathers developed here, a heritage leading to voluntary federation under law, represents the best set of ideas and values ever put together in one place in the world's history. I think they are the hope of mankind. The achieving of a world of freedom and peace depends upon our understanding their true nature, making them work better here at home, and helping spread them throughout the world—with all our hearts and souls as well as our minds.

This world conflict is not an old-fashioned struggle for the control of land; it is for control of man—the mind of man, the soul of man, the whole of man.

Fourth, if we are to have the inner strength to fulfill our religious heritage here and to share it abroad, we must ally ourselves with the truly great leaders, the founders of our faiths. This means for us who are Christians that we must rediscover Christ our Master, must recommit ourselves to His Lordship and His direction, receiving from God the power to be and to do that He promised to His disciples.

IV

If these things in our heritage are not true, if God is not, then of all men we are the most foolish. Our whole effort in this land is futile, in fact makes no sense.

But if God is, then what ought to be can be. There are dark valleys to go through, but there is no reason for dismay or despair.

God regularly operates through men and women—men and women who allow themselves to be captured by Him, give themselves to preserving and strengthening the heritage others have developed thus far, and work and walk forward with God unafraid.

Never did we in America face such a fundamental challenge to the ultimate values of life. Never did we have to think so deeply or work so hard as we shall have to in the years just ahead if we are to live in dignity and usefulness—or even to live at all.

Our generation cannot escape the call to great dedication and heroic effort if we are to "secure the blessings of liberty for ourselves and our posterity" which came out of our religious heritage. It is not necessary to remind you of this pilgrimage that on these blessings depend all others.

Notice: It's $1.15 Pay Law for 2 Years

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose a news item from the Des Moines, Iowa, Register of May 7, 1961, written by the Register Washington Correspondent, Mr. Richard Wilson:

NOTICE: IT'S $1.15 PAY LAW FOR 2 YEARS—THEN MINIMUM WILL GO TO $1.25

(By Richard Wilson)

WASHINGTON, D.C.—A good many lower paid workers in the Nation who have been watching only the headlines are likely to be disappointed when their pay isn't immediately raised to $1.25 per hour.

They are going to wonder what it is all about when they get a raise to $1.15 per hour and this remains the federally supported minimum for 2 years more.

President Kennedy, it has been reported, won a big victory when the House passed the $1.25 per hour minimum wage bill which he backed last year in Congress and this year in the White House.

The point is that it isn't a $1.25 per hour minimum wage law yet; it is a $1.15 minimum wage law. That is exactly the figure the Republicans under President Eisenhower supported last year.

A YEAR LONGER

If the Ensenhower-supported legislation had passed, lower paid workers would have had their $1.15 per hour minimum for a year longer.

Moreover, in one important respect the legislation hailed by the Democratic leadership isn't even a $1.15 per hour bill; it is a $1 minimum for all new persons brought under the bill's coverage. This will last for 3 years, become $1.15 in the 4th year and $1.25 thereafter.

About 3½ million new workers will be blanketed into the guaranteed minimum, but not the laundry workers.

President Kennedy campaigned the country last fall with the aim of getting the laundry workers covered by the minimum-wage bill, one of his most frequently mentioned proposals.

In the Southern States a large percentage of laundry workers are Negroes.

But when it came to performance, President Kennedy couldn't get Congress to include laundry workers.

The House of Representatives wouldn't stand for it, though the provision passed in the Senate.

HASN'T GIVEN UP

But President Kennedy hasn't given up. He discussed the problem at length at a press conference Friday.

"One of the problems with laundry workers, of course, is that they are paid quite badly now. I would say they are among the lowest group—almost the lowest group in the American economy.

"Laundries are not a prosperous business at the present time. The passage of the minimum wage of $1.25 would increase the cost of the laundry owners by a substantial sum because manpower represents a high percentage of their cost, and they are competing with home laundries, which now have become a rather easy alternative in many cases, so that the argument is made that we would liquidate a substantial percentage of the industry and throw them out of work."

All the same, President Kennedy still wants the laundry workers included, and indicated he will ask Congress to reconsider its action.

Passage of the minimum-wage bill with the $1.25 figure in it—more than 2 years from now—was a hard job for administration leaders and skillfully executed.

The day before the House voted on the conference report last week, President Kennedy announced a broadly phrased but very vague program to help the U.S. textile industry. It has mostly to do with curbing imports of competing goods.

In recent years a sizable portion of the textile industry has moved into the Southern States. It was from the Southern States also that most of the Democratic opposition came to the so-called $1.25 minimum-wage bill.

BID FOR SUPPORT

President Kennedy's prevote announcement of the textile program was commonly accepted at the Capitol as a bid for support from southern Congressmen for the minimum-wage bill. The southerners might get into trouble with some business elements because of the wage vote, but at least the textile manufacturers would be happier with their representatives in Washington.

There were other little details of the bill that were compromises to win votes. Processing of shade-grown tobacco was excluded. It was also specifically provided that the minimum-wage standards should not apply to the ginning of cotton nor to workers at country elevators.

There are dozens of other exemptions, with the main extended coverage applying to employees of some retail and service establishments.

Hotels, motels, hospitals, restaurants, motion-picture theaters, lunch counters in retail establishments are on the exemption list. Retail establishments must handle goods moving across State lines in total annual volume of $250,000 or more.

What President Kennedy emphasizes, however, is that progress has been made, and the action of Congress was the first expansion of coverage of the minimum-wage law since New Deal days.

FIVE YEARS

And even if workers have to wait a couple of more years they will get the $1.25 minimum, provided they are covered by the law.

But for the 3.5 million newly blanketed into the act, they won't get the $1.25 minimum until the fifth year in this long-range legislation so strongly hailed as an example of Democratic Party concern for low-income people.

"Because of the Health Condition Described at the Time of Application, We Cannot Accept Your Wife as a Member"—A Sidelight of Hospitalization Insurance for the Retired

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mrs. SULLIVAN. Mr. Speaker, few issues scheduled to come before the Congress are as controversial as the proposal for hospitalization and nursing home cost insurance for persons retired under social security. We are told repeatedly that such a proposal has little if any merit, and should not be considered seriously. However, I have a letter in my possession which raises an interesting sidelight on this issue, and I would like to share it with the Members of the House of Representatives as a factor to be considered.

First of all, I should say that our Blue Cross-Blue Shield program in St. Louis was among the first such plan in the country to make it possible for retired persons over 65 to obtain coverage on an individual basis. It is my understanding that in many areas of the country,

the worker who goes on retirement under social security can no longer obtain insurance coverage from Blue Cross-Blue Shield, whether he can afford it or not. So our situation in St. Louis is therefore much better than the arrangements possible for elderly people in many other parts of the country.

WIFE'S APPLICATION FOR HOSPITALIZATION INSURANCE REJECTED

Nevertheless, in the instance just called to my attention, while the retired worker was able to apply for and receive coverage for himself under Blue Cross-Blue Shield following his retirement and following the cancellation of his coverage under the group plan in effect where he had been employed, he and his wife now discover that the wife's application for nongroup coverage can not be approved "because of the health condition descrized at the time of application."

The wife writes me:

Am enclosing a letter from the Blue Cross, which tells me they cannot give me hospital insurance. My husband retired recently, and up until then we had a policy from where he was employed, but canceled at the time of retirement.

We are living on our social security and veterans bonus, and if I would become ill and had a large hospital and doctor bill we would have to mortgage our home. I know there are thousands of people in the same position we are in, and would appreciate your voting for passage of the medical bill when it comes to a vote. I would be happy to have my social security reduced by a few dollars and have it applied toward the insurance. Now this might be a suggestion when it comes up for discussion. I would thank you very much if you would give this a thought.

The letter from Blue Cross Service which the wife forwarded to me notified the husband of acceptance of his application for both Blue Cross and Blue Shield nongroup enrollment but added:

Because of the health condition described at the time of application, we cannot accept your wife * * * as a member. This notation has been made on your application.

WHAT IS THE SOLUTION FOR FAMILIES IN THIS SITUATION?

Mr. Speaker, one of the strongest arguments made against the proposed social security program of hospitalization insurance coverage is that retired individuals and couples—who are not medically indigent and thus not eligible for coverage under the Kerr-Mills Act of last year—can purchase adequate insurance by themselves and thus do not need such insurance under social security.

But what about cases of this kind? During his working lifetime, the husband could purchase both hospital and surgical coverage for himself and his wife under the group policy at his place of employment. Suddenly, however, he finds upon retirement that his wife is not eligible for either coverage under the nongroup enrollment open to such individuals following retirement.

Presumably, if the wife has a health condition which makes it uneconomic for the Blue Cross-Blue Shield program to accept her, her chances of requiring hospitalization would be such that the need for pre-payment hospitalization insurance becomes even more urgent.

I would urge that those who have insisted there is no need for the coverage under social security proposed for retired persons by President Kennedy come forward now and advise how this kind of case should be handled. I am certainly anxious to learn how the couple involved in this particular case can solve what to them is a most important and worrisome retirement problem. Everyone interested in this issue would have to concede it is a problem which demands solution.

U.S. Trade With Castro Continues

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1 1961

Mr. ROGERS of Florida. Mr. Speaker, the legislation before the House today concerns two aspects of the Cuban problem. However, there is another aspect of Cuban relations which has gotten much attention but little action, and that is United States-Cuban trade.

Though we have broken diplomatic relations and called for strong action against Cuba, each month we import more than $2 million worth of Cuban tobacco alone. Fruit and vegetables are among the other imports which supply revenue for Castro's domination of the Cuban people.

I call to your attention this very timely article by Victor Riesel which appeared in the Palm Beach Post:

U.S. TRADE STILL GOES ON WITH CASTRO

The last time I spoke to Castro he was wild eyed and muttering. But apparently he has not lost touch with the practical. His devotion to communism has not developed in him a distaste for our capitalist dollars and it should be known that Cuba still is selling over $40 million worth of produce a year in the United States. This business, though not quite as usual, is going on right now, invasion or no invasion, insults or no insults.

His economic chief "Che" (Okay) Guevera, needs these dollars to keep the island's gasping economy from choking to death. The Soviets are sending him military hardware, not hard rubles. The Cuban State Trust collects these dollars from some "Americans" through letters of credit placed to Cuba's accounts in Canadian banks.

With these $40 million, Castro actually is still purchasing some vital machinery in the United States and vital livestock in Canada to bolster his regime—not to feed his people. Despite everything that Castro has come to mean, some U.S. machinery is permitted him by the State Department on the theory that a total embargo now would cause hardships to some international brokers. The American suppliers of machinery would lose money if they could not complete orders Castro and Guevera placed here over the past year or so—that's the theory. What about the hardships of the Cubans who hit the beaches for freedom. They lost more than money.

Furthermore, some of the $40 million the Communist Cuban Government earns from its sales in America is paid to Canadian ranchers. They have been rolling their livestock south along the eastern seaboard to West Palm Beach.

There, twice a week—Tuesdays and Thursdays—the cattle have been shipped on the West India Fruit & Steamship Co. ocean ferries.

The overnight ferries were shut down for a few days during the life of the liberty beachheads. But now they have resumed supplying Castro and returning with his moneymaking produce. Other Cuban cargo is flown in by his communized companies to Miami.

It is inconceivable that tens of thousands of U.S. citizens do not wander about with a perpetually bitter taste in their mouths. They still are buying Castro's tobacco and vegetables. Even at this minute Castro's plantations are selling some $2 million worth of tobacco a month in the United States. This is a Government—well documented—figure. The Cubans are even selling us a synthetic filament made by the Rayonera factory in the Matanzas district. Thus, the State Department permits this neo-Communist competition with our own hard-hit textile industry, which President Kennedy is attempting to aid. Those people at the State Department should check with the White House.

The State Department should check with somebody. As recently as March 10 Castro was permitted to buy live cattle, live hogs, baby chicks, and even hatching eggs from us. These purchases were not made for the benefit of the people of Cuba.

The livestock was being used for breeding purposes, so Castro could equip future collective farms. If we had not been sending him these animal cargoes, the Russians would have had to supply Cuba. This would have drained the scarce Soviet stocks. It would have put a heavy load on the already overburdened Red bloc merchant fleet.

But early in March someone told the boys at the State Department the facts of barnyard life. Only then did the trade end. But if we had not permitted the Cubans to make money in the United States they never would have had enough to pay for the cargoes for their Caribbean communes.

What makes this business as usual between Cuba and some private U.S. brokers even more galling is the fact that our military finds itself in an awkward position in Cuba. There are some dollars the Pentagon must pay Castro. We rent the Guantanamo Bay base for $150,000 a week. Also we pay some 3,500 Cuban workers on the base some $15 million a year in wages. This we have to do in dollars.

But why should private U.S. citizens add to Castro's Communist exchequer? The anti-Communist Cubans who fought Soviet tanks on the beaches can tell you that liberty is dearer than money.

Winchell Apologizes for Slur Against Italian-Americans

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. ANFUSO. Mr. Speaker, many of our colleagues will recall the slur contained in a recent column by Walter Winchell in which he said that the reason President Kennedy did not appoint any prominent Democrats of Italian origin to public office was because

always lurking in the background was the control by or link with the underworld.

Millions of law-abiding and decent American citizens of Italian extraction felt that this was an insult to the entire Italian-American community. I had subsequently written to Winchell and asked for an apology. In the meantime, a number of my colleagues in both Houses of Congress were similarly deeply disturbed over the matter. When the matter was called to the attention of the White House and the Department of Justice, the White House branded Winchell's statement as being "totally inaccurate" and Attorney General Robert F. Kennedy said that the report by Winchell was "completely false."

Mr. Speaker, I am now in receipt of a recent column by Winchell containing an apology and also a letter from his attorney Ernest Cuneo stating that "he was wrong and he says so." I wish to insert these into the RECORD:

WALTER WINCHELL OF NEW YORK—MAN READING HIS MAIL

"Wilmington, Delaware, May 4: Dear Mr. Winchell," writes Joseph A. L. Errigo, "As supreme recording secretary of the Order of the Sons of Italy in America, I wrote you a congratulatory letter on October 19, 1960, relating to a story written by you titled: 'Thoughts on Columbus Day' which appeared in many of our papers, including the Pittsburgh Post Gazette on October 11. On April 12, 1961, I wrote you on another matter. I have always had the greatest respect and admiration for your integrity and honesty.

"As one of your ardent supporters in the Order of Sons of Italy, it now becomes necessary for me to answer many questions for and on your behalf. If you are wrong, and if you made a mistake, you should offer an apology and an explanation."

DEAR MR. EGGIGO: Thanks for your letter, the only one not written in anger. The source reported the President hadn't appointed any Italian-Americans. Because the Big M was always in the background. Characters (I added) right out of "The Untouchables."

Congressmen of Italian-American parents offer the names of four Italian-Americans appointed by the President. That's enough for me to make that fact and my apology public.

The mail that brought your letter also brought a clipping from an Italian-American newspaper published in New Jersey on April 21. A column of comment (on this controversy) includes the following puzzling observation: "Some of our people may be bitter at President Kennedy for his failure to give due recognition to our great Democrats of Italian extraction, and justly so."

NORTH AMERICAN NEWSPAPER ALLIANCE, INC.,
New York, May 11, 1961.

Hon. VICTOR L. ANFUSO,
New York, N.Y.

DEAR VICTOR: Walter wanted you to have a copy of this.

He was wrong and he says so, and than this, no man can say more.

With warm regard.

Sincerely,

ERNIE CUNEO.

The Case for an Ireland, One and Indivisible

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. LANE. Mr. Speaker, long after England has relinquished her subject colonies in other parts of the world, she stubbornly clings to the one next door—the six counties that were cut off from Ireland in 1920 and have since been occupied by British troops, with a satellite government under the domination of England. This was a betrayal of the freely expressed will of the Irish people.

In 1918, and in June of 1920, the Irish people by a vote of 80 percent of its adult population throughout all of Ireland declared that they wanted an Irish Republic for all of their land of 32 counties—and not merely 26 of them. A striking example of English perfidy is the fact that after this vote throughout all of Ireland by the Irish people, through the process of democracy, to have an Irish Republic for all of their little ancient nation, partition was imposed on them and their rights denied.

Americans cannot understand why England continues its occupation of the six counties in defiance of world opinion.

The Irish appeal for the restoration of the land that was stolen from her must be heard by the United Nations.

In support of her claim for justice, I want to remind all Americans of the irrefutable facts in the case as presented in the following editorial: "Ireland and Partition," from the March–April 1961 issue of the National Hibernian Digest.

IRELAND AND PARTITION

American public opinion since Revolutionary times has been friendly to Ireland and to the Irish. Today, public opinion in the United States is still very friendly in this direction. Public opinion as referred to here means the wishes and sentiments of the individual men and women who make up the population of our country, the United States.

A FEW EXAMPLES OUT OF MANY

U.S. public opinion helped Ireland during the English-manufacturer famine of 1845–47 in Ireland. It also helped the Irish during the English landlord eviction period of the 1850's. Likewise, it helped the Fenians to strike a blow for Irish freedom in 1867 and helped the Clan-na-Gael of America to maintain the Fenian tradition of independence for Ireland. It helped to stop additional executions in Dublin of many leaders of Easter Week, 1916, already sentenced to death, at the time that 16 of their comrades had been executed without trial and their bodies without coffins buried in fresh lime to destroy quickly the last bit of their flesh and bones so that there would be "no relics."

It helped to stop the infamous English Black and Tans in 1921 from continuing their deliberate plan to exterminate the patriotic Irish after these English-selected demons had for almost 2 years murdered, raped, shot, burned, jailed and tortured thousands of innocent Irish men, women and children and looted their homes.

IRELAND IS NO JOHNNY-COME-LATELY

Ireland, one of the oldest nations in Europe, traces its nationhood back to a point beyond 1,500 B.C. The nationhood of Ireland had already been an accepted fact recognized as such by Europe at the time St. Patrick began his missionary work in 432 A.D. among the Irish. After 1492, America then called the New World recognized Ireland as a one undivided nation. In short, the undisputable evidence formed in history and geography covering a period of over 3,400 years proves that the entire island of Ireland was always one geographical unit and one complete nation.

IDENTIFICATION MARKS OF NATIONHOOD

The identification marks of Ireland's nationhood are genuine and incontestible; one geographic unit with the sea and ocean as its boundaries; a national language, Gaelic, which lives today as it did in ancient times; a distinctive culture and code of laws from that of other lands; a homogeneous people whether they live in north, south, east, or west; a national tradition going back to the dawn of history.

Ireland's churches and religious bodies of today be they Catholic, Episcopalian, Presbyterian, Methodist, Baptist, the Religious Society of Friends, the Jewish congregations and also other religious denominations are now as in the past organized on a national all-Ireland basis. Her schools and universities; her sports are and have been nationwide. Her shamrocks grow in every part of the country; her music and song echoes throughout the length and breadth of the land. Above and beyond all is the name Irish, for the people in all parts of Ireland are Irish and proudly tell the world that they are Irish.

THE YEAR OF PARTITION, 1920

The historical fact that all the island of Ireland was one national unit and one undivided Ireland was never questioned until 1920. At this time the English Government for its own special political purposes in England partitioned Ireland by cutting the nation into 2 parts—1 part composed of 6 counties representing one-sixth and 1 part composed of 26 counties representing the other five-sixths of Ireland.

Yes, it was on December 23, 1920, that 6 of Ireland's 32 counties were cut off from their sister counties by a law made in England by the English Parliament. The deed itself was officially called the Partition of Ireland Act. With pride, it can be said that no Irishman in the English Parliament, although some were there, ever voted for this act or deed. And again with pride, it can be said that in 1918 and in June 1920 the Irish people by vote of 80 percent of its adult population throughout all of Ireland declared that they wanted an Irish Republic for all their land of 32 counties.

A striking example of English perfidy is the fact that after this vote throughout all of Ireland by the Irish people, through the process of democracy, to have an Irish Republic for all of their little ancient nation, partition was imposed on them and their rights denied.

ENGLAND WANTS TWO IRELANDS

Today, England would have the world believe that there are two Irelands. She makes it appear that way. The one-sixth part, pres-

ently occupied by 71,000 armed English forces, has an English dominated and controlled government in Belfast. The five-sixths part, free from English military occupation since 1922, has a government in Dublin.

So the little ancient Irish nation, today, has two governments—one for the minority of 20 percent and one for the majority of 80 percent. This setup is alien to American concepts that under democracy the majority should rule. Under American principles of democracy, it is the majority of the entire country that counts in an election of a government.

As long as English armed forces occupy any part of Ireland, against the wishes of the majority of Irishmen, the Irish nation as such is an English military-occupied land where democracy is denied. The denial of democracy to Ireland should pain American public opinion if and when it is informed and aroused. Justice requires and demands that all of Ireland should be free entirely from English occupation and that the government of the Irish Republic should govern all the land.

A JOB TO BE DONE

Hibernians, there is a job to be done. Unite on it. American public opinion, world renowned for its fair play to all, must be kept informed that partition with all its repugnancy to democracy exists in Ireland and that England is solely responsible for this evil condition. American public opinion, ever eager to help the oppressed, must be aroused to the fact that England today maintains a police state in its occupied area of Ireland—a police state similar in structure and function to the ones that America in World War II found it morally proper and absolutely necessary to destroy.

Rural Electric Co-op Leaders Mobilize for Success of Rural Areas Development Program

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, on May 1, President Kennedy signed into law the $394 million areas development bill, an action that some day may be as significant to the rural economy as the rural electrification program has been.

This week, some 750 rural electric co-op leaders from across the Nation are in Washington for a Rural Areas Development Conference sponsored by the National Rural Electric Co-op Association. The conference makes it possible for member systems to unite their strength and combine their abilities and resources toward the common goal of revitalizing their communities and raising the economic and social standards of the areas they serve.

During the conference, delegates heard REA Administrator Norman Clapp outline the REA approach to rural areas development. Under leave to extend my remarks, I would like to include Mr. Clapp's speech in the RECORD:

THE REA APPROACH TO RURAL AREAS DEVELOPMENT

The size and temper of this great gathering here today demonstrates one thing for sure about the rural areas development program.

There is no question about the interest that the leaders of rural electrification cooperatives have in this program. Nor is there any question about your enthusiasm and determination to do something about improving the economy of the rural communities in which you live.

Now that you have made that clear, let's get down to cases about the size of the job we face and do some hardheaded thinking about how we should proceed to develop our areas.

When we look at our national economy, we see a sharp disparity of income and economic opportunity between rural areas and urban areas. Census figures show that the median annual income for an urban family in 1959 was $5,755. The median income for farm families was less than half that amount—only $2,800.

Now that does not mean we want to pull down the economic levels of the urban areas. It simply means we must get busy and build up the economic health of the rural areas. From a better adjustment of income between these two great segments of our economy will come greater growth for both. Each will serve as a better market for the other. Business will prosper, production will increase—and be consumed.

The present disparity in income reflects low farm prices, and it also reflects widespread rural underemployment. It doesn't take as many people to raise the food and fiber we consume as it used to. Unfortunately, many of the people displaced from full-time agriculture have not found jobs off-the-farm. There are not enough jobs to go around in rural America today.

One unhappy result of all this is that our young people are leaving the farm in large numbers. The Department of Agriculture estimates that fully 75 percent of our farm youths leave the rural communities where they grew up and went to school by the time they are 30 years old.

Our areas are losing these young people to towns and cities, and the rural population left behind is an aging one. In 1959, for example, young men and women of 20 to 34 years of age comprised only 14 percent of our farm population. This age group represented 19 percent of our urban population.

It was in 1958, for the first time in the history of our farm population, that there were more people on farms who were over 45 years of age than there were people between 18 and 45.

This aging creates many difficulties for a community in terms of education, health facilities, taxes, new business and services. I will not comment on them further today except to say that this imbalance between young people and older people is a serious threat to the future soundness and growth of our rural communities. The economic health of a community depends upon its retaining its proportionate share of young men and women, starting new families, new households, and new enterprise.

The economic lag in rural areas also has serious implications for our national economy, both from the standpoint of domestic welfare and from the standpoint of our position as a world power: Domestically, the depressed state of rural income is acting as a brake on the whole recovery program. The jobs of city workers depend in large measure on the market in rural areas for the things they manufacture and sell. In recent years, agriculture alone has represented a $56 billion annual market for production goods and consumer goods. Figures for 1955 show that farmers spent $795 million for automobiles and trucks; more than $1 billion for household furnishings and equipment; more than $2 billion for clothing. It should be perfectly obvious to everyone that what hurts the rural market hurts the urban worker as well. When rural people can buy, city cash registers will ring.

* * * * *

REA and REA-financed electric systems have for 26 years been in the forefront of the battle to raise living standards in rural areas. We helped bring the blessings and the enormous productive power of electricity to rural people. We are moving fast to help bring them the modern telephone service which has been denied them for so long. In providing these services, tens of thousands of new jobs for local people have been created. With this background of leadership in bootstrap enterprise, we have logical responsibility to offer leadership in the wider fields of rural areas development.

Our job cannot end with bringing people electricity and telephones. These services have made rural life more attractive for many young people, but they are not enough by themselves to arrest the drift away from our communities—and away from the meters on your power systems. Idle services on our co-op systems have reached the 500,000 mark.

We now must tackle the crisis of rural income and find ways to keep a larger share of the food and fiber dollar at home, where it is produced.

I am convinced that President Kennedy's farm bill, which offers farm producers a means of uniting and through democratic processes, molding the production of their commodities to fit market demands, will go a long way toward raising farm prices to fair and reasonable levels. It represents one vital and essential approach to the problems which beset us.

But again, even higher farm prices alone will not solve the need. As farm technology advances, the actual production of farm commodities requires fewer people. Many rural people need supplementary employment and are unable to find it.

Those of us in rural electrification have long been identified with the needs and aspirations of rural people. I think we can say, in all modesty, that we know a thing or two about helping rural people help themselves through cooperative action. Let us now apply this knowledge to the creation of more rural employment. Let's provide more paychecks, circulate more dollars, generate a more vital national economy.

How can we do it? What do we need to bring this to pass?

First, we need local leadership. We need men and women who are determined and imaginative. We need people of energy who are impatient of delay. We need the qualities that you people here today have to offer. We need your development groups, your committees, your cooperatives. Pull together all those local people who can make and will make a genuine contribution.

Then develop complete information on your local needs and resources. Get the facts on your labor supply and local skills. Find out where your food and fiber and timber go when they leave your area. Know the size of your local market for goods and services, and study the requirements of all your markets. Make a complete inventory of your community, and plan how they can best be fitted into potential markets.

Third, concentrate on homegrown industry. There is no reason why our rural areas should not retain a bigger share of the food and fiber processing dollar. We can do much more food processing, packing, handling, and packaging close to home than we are doing now. Let's get our farm produc-

tion as nearly ready for the retail store as we possibly can.

* * * * *

Give some careful thought to developing better recreational facilities. Frequently, a distressed agricultural area has great potential for outdoor recreation and tourist business. And make no mistake. The tourist business is very big business today. You local people have it in your power to make sure your woods and rivers and lakes are developed intelligently, to be of maximum benefit to all people who use them. The multipurpose development of natural resources, particularly water resources, is not new to REA people. Be tough-minded enough to oppose those interests who imagine recreation to consist of a roadside string of hot dog stands and cabarets. Recreational projects should improve a community, not cheapen it. Scenery belongs to everyone. Make it an attraction, not an eyesore.

Finally, what is needed is long-term, low-interest credit for rural projects. The new Area Redevelopment Act will make some such credit available for new enterprises in designated depressed areas. In other areas, planners should investigate the loan programs of the Small Business Administration, Farmers Home Administration, and other Federal agencies, including REA. As far as conventional financing is concerned, the tight money situation which has plagued small business for so many years appears to be easing somewhat. You can be certain that this Administration is going to pay careful attention to the credit needs of small enterprise.

In initiating any program of community development, there are several pitfalls which we must be careful to avoid. One is the danger of eternal planning, of confusing the organization for action with action itself.

* * * * *

There also is a danger that this program can degenerate into a kind of game of industrial musical chairs. Merely moving a plant from one part of the country to another will not solve our problems. It will raise neither our national income nor our national product. The Federal Government cannot participate in programs involving the pirating of industry from one place to another. It may be that local groups think they can justify such actions out of strictly local considerations, but we at REA certainly could not justify them on a national basis. And I suspect that whatever local advantage such a game might seem to have would in the end prove only temporary. Keep your eye on homegrown projects.

I hope that I have made this point clear. It is certainly sound and praiseworthy to improve your community so that an industry will want to locate there. It is something else again to extend artificial bait in the form of uneconomic cash or other inducements.

Finally, there is the danger of making imprudent or unsound investments. Be sure there is an adequate market before you leap into a new venture. Be sure that the goods and services you sell can be priced competitively. The projects you initiate will be only as sound as your own judgment.

Now let's talk about where REA fits into this program for rural areas development. I can only speak for REA today and not for any other agency.

First, our interest is in you. Our interest is tied to our working relationship with 1,000 rural electric borrowers and 750 telephone borrowers. Our interest is in you and the more than 20 million rural people in 2,700 counties who depend on the systems you represent for low-cost electric power and telephone service. We want these people to continue to receive all the power and modern telephone service they need at reasonable rates, and we believe one way to assure this is to help you develop a healthy balance between agriculture and industry.

Second, as an agency responsible for public funds, we have a self-interest in the growth and financial stability of our borrowers and the protection of the Government's loans in your rural electric systems. The migration of our young people out of rural areas, the depressed state of farm income, and the lack of job opportunities pose a threat to your continued growth and security, which must be met.

Third, we have an interest as a lender of section 5 funds. We expect to emphasize the availability of section 5 loans through our borrowers to finance the installation of electric machinery and equipment for industrial, commercial, and agricultural enterprises in rural areas.

REA's interest in rural community development is clear on all these counts, and I want to emphasize that in this sense we are prepared to offer any assistance we can to borrowers, no matter where they may be located.

* * * * *

But the major burden and initiative must, of necessity, fall on you people here and your neighbors back home. I hope you will face up to the challenge when you return home and get some projects on the drawing boards that will help us stop this migration of our young people to the cities and boost rural income.

The greatness of America is rooted deep in its soil. The distinctive stamp of American character has sprung from the pioneer life of yesterday and the influence of rural living today. Here the rugged independence of the individual, the human qualities of neighborliness, the virtues of cooperation have been nurtured. We must not, we cannot, abandon rural America to economic inertia, for in these rural communities, as well as in our magnificent technology, lie the wellsprings of our greatness.

Detroit, 1961: A Changing Face—A Growing Force

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article prepared and published by the Michigan Bell Telephone Co., entitled "Detroit, 1961: A Changing Face—A Growing Force":

The Michigan Bell Telephone Co. has prepared and published a report entitled "Detroit, 1961: A Changing Face—A Growing Force."

The report points out that Motor City is only a limited description of Detroit's new makeup. The Detroit of 1961 is a city that is broadening its manufacturing horizons, adding new industries (120 per year), and building an even healthier and more diversified business community.

Detroit creates more wealth per capita than any other city in the United States. Nearly 50 percent of Detroit's total labor force is engaged in the stable, wealth-building activities of manufacturing or construction. Productivity in these two fields doubles that of San Francisco and is half again as great as New York's. Detroit's wage scale equals or exceeds that of any other industrial area, and only Washington, D.C.'s spending measures up to the $10 billion Detroit spends annually for goods and services.

Starting from the Detroit River, redevelopment activity is reaching deep inside the city to create new housing and provide needed acreage for industrial, commercial, and institutional expansion. Port activity in 1960 opened a new gateway to greatness for Detroit as an international shipping center. Now 101 oversea ports in 48 countries are linked to the port of Detroit by regularly scheduled steamship lines. In an 8-month shipping season total tonnage going through the Detroit River exceeds combined tonnage through the Panama and Suez Canals in a full year.

Detroit is a busy city—busy growing, busy creating its greatest progress in history.

DETROIT'S INDUSTRIAL MAKEUP IS DIVERSIFSED

More people are employed in nonautomotive manufacturing in Detroit than are employed in all manufacturing in either Boston, St. Louis, Baltimore or San Francisco.

The city is a production giant in the fields of machine tool accessories, gray-iron foundry items, metal stampings and hardware. Detroit uses more finished steel (more than 10 percent of the total national output) than any other industrial area in the country, and ranks high in the manufacture of drugs, paints and varnishes, wirework, tires, machine tools, and office machinery. Wayne County, according to Dun & Bradstreet's new Metalworking Directory, is now the third largest metalworking county in the United States. Of the 145 classifications of manufacturing recognized by the Department of Commerce, 127 are represented in Detroit. (For a partial list of the wide range of industries in Detroit, see exhibit A.)

DETROIT'S COMMERCIAL AND INDUSTRIAL EXPANSION SHOWS STEADY INCREASE

With each decade, Detroit's ability to expand gathers momentum. More industrial building permits were issued during the past decade than in any other decade of the city's history (including two booming postwar periods).

The number of industrial building permits issued in Detroit from 1920–29 was 1,486, and from 1930–39 the total issued was 674. In the decade from 1940–49, the number jumped to 1,242. But even this total was small compared with the 2,306 industrial building permits issued from 1950–59.

And here's just a partial list of building permits issued by the city of Detroit during the first 11 months of 1960:

Twenty-six new factory and shop buildings with a valuation of $1,327,815.

Three hundred and seventy-six additions and alterations to factory and shop buildings with a valuation of $4,454,708.

Sixty-three new office buildings with a valuation of $2,008,800.

One hundred seventy-one additions and alterations to office buildings with a valuation of $2,271,894.

Sixty-five new storage and warehouse buildings with a valuation of $1,569,355.

One hundred forty additions and alterations to storage and warehouse buildings with a valuation of $2,156,459.

Sixty-five store buildings with a valuation of $2,145,750.

Four hundred thirty-one additions and alterations to store buildings with a valuation of $1,884,893.

A total of 219 new building permits with a valuation of $7,051,720, and 1,118 permits for additions and alterations with a valuation of $10,767,954 were issued.

The sources of these statistics were the city building inspector's office and the city plan commission.

DETROIT ATTRACTS NEW INDUSTRY

Good government, a designed-for-industry expressway system, production know-

how, a limitless pool of skilled labor all serve to attract out-of-State industrial firms at the rate of 120 per year.

During the past two years, Detroit has welcomed more than 300 firms from out of State, according to the Detroit City Industrial Coordinator.

More than 400 industrial and commercial firms have expanded in Detroit during the past two years.

Here are just a few projects undertaken in 1960 or planned for this year:

Cadillac House Motel, adjacent to Detroit's Civic Center, was constructed at a cost of $1,500,000.

Casa Balcona, a $10 million cooperative apartment building, is planned on a 5-acre site.

The Detroit Edison Co. announced a construction budget of $70 million.

Easton Manufacturing Co. will build a new research center at an estimated cost of $1,250,000.

Fairlane Shopping Center announced a $15 million project on a 50-acre site.

Florists' Telegraph Delivery Association built a $1 million national headquarters building.

Plans have been announced for two 21-story apartment buildings and a shopping center, costing $13 million in the Gratiot Redevelopment Area.

A $1 million home office for the Great Lakes Insurance Co. has been announced.

A 5-story, 80-unit motel, Highland Inn Motor Motel, will be built at a cost of $1 million.

Jones & Laughlin Steel Corp. plans a $1 million expansion at its Stainless & Strip Division.

Michigan Bell Telephone Co. announced a construction program during 1960 of $101,500,000, including three new buildings to house its engineering department, Woodward Division headquarters, and a service center. They will cost $6 million and will be located on a 40-acre unit.

Michigan Consolidated Gas Co. plans to spend $22,238,000 on new facilities and equipment.

The New York Central Railroad began work on a $13 million electronically controlled freight yard.

A 12-story office building is planned in the Northland Shopping Center area. An identical building will follow if the first unit is successful. The two structures will cost approximately $8 million.

A 17-story hotel, costing $2,500,000 will be built downtown.

A GREAT CITY PLANS FOR A FORGE-AHEAD INDUSTRIAL AND COMMERCIAL FUTURE AND—LOOKS TO THE SOCIAL NEEDS OF ITS PEOPLE

Twenty-one clearance and conservation projects (covering nearly 3,000 acres) make a strong contribution to Detroit's new growth in greatness.

Blight areas are being transformed into park settings for long-needed housing projects. Progress-planned corridors are cutting wide arcs through yesterday's slums—providing prime sites for industrial, commercial, and institutional growth.

An example of such projects is Lafayette Towers where construction will start this spring on a 4½-acre site. Estimated cost of this project is $14 million, including twin-20-story apartment buildings, a 2-level 351-car garage, and a swimming pool and recreation area. The towers will contain 680 living units.

WEST SIDE INDUSTRIAL CORRIDOR

Located less than a mile from the shopping district on Woodward Avenue and a half mile from the new Convention Hall, the West Side Industrial District is a project designed to create a center for wholesaling, manufacturer's warehousing, truck terminals, and light industry. The Fort-Vernor Expressway will be routed directly to the north of the district, providing a nonstop westerly route to Chicago, easterly to Port Huron, and southerly to Ohio. The district lies along a section of the Detroit River which has potentialities for much more intensive marine terminal activity in the future.

Here are a few of the commercial and industrial firms that have elected to locate in the West Side Industrial Corridor:

National Dry Goods proposes to build a $125,000 warehouse and office facility.

Rim & Wheel Service Co. has been operating from its modern $125,000 building.

A $5 million Graphic Arts Center (for printing and allied industries) will absorb 17 acres.

Holiday Inn is planning a 100-unit, million-dollar hotel.

Detroit has 18 major redevelopment projects, totaling $150,791,000, either underway or in planning stages. Three conservation projects, amounting to $39,320,883, also are in various stages of development. The 21 clearance and conservation projects total $190,111,903.

(For a list of major redevelopment and rehabilitation projects, see Exhibit B.)

DOWNTOWN DETROIT MAKES STRONG BID FOR LEADERSHIP IN RETAIL SALES

Downtown Detroit contains the most highly concentrated shopping facilities of any major city in the country. Clustered in an area 8 blocks long by 4 blocks wide are 800 department and specialty stores. It is estimated that Downtown Detroit accounts for one-third of the total volume of retail trade in the standard Metropolitan Detroit area—significant evidence that urban Detroit is still making a strong contribution to the economic health of the metropolitan area.

PROPOSED INTERNATIONAL VILLAGE WOULD PROVIDE SHARP INCREASE OF BUSINESS ACTIVITY IN THE DOWNTOWN AREA

A 30-acre site in the downtown redevelopment area has been selected as the site for an International Village. This village would include a strip of continental resort-type motor hotels, an international trade office building, a high-rise apartment building, several large restaurants and night clubs, and a group of restaurants, gift and curio shops of an international type.

Not only would the village attract more conventions to Detroit, but it would also attract thousands of tourists, stimulate development of other businesses, and cause a general surge of local business activity in the downtown business district, according to The Detroiter, a weekly publication of the Detroit Board of Commerce.

DETROIT EMERGES AS A CONVENTION INDUSTRY GIANT

Although a newcomer to the top ranks of the convention industry, Detroit is rapidly climbing to the lead position.

In 1950, convention spending was estimated at $6,500,000. By 1957, spending had risen to $10 million. In 1958, eager-to-spend delegates vaulted the figure to $11,390,000. In 1959 and 1960, spending rose to $13,250,000 and $17,182,000, respectively. And in 1961, this amount will be nearly doubled when convention spending is expected to soar to the $30 million mark, according to the Detroit Convention and Tourist Bureau.

DETROIT'S CONVENTION INDUSTRY LOOKS TO A $65 MILLION FUTURE

The Detroit Convention and Tourist Bureau has advance bookings for 358 conventions through 1972. An estimated 839,000 delegates will attend the conventions and spend $65 million.

A recently announced $8 million project that will offer a combination of hotel and motel facilities is sure to give added thrust to Detroit's convention business. A 306-room high rise center hotel will be flanked by two 100-unit motel wings. Features will include a dining room seating 400 persons, a garage designed to hold 300 cars, an Olympic-size swimming pool on the garage roof, and an outdoor restaurant.

PORT OF DETROIT SHOWS 461-PERCENT INCREASE IN OVERSEA TRADE SINCE 1958

The St. Lawrence Seaway has firmly established the port of Detroit as a new gateway to world trade. Since 1958, oversea shipments and receipts through the port of Detroit have shown a 461.5-percent increase. Detroit is the pivot of the Michigan Customs District, and now handles a greater volume of imports and exports than any other port of entry except New York.

The acting port of Detroit director reports that oversea shipments and receipts climbed from 68,626 cargo tons in 1957 to 87,232 tons in 1958. They jumped to 362,808 tons in 1959, and reached 489,791 tons as of October 1960. The estimated total tonnage for the 1960 season exceeded a half-million tons, and exports during 1960 nearly doubled the volume of imports.

DETROIT PREPARES FOR LEADERSHIP AS AN INTERNATIONAL PORT

The current net direct income from general oversea cargo is $17 per cargo ton, while indirect income amounts to $51 per cargo ton, according to the Port of Detroit Commission.

The commission estimates that within 3 years the port should receive between $3 million and $9 million in direct income. In the distribution of this additional income, wholesale trade is expected to account for between $800,000 and $1,400,000; retail trade between $1,800,000 and $3,200,000; finance, insurance, and real estate between $1,200,000 and $2,200,000; and services between $1,200,000 and $2,200,000.

The commission further estimates that this influx of income into the area will stimulate indirect financial benefits amounting to between $10 and $18 million.

Waterfront improvements, totaling $1,600,000, will be constructed this spring. Three projects included in the program are: An Engel Park marina for seasonal mooring of 330 boats, costing $981,000; outboard launching facilities at the foot of St. Jean Street, $368,000; and a civic center breakwater and dock, $250,000.

DETROIT MARKET FACTS

The Detroit market zone, which includes Detroit and 18 communities in the metropolitan area, has a population of 2,412,620. The Detroit zone includes 689,320 families, with a junior market of 885,440 children 18 years of age or younger, according to Michigan Bell Telephone Co. commercial engineers.

In September of 1960, the number of telephones in the Detroit zone reached 1,129,904, an increase of 127,213 since 1955 and 26,105 more than in 1959. Customers made an average of 5,625,952 telephone calls a day from these telephones.

During the first 10 months of 1960, permits were issued in the Detroit zone for 2,644 new homes, with a valuation of $37,358,818. Also issued were 834 industrial and commercial building permits, with a valuation of $34,115,143, and 11,858 permits for alterations and additions, with a valuation of $41,068,363. Permits for 6,202 garages, valued at $7,273,549, and 134 miscellaneous permits, valued at $123,528, were issued, making a total of 21,672 building permits and a valuation of $119,939,401. These figures came from the various building inspectors' offices.

Employment figures for the first 10 months of 1960, showed an average of 1,301,560 employed persons in Wayne, Oakland, and Macomb Counties, the three most populous counties in the Detroit metropolitan area.

The total represented an increase of 14,060 over the same period of 1959, according to the Michigan Employment Security Commission.

Of these persons in the labor force, 514,550 were in manufacturing, 520,790 in nonmanufacturing, 129,520 in Government employ, 10,700 in farm labor, and 126,000 self employed.

Retail sales in the Detroit zone for the first 10 months of 1960 totaled $2,617,875,526. Retail sales in Detroit were 11 percent above the national level in 1959. Total retail sales for Wayne County for the first 10 months of 1960 were $3,246,193,833. Retail sales in the Detroit zone represent 81 percent of the Wayne County total.

Residents in the Detroit zone spent $799,221,088 for food, $569,591,231 for automobiles, $321,480,385 for general merchandise, $174,651,061 for building materials, $137,893,950 for apparel, $123,720,710 for furniture, and $491,317,101 for miscellaneous items, according to the Michigan Department of Revenue and the U.S. Census of Business.

According to the Sales Management Survey of Buying Power, the Detroit zone had a spendable income (after taxes) of $5,241,979,410. The average income per household in 1959 was $7,593.

As of June 1960, banking institutions in the Detroit zone showed total resources of $4,816,527,573 and total deposits of $4,380,964,184, according to individual bank statements. Bank debits for the first 11 months of 1960 amounted to $98,494,110,000, an increase of $6,975,800 (7.6 percent) over the same 11 months of 1959. Detroit checkbook spending was up, according to the Federal Reserve Bank Research Department. As of October, among the major areas in the Midwest, bank debits of Detroit and Chicago scored the largest rise, up 9 and 10 percent respectively.

Motor vehicle registration for Wayne County in 1959 totaled 1,008,725. Only two counties in the United States have a higher registration. In 1959, more new cars were sold in Wayne County than in Arizona, Arkansas, Delaware, Idaho, Maine, and New Hampshire combined.

In 1959, 167,411 new cars were sold in Wayne County. For the first 9 months of 1960, new car sales in Wayne County reached 121,084. Added to the new car sales figure, was the sale of an estimated 275,000 used cars during the first 9 months of 1960.

Approximately 352,000 vehicles enter and leave the Detroit zone each 24-hour period.

These figures came from the Michigan Department of State, the State highway department, Michigan Auto Dealers Association, and the Automobile Manufacturers Association.

EXHIBIT A

Here is just a partial list of industries that are making Detroit a growing industrial force: 7 flour mills; 119 meat product plants; 17 canning and preserving plants; 79 beverage companies; 7 hat, cap, and millinery manufacturers; 11 paper mills; 466 commercial printers; 14 industrial organic chemical firms; 86 soap and detergent manufacturers; 52 paint, varnish, and lacquer manufacturers; 13 petroleum refineries; 11 manufacturers of tires and inner tubes; 9 flat glass companies; 55 blast furnaces, steelworks, rolling and finishing mills; 50 iron and steel foundries; 17 rolling and extruding plants; 34 cutlery, hand tool, and general hardware manufacturers; 47 millwork, veneer, plywood, and prefabricated structural wood products; 48 concrete, gypsum and plaster products; 50 iron and steel foundries; 207 fabricated structral metal products; 29 jewelry, silverware, and plated ware; 41 toys, amusement, sporting, and athletic goods; 52 nonferrous foundries; 74 miscellaneous primary metal industries; 106 coating, engraving, and allied services; and 36 office, computing, and accounting machines.

Students Hope To Meet German Pal

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. HARDY. Mr. Speaker, in these days of ideological conflict, when division and misunderstanding among free people gives advantage to the enemies of freedom, it is encouraging to learn about actions initiated by our young people to exchange ideas and develop friendships and understanding with their counterparts in foreign countries. The following article from the Virginian-Pilot and Portsmouth Star newspapers in my district is an account of just such an activity on the part of a group of students at Cradock High School located in Portsmouth, Va.

I am sure there are students in other high schools who are participating in similar exchanges with students of other countries. I commend them for their good work in building good will. It has often seemed to me that people-to-people contacts like this can be more effective in promoting our country's foreign policy objectives than any other type of diplomacy:

STUDENTS HOPE TO MEET GERMAN PAL
(By Charles V. Pritchard)

PORTSMOUTH—If they can figure a way to finance it, members of a Cradock High School English class will meet one of their German pen pals this Christmas.

One of Miss Cora Mae Fitzgerald's freshman English classes wants to invite the Germany pupil here.

The pen pal project started in September after the pupils learned that Ingeborg Jutta Gregory is a native of Germany. Her father was killed in the war, and later her mother married an American, P. L. Gregory. About 4 years ago, they came to America and they now live at 7 Sampson Place in Cradock.

American English students and German English students began correspondence when Miss Fitzgerald's class sent a box to Germany. It was filled with candy, marshmallows, and chewing gum, most of which are quite expensive or unavailable in Germany. Miss Fitzgerald sent the German English class' teacher, Wolfgang Erbroth, coffee and cigarettes.

The German English students responded with a box and letters. Their box was filled with homemade cookies and cognac chocolates. Their letters said they liked the gift from America, but the chocolate was "too sweet." Germans like their chocolate bitter.

More letters followed. Then tapes replaced paper. Voices of Cradock students went east, and voices of German students came west. Included on the tape from Germany was the class singing "Oh, Suzanna" and "Carry Me Back to Ole Virginny." Miss Fitzgerald said that, except for the tempo of the State song being faster than it is sung here, it was very nice.

The Cradock students now are packing a box with American newspapers, magazines, and compositions on life in America which the German students requested.

Miss Fitzgerald reports that the project has been a very interesting one for the students. It has helped them in their studies and she hopes it has increased world understanding.

Because classes stay together in Germany, Miss Gregory remembers her former classmates and tells about them when the letters are read or the tape is played in class.

Miss Fitzgerald's class will be together again next year, too, so they will be able to continue the pen-pal project. For this reason, the idea to invite a student here from Germany developed.

At first the students talked about the wonderful opportunity it would be for one or more of them to be able to go to Germany.

But after thinking about how wonderful America is, they decided that it would be much nicer if a German student could come to this country.

Director Bennett Tells How To Improve the Administration of Justice

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. LANE. Mr. Speaker, one of the most efficient and progressive agencies of the U.S. Government is the Bureau of Prisons and its highly regarded Director, Mr. James V. Bennett.

His reputation as a modern penologist is nationwide because of his success in rehabilitating violators of the law. His constructive experience in this field is an inspiration to inmates, prison officials, judges, and probation officers, who seek out and benefit from his philosophy of justice tempered with mercy.

Mr. Bennett is concerned about the disparity in sentencing, and he documents his theme with actual but anonymous cases that reveal the uneven administration of justice from court to court and State to State.

He tells of two cases that "indicated no significant differences for sentencing purposes, but they appeared before different judges and the first man received 15 years in prison and the second man 30 days."

There is much food for thought in Director Bennett's observations and suggestions. I, therefore, under previous permission, insert in the Appendix of the CONGRESSIONAL RECORD the text of the speech that he gave before the Sixth Circuit Judiciary Conference at Dearborn, Mich., on April 28, 1961, titled "Count-Down for Judicial Sentencing":

COUNT-DOWN FOR JUDICIAL SENTENCING
(By James V. Bennett, Director, Bureau of Prisoners, before the Sixth Circuit Judiciary Conference, Dearborn, Mich., Apr. 28, 1961)

The title I selected for this paper—"Count-Down for Judicial Sentencing"—sounds a little more ominous and much more mathematical than I intended at the time I submitted it to my good friend and your distinguished colleague, Judge Levin. No comparison with modern space science, however, is needed to alert us to the fact that a searching and perhaps agonizing reappraisal of present sentencing methods is also underway. Yet I doubt, as a matter of fact, that the new wonders of this scientific age would be of much more help to us in our deliberations than it was to one of the obsessive compulsive gamblers we have in one of our institutions.

I refer to a bank officer who had a long record of reliability and trustworthiness. I presume he would have continued in what he apparently considered a dull routine had he not suddenly acquired an uncontrollable urge to obtain a lot of money quickly, possibly for some foreign travel he had in mind. He read that a Massachusetts Institute of Technology instructor had devised a strategy for winning at blackjack. With the aid of an electronic computer this mathematics genius found that the chances of winning at blackjack depended greatly on the cards that had been played in previous hands. With the use of an electronic brain that is guiding some men through space and showing others how to make money on the commodity exchange he evolved a formula which showed for instance that the house wins more often if the aces have been exhausted and the player more often if the fives have been exhausted. Our guest checked this theory as best he could and then undertook to put it into practice with the bank's money. His only difficulty was that he did not have beside him at the gambling table a computer and data processing machine to help him apply in the few seconds allowed to place a bet the proven system. To his everlasting chagrin he lost a great deal of the bank's money and ended up ignominiously in one of our institutions teaching fifth grade arithmetic to persons less advantaged in this esoteric field.

It may be that some day some electronic whiz will come along who can develop what the computer people call a program which will enable the judge to put into the machine certain facts, standards and values about the prisoner at the bar and out will come the perfect sentence—consistent in every way with the needs of the defendant, the sound objectives of law enforcement and in conformity with a humane and civilized system of justice.

That may seem remote now but experimental research is already underway to determine how accurately a computer can predict the future conduct of individuals having like backgrounds, mental capacities, skills, experiences, and so on. Princeton grades its football players that way, baseball managers are thus determining their batting orders, and 7,000 doctors are assigned each year on the basis of computer findings.

If we could find out and scale the important factors and considerations which should be taken into account in determining the correct sentence the computer might be helpful. As a matter of fact, with the help of a Ford Foundation grant we are ourselves now trying to determine the factors which account for one prisoner making good in the community after he is discharged and why another one fails. So, in my countdown on judicial sentencing I suggest that the potentialities of electronic computers and data-processing machines be taken into account.

My next number in the countdown series calls to mind the fact that our population will increase by 50 percent in the next 20 years. Thus there will be not only more people to keep in order but more accompanying strains and stresses upon our social structure. The growing rate of alcoholism, divorce, and unemployment as well as the degree to which race relationships and urbanization are changing point inexorably to a further increase in our crime rate. If you judge, for instance, the effect the automobile has already had upon the growth and prevalence of crime it's not difficult to imagine what will happen in an era when our population becomes larger, more mobile and more dependent upon cars. What indeed will happen to the economically dis-

advantaged when the automobile becomes even more of a necessity and status symbol than it is at present. Upward of 275,000 automobiles are now being stolen each year and, of course, every bank robbery, kidnaping, and most crimes of violence require the use of the automobile for its perpetration. Moreover, almost every case of juvenile delinquency, as you know, now revolves around the automobile. In sum exposure, opportunities and causes for crime are all on the march. How then can we possibly cope with the problem of sentencing fairly and properly and evenly so large a number of criminals if there is not some consensus as to how it should be approached?

The next number in my countdown on judicial sentencing follows logically from this facing up to facts. I ask you to consider the widening role of the Federal Government in the field of crime control. Already there are hundreds of laws on the statute books that bring the errant citizen under Federal jurisdiction but the end is certainly not in sight. Proposals, for instance, have been made to bring under the umbrella of title 18 of the Criminal Code practically all offenses where an interstate facility is used in its promotion.

Consider for instance the scope of Senator KEATING's bill which would give the Federal courts jurisdiction over any conspiracy which utilizes the mails, any transportation facility, any interstate communication by wire or radio in furtherance of an organized crime offense. Organized crime is defined to include violation of any law relating to gambling, narcotics, extortion, intoxicating liquor, prostitution, criminal fraud, false pretenses, murder, assault, and so on. All encompassing as this is there are others which seem to have reasonable chances of enactment, such as the proposed plan to broaden the Federal Fugitive Felon Act to include most other felonies. You are all familiar with these proposals and I have no doubt can judge their potentialities accurately. The only point I wish to make is that it is inevitable that more and more cases of more and more different types of offenders are to be brought into Federal court.

That brings me to my next number in this perhaps awesome count-down on the future of our sentencing methods and philosophies. This one concerns the challenge which Congress has presented in the recent new statutes dealing with these matters. Vast new discretionary powers with regard to sentencing have been granted the courts. Some 60 new district judges are about to be authorized and 15 or so will be appointed to fill existing vacancies. These obviously pose new opportunities for disparity since they widen the exposure, so to speak, for inconsistencies. While this is occurring there is a growing acute consciousness of the importance of more exacting standards of criminal justice. I judge from recent appellate and Supreme Court decisions that the trend in this direction is unmistakable. So the conclusion is inescapable that we must step up the time table for working out common Federal sentencing philosophies.

Now my next number in my count-down requires that we look at what has been happening with regard to judicial sentencing. Certainly we must not blind ourselves to the fact that there are many who feel that the task of sentencing should be taken out of the hands of a single judge. I disagree with that approach. Nonetheless, California has already adopted a sentencing tribunal plan and other jurisdictions are working in that direction. Senator Hruska has introduced a bill providing for appellate review of sentences, a procedure already in effect in such States as Massachusetts and Connecticut. Nor can we fail to notice how in moments of hysteria minimum mandatory penalties are prescribed for certain offenses that at the time affront our legislators. A bill, for instance, has been introduced this year to extend the mandatory penalty principle to transporting obscene literature. In my opinion we already have far too many mandatory penalties and some system must be evolved that will make these seem wholly unnecessary. But I emphasize that the whole question of sentencing has come under close and continuous scrutiny.

As we pronounce the next number in our countdown let's take a little look at the differences in approach among the judges as to how this problem of disparity should be attacked. One of my oldest and best friends, and now chief judge in one of our largest metropolitan areas, tells me to tread very softly, speak in generalities, and never mention cases that can be identified. Another tells me candor, frankness, and forthrightness is the only way that will bring home the seriousness of the situation. Another of my good friends among the judiciary tells me that he must know the potentialities of an offender for reformation, how long this will take, and what psychiatric and penological techniques are to be used before he can conscientiously pronounce a sentence. In contrast another judge on the Federal bench says that lectures by penologists and sociologists are of little value. One judge writes that uncertainty of the extent of any sentence is of the greatest value as a deterrent. Another rejects entirely the idea of an indeterminate sentence. And yet there are those who say judges have the same basic sentencing philosophies. I wonder.

I have a great and abiding respect for judges and for their courage as demonstrated particularly in this circuit in recent months. I admire them for their dedication to the ideal of equal justice under law. The care that is taken to ascertain the facts about an offender and how he is to be treated constantly amazes me. In no other judicial system in the world do judges now have or are able to obtain so much information about an offender as in the Federal system. And it is being used effectively to improve the administration of justice.

Even though I feel thus and agree that our courts and judges are the bulwark of our way of life, I cannot be so shortsighted as to overlook or shrug off without concern some cases where I have been dutybound to carry out the mandate of the court. Take for instance the cases of two men we received last spring. The first man had been convicted of cashing a check for $58.40. He was out of work at the time of his offense, and when his wife became ill and he needed money for rent, food, and doctor bills, he became the victim of temptation. He had no prior criminal record. The other man cashed a check for $35.20. He was also out of work and his wife had left him for another man. His prior record consisted of a drunk charge and a nonsupport charge. Our examination of these two cases indicated no significant differences for sentencing purposes. But they appeared before different judges and the first man received 15 years in prison and the second man 30 days.

These are not cases picked out of thin air. In January the President of the United States commuted to time served the sentence of a first offender, a former Army lieutenant, and a veteran of over 500 days in combat, who had been given 18 years for forging six small checks.

In one of our institutions a middle-aged credit union treasurer is serving 117 days for embezzling $24,000 in order to cover his gambling debts. On the other hand, another middle-aged embezzler with a fine past record and a fine family is serving 20 years, with 5 years probation to follow. At the same institution is a war veteran, a 39-year-old attorney who has never been in trouble before, serving 11 years for illegally importing parrots into this country. Another who is destined for the same institution is a middle-aged tax accountant who on tax fraud charges received 31 years and 31 days in consecutive sentences. In stark contrast, at the same institution last year an unstable young man served out his 98-day sentence for armed bank robbery.

An examination of sentencing statistics produce a less-dramatic picture, for they inevitably level off the extremes of leniency or severity. But they do serve to prove the widespread extent of disparities. For example, the crime of forgery usually involves similar circumstances and individuals, but last year the district of northern Indiana gave average terms of 52 months, while western Washington imposed an average of 10 months. For auto theft, an offense so often involving similar factors, one court in this circuit imposed terms averaging 48 months, but eastern New York imposed terms averaging slightly in excess of 14 months. The proportion of all types of convicted defendants placed on probation ranged from 67 percent in South Carolina to 10 percent in western Tennessee.

I will pronounce the next number in my countdown roundly and slowly, in order to take a look at some of the things that are being done to prevent blast off on judicial sentencing. It is most encouraging to note that the resources of the courts are being expanded in several ways to meet the challenges. The number of probation officers has increased sharply during the past 5 years, from approximately 300 in 1955 to more than 500 this year. With the reduction in the caseload per officer that this expansion has already brought about, the probation officers can be expected to do a better job in the preparation of presentence reports for the use of the courts and in supervising the clients assigned to them. The results of these improved services should become apparent within the next year or two.

Apropos, incidentally, of the importance of the presentence report let me say that a bill has been introduced in Congress which would in effect set aside a sentence by a visiting judge who pronounced his judgment without having such material before him. This came about because a bank embezzler was sentenced by a visiting district judge to 12 years without benefit of any information as to the background of the offender. In this connection I am reminded of a comment of the late revered Judge Schwellenbach who once said:

"The knowledge of the life of a man, his background and his family, is the only proper basis for the determination as to his treatment. There is no substitute for information. The sentencing judge in the Federal court has the tools with which to acquire that information. Failure to make full use of these tools cannot be justified."

The extent to which individual courts are following this advice and experimenting with various methods of assuring a greater measure of sentencing consistency can be noted right here in Detroit. Chief Judge Levin, as many of you know, has introduced the presentence conference for the judges of his court. The judges, as I understand it, meet once weekly and discuss the cases currently awaiting disposition. Each judge weighs a checklist of factors to be considered in imposing sentence and submits a recommendation. Through discussion some resolution of divergences in point of view are sought, and I am told, usually successfully. Chief Probation Officer Dick Doyle will give you more information about the presentence conference later this afternoon.

In Tacoma, Wash., Judge George H. Boldt follows the practice of recording his own dispositions in given types of cases. When imposing sentence on an individual defendant, he studies these records in an effort to make the sentence consistent with his previous dispositions. In Miami, Fla., Judge Emett C. Choate invites representatives of

the investigating agency to make suggestions as to disposition after the defendant has been convicted. This practice, of course, assures that the court receives the point of view of the people who are charged with enforcing certain statutes and who may be primarily interested in the deterrent purposes of the sentence.

The courts are also showing a commendable and increasing tendency to look for help and guidance when confronted with difficult sentencing problems. By the end of December 1960 they had sent to our institutions approximately 500 defendants under the diagnostic and observation procedures of the 1958 act. And these cases are now coming to us at an accelerating rate.

We seldom get a case that is routine or easy to decide. And properly so. Our grist consists for the most part of alcoholics, mental defectives or sexually deviated persons, people who commit bizarre crimes, nomadic youngsters in search of some El Dorado in a stolen automobile, bank embezzlers who steal not for themselves but for some friend or to aid some tottering business, veterans who try to square accounts with society because of the hostilities they harbor, women who are the doting accomplices of some man, and finally many rejected, unwanted youngsters who basically are social casework problems. These are all hard cases and we do all we can to summarize the facts, describe the findings of the psychiatrist, give our estimate of the time required to teach the offender a trade or how to get along despite his handicap and otherwise try to help the court in the proper disposition of the case.

Since all these factors are so difficult to appraise we feel that the indeterminate sentencing provision of the 1958 statute should be used unless there is some good reason to the contrary. The courts, I am glad to say, are using this provision of section 4208(a)(2) in increasing numbers.

The value of indeterminate sentences is demonstrated by the case of a 32-year-old bank robber who came to us only a few months ago. As a juvenile he had been institutionalized on two occasions, but he had kept out of trouble for the past 13 years. He had an excellent work record, but his family troubles piled up on him. His wife, after having four children, became openly promiscuous, and when the marriage ended he was saddled with heavy support payments. He again married, more happily this time, but his wife brought to the marriage three more children whom the defendant had to support. He and two companions robbed a bank and they were promptly apprehended. The judge gave him 15 years under the indeterminate procedure. We have been able to set certain goals for him in terms of academic schooling, trade training, group psychotherapy, and self-discipline which he must achieve before he can be advanced to the next step. I have recently been informed by the institution that the defendant is making such marked progress on his training program that we should be able to bring his case to the attention of the parole board soon.

As I reach the last number in my countdown I think we can say with justification that the Federal judiciary has made an excellent start within the past two years toward its goal of reducing the problem of sentence disparities to reasonable proportions. No one of course is so naive as to believe that perfect justice is attainable. The fortunes of men are subject to too many vagaries of fate. But certainly through the Institute approach we are seeking out better ways to reach this clearly achievable goal. This circuit is an outstanding example of the critical self-analysis with which the problem is being viewed.

No one can doubt the difficulty of this task. It calls for sober thought and hard work on the part of every individual judge, and it calls for the full cooperation of every agency and official who is asked by the courts for their assistance.

No other judicial act I venture can bring the judge the intense personal satisfactions that come from wise sentencing. I am sure all of you can attest to that experience. One of you, to my knowledge, has at the present moment the heart-warming feeling that the sentences he imposed on a group of youths several years ago have helped them to a better life and have served society well. Although these youths became involved in a rather sensationalized offense and the judge was under considerable public pressure, he nevertheless committed them under the Youth Act. All have now returned to the community on parole, and all are doing exceptionally well. One is graduating from college in June, two have become respected married men, and a fourth is well on the way toward success in the business field.

Except for a wise judge, it could have turned out much differently, both for society and these individuals. Confronted with a challenge, this judge searched his own soul, ignored cries for retributive justice and called rather upon the best resources of the law to solve the problem. And his wisdom, compassion, and understanding evolved a sentencing plan that worked.

It is heartening and strengthening to see that the Federal judiciary by and large is adopting similar soul-searching and resourceful methods. Thus it is that the challenge inherent in any countdown on judicial sentencing will, I feel sure, stop short of launching our legal system into an unknown "stratosphere." Instead, the even-handed administration of justice will be raised to new heights through perfection of present techniques, sharing of views and experiences and through practical implementation of the cooperative spirit of understanding and good will that has always characterized the Federal judiciary.

Congratulations! This Is National Tax Freedom Day

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PELLY. Mr. Speaker, it takes the average taxpayer today just short of 4½ months to earn enough to pay his year's local, State, and Federal taxes. So assuming on January 1, 1961, he assigned the entire amount of his regular weekly paychecks to the tax collector until his annual tax debt was paid, today for the first time in 1961 his taxes would be paid up and he would commence receiving his own paychecks to expend for his own family needs.

Today, for the first time, the average American breadwinner is free, as such, and will be until December 31 to earn his and his family's needs for food, shelter and recreation if there is any left for the latter.

A similar average taxpayer in 1920, in the days when Government was not so big and costly, would have worked to cover his share of taxes from January until February 28. After 2 months of work the average taxpayer 40 years ago could have celebrated Tax Freedom Day.

Twenty years later in 1940 taxes had increased so that March 27 could have been celebrated as national average taxpayers Tax Freedom Day. The anniversary was almost a month later.

If one figures the rate of increase each 20 years and projects it into the future a taxpayer in due course will be working 365 days a year for his Government and all his needs will be provided. But until then, Mr. Average Taxpayer, congratulations are in order—the rest of your paychecks this year you can keep.

Mr. Speaker, during the days of the "old frontier," a citizen if he desired could work a few days on the local roads and his obligation was over.

Today under the New Frontier the people are headed into full-time employment but under the modern affluent society of the near future there will be only one employer and the work will be steady.

The only freedom will not be tax freedom but, unfortunately, will be the freedom to work day in and day out, year in and year out—all needs cared for from the cradle to the grave—for Uncle Sam.

Until then, congratulations, Mr. Average Taxpayer. This is your National Tax Freedom Day.

"Forest Shield," Timely and Pertinent Editorial in the Los Angeles Examiner for May 11, 1961

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore, I am pleased to bring to your attention, and the attention of my other distinguished colleagues, an editorial appearing in the Los Angeles Examiner, Los Angeles, Calif., on Thursday, May 11, 1961.

Supervisor Bonelli and his associates, who came to Washington as mentioned in this editorial met with the southern California delegation in Congress and was very informative to us. Having lived in Los Angeles County myself for over 50 years I witnessed, both from long distance and close up, some of these terrible fires in the Angeles National Forest—and even closer to metropolitan Los Angeles than that.

The editorial follows:

FOREST SHIELD

Tinder-dry conditions from years of scanty rains in the Angeles National Forest have prompted renewed efforts to obtain adequate Federal aid to preserve this vital watershed of Metropolitan Los Angeles.

A county delegation headed by Supervisor Bonelli is now in Washington discussing with Congressmen from this area an emergency fire prevention program for Angeles Forest.

The key to this project is access roads designed to permit firefighting equipment to penetrate portions of the thickly wooded and precipitous terrain now inaccessible.

Mr. Bonelli and his delegation want the Federal Government to supply $31 million in 10 years to help build these roads, which are not boulevards for public use, but trails for specialized vehicles.

In the past 10 years alone, the Forest Service has incurred losses and expenses exceeeding that figure, because it could not reach little fires in time to prevent them from becoming major conflagrations.

We are now in the driest period of 30 years; the number of forest visitors and campers is at a high peak.

And sad to say, there is no decrease of careless smokers, untended campfires, children playing with matches, flames from motor accidents, incendiarism and occasionally, natural causes like lightning.

Every fire that gets out of hand inflicts on our communities serious losses in naturally stored water, not to mention destruction of property caused by flash floods.

Until a system of access roads makes it possible to reach all points, we will be constantly threatened with losses in life, property and natural resources.

That is the simple proposition the county delegation is trying to impress upon Congress. We hope it will command the attention it deserves.

Please, Mr. President, Don't Overlook Arizona

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. RHODES of Arizona. Mr. Speaker, on May 8, 1961, the following editorial appeared in the Tucson Daily Citizen, Tucson, Ariz. Since it is timely, I am inserting it in the CONGRESSIONAL RECORD to be enjoyed by my colleagues in the House:

PLEASE, MR. PRESIDENT, DON'T OVERLOOK ARIZONA

President JOHN F. KENNEDY,
New Frontier,
Washington, D.C.

DEAR MR. PRESIDENT: Now that you have signed the $394 million depressed areas bill, making it the law of the land, we would like to call your attention to some badly depressed areas you may have overlooked.

There are a lot of them. Some of them are so badly depressed they are defunct. Out here on the old frontier, we used to call them ghost towns. We liked that poetic term, but to expedite communication on the New Frontier, we'll call them depressed areas. They certainly qualify.

Consider, for example, such towns in Arizona as Contention, Russellville, Charleston, and Galeyville. These once-thriving communities were centers of employment and recreation for miners and mill hands, gamblers, outlaws and bartenders.

But the mines closed. Nobody thought of moving a lace factory out from Boston and training the miners to work in it. So the miners left. So did the bartenders and barbers. The towns died.

This tragedy could have been prevented, Mr. President, had your Depressed Areas Act been operating. As we understand it, you have set up a Federal loan and grant program to attract industries to areas which have lost their main source of support and to retrain workers with obsolete skills.

It probably isn't fair to ask you to revive Contention, Charleston, and Galeyville. You have less than $400 million to work with, and that's too little and too late. These defunct areas are a long way from any major market for lace. And, besides, no voters live there anymore.

But we do call your attention to Tombstone. This is no ghost town, but it is one of the most famous depressed areas in all America. Once the biggest and busiest city in Arizona, Tombstone lost its main source of support when its silver mines flooded. Jobs disappeared by the thousands. The 1,200 people presently living in Tombstone deserve a lot of consideration because their area has been depressed ever since 1860. We doubt if any area in West Virginia or Pennsylvania can match that.

There are, Mr. President, some 18,000 communities in this Nation engaged in a highly competitive battle to attract industries. They have been doing this with their own money. As we understand it, the depressed areas program will use Federal money, largely collected in successful areas, to pay for increased competition from unsuccessful areas.

Some diehards out here on the Old Frontier don't think that's fair. They don't even think it will work. Even in Tombstone, some folks refuse to believe a cold cash subsidy in the offing will freeze economic history in the making.

We think they'll quit carping just as soon as you move a nice, big factory to Tombstone from, say, Chicago. You might get a few complaints from Chicagoans because their city, with its unemployment rate of 6 percent, also qualifies as a depressed area. But Tombstone certainly deserves priority. It has been depressed ever since Wyatt Earp hung up his six-guns for the last time.

And then, Mr. President, we suggest that Jerome be next on the priority list. This Arizona copper mining community was thriving until 1925, when the whole town started skidding slowly down the mountain at three-eighths of an inch per month. The mines have closed, but a couple of hundred people still live there. We don't know what they do for a living, but they have a nice museum.

We would like to put Allentown—formerly a cattle shipping community—on the list, but are afraid the New Frontiersmen couldn't find it. The realistic citizens of Allentown, not offered a subsidy, went along with economic history and deserted the place. And the Navajos carted all the buildings away to their reservation.

Respectfully yours,
AN OLD FRONTIERSMAN.

When the Going Gets Tough, the Tough Get Going

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. BARRY. Mr. Speaker, this Nation's citizens have achieved a very high degree of physical health. We live longer, and while we live we are freer from disease, than almost any people in the history of mankind. On the other hand we are continually getting softer and less physically fit. Health, that is freedom from disease, is not the same thing as physical fitness which is toughness, strength and endurance. We have the former and it is ever increasing. We once had the latter, but it is lessening every year.

It is probably startling to most Americans, but it is apparently true, that the youth of Europe are fitter physically than we. As the Olympic games graphically illustrate, the majority of world champions in athletics are no longer Americans. Excuses have been made for that. Far worse is the fact that fully half of our young men are unfit even to be admitted to the Army.

It should be profoundly disturbing to every American that this is so. Are we approaching that moment in our history when we have passed our great age and are on the decline? Great nations decline because of the lack of fitness and determination in their people. Having struggled to achieve and having succeeded, too often a people will sink into luxury. The trouble with this is that there are always many others at once willing to struggle and sacrifice to seize the lead. Have we reached the stage of decline? Is our industry no longer able to compete with the world? Can it only exist within a "protected" market? Are we incapable of being first with a man into space? Will we have to watch while others exploit ahead of us our century's geographical frontiers, the moon and the planets? Is the American way of life such that others no longer wish to emulate it, but different systems have the strength to attract the newly emerging peoples of the world?

I fervently hope not, but mere wishing will not prevent it being so. Recently a splendid address came to my attention by West Point's director of physical education, Col. Frank Kobes. I commend it to everyone. In it he says:

Vigorous spirit and tough minds are usually found in strong bodies. We have a motto in our boxing room at West Point that reads: "When the Going Gets Tough, the Tough Get Going." I for one, feel it is time that we started getting tough.

I, for one other, agree.

WHEN THE GOING GETS TOUGH, THE TOUGH GET GOING

(This address by Col. Frank J. Kobes, Jr., professor of physical education, U.S. Military Academy, was delivered to the annual meeting of the New York State Association for Directors of Health, Physical Education, and Recreation and also at the Peekskill, N.Y., Exchange Club, Stuart Weinger, president, during its dinner arranged by Mr. Edward Gibbs for Peekskill High School athletes.)

President John F. Kennedy recently stated: "The next year, the next decade, in all likelihood the next generation will require more bravery and wisdom on our part than any period in our history." As those charged with developing in the next generation, a good share of this bravery and wisdom, we as teachers, are faced with a tremendous task, especially since we find this generation growing up in an era which is completely different from any our country has previously experienced. It has been called the space age. It has also been called the age of anxiety or the aspirin age—whatever its name, it is a protective age; parents protect their children from the jolts which they themselves absorb; the State protects its citizens against unemployment, sickness, profit or loss; schools, more and more, pro-

tect their pupils from the reliable old corrective of trial and error. The final result of this over-protection is stultification—a cocoon which strangles the butterfly.

This is also an age of leisure and abundance. We have so much food that it is collected and hoarded in storage bins throughout the country. Not far in the future is the 4-day work week for the same wages as the old 6-day week.

Today also, we have the situation of 16 million men and women past the age of 65 who are classified as aged. These 16 million, in just 15 short years from now will become 20 million. One of the great problems here is that many of these elderly people are not really living but merely existing, being kept alive by drugs and medicines, not able to lead active lives.

The space age child is one who is overfed, overweight, and underactive. This generation of the tallest, heaviest, and most nearly disease-free youth in all history is being victimized by an age of mechanization, specialization, and materialism. He doesn't have to perform chores around the house such as carrying in coal and kindling; he doesn't have to carry out the ashes or chop wood; he doesn't have to walk to school or anywhere else, for that matter. More than likely, he finds recreation in sitting or watching or listening or riding. He finds ideas clouded and values confused. He believes that his forefathers handed down to him the right of happiness, rather than the right to pursue happiness. With the passing of time, some of the words in our Bill of Rights have been obscured or faded away; that important word pursuit seems to be one of them.

The space age curriculum is loaded with abstract intellectualism. It overemphasizes science. Physical education is crowded out by spudnikitis. Priority is given to the development of a select group of minds that are supposed to solve the mysteries of space. In this new academic attitude, the question that arises is, "How do we intend to conquer space and survive when only about 50 percent of our male population has enough physical efficiency to be qualified to wear the uniform of our Armed Forces? Should this trend continue, our children will certainly become a race of "eggheads walking around on birdlegs."

It is later now than it has ever been and frankly I'm not sure that we will wake up in time. Dwight D. Eisenhower issued the alarm 5 years ago—the Youth Fitness Council was born. And there was a great beating of wings in the area of physical fitness. Still, there hasn't been a great deal of change for the better. In fact, in some instances it has grown worse; for example, I am told that in the past year or two, some 55 colleges have considered dropping the physical education requirement, and a few of them already have.

For your consideration, I offer the following comments relative to physical education and athletics in the curriculum today:

First of all, we must have sound objectives. They must be well thought out, adopted and written down where they may serve as constant guides. The No. 1 objective (which is the fundamental reason for the existence of physical education) is the development and maintenance of a high level of health and physical fitness. We must accept the responsibility for the physical aspects of the growth and development of young people.

This is our unique purpose in the educational environment. To put it in another way, it is our job to see that the student develops the capacity for work. Too many students, and even adults, have never experienced the joy of real work or all-out effort.

Do not be afraid to give conditioning exercises or vigorous calisthenics to your pupils—give more concern to good, hard, physical effort and challenge and less concern to insuring that the activity is fun. More kinds of physical activity will be more fun if our children are well conditioned physically.

Dr. W. Raab, eminent cardiologist at the University of Vermont, stated recently: "I often get the impression that fitness is being advocated as nice rather than necessary and that our instruction is promoted in a spirit of fitness for fun rather than fitness for survival in keeping with the seemingly popular take-it-easy philosophy. I am not being melodramatic in my use of the word 'survival.' We are faced by a shrewdly calculating and patient enemy who is waiting for our economic, moral, and physical disintegration, firmly convinced that our complacency will work in his favor. Whether we like it or not, we have to be prepared to live with a creeping emergency or cold war that may last for decades." Our very survival of our way of life may well depend upon how well we maintain the physical fitness of all our citizens.

Any really informed person knows that youth develops as a total entity, that growth and development of any part is related to the growth and development of the whole. And that if active cells are wanted in the brain or any other part of the body, activity of the total organism is a necessity.

Therefore, it is difficult, indeed, to understand the argument of the scientist against physical education and athletics as a part of education. It is difficult because the scientist is creating a situation which emphasizes the very need for physical activity.

This era of automation creates less and less the need for muscular activity. But it has not changed, nor will it change the requirements for living. In spite of our sedentary life, the same physiological needs are there, and the answer lies in exercise and muscular activity. This is a basic requirement for success and productive living, and it will remain a requirement until the scientist creates some machine to save man from deterioration because he has become a sedentary creature.

I am fairly certain that this gadget will never come into existence.

Our second objective should be that of providing a wide variety of motor skills in our program. By this, I mean such skills as running, jumping, throwing, climbing, lifting, balancing.

These are the basis for leisure time sports skills which will be so valuable in maintaining, as well as creating, the habit of keeping physically fit throughout life. This entails a positive health program, not just prevention of disease.

We must be constantly aware of the fact that in 20 years, few men will have to work with their hands. Also, we must realize that all those young people whom we teach, have a life expectancy of about 22 years more than their grandparents. We must do something to prepare them to live these additional years with dignity and vigor. We must educate them to the need for the habit of physical activity.

They must understand that in their leisure time, they may seek release from the fast pace of today's world and tomorrow's world, through physical activities which are relaxing and which counterbalance their otherwise physically inactive routines of daily living. However, the development of skill alone for these activities is not enough.

Continued participation depends upon the development and maintenance of muscular strength and endurance to offset the physical deterioration which accompanies the inactive years of later life. One of the major objectives in physical education and athletics should be the development of moral fiber in our young people.

By moral fiber, I mean such attributes of character as courage, the will to win, daring, perseverance, sportsmanship.

It is a recognized fact that the worth of any activity for character development depends upon the nature and intensity of the emotions it arouses, and the standards which control the expression of these emotions.

Because physical and athletic activities involve the deepest and most powerful of human emotions, they are of exceptional value from the character development standpoint. In addition, they appeal strongly to children and elicit their energetic, enthusiastic participation. Of all the experiences which they undergo, none possesses more opportunities for the building of these desirable moral qualities. Since many of the activities are contests in which the participants are brought into close contact with one another, and in which personal courage and daring play very decided roles, manliness, aggressiveness, confidence, determination, and the ability to think and act quickly and efficiently under pressure are developed to a degree unattainable by other means.

Hundreds of young men in whom these attributes might have never been awakened, are for the first time, given a chance to find themselves. This laboratory of the sports field simulates the conditions of life where leadership, self-discipline, and teamwork are experienced over and over again.

Athletics are an integral part of a boy's educational experience, not just a diversion or safety valve for excess animal energy. Athletics offer the boy the chance to meet the challenge of his own inadequacy, face to face, and do something about it, as no other activity does. They give him the spirit of adventure, the opportunity to dare. An end in football may wear a protective face mask, but he still must tackle a hard running back. If he flinches or fails, he knows.

Negotiations will not lower a high jump bar from 5 feet to 4. Promises will not put a soccer ball into the goal. Guidance counseling will not raise a batting average or give a pitcher control. Only the athlete can accomplish these feats and he does so, primarily alone. It is the athletic program's function to see to it that he faces the task squarely and does not hide from it. The help it gives is to help the boy gain satisfaction and confidence from continuous self-improvement.

Now, I hasten to point out that I have listed our contributions in this area of character building as the third objective. Many of us already have placed this too high on our list of objectives; there is no question that through physical activity, the pupil has the opportunity to develop this moral fiber of which I speak. And, if there is anything our citizens need today, it is moral fiber. However, many of the academic subject areas can claim that they, too, contribute to moral development and this, of course, is true to some extent.

But, physical fitness is our unique contribution to the educational environment. We can measure it, we can show improvement, we can show deterioration. On the other hand, it is extremely difficult to measure moral and social outcomes.

Furthermore, these so-called moral and social outcomes of physical education are by no means automatic. They are achieved only with intelligent, patient, and meticulous planning and supervision of activities. Without qualified leadership, physical education becomes merely a series of exercises and games, with no significant impact upon the growth of the child. In fact, all too frequently, weak teaching creates a learning situation which produces negative rather than positive outcomes.

Too often we have appeared to our academic colleagues as having the answer to all the problems of education within our own subject area.

Perhaps we have moved too fast and made the same mistake that the academicians are now making. They have wandered too far away from fundamentals; they are more interested in mathematical logic than the problems of human existence.

In this day of peril, we must remember that we are educating boys and girls, not machines. We must get back to the emphasis on fundamentals. We have become so concerned about breadth that we have been blinded to the need for depth.

We often refer to the great educational system of the Greeks—they believed in educating the "whole" man physically, mentally, and morally. The Spartans, in particular, were great believers in the fact that health and physical fitness were the very foundations for building good citizens. When a child was born, he would be examined by his father and if there was evidence of physical weakness or ill health, the child was abandoned on a mountainside to perish. Thank goodness that our respect for human life today considers such action unthinkable. This is real fundamentalism and I certainly do not advocate going quite that far. However, the pendulum appears to have swung too far in the opposite direction. Too many of our school administrators are of the same opinion as one of our supposedly outstanding college presidents who stated not too many years ago, that when he feels the urge to exercise, he lies down until the feeling goes away.

Yes, primarily, we must develop in our children, strong foundations of physical strength and endurance. On this foundation then, we can, in the laboratory of the gymnasium and the athletic field, build the skills and the moral fiber which our citizens need. But the foundation comes first, the moral attributes are additional dividends. They are the frosting on the cake and without the cake, there can be no frosting. I fear that too many of us have been attempting to mix the frosting without the cake.

Physical fitness is not only the key to a healthy body, but it is the basis of creative intellectual activity and adjustment to our ever changing environment. We don't understand all the aspects of this—the molding of a sound body with an energetic mind is complicated. Nevertheless, it is there. We have made several studies at the Academy which have convinced us that among the several entrance examinations which are given to candidates, the best single criteria for cadet success at the Academy is physical ability. I have a suspicion that this may be just as true in many of our civilian colleges.

Vigorous spirit and tough minds are usually found in strong bodies. We have a motto in our boxing room that reads: "When the going gets tough, the tough get going." I, for one, feel it is time that we started getting tough.

The principles of curriculum construction indicate that programs of education for our children should be based upon their needs. The needs are determined by the society in which they live and the challenges and problems which face that society. Therefore, in these threatening times, the needs of our children must be adjusted to this situation. Our boys and girls, who are growing up during troubled times such as we are experiencing today, certainly have a vital need for physical fitness. Our physical education must provide effective programs and must demand that all pupils meet adequate physical fitness standards.

It is imperative that we so educate our young people that they may be able and eager to draw on the well of physical vigor throughout their lifetime.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

New Superior California Product Breaks a European Monopoly

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mr. KUCHEL. Mr. President, California is justly proud of her great and historic vineyards and of her preeminent wine industry. We produce 92 percent of all the grapes and 85 percent of all the wines produced and consumed in our country. And now the College of Agriculture of the University of California has been able, through science, to improve the quality of the production of our vintners, and to produce a gourmet treasure.

A few weeks ago, at the World Trade Center in San Francisco, I made some comments on the new Premier Semillon, a new California wine, created by the joint efforts of the university and one of our great California wineries. I ask consent that those comments appear in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY U.S. SENATOR THOMAS H. KUCHEL, OF CALIFORNIA, MARCH 6, 1961, SAN FRANCISCO

Mr. Feldman, Dr. Amerine, Dr. Nelson, Mr. Nightingale, ladies and gentlemen, today California produces 92 percent of all the grapes and 85 percent of all the wine produced and consumed in the United States. As for jobs—a category of which all of us are particularly conscious—our vineyards and wineries employ, if seasonal workers are included, approximately 111,000 persons.

Those figures are not new to many of you. I iterate them to remind you that the accomplishment we honor today is part of something vital and important to our vital and important State. California and its wine industry have prospered together for almost 20 decades. It behooves all of us to do all in our power to strengthen that mutual prosperity in the decade of the sixties—and the decades to come.

The mutuality of California and its wine industry is due primarily to three causes.

The first is appreciation and utilization and, perhaps, I might add, improvement, of European wine-making know-how. Rather than trying to start from scratch, California's early vintners transplanted to the New World not only the cuttings but also the practices of the great Old World wine makers. And, incidentally, they included Armenians and Hungarians and Germans as well as Spaniards and Italians and Frenchmen. Charles Wetmore, who founded the Cresta Blanca Winery, which helped develop and bottle the great new wine we have just tasted, was a prominent enologist of his day who was commissioned by his fellow vintners in the early 1880's to sail to Europe and buy for them the finest European cuttings. Dr. Nelson and Mr. Nightingale used modern temperature and humidity controls to induce the noble mold to grow, but the Semillon grapes on which they induced it were hand-picked from vines born 80 years ago in France.

The second major reason for the growth of our great wine industry is appreciation and utilization of intelligently controlled research. California vintners have not merely followed their ancestors. Led by the progressive college of agriculture of our great State university, they have tried constantly to improve the quality and yield of their grapes, and the purity as well as the taste of their wines. When the vineyards of Europe were threatened by the dread pest of phylloxora near the end of the 19th century, American roots were exported to France and Germany. Today, in one of the most interesting examples of cultural exchange the world has ever seen, the great vineyards of both Europe and California are stocked identically with American roots on to which European cuttings have been grafted. All three of the wines just tasted—the traditional California semillon—the world-famous standard of excellence, Chateau d'Yquem—and our precedent-breaking new Premier Semillon—were pressed from grapes grown from European cuttings grafted to American rootstock.

Finally, California's wine industry was driven forward by the vigor and daring of our free-enterprise system. It took courage and confidence 80 years ago to nurture helpless vine seedlings when banking, shipping, and railroading were the accepted, safe-and-sane occupations for growth investment. And it took courage and confidence 5 years ago for Cresta Blanca to underwrite an experiment in applied science from which no immediate returns could possibly be foreseen.

There is, then, a heritage behind Premier Semillon—not only the obvious, European-rooted heritage of fine winemaking, but also the specific heritage of California's wine history. And that heritage and that history, I believe, are more important for what they portend than for what they have accomplished. This is nearly always true of a vigorous civilization such as ours, and it should be true: The future magnetizes the present, and overshadows the past. Only by growing can we remain a healthy social order, and only by looking ahead can we grow.

This is particularly true of an accomplishment like that represented by Cresta Blanca Premier Semillon. Its importance today lies in its promise for tomorrow. Certainly, no one is going to get rich on the 1,300 bottles a year that Mr. Nightingale is now producing and Mr. Feldman is now rationing like tickets to the Giants' opener next month.

It is a magnificent fact that production of California wine as represented by shipments last year set an alltime record of—I may as well be precise about this: 129,355,394.06 gallons. That's the official Wine Institute figure, and I plan to ask Roy Taylor who bought that six-hundredths of a gallon. That total is 3.92 percent higher than the 1959 figure, which was itself a record.

Two subsidiary facts directly related to the product being introduced today are, if anything, even more impressive.

Shipments of California table wine have burgeoned much more than shipments of all wine. Since 1952, total shipments of California wine have increased a little more than 11 percent, while shipments of table wine have risen a whopping 55 percent. In every year since 1952, table-wine shipments have been higher than the previous year.

Even more encouraging, California's premium table wines are doing best of all. Nobody publishes premium-wine as distinct from popular-priced-wine figures, but I have been able to learn that sales of premium wines from 1953 through 1959 increased more than 46 percent. The corresponding figure for all California table wines is around 25 percent, so premium wines are surging ahead at nearly double the rate of all table wines.

We can enjoy this pleasant picture, then: That segment of the California wine business which is doing best is the most culturally important, the most promising and the most profitable segment—the segment encompassing premium table wines.

And that is the segment to which the new wine honored here today belongs, and which, I am convinced, it will materially bolster.

I wouldn't dare try to improve on the descriptions of Premier Semillon presented so eloquently by Dr. Amerine, Dr. Nelson, Mr. Nightingale and Mr. Feldman, but I would like to point out that this superior new California product in effect has broken a European monopoly of one of the gourmet treasures of the world. With one or two minor exceptions, Premier Semillon represents the development in and by California of the only European wine type not previously produced successfully outside of Europe. It demolishes one of the few remaining bastions of European winemaking superiority.

From our viewpoint, the elimination of European exclusiveness in the production of botrytised wine is simultaneously an elimination of just about the only unfilled setting in the bracelet of great California premium wines.

Until the university and the Cresta Blanca winemasters applied their genius to the problem, the comfortably dry California days and pleasantly cool nights in which we glory, prevented us from also enjoying a wine of our own enriched by the noble mold. To urburden ourselves from the patronage of the lovers of Chateau d'Yquem and the other famous botrytised wines of France and Germany, we had to offset the perfection of our climate. That is quite an assignment. I salute the responsible gentlemen for accomplishing it, and I trust it will be accomplished for this purpose only.

I have waited throughout this program for one of my predecessors to tell the beautifully ironic story of an earlier conquest. I don't know whether they saved it for me or didn't do their homework, but here it is.

Among the cuttings Charles Wetmore brought back from Europe on the trip to which I have alluded were some from the world famous Chateau d'Yquem vineyard which Wetmore planted in his new acres in the Livermore Valley. The cuttings grew to vines, and in 1889 Wetmore entered a California white table wine made from grapes grown on those vines in the wine judging of the great Paris Exposition. As I was told the story, the upstart entry from an un-

With one or two minor exceptions, Premier Semillon represents the development in and by California of the only European wine type not previously produced successfully outside of Europe. It demolishes one of the few remaining bastions of European winemaking superiority.

From our viewpoint, the elimination of European exclusiveness in the production of botrytised wine is simultaneously an elimination of just about the only unfilled setting in the bracelet of great California premium wines.

Until the university and the Cresta Blanca winemasters applied their genius to the problem, the comfortably dry California days and pleasantly cool nights in which we glory, prevented us from also enjoying a wine of our own enriched by the noble mold. To urburden ourselves from the patronage of the lovers of Chateau d'Yquem and the other famous botrytised wines of France and Germany, we had to offset the perfection of our climate. That is quite an assignment. I salute the responsible gentlemen for accomplishing it, and I trust it will be accomplished for this purpose only.

I have waited throughout this program for one of my predecessors to tell the beautifully ironic story of an earlier conquest. I don't know whether they saved it for me or didn't do their homework, but here it is.

Among the cuttings Charles Wetmore brought back from Europe on the trip to which I have alluded were some from the world famous Chateau d'Yquem vineyard which Wetmore planted in his new acres in the Livermore Valley. The cuttings grew to vines, and in 1889 Wetmore entered a California white table wine made from grapes grown on those vines in the wine judging of the great Paris Exposition. As I was told the story, the upstart entry from an un-

known winery in the unknown wine country of California was a laughing matter throughout Paris. On the day of the announcement of the winner, a single shrouded bottle stood on a long table. The shroud was removed, revealing—as the Grand Prix Gold Medal winner—Cresta Blanca's Livermore Valley entry.

To the chagrined audience of Parisiennes, the Marquis de Lur-Saluces, the owner of Chateau d'Yquem, gallantly made one of the great statements of wine history.

"The daughter has excelled the mother," the Marquis said of Wetmore's wine.

I have no intention of competing with a deceased Marquis who cannot fight back, but I cannot help suggesting—after tasting a vintage Chateau d'Yquem and our new Premier Semillon—that this great California winery has done it again.

In closing, thank you very much for allowing me to take part in this delightful ceremony.

J. Edgar Hoover: A Look at the Record

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. SMITH of California. Mr. Speaker, in marking the 37th anniversary of J. Edgar Hoover's outstanding service to his fellow Americans, I would like to include in the RECORD today an editorial from the Milwaukee Sentinel, May 8, 1961, which, as the writer says, speaks for itself.

WASHINGTON PARADE—37-YEAR RECORD TELLS G-MAN STORY

(By David Sentner)

America's No. 1 G-man—J. Edgar Hoover—marks his 37th anniversary this week as the head of the Federal Bureau of Investigation.

Let the record speak for itself.

Here are some highlights in the FBI's history since Hoover took over as its Director on May 10, 1924:

July 1924: FBI Identification Division founded to serve as national repository for fingerprinting identifying data.

November 1932: FBI laboratory founded.

September 1933: Trapped at hideout in Tennessee, George "Machinegun" Kelly gave FBI agents a nickname when he shouted, "Don't shoot, G-men," and meekly surrendered.

July 1934: FBI agents killed John Dillinger, notorious shoot-from-the-hip bank robber outside a Chicago theater.

July 1935: FBI National Academy founded.

May 1936: FBI Director Hoover personally led squad of agents in apprehension of notorious Alvin Karpis at New Orleans, ringing down curtain on Barker-Karpis gang—one of the most vicious gangs of the "terrible thirties."

June 1941: FBI agents rounded up Frederick J. Duquesne and other members of German spy ring. Duquesne and 32 espionage associates convicted and sentenced to terms exceeding 300 years.

June 1942: Eight Nazi saboteurs who landed on coasts of Florida and Long Island from German submarine arrested by G-men. Not a single act of enemy-directed sabotage was committed in United States during World War II.

October 1949: Eleven national leaders of Communist Party convicted under Smith Act on FBI evidence. Scores of more party leaders to be convicted through later years.

March 1950: Klaus Fuchs, identified as atomic spy on basis of information gathered by FBI, sentenced in Britain to 14 years imprisonment.

June 1953: Julius and Ethel Rosenberg, atomic spies, convicted in 1951, were executed. They were identified and arrested as Soviet agents by FBI.

January 1956: After 6 years of intensive investigation, FBI agents in Massachusetts arrested six men on charges of participating in $2,775,000 robbery of Brinks, Inc., on January 17, 1950. Five other men also named as members of Brink's gang.

October 1958: Master spy Col. Rudolf Ivanovich Abel, one of most highly trained espionage agents in services of Soviet Union, convicted and sentenced to 30 years imprisonment. He was identified and traced to New York hotel by FBI agents. Abel found to possess latest tools of Soviet espionage, including shortwage radios, code books, microfilm and such hollow objects as coins, flashlight batteries, hardware and jewelry.

February 1959: In war on organized crime and racketeering, FBI scored major breakthrough with arrests of group of New Jersey men on charges of jury-fixing. Jury-fixing occurred in 1956 Federal income tax evasion trial of Abner "Longie" Zwillman, reputed boss of New Jersey underworld and prohibition era bootleg baron. Less than 2 weeks after FBI agents took men into custody, Zwillman committed suicide. Three of those arrested pleaded guilty.

February 1961: Melvin Davis Rees, Jr., Maryland musician and sex criminal, convicted of brutal kidnap-murders of Mildred Jackson and her 6-year-old daughter, Susan Ann. Intensive 18-month FBI investigation established that Rees was responsible for abduction of these two victims in Virginia and transporting them into Maryland where they were murdered and buried. Bodies of Mrs. Jackson's husband and infant daughter, who disappeared on same night as Mildred and Susan Ann Jackson were found in shallow grave near Fredericksburg, Va.

The County Official—A Composite Picture

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. WILEY. Mr. President, across the Nation we as a people are being served by an army of dedicated, loyal, competent, but largely unheralded, individual: our county officials.

At a government level close to the people, these officers represent a real key to progress in the community.

All too often, however, the outstanding service of this public-spirited corps is either overlooked or not given due recognition.

In a political system, of, by, and for the people, it is extremely important: First, that we elect, or appoint, highly qualified and dedicated officials to such posts; second, that we provide them the opportunity and facilities to do a good job; and third, that we give them due recognition for outstanding service.

Recently, the County Officer, official publication of the National Association of County Officials, published a splendid article to better acquaint us with the ability, dedication and service of our county officials.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COUNTY OFFICIAL—RESULTS OF A COUNTY OFFICER QUESTIONNAIRE

The county official—what sort of a man is he?

If the term were used to include the full range of public employees on the payroll of the 3,042 American counties, there would be some 668,000 of him (or her), 568,000 of whom are classified as full time. This is an army of workers surpassing in size that of any corporation in the Nation, and growing faster than any other level of government.

It is not with the whole army that we are concerned here, however, but only its leaders, and more precisely, the leaders of National Association of County Officials. It is the elected or appointed officials in policy-making or managerial positions who are eligible for National Association of County Officials membership.

From this group, the County Officer recently polled a representative cross section, chosen from the officers and directors of the association, from committee chairmen, from officers, directors and paid executives of State associations of county officials. More than 50 percent responded to the questionnaire, and out of the answers has emerged the first full, composite picture of the American county official as he is today.

TWO GROUPS OF OFFICIALS

Broadly speaking, the county official breaks down into two groups, the elected (two-thirds), and appointed (one-third). If he is an elected official, his title is likely to be county supervisor, commissioner, chosen freeholder, councilman, parish juror, judge, clerk of the court, or treasurer.

If he is an appointed official, his title is probably county manager, county executive, planning director, county engineer.

Having established who he is and how he got there, let's break him down further, dissect him thoroughly on the basis of information he supplied about himself.

THE COMPOSITE STUDY

The composite county official today is 52 years old and married. He has been in the public service for 16½ years (half of his adult life), and a member of NACO for 8½ years.

By occupation, the elected official is a small businessman—insurance, real estate, or retailing—a farmer or rancher, with a small number from the teaching profession. In contrast to the public concept of the local politician, only a small percentage of those reporting are lawyers. If he is an appointed public official, chances are his only occupation has been public service.

If he has been, as most were, a small businessman, farmer, or rancher, he has learned the value of prudent spending or he would not have survived in private business. He carries this natural fiscal conservatism and thriftiness into his conduct of public affairs. He is likely to insist on brand names he is familiar with, from dealers that he knows.

HE IS CLOSE TO HIS PEOPLE

He is likely to consider the public coffers as a public trust, and he guards it accordingly, because he is closer to the people he serves than most other public officials. The money that he raises, appropriates, and is entrusted with, comes from the homes, the real estate, the tangible worldly goods of his friends, neighbors, and churchmen.

His salary was not asked on the questionnaire, but from many sources it can be ascertained. If he is an elected official, chances are he serves only part time, and receives only a very minimum stipend, although the list of those not receiving any pay is diminishing. If he is an appointed official, or an elected official serving in a full-time capacity, he will probably be paid between $3,600 and $25,000 a year, with the median about $7,500. If he is a county chief executive, he is likely to be in the lower ranges of the five-figure bracket, where salaries range from $6,000 to $25,000. If he is a county engineer, he will be just one-side or the other of the five-figure bracket, ranging roughly from $3,600 to $22,500, with the average close to $10,000.

At any rate, he did not enter public service for the money it pays. There is a little bit of the dedicated man in him.

The homelife of our composite county official is remarkable for its stability. Chances are about even that he has lived his entire life (outside of his military service and his trips to NACO conferences) in one State, and if he did move, it was to a neighboring State (roughly 20 percent). Highest mobility among those responding are those now living on the west coast. Only three of these were natives.

HE IS A JOINER—A PUBLIC-SPIRITED MAN

Our composite man is likely to be gregarious and a joiner (less than 20 percent reported nonjoiners). Chances are 3 to 1 he belongs to two or more organizations of the professional, service, civic, or governmental type. Some report membership in a dozen such associations. He has a fondness for professional groups (nearly a third of all respondents), service clubs (better than 25 percent), charitable and health organizations, the chamber of commerce, governmental associations (20 percent), lodges, and church groups. A surprising find: only 6 to 7 percent belong to veterans organizations, although over half of them have had prior military service.

Not only is he a public-spirited man—generous with both his time and talent in civic and community activities—he is to a surprising degree an educated man as well. Almost without exception he has a high school diploma, more than likely in the public high school in his home county—and chances are exactly even that he has had some college. Nearly 25 percent have college degrees, and this percentage is rising as the postwar generation comes to power.

Among the appointed county officials, two-thirds have finished college and nearly half have graduate degrees. There are even Phi Beta Kappa keys among them. His high level of education speaks for a high level of intelligence as well, gained as an astute observer of his community's problems, and the trend of the communities around him. He has knoweidge temepered with wisdom.

HE IS FROM A SMALL COUNTY

Our composite man is more than likely from a small county—the highest proportion is in the 10,000–25,000 population group. Because counties of this size do not always need nor can they afford the specialized personnel of their large brothers, our official is probably both legislator and executor, serving two of the three functions of our governmental system. Because his community is of moderate size he knows it well. Because his taproots grow deep, he is sensitive to its pulse and vitally and personally concerned with its needs. He is willing to move ahead, but not at breakneck speed or over uncharted courses. By sentiment he is for governmental improvement by evolution and not by revolution.

From training and inclination he wants to be personally involved in every decision and every policy action in his county, from right-of-way acquisition to the purchase of typewriter ribbons. He is the small businessman, shrewdly and carefully conducting the business of local government.

HE IS A VETERAN

Chances are better than even that the county official is a war veteran; and if he isn't, it's usually because his average age—52—made him too young for one war and too old for the next two. An unusually high proportion—nearly half—were officers. In the service he was a coastguardsman manning an assault boat against a hostile beach, changing the bulb in a lighthouse; he was a jet fighter pilot in the cold war, a B–17 pilot, a seaman in World War I, a marine engineering officer building airbases, a legal officer in the Air Force, an infantryman with a rifle in his hand and mud in his eyes, a chief petty officer in the Navy, a National Guard company commander.

Our composite county official has already made his mark in his community—and many are destined to move on to higher positions. He is likely to be the director of a bank or savings institution, has been chosen to sit on some kind of State policy council or committee; and chances are 1 in 10 that he has earned an outstanding citation such as the junior chamber of commerce's "Young Man of the Year" (2 percent), the chamber of commerce's "Good Citizen, Good Government" (6 percent), or the American Public Works Association's "Man of the Year" (2 percent).

He is, in short, a community leader, stable, just under middle age, educated, intelligent, and dedicated. He is the hope of the future for local government.

Who Judges?

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ottawa (Kans.) Herald of Thursday, May 11, 1961. The editorial points to an alarming situation—a situation of which I am sure some of my colleagues are aware. Believing that all of my colleagues will be interested in the facts which the editorial pionts out, I am pleased to insert it in the RECORD:

WHO JUDGES?

Terming today's television a vast wasteland, the Chairman of the Federal Communications Commission this week issued a word of warning to television officials.

He said the Federal regulatory agency intends to judge station license holders on how they meet community needs. The time of judgment is to be when licenses come up for renewal.

Disclaiming any intended censorship, the FCC Chairman said TV is filled with murder, mayhem, Westerns, cartoons, and commercials. He said his agency will see that TV stations serve their listeners.

His remarks stirred a wave of objections. Enforcement of such a policy will create even more trouble.

It appears that the new FCC Chairman is one of those knights in shining armor out to cure the ailments of the world.

He may not like Westerns, blood and thunder shows and the TV commercials but he will find it is not the three-man FCC which sits in judgment of this new media.

This judgment is reserved for the man, woman or child in front of the home TV set. The viewer decides with the flip of the wrist what he or she wants on TV.

When the do-gooders start deciding what the public wants, they are in for a surprise. It usually winds up with John Q. Public getting the do-gooder's scalp.

Prayers of Reparation Offered for Acts of Desecration in Cemeteries

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a thought-provoking article which appeared in the Lawrence Eagle-Tribune, Lawrence, Mass., on May 11, 1961:

PRAYERS OF REPARATION OFFERED FOR ACTS OF DESECRATION IN CEMETERIES

A group of young persons from St. Augustine's Parish met for an unusual but thought-provoking purpose Wednesday evening at the veterans lot in the Immaculate Conception Cemetery.

Members of the Chi Rho and youngsters from the school offered prayers of reparation for the desecration in the Immaculate Conception and Bellevue Cemeteries by two young men on April 30. Their moderator, Rev. Bernard J. O'Dowd stated that the idea was that of the young people in the organization and was a wonderful thought.

Father O'Dowd not only led the prayers but spoke on "Community Responsibility" to the gathering. He stated that the purpose for assembling at the cemetery was not for vengeance, "for that belongs to God alone," nor for justice "for that belongs to a civil power." He said that they had come for the purpose of prayer to make recompense before God for these crimes and to pray that our community may be spared similar crimes in the future.

"Our presence here is to give voice to the sentiments of outrage justly felt by the people of Lawrence. Further, it is our hope that we may exert moral force by impressing upon all our people that civic responsibility is within the purchasing power of all," he said.

Father O'Dowd stated that a frightening fact in the Nation today is the rise of the crime rate. "At present," he said, "it is four times greater than our population rate expansion." Certain crimes, he stated, touch even the sacred, and something sacred was violated in these acts of destruction.

"Reverence and respect for the dead is a trait evidenced even in some uncivilized tribes and nations. Every nation worthy of the name civilized has possessed this quality of reverencing the dead," Father O'Dowd said.

The physical damage done, he stated, is within the realm of repair. The crime itself, while sufficiently disturbing, is yet more distressing if considered as a symptom, he remarked. "If resting places for the deceased be defiled, what more shocking crime will headline our press tomorrow or the day after?"

BRIEF BACKGROUND

Father O'Dowd gave a brief background to the events which led to the desecration at the cemeteries and then told of the apathy shown by individuals who were asked opinions concerning the act.

"Let each of us search his heart this evening and register his reaction to this desecration. The answer you find in your heart will be the directional signal for the future course of decency in our community," the priest said. "Any community is safe, strong, and healthy as the various components which comprise it: the individual, the family unit, the religious bodies, the business associations, the social organizations, and the various departments of the governing body," Father O'Dowd said.

He stated that every individual must realize that his social acts have repercussions on the community for better or for worse and that the welfare of this city is partially held in his hands.

He closed his talk to the group by saying, "As we stand here this evening among the dead, overlooking the resting place of those who fought to make our country free and decent, let us pray that we will not have to come here again to protest crimes against the place of their repose."

PRAYER RECITED

Following the recitation of the Lord's Prayer by the group, Father O'Dowd offered the following prayer:

"Show Thy mercy to us, O God, that Thy just punishments be not delivered upon our people who have witnessed the desecration of sacred resting places. We know these crimes should see Thy vengeance visited upon us, but may our presence here this evening appease Thy wrath, and restore our people to Thy favor. We know only a handful of Thy creatures were responsible for these wrongs, O God, but still Your spotless majesty has been offended.

"In speaking for all good people in our community, we pray and beg your kind forgiveness, O Lord, and most humbly petition that we be given the strength, courage, and vision to combat the forces of evil about us. Conscious of our own inadequacies, our imperfect petition, O God, is that you will not desert us in this hour of need. Without Thy help our efforts will avail nothing. But, if Thy hand supports us and all men of good will, then we may labor with genuine hope in our hearts.

"We pray, O Lord, for our civic leaders whose weighty charge and duty, is the preservation of justice and good order in the community. May they discharge their obligation with vigor of purpose and uprightness of character.

"We pray, O Lord, for those whose task is the education of our youth. May they inspire their students to follow the path of righteousness toward their fellow man and to develop in their own lives personal integrity and a true sense of responsibility.

"We pray, O Lord, for our religious leaders that their presentation of your divine message may be attentively listened to and acted upon.

"We pray, O Lord, for all our people that they may fulfill their personal, family, and civic obligations with courage and enjoy the fruits of a good and holy life in your sight.

"Memorial Day, 1961, will soon be here. May we on that day witness the true spirit of our people giving respect to their departed loved ones."

Zeal for Freedom

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mr. MONRONEY. Mr. President, I ask unanimous consent, to place in the Appendix of the RECORD, the address I delivered on May 1 in Tulsa, Okla., at an extraordinary Americanism Day rally of northeastern Oklahoma junior and senior high school students in Skelly Stadium. It was sponsored by the Intercounty Council of Civitan International, which includes four clubs in Tulsa, and one each in Sand Springs, and Broken Arrow, Okla.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ZEAL FOR FREEDOM

(By Senator MIKE MONRONEY, of Oklahoma)

What a great honor it is to be here today, to be chosen to address this huge Civitan Americanism Day program welcoming 36 new citizens, to be a part of the answer of the freedom-loving citizens of Oklahoma, of America, and of the world to the challenge of the Soviet conspiracy on this May Day. I want to thank the six Civitan clubs who launched this Americanism Day observance, in a new dimension, with thousands of students participating.

Years ago Americans stood idly by as the wobblies, the psychopaths, the unbalanced and the hard core Communists observed May Day as a day dedicated to the propagation of communism, and its fellow-travelers marched in regimented style attempting to show worldwide adherence to their slave-state system.

Today the answer of the free world to this challenge of captives of communism gives ringing proof of the vitality and dedication of free men around the world. Students participating today from 23 public high schools and 4 parochial schools give a new and strong emphasis to America's answer.

I am thankful that Civitan International here in northeastern Oklahoma has planned full participation of our young Americans in this day. The American Bar Association, the American Heritage Foundation, the National Governors Conference, the U.S. Conference of Mayors, the National Educational Association, the International Association of Police Chiefs, the Association of American Law Schools, the National Conference of Bar Presidents, the Business and Professional Women's Clubs, Rotary, Kiwanis, Lions International, and dozens of other national and local organizations join with Civitan International to today dedicate themselves to an American offensive against this seizure of May Day as a day dedicated to communism.

It is fitting indeed that instead of permitting this seizure through abdication of Democratic zeal in our system, that we make it our day of observance of the power, dignity, and moral strength, a day dedicated to our belief in the eternal and undying principle of law and order.

Two Presidents have marked May 1 previously as Americanism Day, by proclamation. Last month, President Kennedy did likewise.

DEMOCRACY CHALLENGES FALSE DOCTRINES

More than 40,000 celebrations were held as the United States last year observed this law day of dedication to the eternal verities of individual freedoms guaranteed by law. Each year the national impact of a resurgent democracy challenging the false doctrines of communism grows as America's answer to the slavery of the mind, the body and the spirit that holds captive one-third of the world's population.

Today here in Tulsa, as elsewhere throughout the entire Nation, we observe this day as a militant answer of America's youth, of its adults, and of its new American citizens receiving their rights of citizenship—there were 364 new citizens in Oklahoma last year—and as a day of militant free men unwilling to sacrifice our birthright for the chains of dictatorial rule over every facet of our daily life.

These priceless freedoms to walk erect in dignity as individuals instead of pawns of an all-powerful state did not come to our forefathers on a silver platter. They did not come in ease or complacency as a casual gift nor as the answer to a frivolous wish. They came because men and women chose to risk death rather than to submit to the imprisonment of their minds and spirits by alien control that could bend them to their will or force their compliance to the goals of the chosen few in the privy council or the Kremlin.

Today in Red Square in Moscow and in the dozens of captive satellite countries overrun by communism the youth of those nations march in regimentation to the pageantry of their system. Massive propaganda efforts, worldwide in their scope, attempt to portray this pageantry of flags, of armed might, of massed marching as the wave of the future in the world contest in which freedom everywhere is challenged.

With the powers to command compliance, with a state-owned press, with the suppression of all avenues of open and free criticism or thought, this ominous wave of massed millions seeks to convince the underprivileged billion people of the new nations that communism is so militant, so vigorous, so overwhelming in its zeal and missionary spirit that the old-fashioned freedom of democracy will fall before the loud blasts of its shrill and screaming trumpets.

But all the pomp and ceremony of the Soviet system that masks the ugly treachery of conspiracy and contempt fails to realize the span of nearly 3 centuries that gave deep root and substance to the democracy and freedoms that are our priceless heritage.

FRONTIER NO PICNIC

It was not an easy task that the Pilgrims took to carve out a place for religious freedom on our continent. It was no accident that we transplanted the Magna Carta into the soil of the colonies of Virginia and Pennsylvania. It was no picnic to transform a hostile frontier into a homeland for patriots who loved their God, revered the law and were willing to die rather than submit to any government that was not of their own choosing. Their right to freedom under laws of their own making took precedence over the accumulation of wealth, of power or of prestige. Next only to the love of family, for whom they sought this freedom in perpetuity, was their love of America and the hope it held for liberty for all mankind.

It was this torch of freedom that was passed on to much of the world as it existed then. It was this spark of democratic zeal that swept away the long-established dynasties that had long ruled the Western World by divine right of kings. Thus it was American ideals of liberty that set the course for dozens of other nations to achieve their freedom.

Eight wars, from the Revolutionary War of 1776 to the Korean war of 1950, have been waged to preserve the freedoms of man. In America and around the world, the blood and resources of this Nation have been spent that all manner of men could hope for a way of life of brotherhood in equality instead of slave and master.

Yet growing out of the rubble and ruin of two World Wars has come a new virus of totalitarian dictatorship that is threatening to quench the light of liberty and hope that was lighted over the years at such cost in life and property.

Today by subversion, conquest, and revolution this mighty force seeks to expand its system to the very shores of our continent. Nearly one-third of the world's people today are under its ironclad rule as it reaches now westward for still more power.

It wears many faces and speaks with many voices. Its methods are ever-changing but

its motives never change. Purporting to end colonial power, it actually (but secretly) seeks to build up the most ruthless colonial empire ever known. Falsely speaking for freedom, it woos the newly independent nations into a new and viciously captive state. Propagandizing for peace and disarmament, it seeks under this false cover to subvert new millions to iron curtain power.

WAR IS INVISIBLE

It is a war of new dimensions that we face, not a war wherein the brave and the bold can face on the battlefield the enemy of freedom. From 5,000 miles away through outer space is the ever-present threat of total war of annihilation by ICBM. One hundred divisions, mobilized on two continents, and more threats to their so-called "peaceful expansion" of the Communist philosophy. Blackmail, espionage, agents provocateur, volunteers, and military training missions add to the underground methods by which expansion of the system is forced on the unwary or the weak nations that fall in the path of their desires. It is an invisible war in which the outstretched hand is in reality the mailed fist. May Day in the Communist world is the pageant of its method of exploitation and expansion of its system.

Never underestimate the dedication and zeal of the Communists for their cause.

That is why this huge rally of Tulsa's youth today is important. We must show ourselves and the world that the missionary zeal and dedication that we have for our system of democracy and freedom is greater than their zest for and belief in their slave-state system. That is why we must on this day have a greater sense of responsibility for the preservation of our heritage than can be lathered into the pageantry in Red Square, Moscow—or in Peiping or Budapest or Prague or Warsaw. We must have it because we know and understand the great difference between our two systems.

In the kind of war that we face, hot or cold, we must understand that our enthusiasm for our system must be more sustained, more enduring, more vigorous and more intelligently directed than the Communists can muster from their regimented captive peoples. If we de not have this sustained sense of enthusiasm against all obstacles, we may lose the conflict in the years to come.

There are times, as we face them now, when the tide of battle in the invisible war seems to run against us and the course of freedom everywhere. These are merely individual battles, only a small part of the enduring and lasting conflict that may go on for decades before this threat of Communist domination of the world wil be ended.

RUSSIANS NOT 10 FEET TALL

We would make great errors if we suddenly decided that the Russian Communists have grown 10 feet tall, or that their achievement of a man in space marked the final decision in the conflict. They have their failures, too, although a controlled press can hide their failures while we tell the world of all our actions, good or bad.

In such conflict, whether in actual brush war as in Laos today, or in Cuba, the fortunes may go temporarily against us. These reversals must not be a time for despair or a signal to weaken us in our purpose. They signal instead a time for reexamination of the broad scope of the conflict and of its ever-changing course. They should inspire Americans everywhere to new vigor and new determination to build our strength and our determination to carry on to a final victory.

Russians and their captives are of the oriental mind. Time means little to them as they calculate the impatience of the Western World. If a score of years finds them ahead of where they are today—they mark it as a victory of great importance. They hope that because of the impatience of America and our Western allies, they can wear us out as we weary of the continuous tensions and conflict. Sustained, determined, steadfast we must be in order not to fall victims of the fatigue of the ebb and flow of the cold war fortunes.

Perhaps we are facing a new and a different call to duty in the battalions of freedom than our forefathers answered. Theirs was a call to die for freedom if it were necessary. Ours may be to risk dying, but also to be ever conscious that we must be willing to think for our country, to understand the cold, calculating movements of the Communist conspiracy in every part of the world, and to react with a clear, unimpassioned mind in the way that will best serve America and uphold the shield of liberty we carry for most of the free world as well.

The long, tedious task of constant readiness to fight if need be with conventional weapons or with missiles may be the duty of this generation. But on top of this military readiness must be even other offensive weapons in the field of winning the hearts and minds of a billion of the world's people in the new and uncommitted nations. This billion of the world's population will look either to the United States or to communism for leadership in the decades to come.

THINK FOR COUNTRY

Today some of them lean toward communism in the new nations of Africa, southeast Asia, the Middle East, and in Latin America. They are not lost to the free world, yet, but the siren song of quick industrialization, a better standard of living, and world trade with the Iron Curtain bloc is false, but attractive bait to undeveloped nations emerging from centuries of colonial rule. What a shame it would be in modern history if these people won their freedom from one form of colonial rule to exchange it for a more ruthless, vicious colonial system under the Communist hammer and sickle.

Thus, we must not only be prepared to die for America and freedom in today's threat, but to think and serve in ways that will make it possible to prevent this world's domination by communism, of which Mr. Khrushchev so often boasts.

This one-third of the world's people must be permitted to see the good and the bad in our system of democracy by our acts and deeds, not just our words. And it must be made possible for them to see clearly, without the rose-colored glasses of Communist propaganda, the acts and deeds, not just words, of the Kremlin conspiracy.

To do this will take great efforts, not on the battlefield, but in the schoolroom, in the laboratories, in the hospitals, in the mines and on the farms of the farflung areas of the continents were these billion people live. We, with our science and our feeling of the brotherhood of man, must find ways to show the true and kindly face, the humanitarian face, of Uncle Sam. We must show that, while our fist is a strong shield of freedom, the hand is open in friendship and in cooperation for their chance to develop a prosperous, progressive freedom-loving democracy where man is the master of his own destiny, the author of his own scheme of business, the owner of his own enterprise, and the one who can make his own decisions instead of carrying out the orders of a foreign master.

SHOW BY DEEDS OUR LOYALTY

We must show them by deeds, not words, that we on the freedom side of the world seek friends and partners, not slaves or automatons carrying out the orders of distant masters.

By unlocking the secrets of nature through atomic research in health, engineering, and peaceful power, by transforming the salty waters of the seas surrounding desert lands into vast sources of usable irrigation water, by engineering and by education, we can with the perseverance, patience and endurance that the conflict requires, in God's good time roll back the Iron Curtain so that democracy and freedom will again take the offensive.

And in so doing, by our concern for the freedom and development of all manner of men, we earn anew for centuries to come the right to be known as the defender of man's precious freedoms and the friend who helped a billion of the world's underprivileged people to find their way into the 20th century.

The Innocent American

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. WESTLAND. Mr. Speaker, when President Sukarno visited Washington in late April, I questioned the red carpet treatment he received. Others also questioned our all-out welcome in light of Indonesia's relationship with the Soviet Union and its President's guided democracy. Among those who viewed this display of hospitality as unnecessary and undeserved were the Seattle Post-Intelligencer and the New York Journal-American.

Subsequently, I have read an editorial in the Djakarta Daily Mail, an English-language newspaper published in Indonesia's capital, which takes me and the Journal-American to task. I believe that this editorial is worth the few minutes time it would take Members of this body to read it.

Mr. Speaker, I want to point out the full implication of this editorial. In the two paragraphs just before the last one, the newspaper says in effect that America must buy Indonesia's friendship, otherwise she will sell herself to Russia. The $450 million Indonesia received in military aid from Russia in January may have been the downpayment.

You cannot buy friendship with a few million silver dollars or a chunk of gold. We did not buy the Dutch. Our friendship is built on mutual respect and purpose and sealed with mutual loss of blood in a bitter war against a common enemy, an enemy with whom Sukarno cooperated.

It is possible Indonesia's guided democracy is being directed toward the Communist camp and the editorial indicates that the Djakarta Daily Mail may approve.

The editorial follows:

THE INNOCENT AMERICAN

A Republican Congressman JACK WESTLAND has found it necessary to question the red carpet treatment accorded to President Sukarno during his recent informal visit to the United States.

Said he: "President Kennedy has accorded President Sukarno a most cordial welcome despite the fact that he has repeatedly criticized the United States and just recently received $450 million from the Soviets to be

used against the Dutch who are our proven friends.

Echoing the Republican Congressman's anti-Indonesia barrage, the newspaper New York Journal-American declared: "The red carpet treatment accorded to Indonesian President Sukarno who is scheming to grab West New Guinea, the last remnant of the Dutch East Indies and impose on it a new Sukarno imperialism, is a totally unnecessary display of hospitality to one who has done nothing to deserve it."

So, the fight is on between the "beautiful, innocent American and the ugly American." The black sheep, President Sukarno of independent, actively and positively nonalined Indonesia. The stake, American democracy.

Indonesia's view on this uncalled for blistering attack? Let the dogs bark while the caravan finds its way with its strictly nonalined policy and guided democracy, until the liberation of Irian Barat as General Nasution said it, has been peacefully realized.

With or without the reactionary blessings of Congressman JACK WESTLAND and the New York Journal American, the Indonesian caravan will move on to meet its moral commitments toward the Indonesians still living in bondage under the Dutch in Irian Barat.

Anyway, barking dogs do not bite. If they do bite at all, they will bite their own kinds only, while a third one, the real enemy, gets away with the spoils.

How pitifully childish can one be? How ugly must the "Ugly American" appear in the eyes of beautiful innocent Congressman JACK WESTLAND and the New York Journal American? And how dangerously narrow can the mind become when lost in a democracy Monroe-ism brew?

Let the dogs bark, while we continue with our guided democracy caravan that is positively against imperialism, whether new or old, whether it comes from JACK WESTLAND and New York Journal American's proven Dutch friends or not.

If Congressman JACK WESTLAND and the other Americans of his kind choose to sit on their money rather than help Indonesia to achieve prosperity for all and real democracy, let them.

The caravan will roll on, on, and on, with somebody else's dollars, like for instance, the $450 million from Russia. If and when that happens, we can just imagine how JACK WESTLAND and New York Journal American will yell and scream about communism in Indonesia.

How sadly ridiculous can be the reasoning of this "innocent American" by the name of JACK WESTLAND, who obviously had the courage to insult a visiting friendly President, but who very likely was cringing in his corner when his own Republican President was made a fool of by Khrushchev, in Paris last summer.

Relocation of Right of Way of Canyon Power Project Tunnel Aqueduct, California

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. ENGLE. Mr. President, it gives me great pleasure to call to the attention of my distinguished colleagues the Department of the Interior's approval of an application by the city and county of San Francisco to relocate a right-of-way for the canyon power project tunnel aqueduct to be constructed between O'Shaughnessy Dam at Hetch Hetchy Reservoir in Yosemite National Park and the Early Intake in Stanislaus National Forest.

This approval, pending for 2 years under the previous administration, was accomplished in little more than 3 months after the present administration took office, with Secretary Stewart Udall directing the operation of the Department of the Interior.

The relocation of the right-of-way will save the city of San Francisco approximately $1 million in construction costs. At the same time, the approval bound the city to engineering and esthetic considerations which will guarantee the preservation of fish and wildlife under optimum conditions and maintain the natural beauty of the site.

San Francisco Representative JOHN F. SHELLEY maintained close contact with the Interior Department in settlement of what at first appeared to be conflicting interests. Representative SHELLEY is widely and fondly known for his ability to negotiate happy conclusions to troubled situations.

It is proper that the Congressman's efforts are fully appreciated in his native city of San Francisco.

It gives me pleasure to call attention to the excellent editorial which appeared in the San Franciso Examiner, May 3, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MAJOR SERVICE

For months it has been touch and go as to whether San Francisco would get the required Federal permit to relocate the aqueduct for its $21 million canyon power project on the north side of Tuolumne Canyon in the Sierra. The relocation involves a saving of $1 million to the city.

This week, thanks largely to the quiet efforts of Congressman JOHN F. SHELLEY, the permit was granted. Wisely, the permit requires the city to maintain a streamflow and preserve recreational values in the canyon.

We congratulate Congressman SHELLEY for performing a major service to this city.

H.R. 6611

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. DULSKI. Mr. Speaker, on Monday of this week the House considered H.R. 6611, providing for a temporary reduction in the duty free allowance for returning American tourists. I support the basic principle of this legislation, but I believe sincerely that it should not apply to imports from our neighbors, Canada and Mexico.

Under the legislative procedures, it was not possible to amend the bill to except these imports from contiguous countries. Therefore, I had no choice but to oppose this legislation. On Wednesday, May 17, the House will vote on this bill.

Believing as I do in the basic principle of this legislation I am today introducing a substitute bill which carries out the fundamental intent but excepts imports from the two contiguous nations, Canada and Mexico.

Kiplinger Sheds Light on Farm Bill

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. COOLEY. Mr. Speaker, the Kiplinger Agricultural Letter, published on Saturday, May 13, was like a bright sun breaking through cloud, fog and mist. I commend the Kiplinger editors for bringing into the true light of day the farm legislation with which this body soon must deal.

By permission of the House, I am inserting the first part of this letter in the Appendix of the RECORD, in the thought that it will be helpful to the members in the enactment of a sound agricultural bill which will afford our farmers an opportunity to share equitably in our free enterprise economy:

THE KIPLINGER AGRICULTURAL LETTER,
Washington, D.C., May 13, 1961.

DEAR SIR: You may wonder what to believe now about the omnibus farm bill after the sweeping statements this week by Shuman of the Farm Bureau.

Shuman heads one of the biggest farm groups and is the first major farm organization spokesman to speak out in complete opposition. Grange, Farmers Union, co-ops, and others have testified for the bill.

Thus Shuman becomes the rallying point for the opposing forces and that makes it important to understand his view for perspective.

Shuman went overboard in his denunciation of the omnibus bill, in opinion of many farm experts on both sides of the political fence.

He is out to kill the omnibus farm bill, and no holds barred. The tactics are the same as those refined by former Agriculture Secretary Benson to whip up public animosity to all farm programs, and same as were used 11 years ago to beat the Brannan plan; big controversy of that time.

This means the bill may not be judged strictly on its merits.

Here's where Shuman went off the deep end. He says the bill would regiment all farmers. It is impossible for anyone to know that, simply because bill does not set up programs but merely provides a procedure for setting them up at a later date.

Safeguards exist in the bill and others can be built into it which further rule out this possibility. For example, two-thirds of growers of any commodity would have to approve a program to put it into effect.

His charge that the bill would cost 15 to 20 billions is unfounded, as he admitted later on in Senate hearings. Still, this made headlines and reinforced the public misunderstanding about the farmers' problems.

Charge assumes that all commodities would get Government programs. But the blunt truth is that most commodities would

not get them. The bill provides fire extinguishers which growers can get to help them, but only if a majority wants them * * * and then only if in price trouble. Agriculture Secretary could raise no support levels without Congress consent.

Shuman's claim that the bill would reduce powers of Congress had been met by earlier changes in the omnibus bill—nothing to it now.

Under terms of bill—which could be changed now or later—Congress can approve or disapprove any plan, or write its own program. City-dominated Congress will continue to have final say on the programs.

So, net, there is nothing in the bill to regiment farmers, there is nothing in bill indicating $15 ot $20 billion in Government costs, and there also is nothing in the bill asking Congress to abdicate.

Involved is basic idea conflict on role of Government in farming. You may agree with Shuman that farm economy can right its own wrongs and gain prosperity with less Government, or you may disagree on the basis that Government has a responsibility to assure strength in the economy.

But no matter where you sit, it's important to know the facts.

The Emergency Feed-Grain Program

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an advertisement that appeared in a newspaper in the State of Minnesota, the Fairmont (Minn.) Sentinel, under date of April 28. The advertisement was placed in the paper by some of the farmers and other leading citizens of the area. It is entitled "The Emergency Feed-Grain Program" and it spells out the purpose of the feed-grain program that was recommended by the President and the Secretary of Agriculture and passed by the Congress.

The record in my State is remarkable. About 70 percent of the eligible farmers in this program are now active participants. The program is going to work. It is a good program. It was the first major farm legislation offered by the administration. I compliment the Secretary of Agriculture and the President upon their foresight. We again see farmers participating in a farm program, and for one reason. They have faith in the Department of Agriculture, in the Secretary of Agriculture, and in the administration. It is only on the basis of such faith that we can have farmer participation—a faith which in recent years was almost destroyed, but which is now being revived.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

THE EMERGENCY FEED-GRAIN PROGRAM

Millions of farmers, acting individually, cannot effectively influence the total output or the price of the products they sell, but cooperating in this feed-grain program will do it.

WHY FARMERS JOIN

There is some talk about the need of reducing the corn surplus but the principal inducement is financial.

By reducing the corn acres by 20 percent as compared with his average for the last 2 years, a farmer is assured a price support based on the national average of $1.20 per bushel of corn, and in addition, he gets paid for conservation practices which might be as much as $32.40 per acre for the first 20 percent and $38.90 per acre for the next 20 percent of allowed acres of corn.

For details contact your ASC office as soon as possible. The time for signing closes on June 1, 1961.

A farmer who also sells seed corn recommends this program even though his sales will be reduced by about 20 percent.

The manager of a co-op, selling fertilizer, advocates this program even though it will reduce his sale of fertilizer.

In Iowa, bankers are trying to encourage people to go into this program. They feel their customers need the money.

Many livestock feeders appear ready to join; they figured it will benefit them, too.

The new feed-grain program, in the minds of both farmers and business, holds a promise of reversing the trends of recent years.

Your neighbor signed up; why don't you?

NEA Survey Shows Many Changes Now Underway in Agriculture

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. McINTIRE. Mr. Speaker, agriculture has many dimensions, taking diverse forms and evidencing varying prospects in different geographical locations.

I insert into the RECORD an article depicting a sectional sampling of agriculture in America. This article has been extracted from the May 1961 issue of the National Publisher, which is published by the National Editorial Association:

NEA SURVEY SHOWS MANY CHANGES NOW UNDERWAY IN AGRICULTURE

Though farm income has fallen sharply in some areas in the last 10 years, many of the Nation's farmers are holding their own and some are doing better than ever before. What accounts for the difference?

A survey of the National Editorial Association's agricultural committee members, just completed by the National Publisher, shows that fast-moving changes are taking place in agriculture today. The trend is toward fewer but larger farms, more mechanization, and in some areas, such as the South, there is a wholesale shift from the production of traditional crops to more diversified farming.

Where readjustments are taking place, the cost-price squeeze has not been hurting farmers so much. Nonetheless, small farms, particularly in the northeast, are being abandoned or sold to city residents for summer homes or hunting preserves. Geography, always a major factor in farming success, is reflected in the changing pattern of agriculture. Here is a regional breakdown of reports from the members of NEA's agriculture committee.

NORTHEAST

Roswell R. Sanford, of the Catskill Mountain News, Margaretville, N.Y., reports that dairy farming is the largest industry in his county, and milk is the direct or indirect source of income for almost every businessman in the area. When farmers prosper, he says, so does everyone.

Right now the farm economy in his area is in a state of flux. The small 25-cow family farm is rapidly going out of business. The better land is being absorbed into larger producing units and some farms are being abandoned. Few young people are interested in becoming farmers.

The big local issue, he says, is support prices. Farmers in his area fear that proposed feed grain supports will raise the price of cattle feed with little or no increase ahead in the price farmers get for milk.

In Vermont, says Otis F. Rockwood, of the Rockwood Publications, Vergennes, Vt., dairying produces more dollars than any other line of farming. In his area the view is held that President Kennedy's farm program, as so far announced, is not going to help the Vermont milk producer.

Most Vermont farmers are suspicious of his price supports. They have an uneasy feeling that the promises to let farmers write their own programs do not square with the unfolding shape of the pending bills that look in the direction of tighter controls.

MIDDLE ATLANTIC

In southern New Jersey John A. Vernon, of the Plain Dealer, Williamstown, N.J., reports that truck farming is on the decline but poultry farms are holding their own. He estimates that overall farm income in his area is down about 25 percent from 10 years ago. A big reason for the decline, he feels, is the shortage of good farm labor.

In contrast Phillip St. C. Thompson, of Stromberg Publications, Ellicott City, Md., reports that the farm economy is very sound in his area and in the State in general. He says "we are near large metropolitan markets and most of the production is in perishable products that have a constant demand." Nonetheless, he notes that although his county's population has increased 55 percent since 1950, the number of farms has decreased by 30.4 percent and total production of agricultural products has remained at the 1950 level.

Thompson says the best service hometown publishers and all news media can give to agriculture is sound public relations information and factual reporting. He adds "I am distressed about articles that have damaged farm economy in the past. Since agriculture is responsible for 40 percent of the Nation's economy, I feel we of the newspaper industry should give the farmers of America a boost and be sure that we stick to factual reporting."

MIDWEST

In many areas of the Midwest farm income has fallen markedly in the past 10 years and there appear few signs of any immediate upturn.

Noteworthy is a report from Tom W. Eylar, of the Defender Publishing Co., West Union, Ohio. Eylar says "farm income is falling so fast that many farmers have to seek aid from relief agencies to exist."

In his area, he says, there is little industry, agriculture is of small scale and some type of employment on a part-time basis would do more to help the farmer than anything else.

In Iowa the situation is somewhat different. C. D. Elling, of the Garner (Iowa) Leader, cochairman of the NEA Agriculture Committee, reports that while the farm economy in the Midwest is down and an immediate uptrend is not foreseen, the distant outlook on our area is good.

He says the size of family farm in his area is constantly growing, rural zoning is becomming an important issue, and there is a good trend of industry to rural areas and small towns.

Elling points out "the newspapers in this area promote 4–H Club activities, the farm bureau, junior fair, rural development, and other relevant programs," and adds, "This is our obligation and responsibility for a brighter, progressive, and more prosperous rural Midwest—especially in the agricultural State of Iowa."

The viselike grip of the price-cost squeeze is being felt in Wisconsin as it is in many other areas, says Walter E. Gleason, of the Tribune Gazette, Clintonville, Wis. Although industry is employing more and more people each year in this area, the economy is still based on agriculture in general and dairying in particular.

One farmer interviewed by Gleason put it this way: "The average northeastern Wisconsin dairy farmer received only 39 cents per hour for his labor in 1959. How does he live? Part-time and full-time jobs in industries have cushioned many farm family pocketbooks and have kept the rural economy in better shape than might otherwise have been the case.

"Another economic factor should be mentioned. Twenty-five percent of the dairy herds are too small to make for an efficient operation. Most of these operators are trying to expand. Small and large dairy farmers in this area are faced with a need to increase production in order to improve their income and to lower units cost. Supplies already are excessive and if all farmers accomplished this increase the price decline will more than offset the gains made. This is the dilemma facing the Wisconsin dairyman."

This farmer continues "the supply-management idea of the Kennedy administration has been getting some attention here in the form of a quota plan for milk with the rather significant favorable reaction of most larger, efficient producers and lukewarm to hostile reaction of some small producers."

As a publisher, Gleason adds, he has been trying to "play down the middle" on the farm problem, discouraging reliance upon governmental action and encouraging greater efficiency on farms. "We do all we can to bring farm life into its properly important place in our community picture," he says. "We don't treat the farm problem. We record the news about farming at every opportunity."

Other areas of the Midwest appear to be faring very well in this period of transition. Reporting from Illinois, Donald T. Forsythe, of the Hancock County (Ill.) Journal, says his community is almost wholly dependent on farm income and that business fluctuates with the farm situation which "has been consistently good for the last several years."

He reports no major farm issue in the area outside of the ever present support problem.

Rural development is the biggest local farm issue in his area, reports Robert Cummings, editor of the Cannelton (Ind.) News. He says "in this day of mechanization of farming the trend toward big acreages on farms has caused a need for part-time farming and part-time employment elsewhere for our rural residents.

"At our newspaper we help vigorously in promoting 4–H, industrial development, rural development, and farm surveys to know our local agricultural problems so that they can be remedied."

SOUTH

The farm picture appears bright in Arkansas according to a report from Melvin Schexnayder, of the Dumas (Ark.) Clarion. In his area cotton is being mechanized and modern production methods are being introduced and expanded for rice and soybeans. The new developments, he says, have doubled the size of farms and boosted the value of land.

He explains that while the number of farm operators has decreased sharply, agriculture-connected industries are beginning to take up the slack in the area. Of Dumas' 17 homegrown industries, originated with local initiative and capital, all but 6 are directly connected with agriculture.

With agriculture so much a part of our economy, he says, the Clarion devotes a great amount of space and time to farming news and promotions, including such items and activities as the promotion of cotton uses, the establishment of the only farm-raised fish plant in the United States, twice yearly rice promotions, stressing the value of marketing plants for such crops as soybeans, grains and vegetables, and countywide agricultural planning.

Diversification has opened the door to greater farm profits in Mississippi says J. O. Emmerich, of the McComb (Miss.) Enterprise Journal. He reports that farmers' income has increased in Mississippi as the result of diversified changes. Specifically, we have changed from row crops, largely cotton, to livestock, dairying, tree farming and poultry.

While cotton remains dominant in the delta section of the State, he says "Mississippi now has more cattle than any State east of the Mississippi, leads the Nation in the number of tree farms, is the State with the largest tung oil production, and the world's largest broiler plant, world's largest pecan orchard, and world's largest cotton plantation. In some areas of livestock we have broken the world's selling prices in pedigree stock."

Emmerich adds that the outlook for continued agricultural progress in the area looks good and that his paper is cooperating in every way possible to keep the farm economy moving ahead.

SOUTHWEST

As in the South the farm economy in the Southwest is exceptionally strong and for many of the same reasons. Jessie Stewart, of the Ochiltree County Herald, Perryton, Tex., reports that "the status of the farm economy throughout this area is exceptionally good; much above the average. The per capita farm indebtedness is very small; the outlook for the future of farming is exceptionally good."

Besides a thriving agriculture she reports that oil and gas discoveries since 1956 are providing new income to many farmers.

The big local farm issue is the Government's farm program on which, she says, many farmers of her area take the position that the program is unfair to them and they are against Government support of any type.

Bob Lee Kidd, Jr., of the News-Sun, Poteau, Okla., on the other hand reports that "the farm economy in extreme eastern Oklahoma must be boosted if the farmers and ranchers and the communities in the area are to be helped." But, he does not feel that "any pump priming on the part of the Government will materially assist the economy."

NORTHWEST

The farm economy is booming in Oregon according to Bill Robinson, of the Madras (Ore.) Pioneer. He says "farm income figures for 1960 show a gross of $13,534,400, an alltime high. Potatoes topped the crops with $3,700,000. Beef showed a gross of $3,620,000. Wheat with a gross of $1,073,000 will remain fairly constant. Peppermint, a relatively new crop, will gross over a million in 1961."

As to the future, his area is adjacent to the Portland metropolitan market and he feels that expanded farm production is almost inevitable. He adds, "many of the farmers are young men with keen interest in new crops and new methods."

Much the same situation is described by Gerald Bardo, of the Lusk (Wyo.) Herald. He reports few marginal operations in his area and says that both the cattle industry and wheat farming are in a healthy condition. However, the sheep industry is in a precarious position, "dependent as it is on the whims of governmental favor in relation to foreign competition."

As to the role of his newspaper, he says, he "has worked closely with the farm bureau and the extension service programs in the belief that considerable strength for America lies in this field and the related 4–H program, and that the future of our small rural towns is dependent on cooperation and understanding between town and country."

SUMMARY

While farm income is down in some areas, it is holding steady or is actually up in others. Major factors in areas of higher farm income appear to be shifts to more profitable crops, more efficient farming methods, and new industries which provide part-time income for farm families.

In all areas of the country the survey indicates that hometown newspapers are doing their part by keeping farmers up to date on changes that will bring them more income, supporting programs which benefit the farm economy, and interpreting agriculture fairly to town and city residents.

FARMERS ARE GOOD CUSTOMERS

American farmers are among the best customers of industry and business. They spend $40 to $41 billion every year to produce crops and livestock and to buy consumer items such as appliances, automobiles, television sets, clothing, furniture, and, yes, food.

The cost of producing 1959 crops and livestock was $26.2 billion. It probably was $100 million higher in 1960. Other purchases of farmers run around $15 billion a year. Those are figures from the U.S. Department of Agriculture.

On top of these production and living costs, there are capital expenditures by farmers—big ones.

Look at some of the bills the farmer paid in 1959 in order to run his business of farming, and see where it meant income for you:

Fertilizer and lime, $1.4 billion.

Petroleum fuel and oil, $1.5 billion.

Cost of other motor vehicle operation, $1.4 billion.

Pesticides, $250 million.

Short-term interest, $617 million, and interest on farm mortgage debt, $580 million.

Electricity, $147 million.

Insurance (fire, wind, and hail), $200 million.

Telephones, $131 million.

Veterinary services and medicines, $168 million.

Dairy supplies, $52 million.

The cotton farmer spent $219 million to have his cotton ginned; the dairy farmer $180 for milk hauling.

The containers used on the farm to package farm products cost $139 million.

Although the farmer spends $2.5 to $3 billion a year for new farm tractors and other motor vehicles, machinery and equipment, he still used in 1959 about $30 million worth of small handtools.

The 1959 feed bill of the farmer was $4.6 billion. He bought livestock costing him $2.7 billion. The seed he bought cost $534 million.

The farmer in 1959 spent more for nearly every production item (except some like harness and saddlery) than he did in 1949.

And the farmer, if he meets the demand of our estimated 230 million people in 1975,

will require more and more nonfarm inputs—more machinery, more fertilizer, and more of other input items.

Department of Agriculture economists estimate that the total demand for farm products will be 35 percent greater in 1975 than in the late 1950's. We'll need, they say, 45 percent more livestock and 25 percent more crops to supply the demand of 230 million Americans and of the growing number of oversea customers for U.S. farm products.

Budgetary Reforms

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. KUCHEL. Mr. President, Members of the Senate will be interested in the valiant fight, now being waged by a distinguished Member of the House of Representatives, to implement the Kennedy Budget Reform Act designed to offset huge deficits in Federal spending. Representative F. BRADFORD MORSE of Massachusetts has been urging the administration to consider adopting those steps necessary to give full effect to a Hoover Commission recommendation, written into law by the Congress, under the leadership of the President, when he was a Senator from Massachusetts. This act would bring up for annual congressional scrutiny unobligated and unexpended carryover funds in executive departments. The law is in the public interest. MORSE deserves great credit for his leadership in this field.

Discussing the exertions which Mr. MORSE is making, Mr. Raymond Moley, in an article published in the Los Angeles Times of April 25, comments favorably on those activities of Mr. MORSE. I ask unanimous consent that Mr. Moley's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT URGED TO PUSH REFORM THAT HE ADVOCATED AS A SENATOR

(By Raymond Moley)

BRADFORD MORSE, new Congressman from Massachusetts, has called upon the President to put into effect a reform which was sponsored by Mr. Kennedy in 1957 when he was a Senator.

This legislation, which passed the Senate by unanimous vote and later by a large majority in the House, was designed to enforce one of the major recommendations of the second Hoover Commission, of which the President's father, Joseph P. Kennedy, was a member. The bill became Public Law 85–759.

In its report early in the Eisenhower administration the Hoover Commission called attention to a longstanding defect in the method of making up the annual budget and in the practices of the Appropriations Committees of Congress. Reduced to simple, nontechnical terms it was this:

On the recommendation of the Appropriations Committees Congress was in the habit of voting funds for new programs annually. But since many such appropriations were not spent in the year designated they were marked as "obligated" and carried over from year to year.

In the years which followed there was no review of these unexpended funds by the Appropriation Committees of Congress. Thus Congress lost control of expenditures and could not control or even predict accurately the amount to be spent.

The recommendation of the Hoover Commission was that Congress should by law and in practice review annually not only the requests for new appropriations for new purposes but should take into review all of the unexpended balances from previous authorizations and appropriations.

This would bring into focus annually the real fiscal situation of the Government and its many agencies.

This bill, in combination with the cost-basis bill passed last year, would give us far greater control over the amounts of money the Government will spend in each year.

But despite the urging of President Eisenhower in two of his budget messages following the passage of Public Law 85–759, the House Appropriations Committee refused to put the plan into practice.

In his letter to the President, Representative MORSE expressed disappointment that President Kennedy has not recommended that the provisions of his own plan be adopted.

In reply a special counsel to the President noted that the idea has been adopted in the requests for appropriations by 75 percent of the civilian agencies and that the President had urged that the remaining agencies, including the Defense Department, get their accounting in shape.

As MORSE pointed out, the various departments were carrying over from past appropriations in the form of obligated funds the vast total of over $37 billion. Over much of this Congress simply has refused to assume reviewing responsibility.

The value of such a reform, if the President would put the heat upon a Congress of his own party, would be that in a year such as this it might be possible to balance the budget by simply looking over these projects and programs to see if some could be deferred or dropped entirely.

Now since a deficit will appear this year and a larger one next year it should be the determined policy of the President and of Congress to prevent these inflationary drains. In short it is time for the Government to put its house in order.

Opposition to Proposed Department of Urban Affairs and Housing

EXTENSION OF REMARKS
OF
HON. JOHN B. ANDERSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. ANDERSON of Illinois. Mr. Speaker, on April 18, 1961, the administration submitted to Congress draft legislation to create a Department of Urban Affairs and Housing. This bill would submerge the activities of the Housing and Home Finance Agency into a new Cabinet-rank Department and add a new administrative layer onto the housing programs. My attention has been called to an excellent editorial on this subject printed in the Reading (Pa.) Eagle, commenting with favor on a speech in opposition to the new Department, made by Mr. O. G. Powell, president of the National Association of Real Estate Boards. I hope that the House Committee on Government Operations in its deliberations will weigh carefully the issues involved in this bill and the implications it has on the size and efficiency of the Federal Government. Under leave to extend my remarks, I would like to have the editorial inserted in the RECORD.

NEW POST OPPOSED

The 70,000-member National Association of Real Estate Boards (NAREB) recently went on record as opposed to President Kennedy's proposal to create a Department of Urban Affairs and Housing, headed by a person of Cabinet rank.

Speaking at the recent annual convention of the Missouri Real Estate Association in St. Joseph, Mo., O. G. Powell, NAREB president, warned that such a proposal will "complete the erosion of our system of Federal-State-local relations."

Observing that the country's cities "paid handsome tributes to the majority party in the last election," Mr. Powell said that perhaps it is only human for the cities to want something in return.

Noting that the cities are aware the Federal Government has preempted most of the sources of tax revenue, he asserted: "Rather than use their tremendous voting power to get the Federal Government away from the taxpayers' trough, they apparently have decided that they might as well join up and get it while they can."

The NAREB leader was apparently referring to the strong support given to the President's proposal by the U.S. Conference of Mayors.

Speculating on what such a proposal would mean to local responsibility for the solution of problems that are inherently local, Mr. Powell expressed fear that this approach "will soon create a situation in which the mayors of our cities will have little to do other than perform the ministerial task of distributing Federal money."

He traced the suggested creation of the new Federal department to its inclusion in the Democratic platform at the request of mayors of large cities who cited a wide variety of problem areas, and added these areas affect all of the American people—not just large cities.

He noted these problem areas included public health, water and air pollution, airports, highways and railroads, unemployment, the relocation of industry, fire protection and prevention, and civil defense.

Mr. Powell observed that many existing Federal departments are to be raided of some of their traditional functions (among those cited) in order to create the proposed new entity. And he warned that the existing departments are identified with national interests, and such interests have been the basis of their creation.

"The proposed Department of Urban Affairs," he said, "would be a departure from this broad national interest because it would be identified with the interests and objectives of a handful of metropolitan areas.

"If the Department of Urban Affairs is to have jurisdiction over these matters, then who will take care of the same problems as they affect the small towns and rural communities? Will it be necessary to create a Department of Small Towns and Rural Areas?"

Mr. Powell then quoted the National Association of County Officials, which expressed opposition to the proposed new department on the ground "that it would further weaken the States and would tend to create an unwieldy bureaucracy of the type found in many foreign countries."

As we pointed out in a preceding editorial, the creation of any new Cabinet setup in

Washington is inevitably accompanied by bureaucratic confusion and redtape, as well as calling for expenditures of vast sums of the taxpayers' money.

Since the "guy" (government in this case) who pays the bills will also end up by telling you how to spend your money, various city officials may well regret their original enthusiasm for the establishment of such a new department.

Yalta Again?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. DEROUNIAN. Mr. Speaker, with our studied retreat in Laos, the following article by David Lawrence in today's New York Herald Tribune indicates that our direction is not toward a New Frontier of freedom, but toward the old frontier of Yalta.

Is it not about time the President was forthright with the American people?

TODAY IN WORLD AFFAIRS: SUMMIT MEETING NOW SEEN AS SIGN OF U.S. WEAKNESS

(By David Lawrence)

WASHINGTON, May 15.—If President Kennedy holds a summit meeting with Nikita Khrushchev—now reliably reported to be planned—this will be construed throughout the Communist world as a sign of America's weakness rather than strength, especially in the wake of the administration's retreats in Laos and Cuba.

It would be just as logical for Mr. Kennedy to meet with Fidel Castro. Both dictators have insulted a President of the United States. Both are guilty of mass murders and other international crimes. It was just a year ago that Nikita Khrushchev—after having invited the American President to visit Russia—deliberately refused to meet with him when the heads of government assembled at Paris. The Soviet Premier then withdrew the invitation in an outburst of vituperative propaganda. He hurled such epithets as thief and coward at President Eisenhower.

IMPROPER ATTACK

The excuse given for all this was the overflight of a U–2 plane which the Soviet Government knew was but one of a series of such flights for the previous 4 years. Also, though it was proper to lodge a diplomatic protest to the U.S. Government, it was highly improper to make a personal attack on the man who happened to be President of the United States. This was an act of ingratitude which put the Soviet people in an unfortunate light. For it was an insult to the very man who, as the commander in chief of the allied forces in Europe during World War II, had helped to save the Russian people from being overrun by Hitler's armies. If there had not been the successful invasion of North Africa and then of southern Europe led by General Eisenhower, the Nazi forces would have been free to pursue their invasion of Soviet territory on the eastern front.

The U–2 episode was a pertinent subject for debate in diplomatic channels. There is, for instance, no clear-cut understanding among international lawyers as to how high planes or sputniks may fly over a country without permission. Nor is there any persuasive argument in international law against the privilege of a government to protect itself against surprise attack, especially when an adversary is conducting espionage and a cold war throughout the world.

FUTILE CONFERENCES

But, it will be said, President Eisenhower did go to Geneva in 1955 to participate in a summit conference and was ready to go into another such meeting in 1960 in Paris. The truth is that the futility of such conferences has been pointed out repeatedly by many observers, including this one, ever since such meetings were first suggested.

It is to be noted that Vice President Nixon a few days ago, in a public comment, urged President Kennedy to meet with Nikita Khrushchev. But this by no means takes away from the present occupant of the White House the responsibility for participating in such a meeting.

It will be recalled that again and again President Kennedy has intimated—and his Secretary of State, Dean Rusk, has spelled it out—that there ought to be no summit meetings unless some agreement has been previously achieved through diplomatic channels on important topics. The argument has been that summit meetings are all right to ratify agreements or understandings already reached at a lower level of diplomacy.

DIPLOMATIC PROGRESS

Mr. Kennedy started out rightly with an emphasis on quiet diplomacy in the hope of achieving a better relationship with the Soviet Government. If, as is claimed, some progress has been made by that method, then it is logical to continue that course rather than indulge in spectacles like the summit conferences. For Khrushchev's main purpose in such a meeting is to afford him a big opportunity for Soviet propaganda. Doubtless it will be broadcast throughout the Soviet Union that President Kennedy made good his offer of an apology publicized during the 1960 preconvention campaign.

There are two major forces in the world today than can affect the issue of peace or war. One is military—but this is being more and more decried as a form of suicide. The other is moral force.

The theory behind moral force is that, while it should never be the sole reliance of a nation, it should be used to the maximum before there is any resort to military power.

FREEDOM THE ISSUE

Primary in the use of moral force is the need for a repeated emphasis on the principles of human freedom. The United States is desirous of helping in every way to emancipate the Russian people and the other peoples behind the Iron Curtain so that some day they may rise up and establish a free government. The moment autocratic force of major proportions is eliminated, it becomes safe for arms to be reduced, and democracy can thrive in the world.

To kow-tow now to Nikita Khrushchev, however, only serves to dishearten the peoples behind the Iron Curtain, especially in the enslaved states bordering the Soviet Union where some day the revolt will inevitably begin. Whether the fateful day of liberation is many years away or nearer at hand is a matter of speculation, but for President Kennedy to ignore the insulting behavior of Nikita Khrushchev and to meet with him in Austria or elswhere cannot but set back and weaken the moral position of the democracies of the world.

Coast Guard Warrant Officer Corps

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief history and commentary on the Warrant Officer Corps of the Coast Guard, prepared by Mr. Mark B. Sandground.

A Coast Guard warrant officer is in the netherland between officer's status and enlisted rank. A warrant officer is a real specialist in the Coast Guard and is well regarded by all who have the opportunity to come in contact with them. They have an important role in today's technological military service setup:

A BRIEF HISTORY OF THE WARRANT OFFICER CORPS IN THE COAST GUARD

(By Mark B. Sandground)

The vessels of the original Revenue Marine, founded in 1790, were small cutters carrying 3 commissioned officers and from 12 to 20 men and boys. To almost the end of the 19th century there was no intermediate rank or grade between that of commissioned officer and the enlisted members comprising the crew. Rates of pay in general paralleled the current wages for like services in the merchant marine. As cutter sizes increased and with the advent of steam propulsion, the traditional sailing ship rates of boatswain, gunner, carpenter, cook, as well as specialist engineering ratings (oiler and water tender) had been added. However, it was not until 1898 that the status of these specialists was definitely fixed. During that year three General Orders were issued raising boatswains, carpenters, gunners, and machinists to a status above enlisted grades. These officers were "warranted" by the Secretary of the Treasury and authorized to be addressed as "mister." Distinctive uniforms were prescribed. By the act of May 26, 1906, further recognition was given by designating their status as warrant officers and, in addition, higher rates of pay and retirement benefits were granted. The act of April 16, 1908, required that candidates for warrant appointments must qualify by examination for promotion to that grade, rather than adhering to the older practice of being appointed by recommendation of commanding officers. It was not until 1920 that the officers and men of the Coast Guard attained parity in pay with naval pay scales (act of May 18, 1920). Since that time there has been a gradual movement toward making the Coast Guard warrant corps as much like that of the Navy as the mission of the service and essential differences between permit.

At present there is a definite place for the commissioned warrant and warrant officer corps in the Coast Guard. The service has many small isolated units. This is particularly the situation in the lifeboat stations, group commands, and small patrol craft. The complement and physical proportions of many of these units do not require a commissioned officer; in fact, the assignment of such would be a wasteful expenditure of the limited commissioned personnel. On the other hand, isolated location and operational requirements imposed on these units demands more than the authority of the chief petty officer for proper

maintenance of discipline and unit efficiency. The warrant or commissioned warrant officer is suitable to fill these billets. In some localities there will be in close proximity a lifeboat station with small patrol craft, a light station, and small light depot. When this and similar situations exist a group command is organized with a commissioned warrant officer as commander. In this manner the group receives the required on-the-spot supervision which it might not have the benefit of, if a lower grade were in charge and the necessary authority to administer discipline lay in the hands of a distantly located commissioned officer. Further, the Coast Guard has small tenders and patrol vessels in isolated locations, performing somewhat specialized tasks. Here again the warrant officer fills the need of having a proper person in charge when the requirements of the assignments do not merit the assignment of a commissioned officer. In addition to the above-mentioned factors, there is the time-proven necessity of having warrant specialists, the boatswains, machinists, electricians, carpenters, etc., to serve afloat and ashore, to provide the knowledge and know-how gained by practical experience, which commissioned officers are often unable to acquire due to the demands of their diversified duties and advanced study.

The Addition of Electric Generating Facilities to the New Plutonium Production Reactor at Hanford, Wash., at a Cost of $95 Million Not in Best Interest of All the American People

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. VAN ZANDT. Mr. Speaker, about 2 weeks ago Congress gave its final approval to the depressed areas bill authorizing almost $400 million for loans and grants to revitalize depressed areas. I supported that legislation because it was for the national good as well as for the good of my constituents. But, now I want to call attention to a proposal that will come before the Joint Committee on Atomic Energy May 17 which, if approved, would result in spending $95 million of Federal funds—taxpayers' funds—that would further aggravate the conditions we are trying to correct. I refer to the proposed addition of electric generating facilities to the new plutonium production reactor being constructed at Hanford, Wash.

The needless expenditure of this $95 million would, in my opinion, be contrary to the best interests of the citizens. It would result only in producing heavily subsidized electricity by nuclear fuel which would be used to lure industries away from other areas where there is a serious need for additional employment opportunities.

Present challenges facing this Nation from international tensions have already placed considerable stress on available Federal finances. As the trend seems to continue toward the Government doing more and more for everybody and because greater use of the back-door spending mechanism makes it easier to spend tremendous amounts of money, it has become a matter of the utmost urgency for every thoughtful Member of Congress to evaluate each new spending proposal very carefully. There seems to be a serious relaxation of what used to be considered as fiscal guidelines so we should determine whether such spending is absolutely necessary and is the best possible utilization of available funds.

With this in mind, let us look at the $95 million proposal to add electric generating facilities to the new Hanford plutonium production reactor.

Many of us remember the House debate in July 1958 on authorizing construction of the plutonium production reactor at Hanford. It was to cost $145 million, including $25 million to allow for subsequent addition of electric generating facilities if and when Congress should authorize it.

There were clear assurances in 1958, however, that incorporating convertibility features in the project to the tune of $25 million would not commit Congress to the actual addition of electric generating equipment at some later date. In fact, during debate on the project, the Vice Chairman of the Joint Committee on Atomic Energy said:

> I want to say and reiterate that by passage of the authorization legislation today we shall not in any way commit ourselves ever to convert the plant.

Let us not forget this important point—there is absolutely no commitment for Congress to proceed with adding generating facilities to Hanford now or even in the future simply because it has equipment which would permit such an addition. The proposed Hanford steamplant can and should be considered solely on its merits or demerits.

I will not attempt at this time to elaborate on all the demerits of adding electric generating facilities to Hanford, because I, along with several of my colleagues, will have much to say about this project in the next few days. But, today, I will limit my remarks to its effect on other areas and resources of the country.

Mr. Speaker, I supported construction of the new production reactor in 1958 to produce weapons grade plutonium and asked other Members to support it also. During debate on that bill, I pointed out that nothing in the bill at that time—and I repeat at that time—should cause the coal industry concern because we were making no commitments to add electric generating facilities to the reactor. Now, however, this administration has requested authorization to proceed with the addition of these facilities, and this should cause serious concern to the coal industry. I do not say this merely because I am privileged to represent a coal mining area; but, rather, because this major industry represents a vital natural resource of America which is presently in a seriously depressed condition.

The proposal is to add about 700,000 kilowatts of generating capacity to Hanford. This is roughly equivalent to 2,319,000 tons of coal per year, based on an 85-percent load factor. The load factor may seem somewhat high to many, but let me quote from page 16 of the "Supplemental Report on New Production Reactor Power Plant Economic Feasibility Study" prepared by the Federal Power Commission and dated February 1961. The report states:

> An NPR maximum annual power plant factor of 85 percent has been adopted for comparison of NPR plant dependable capacity to that of conventional fuel-electric plants.

Since it takes less than one pound of coal to generate a kilowatt-hour of electricity in most modern steamplants, the total kilowatt-hours from the Hanford steamplant can be translated into 2,319,000 tons of coal.

This figure can also be expressed in terms of man-days of employment for miners in this depressed industry. An average of 12.12 tons of coal can be mined per man per day. This would mean that approximately 19,136 man-days of gainful employment could result from generating 700,000 kilowatts of electric power using a modern fossil fuel steamplant.

I recognize there is no proposal to construct an alternative steam facility of this size presently being considered. But I can assure you that if the future power needs of the area require such an additional block of power—and I might point out that the Bonneville Power Administration reported in its 1960 annual report there is a surplus of power in BPA—there are other resources that can be developed to meet the need, including conventional steamplants. In fact, some of the power companies in the Pacific Northwest are already planning for the time when steam generating units will be required on their own systems. For this reason, it might be said that adding these electric generating facilities to Hanford would further postpone the use of coal-fired stations to firm up much of the Pacific Northwest's nonfirm hydropower.

Mr. Speaker, another criticism I have of this proposal is even more important than the first. This is that $95 million of sorely needed Federal funds would be used in such a way as to further aggravate conditions which we have attempted to alleviate by enacting the depressed areas bill. A serious concern of the Congress at that time was to devise means to forestall shifting industrial enterprises from one area to another. But, the availability of such a large block of heavily subsidized power would be used to lure industrial enterprises away from other sections of the country that are in desperate need of additional employment opportunities.

In urging that these generating facilities be added to the Hanford reactor, the Bonneville Power Administration said to do so would make possible the early sale of an additional 400,000 kilowatts of firm industrial power. Such an appeal from the BPA is by no means new. For years they have been saying:

> Low-cost hydroelectric power is the great drawing card for the Pacific Northwest. Ample supplies provide immediate opportunities for power-using industries.

Now they want to use $95 million of Federal funds—taken primarily from taxpayers in the industrialized East—to produce approximately 700,000 kilowatts of steam electric power. Which, by the way, would be the first Federal steam electric plant outside the TVA area.

There was be no question but what this power will be heavily subsidized, because the various studies of economic feasibility for this project indicate significant items of economic cost have been excluded from consideration. The studies have not been based upon the cost of producing power at the Hanford site, but rather have been based upon the economics of merely adding power to the heat source which will be finished late in 1962. As an example of the cost factors which have been excluded, I might point out that none of the capital costs of the plutonium reactor itself are charged to power production, in spite of the fact it would be impossible to produce power without the heat generated by the reactor. This to me, is just as illogical as attempting to evaluate power costs in a conventional plant based solely on generating costs and excluding the price which had to be paid for the boilers and other standard equipment required to produce steam to turn the generators.

Furthermore, no portion of the $25 million now being spent for the convertibility features of the reactor has been allocated to the cost of power. This, in spite of the fact, that it is admitted electricity could not be produced without such features and they serve no useful purpose other than making the addition of power generating facilities possible.

These are but two of the significant items of economic cost which have been excluded from the economic feasibility study of this project, and there are others. But I think they are sufficient to indicate that if power facilities are added, the resultant electricity would be heavily subsidized, and could be used by the Bonneville Power Administration to entice new industries into the Pacific Northwest.

It is interesting to note that on the basis of the percentage of Federal taxes borne by individuals in the various States, the people of Pennsylvania are being asked to pay almost $7 million toward the cost of adding electric power at Hanford.

Mr. Speaker, there can be no question of my devotion to the orderly development of atomic power as rapidly as improved technology will allow. But, I cannot—and I will not—lend my support to a project such as the one being proposed at Hanford that will only very slightly, if at all, mean substantial advancement in reactor technology. There are many more advantageous ways for the Federal Government to use $95 million for the national good than to waste them on unnecessary and uneconomical undertakings such as this.

Yes, Mr. Speaker, I sincerely feel that the addition of electric generating facilities to the new production reactor at a cost of $95 million will be contrary to the best interests of all the American people and will have the effect of dissipating many of the benefits which we hope will accrue from the enactment of the depressed area law.

I urge every Member of Congress to search deep within his conscience and answer truthfully whether he or she feels that this expenditure is absolutely necessary and is the best use of available Federal funds.

Massachusetts Lauds National Commander John E. Erickson, Veteran of World War I, U.S.A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include part of my remarks delivered at a dinner in honor of John E. Erickson, national commander of the Veterans of World War I of the U.S.A., held under the auspices of the Department of Massachusetts in the town hall in Stoneham, Mass., on Sunday evening, May 14, 1961. Department Commander Edwin Hayden Lombard was toastmaster of the evening:

REMARKS OF THE HONORABLE THOMAS J. LANE, OF MASSACHUSETTS

Greetings, in my travels—from barracks to barracks—I have noticed a special spirit that distinguishes the Veterans of World War I of the U.S.A., from other veterans' groups.

Like them, we are united by shared memories.

And we have our own legislative program.

But more important than these—in some respects—are the strong social ties that transform comradeship into friendship.

This closer relationship is evidenced by the warm welcome that we give to our national commander, John E. Erickson, here in the hometown of Department Commander Edwin H. Lombard.

Stoneham sent many volunteers to serve with the famous 26th Yankee Division. That was one of the first to fight in 1917, and earned one of the best combat records in the American Expeditionary Force.

Stoneham has a long tradition of service for freedom, beginning with the farmers and tradesmen who fought a short distance from here, at Bunker Hill, and Concord and Lexington.

This area is rich in patriotic traditions.

That spirit was exemplified on May 5 of this year. Our neighbor from Derry, N.H., less than 40 miles north of Stoneham, became the world's first true astronaut as he operated the manual controls of the space capsule named "Freedom 7" 115 miles above the earth.

What inspired Comdr. Alan B. Shepard, Jr., with pioneering courage?

As a matter of fact, we had only spent $31,000, including items that did not have to be reported, such as the purchase of office equipment and miscellaneous outlays.

We knew that our organization was growing rapidly, but we also knew that it was not so prosperous that it could spend more money on influencing legislation than the National Association of Manufacturers, for example, or any of the other powerful lobbies.

Although the truth is that we spent $31,000 instead of $200,000 for this purpose, the charge that was subsequently disproved shows that some people on the outside are jumping the gun and are apprehensive about the actual progress we are making.

For this growth we give credit to the energetic leadership of Commander John E. Erickson.

Last year we had a membership of 170,000.

It is expected that the total will pass the 200,000 mark, by the time of the national convention in September.

In the name of the 67 barracks in Massachusetts with returns still coming in we thank our national commander for his hard work and his success in building up the Veterans of World War I of the U.S.A.

I think that some of his ancestors must have come from Massachusetts, because Commander Erickson typifies the patriotism, the courage, and the determination of the Massachusetts officer of World War I who gave us this battle cry: "The command is forward."

It was the example of his parents and his community.

His father served in World War I, and World War II.

In the years between and since, he made it a daily custom to fly the American flag outside his home, and outside his downtown business office.

His son grew up as a participant in this moving ritual. Patriotic reverence for the flag, and the ideals that it symbolizes, developed the courage and the faith in freedom that we admire in Commander Shepard.

As veterans of World War I, we feel that we are related in spirit to this brave young officer of the U.S. Navy.

Our active service ended long ago but from that experience we learned a continuing devotion to what is best for our country.

There are some people with no faith in anything but themselves who seize upon the slightest pretext to discredit the veterans and the organizations that represent them.

It was our turn to be the target a short time ago when some newspapers carried the report that the veterans of World War I had spent over $200,000 in lobbying for a separate monthly pension for all veterans of the First World War. This made us out to be "Mr. Big" among all the lobbies.

Our guest of honor, National Commander Erickson, promptly exposed the false charge that our organization had spent more money on lobbying efforts in 1960, than any other of the 283 groups who must report on these activities to the Congress.

Mrs. Gladys Gardner

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. McINTIRE. Mr. Speaker, great is the satisfaction that comes to those who have dedicated their lives to teaching. Mrs. Gladys Gardner of the Allagash in Maine is one of these, and soon she will be retiring from her chosen life's work.

In her teaching career, she has gathered unto herself a virtual treasure house of experiences, building up a fund of memories upon which she can generously draw to lend real sparkle to her leisure.

The May 11, 1961, issue of the St. John Valley Times in announcing Mrs. Gardner's planned retirement presents a highly interesting projection of this teacher's school life. This is an account that reaches out and captures some of her rich experiences of the past, and I commend this to my colleagues as truly stimulating reading.

Good wishes to Mrs. Gardner in her retirement. May the many years that lie ahead be filled with the rich rewards that are the just due of one who has brought brightness into the lives of a multitude of fellow Americans:

[From the St. John Valley Times, May 11, 1961]

SERVED THE AREA FOR 48 YEARS—ALLAGASH TEACHER TO RETIRE IN JUNE

Mrs. Gladys Gardner is retiring this year after many wonderful years of teaching. We are sure that you will enjoy the story of her and her school life.

"I was born in Fredericton, New Brunswick. I started school at the age of 5. This was in a one-room schoolhouse. Unfortunately, we had to walk about 3 miles to and from school each day to a little town in the country called Kingsclear.

"In those days one had to buy his own books, paper, slate, and pencil. I now remember the first slate and pencil I ever had and how it got broken. Not being able to have another was a terrible feeling, because one had to last all year. Those same old slate pencils, that usually broke in many pieces if we children weren't careful, still served us as the new ones had. Oh, how hard they were to write with.

"When my family moved to St. Francis, Maine, I was in what we would now call the third grade. Our readers were numbered, so I was in the third reader. When we got through the sixth one, we were quite grown up. At the school in St. Francis, we didn't have to buy our own supplies; this was a real surprise for my sister and myself. The Canadian school system was a whole lot different. Here, we went to a one-room building. All the grades were together—from subprimary to the eighth. I remember all my teachers, and to the last of my knowledge, two of them are still living today.

"After the eighth grade I went to work doing housework and baby sitting. Being the oldest of 13 children, leisure was just another word that didn't mean anything to me.

"I was out of school a year. At the end of that year, school meant more to me than ever before. In the fall of 1909, my mother and I went to Fort Kent to see if I could find a job and work for my board, so that I might enter the Madawaska Training School. Traveling by horse and wagon was a very slow process and took us all day.

"We finally found that there was an opening at the dormitory and I gladly took it. It was at the Madawaska Training School for 3 years, gradually working my way through. My wages were $2 a month.

"Early one morning as I was going to school from the dormitory, I met a Mr. Henderson, who asked me if I would like to come to the Allagash to teach school. He talked to the principal of the school. She gave her consent, and said that I could take my exams that day.

"When I went back to my room, my sister and another girl were packing my suitcase. I asked them what they were doing and they said, 'You're going to "Moosetown" to teach school.' This was all a big joke to them.

"When I got home I told my mother that I was going to Allagash to teach and amazed her. Then at once she said 'How in the world are you going to get there?'

"At that time of the year the roads were terrible. There was mud a foot deep in places.

"The next morning my brother volunteered to take me to Allagash, and what a ride it was.

"Monday morning I went inside my first school. A one-room building with benches and desks. I had a small blackboard, very few books, and 10 pencils.

"I taught that summer and went back to school in September. I graduated the next June (1913) and went to teach in what was called Dickey, about 4 miles from my first school.

"In 1914, I taught at the Siding School. In 1925 back to the Allagash I went and in 1916 I found myself in Dickey again. I got married that year. While raising a family of seven children, I had to take quite a few years out of my teaching career. I didn't return to school until 1942. I then went to teach at the Lindbergh School and that was the last 1-room, country school I taught in before moving to the new school.

"In 1942 when I started teaching at the Lindbergh I had some very studious pupils. I might take time to mention a few starting with the older ones: Doris Jandreau, Albertine Pelletier, Florence Hafford, Arlene Jackson, Arlene Pelletier, Wilda Jackson, Audry and Joyce Hafford, Roy Gardner, Queenie McBrearity, Albert Hafford, and there were so many more. Of course, there was Tunny, who knew more than I did until the skunk came into the shed and Tunny fled.

"Cecil was the quiet boy in school. I doubt if I'll ever have a better student than Cecil. But Glen, his brother, was the smart one. He got all hundreds on his papers and then he was too lazy to even take them home. These boys lived across the St. John River and what a time they had to get to school. Then there were the 'Robbins brothers,' Boog and Bill. One noon hour while I was having dinner with Mr. and Mrs. Dave Jackson, Billy and Boogie ruined a panel in the wall by throwing their favorite jackknives. Their father came to school later and fixed it up good as new.

"One day Bernard 'Squeaky' Pelletier cut his finger and fainted. I told Billy to run quick and get some water. Billy dashed into the coatroom and returned with a dish of dirty water. He threw it all over Squeaky's head and all over me. It just happened that I had on a new dress and a white one at that.

"Bobby Jackson came to school and so did his pet ram, Bimbo. I think that Bimbo's attendance was as good as Bobby's.

"The children brought their lunches in lunch boxes and drank milk or soda.

"I can remember so well one morning Loman McBrearty's mother sent him to school. He was in the fifth grade then. He only made it halfway to school and I think the nature of the forest called him, because he never came back. He preferred being in the woods hunting or being along the river fishing rather than coming to school.

"Duane 'Sleepy' Hafford was with us in the old school and in the new school a while. Duane used to sleep the greatest part of the time but was I ever surprised the day I go a card from him and it said 'Congratulations to baby' and the holiday was Christmas.

"Not to forget Carol and Dale Pelletier and their baby sister, Mary; Joyce; Audrey and Dayle Hafford, Thressa and Pauline Jackson.

"Perry and Phyllis Gardner were with us in the old school several years before moving to Bangor. One day Perry Roderick, and Louis pushed Phyllis, Beverly and Linda down in the forms they were putting up for the new school. When I rang the old hand bell, and took the attendance I found that three of the girls were missing. Boze soon spoke up, 'Mrs. Gardner, they are hiding out back of the school and won't come in.' Instead of finding them hiding, I found them crying. I ordered the boys to help the girls out and they did because they sure were scared of the strap in my desk drawer.

"When Louis Pelletier began school, he was only 4 years old. About the same time every day he used to ask me if he could go outdoors and since he was so tiny, I let him.

"None of the children knew he used to sit on the step and suck his nipple, until it fell out of his pocket in front of everyone.

"One day shortly after school opened in August, I noticed the children had some kind of stain on their mouths. Later I found that Wilmer Hafford had brought some choke cherries into the room under his shirt.

"Larry Ouellette was another of my pupils at the Lindbergh School. He is now attending Fort Kent Community High and will graduate this year.

"The Hafford children lived next door to my school. Mrs. Hafford was my janitor.

"In these days I walked to school through rain, mud and snow. We did not have a bridge across the Allagash River, but instead we had a ferry boat. Tom Pelletier was our ferryman until Fred Hafford took it over for a while.

"I would like to mention the warm dinners I had at Mr. and Mrs. Dave Jackson also.

"We moved to the new school in 1953 and the old school was hauled away. It is still standing there across the road, but in my heart it still looks as it did all those years I taught there.

"The pleasant memories of school years keep coming back as I keep thinking of how joyful they were. This will be my last year of teaching and I want to thank you and wish you all the luck and sucess ever."

How Our Experts Almost Ruined Bonn

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most informative and interesting column from the New York World Telegram and Sun written by Lawrence Fertig. It discloses some events of history which should be of real concern to the Congress and to the country.

It also demonstrates again the capacity of the present leaders of West Germany by vindicating their good judgment in rejecting the unrealistic counsel of Professors Hansen and Heller and by following, instead, the proven policies and programs dictated by sound economics in public affairs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the World Telegram and Sun, May 8, 1961]

HOW OUR EXPERTS ALMOST RUINED BONN

(By Lawrence Fertig)

In 1951 the U.S. State Department sent a commission of American economists to Western Germany to investigate and make recommendation to that government on fiscal policy. Chairman of the commission was

Prof. Alvin W. Hansen of Harvard, and Prof. Walter W. Heller, now chairman of President Kennedy's Council of Economic Advisers, joined the commission and is reported to have had a hand in writing the report. The world has long waited to view this report, which was classified by the State Department as a secret document. Many people want to know precisely what measures were recommended by Dr. Heller and the other economists, and to what extent the phenomenal West German prosperity is related to the prescription which they gave for Germany's economic health.

I have had a special interest in this report ever since I heard economic minister of Germany Ludwig Erhard tell a small group of economists that the recommendations by American experts in the 1946–48 postwar period could have wrecked the feeble German economy. In 1948 our experts insisted that the only way out for Germany was by inflation. Erhard threatened to resign if this view was forced upon him, and the Americans backed away. The German Government insisted upon the opposite course—upon the maintenance of a sound currency, a balanced budget, the elimination of price controls, incentives to business and individuals to save and invest, and encouragement to private enterprise rather than government directed economy. The rest is history. Erhard won the battle in 1948 and Germany went on to be the most prosperous nation in Europe.

What then did the Hansen-Heller Commission recommend in 1951? Here I must tell the reader of a mystery. A copy of the 1951 report, which was declassified a few months ago, is nowhere to be had in Washington, not even in the Library of Congress. At first State Department representatives blandly asserted there were so many reports they could not locate this particular one. Finally they stated that the only copy in existence is in the Department's library and a responsible person could get a peek at it by going through a complicated process. The question arises, is the State Department trying to hide this document because its recommendations may cast some reflection upon economists who are high in administration circles today?

On excellent authority I have the substance, as well as a number of quotations from this 400-page report. I believe it is in the public interest for the American public to know about this. In summary it would appear the the German Government practically threw this report into the wastebasket. It pursued policies which were the opposite of those recommended by Dr. Heller and his associates. Today, as we know, German prosperity is the envy of the world. What would have happened had they followed the commission's recommendations? The reader may answer that for himself.

Here are some of the recommendations in the report: (1) That Germany had an "excessive concern for price stability." It tried to egg the Germans on to more inflation and said that they (the Germans) tended to "confuse wartime inflation with the normal operations of peacetime credit." The Germans would have none of this. They kept the lid on the money supply and refused to pursue a cheap-money policy. Germany had less inflation than any nation in Europe, and as a result she had more prosperity.

(2) Our economists told them that "a rate of interest high enough to stimulate any large volume of personal savings would seriously curtail investment." The Germans scoffed at that idea and they encouraged savings by a high rate of interest. Instead of German investments being curtailed they were expanded. German industry made the most rapid strides in Europe.

The German allowed fast depreciation of capital investment and gave special inducement to corporation to increase their investment in new plant and equipment. The American economists objected to this, saying that "it was an expenditure of tax funds which would otherwise have been collected by the government." Always the Americans suggested that the government should be dominant in the economy. The Germans completely disregarded this recommendation and went their own sweet way to prosperity.

Finally the American report said that "the nostalgic hopes looking toward a revival fo the 19th century role of a capital market are doomed to disappointment. The capital market plays no such role in any modern country and there is no prospect that it will." This is probably the most ridiculous statement in the report. It reveals the deep prejudice of American economists in favor of government rather than individual action.

The capital market has been the mainspring of German prosperity and it is certainly the heart of American progress. Plainly, Dr. Heller and his associates never had any confidence in the heart of the private capitalist system—the private capital market.

If the above statements are not correct, the State Department or Dr. Heller should disavow them. If they are correct they lead to grave questions as to whether we ought to follow similar advice for this country now being given by some of the same people in Washington.

Food for Peace Is Coming of Age—It Started With Humphrey in 1949

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Milton D. Hakel, editor of the Minnesota Agriculture:

WITH HUMPHREY IT STARTED IN 1949—FOOD FOR PEACE IS COMING OF AGE

(By Milton D. Hakel)

Here and now in 1961, food for peace is at last coming of age, the culmination of a 12-year dream of Minnesota Senator HUBERT H. HUMPHREY.

Americans are entering a New Frontier. A new administration, led by President John F. Kennedy, is determined to learn to live in and make an asset of the age of abundance, rather than being embarrassed by it.

President Kennedy has given a high priority to the food-for-peace program. His appointment of Dr. George McGovern as the food-for-peace administrator means that there will be coordination of all effort along these lines whether in the State Department or the Agriculture Department and there will be a stepping up of these efforts, as HUMPHREY has pleaded so many times, "to use our farm abundance as the humanitarian arm of the Nation's foreign policy in our efforts to create a better and more peaceful world."

As with any great idea, no man perhaps has exclusively originated and developed it. Others, too, have recognized the importance of food, others have helped enrich this concept of food as a weapon for peace and economic development. Others have authored and worked for bills and resolutions.

But now, in 1961, the man who is most humbly thankful that America has at last begun to move vigorously in this field, is the Minnesota Senator who, for 12 years, like a great conscience, has persistently and relentlessly pleaded with the Nation to understand the opportunities to "use food to help establish a climate for peace."

Year by year and session by session, his insistent voice has explained the possibilities of food for peace to a sleek and fat America, bulging to the seams with abundance. He has urged—he has proposed—he has needled our conscience, he has chided us for our lack of Christian perception, and mostly, he has just pleaded with a complacent America to open up its heart.

Always a man of keen insight into the problems of peace and foreign relations, Senator HUMPHREY embarked upon the food for peace theme soon after he first arrived on the senatorial scene in 1949.

Recognizing the concern about China's having slipped behind the Communist curtain, HUMPHREY warned in February 1949 that India needed food to help expand her economy and, incidentally, to prevent a repetition of what had happened in China.

Speaking before a meeting of the India League in New York City in May of 1949, Senator HUMPHREY said:

"Without stability in southern Asia, without freedom for Asiatics, without education for the people of Asia, without food and nourishment for the children of Asia, there can be no real peace in the world."

In 1949, India was seeking to barter mica, maganese and other raw materials for a million tons of wheat. The negotiations broke down.

The purchase of wheat on long-term credits was proposed by Indian leaders but again no agreement was reached.

To Senator HUMPHREY, who was so cognizant of the needs and the opportunities, it was the beginning of a frustrating two years of effort.

ANOTHER PLEA

Upuon the opening of the Congress in 1950, Senator HUMPHREY took to the floor with another fervent plea for action.

"What is the most important problem of the government of India today? It is food.

"Who has the food? We ought to get down on our knees and pray to God to forgive us our sins—for here on the eastern coast of our land are Liberty ships, 10,000-ton freighters loaded with wheat which the Commodity Credit Corporation has purchased.

"The wheat is stored up and here are people who are dying of hunger, with the Communists on top of them, with their government almost tottering. What are we doing? We are sitting around saying we cannot get along with Pakistan, or with this country or with some other country."

Conditions continued to get worse in India, and in August 1950, Senator HUMPHREY proposed an immediate opening of negotiations to make 60 million bushels of wheat available for famine relief.

"Here would be a grand gesture of good will and basic humanitarianism, a firm cementing tie between our nations, and one of the most significant steps we could take for the preservation of world peace and democracy," he said.

He had been conferring with the Secretary of State and his assistants to try to pave the way for an agreement.

"The people of India are suffering from a food shortage," HUMPHREY declared. "It would be good foreign policy, it would be a good neighbor policy, it would be sound and prudent policy, to make available to this great country (India) some of the foodstuffs

which we have in our storehouses at the present moment."

VOICE IN WILDERNESS

Later in 1950, the Senator sought to rally support for the Javits resolution to extend assistance to India to avoid food shortages.

But, the effort was destined to go well into 1951 and to reach a conclusion only after Soviet Russia had taken a propaganda offensive with delivery of 50,000 tons of wheat to India, and after China had offered rice.

India had bought some wheat from the United States, but far short of the supply needed. Senator Smith of New Jersey sponsored a bill for emergency food aid to India and he was joined in the sponsorship by Senators Humphrey, Saltonstall, and Gillette and 26 other Members of the Senate.

The Smith bill came up for final action in May 1951, and Senator HUMPHREY, who observed that he had begun to feel like a voice crying in the wilderness of politics during the 2 years of effort, made an impassioned plea for the bill:

"I am appealing today that the great American nation answer these basic human needs before it is too late. What India is asking for today is not 300 tanks. She is not asking for arms aid. She is not asking for money to develop atomic energy plants. What she is asking for is something we have in abundance. We do not have to recruit a whole new group of laborers to produce what India neds. We already have it. We have the millions of bushels of wheat that India needs. We have it in storage.

"This is only to remind ourselves again that food is a weapon in the arsenal of democracy and that particularly it is an effective weapon where people are hungry. We have an arsenal of democracy filled with food," he said.

After much debate as to whether the wheat should be in the form of a grant or a loan, the bill was passed and became Public Law 48 of the 82d Congress.

FOOD RESERVE

Early in 1953, Senator HUMPHREY joined with Senator Murray and others to sponsor a joint resolution for the creation of an international food reserve.

Shortly thereafter, the attention shifted to Pakistan where a crisis-ridden government had collapsed, largely because of inability to deal with a famine, Senator HUMPHREY conferred with the Secretary of State, the Secretary of Agriculture and the Mutual Security Administrator, about using some of our food surpluses to help the new government meet the food crisis.

Senator HUMPHREY introduced a wheat for Pakistan bill in April 1953.

This time action came more quickly. President Eisenhower adopted the wheat for Pakistan suggestion as one of his legislative proposals. An administration bill was introduced and adopted and some 1 million tons of wheat were sent to Pakistan.

The need to legislate in each crisis and to risk serious delay, led Senator HUMPHREY and others to think in terms of legislation which would permit the administration to move more promptly to use surplus foods in famine relief. He pressed successfully for an amendment to the Mutual Security Act broadening the power of the MSA Administrator to use surplus foods in foreign aid programs.

Testifying before the Senate Agriculture Committee on July 13, 1953, the Minnesota Senator spelled out the needed legislative authority for the President to donate commodities, to sell at world prices, to sell at concessional prices, to sell on long-term credits, to sell for soft currencies and to trade food for strategic materials. Several Members of Congress sponsored amendments or bills including one or more of these points and HUMPHREY urged development of a single-package bill.

"I would like to see it undertaken in a nonpartisan spirit, sifting out the best that may exist in any of the Humphrey or Aiken suggestions, the Mundt suggestions, the Case suggestions, the Murray suggestions, the Schoeppel suggestions, the McClellan suggestions, and coming up with a committee bill we can all unite in supporting," he testified.

FOREIGN POLICY ARM

Speaking at a cooperative meeting in St. Paul in December 1953, Senator HUMPHREY reiterated the need for policies to "make more effective use of the abundance farmers are capable of producing.

"We need policies which will enable the farmer to see his food used wisely, rather than wasted, to see the output of his land, his toil make its utmost contribution to stamping out hunger and deprivation at home and abroad, and serving as the humanitarian arm of the Nation's foreign policy, in our efforts to create a better and more peaceful world," he said.

Numerous bills were considered in 1954, including HUMPHREY'S broad proposals for food for peace.

An administration bill, the Schoeppel-Judd bill, was finally adopted, considerably narrower in scope and slanted more to surplus disposal than toward foreign economic development. It was titled the "Agricultural Trade Development and Assistance Act of 1954" and became more commonly known as Public Law 480.

While the law itself could have been effective, unfortunately the administration of it was even more narrowly committed to surplus disposal.

The original Public Law 480, a 1-year program, was subsequently extended by 2 years. In 1957 Senator HUMPHREY introduced a bill to extend it for an additional 2 years with an additional $3 billion in authorizations. He urged a broadening of the scope of the plan. The administration recommended a 1-year extension with $1 billion more in program activity.

Supporting a compromise bill for the extension, HUMPHREY called on the administration to end its timidity and indecision and to make Public Law 480 a fundamental arm of our foreign policy.

"By sharing our blessing of food abundance with the peoples who seek to break away from Soviet tyranny, we can make American food the 'yeast of freedom' which can expand and strengthen the movement to freedom and independence. We take a calculated risk, but all we have to lose is the food itself."

U.N. DELEGATE

In early 1957, as a delegate to the United Nations General Assembly, HUMPHREY proposed a plan for international cooperation toward the establishment of a world food reserve.

"It would seem only logical if some of the world's surplus holdings were used to bolster stocks in areas where people live on the brink of disaster from one harvest to the next," HUMPHREY told the U.N. General Assembly. A resolution providing for consultations on such a world food reserve was approved.

HUMPHREY was determined that he would work for further improvements in Public Law 480.

"I regret the necessity of constantly building fires under the administration to get it to use this effective program fully, or to support its proper expansion. We have hardly scratched the surface of what can be achieved with our abundance under the concept of Public Law 480."

Speaking before the national convention of the American Soybean Association in August 1957, Senator HUMPHREY said:

"In time of war, we recognized the importance of food and fiber. We created a War Food Administrator to mobilize our food resources for victory. Perhaps, today, in time of a shaky and uncertain peace in the world, it is time to think about a similar role for a special 'Peace Food Administrator' to guide more effective use of our food resources for another victory. It is even more important to use our food abundance as a constructive force for peace," he declared.

PEACE FOOD ADMINISTRATOR

Later the same year, speaking before a Minnesota Farmers Union convention in St. Paul, HUMPHREY elaborated on his proposal for a "Peace Food Administrator," suggesting that the Administrator be responsible to the President and have responsibility for coordinating the various functions of food distribution, then scattered among agencies in the Departments of State, Commerce, Agriculture, Defense, Bureau of the Budget, the ICA, and the ODM.

In 1957 also, Senator HUMPHREY made a tour of the Middle East countries and came home more impressed than ever with the opportunities to use our food to improve our foreign relations.

He told of the thrill of finding Land O'Lakes dry milk from his home State of Minnesota being distributed to needy Greek children.

In 1958, HUMPHREY took a personal hand in breaking the stalemate in negotiations by Spain to buy U.S. food and fiber. Agreement was finally reached for Spain's purchase of $69 million in commodities including 110,000 tons of soybean oil.

In a lengthy report to the Senate Agriculture Committee in February 1958, Senator HUMPHREY recounted the accomplishments of the Public Law 480 and outlined the dimensions of what could be accomplished under a broader food-for-peace program.

He recommended use of Public Law 480 as an instrument of economic policy, rather than merely as an agricultural surplus disposal program, he urged assurance of greater continuity of the program, and again he proposed putting the entire effort under a central guiding hand.

ABOLISH HUNGER

Despairing that Public Law 480 would be properly broadened in spirit, Senator HUMPHREY in July 1959 introduced a comprehensive International Food for Peace Act incorporating the improvements he had recommended in 1958.

In introducing the bill for a 5-year expansion of the program, HUMPHREY said:

"The purpose of the Food for Peace Act is to so amend and revise Public Law 480 as to make it a more effective instrument for using U.S. abundance of food and fiber to help build essential world conditions of peace and freedom and thereby strengthen and promote the foreign policies of the United States. It is intended to enable the United States to promote more effectively the economic and social development of friendly nations and to lead the way in cooperation with other nations toward the abolition of human hunger."

The findings of fact and policy tell the purpose:

"Because of the increased productivity made possible by science and technology, there is now, for the first time in history, no reason in physical scarcity for the continued existence of hunger—anywhere on this earth. It is now possible and practical for mankind to take cooperative steps to abolish human hunger.

"This being so, massive hunger and suffering from want of clothing, existing in the shadow of unused present and potential surpluses of food and fiber, are no longer tolerable, either morally, politically, or economically.

"The Congress, while recognizing the difficult international, political, and economic problems that lie between hunger and want

of clothing in many parts of the world and food and fiber surpluses in others, declares it to be the policy of the United States to move as rapidly as possible in cooperation with other friendly nations, toward putting its abundance of food and fiber more effectively in the service of human need."

History, hopefully, is now about to witness the opening up of the American heart for which Senator HUMPHREY has so long pleaded.

Housing for Young and Elderly

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mrs. NEUBERGER. Mr. President, statistics compiled from the 1960 census indicate that about 60 percent of our population growth in this decade will consist of persons in two widely separated age groups—those 15 to 24 years of age, and those 65 and older. This change in the makeup of our total population, expected to reach its peak around 1966, calls for a thorough examination of our national programs in the field of housing.

The younger group, in which the formation of new family units will be greatest, will have somewhat limited income for housing. The senior citizens group will have less need for large houses. Thus it appears that there is a built-in demand for smaller homes during the period immediately ahead of us. As a member of the Senate Banking and Currency Committee, I will be very much interested in exploring the housing proposals of the administration designed to meet the needs of these groups.

I am pleased to report that the people of Oregon have taken a leading part in developing housing for the elderly. One specific Oregon development was discussed at length in the April 1961 issue of the Mortgage Banker. I ask consent to have printed in the Appendix of the RECORD excerpts from the article entitled "Housing for the Elderly A New Problem and New Market for Mortgage Bankers," written by the magazine's associate editor Robert J. Beran.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

HOUSING FOR THE ELDERLY—A NEW PROBLEM AND NEW MARKET FOR MORTGAGE BANKERS

(By Robert J. Beran, associate editor, the Mortgage Banker, April 1961)

One of the least explored, but potentially one of the biggest markets in the housing business today, is that of housing for the elderly.

For the mortgage banker, it offers bright new prospects. It is, as one member of the industry so succinctly phrases it, "an issue which is a hot one—as hot and as current as anything will be for a long time."

A rapidly growing feature in our American economy, not only in numbers but in economic power, the more than 15 million persons in this country who are 65 years of age or over (a number increasing at the rate of one-half million yearly) are beginning to exert a marked effect on the housing market. It is, in fact, this segment of the population—these "senior citizens"—which makes the market decision for every sixth dwelling unit rented or purchased.

Significantly enough, however, these older persons do not share proportionately in the 2 percent or more which new construction adds each year to the Nation's housing supply. Their share, actually, falls well short of the annual quota of 250,000 units (one-sixth of the production) which might be expected for an elderly market consuming one-sixth of the total housing supply. And, as a result, all too many of these citizens are forced to share cramped quarters with their children, to live in neighborhoods which have seen better days or to occupy homes too large for their comfort or for their needs.

In short, their special housing requirements, generally, are not being provided—largely because proper financing does not seem to be available, or at least not in ready supply.

This is not to say that nothing whatsoever is being done in this field. All over the country beautiful housing for the elderly is being created. As might be expected, church groups and fraternal organizations are leading the way. The Methodist Church alone now has 104 (as of November, last year) nonprofit retirement homes affiliated with its Methodist Board of Hospitals and Homes. These are located in all parts of the country. Throughout the Midwest, in Arizona and in the Gulf States, and in the Northwest particularly—in Oregon and in Washington—there are many fine projects, either completed or in process.

There is activity, too, under the Housing and Home Finance Agency's new $20 million program of direct, low-interest loans. Just recently the "go ahead" signal was given to nonprofit organizations with plans to build in St. Paul, in Peoria, and in Manhattan—plus groups in the first two small communities to gain approval for such projects: Cordell, Okla., and Eagle Grove, Iowa. Likewise, local housing authorities across the country are gearing to provide housing for the low-income aged, those old folks for whom the only answer to housing problems is the low-rent program.

But the fact remains that the number of units constructed—to date—is insufficient to the need. And the need is there, for all types of housing—for both nonprofit and profit-motivated, for single family residences, multifamily, duplex, high-rise apartments and the like. Private enterprise, generally, since the Housing Act of 1956, has proved itself inadequate. It is going to have to mend its ways. If ever there is to be volume production in elderly housing, it will have to come in the main from the private sector of the housing industry.

To encourage private enterprise in this direction, to spur on the development of good housing which can meet the varying special needs of elderly occupants, the Federal Housing Administration's special section 231 program authorizes FHA mortgage insurance for both nonprofit and profit-motivated rental housing for the elderly. It was legislation, as set forth originally in the 1956 Housing Act (in particular the provisions for liberalized FHA financing for the elderly), which paved the way for the still further liberalized provisions in the Housing Act of 1959—from which evolved this present program.

By removing elderly housing from under the older section 207 program which had preceded it, and by making it a separate program—section 231—FHA gave it status. It took it out of the range of being only a "gimmick" under 207 and made of it another major "financing tool." Like all FHA programs, it depends for its success on the cooperation of private enterprise. Not a subsidy program, it encourages private sources to furnish the necessary capital and private industry to build the kind of housing older people need. It's a program intended to help communities meet their responsibilities to the elderly at the local level.

Although a "hot item" in the FHA showcase, this program, admittedly, has been a slow starter. Thus far, participation in the program on the part of private lenders has not been widespread. Some lenders have not fully appreciated the extent of the need for this kind of housing, some have overlooked the fact that qualified nonprofit sponsors have demonstrated their ability to meet their obligations, and some have turned away because of the interest rate and the long term of the insured mortgages.

There is evidence, however, of a growing interest throughout the country in this sovital Federal program of assistance. As of May 31, last year, FHA had applications for mortgage insurance on 97 projects in 32 States. Mortgages had been insured on 42 projects. By November 30, the total number of active projects—under both sections 231 and 207—stood at 96. This represented 11,365 units for a total mortgage amount of almost $115 million. At year's end there were 102 projects on the active list, 18 of which were then in process. One year earlier, in December 1959, there had been only 59 projects with active status. And, according to the man in charge of the section 231 program, former Senator Gerald P. Nye, "FHA ended up the year 1960 with an even 100 additional applications."

To date, except for isolated examples—the mortgage banker has failed to see the significant business opportunities in the field of elderly housing. He has failed to step up his efforts to accommodate this burgeoning market.

Of course, it's still a relatively new picture—one which hasn't yet registered with the majority of mortgage bankers. Most mortgage bankers tend to shy away from it. But some are off and running in this comparatively new field of building and financing homes for the elderly.

"Financing a large housing project for senior citizens," as one mortgage banker experienced in this work points out, "is a major undertaking and involves considerably more than securing the mortgage commitment."

For one thing, it involves time—a great deal of time. A project very often can be in the formative or development stages anywhere from 1 to 3 years, during which time it is quite possible that it might—and many do—wash out. When this happens, all of the time that the mortgagee has invested in the development of the project is lost without any prospect of compensation for his efforts. Likewise, because of the inexperience of the sponsoring body in most cases, the prospective mortgagee must provide a vast amount of gratuitous service.

For another, the project must have a strong, sound demand from enough of those who can afford to subscribe—if success is to be assured. It is important to determine in advance who will be living in the project and from where these people are to be drawn. Will the project be close to local transportation? Will it be in proximity to local community activities? In short, the elements of success must be inherent within a project from its inception—or it can result in failure.

In profit-motivated projects, particularly, a key point is the management which the sponsor eventually will employ, for it is the caliber of management which will determine the profit. It must be interested in doing a good job, in providing services, etc., and the financing agent must be assured of this in advance. Most mortgage bankers, as potential financing agents, have not pursued this to a point.

In Newberg, Oreg., this month (Oregon, incidentally, is a leader among States in

amount of elderly housing activity) one mortgage banker's efforts reach fruition with the opening of Friendsview Manor, a 126-unit, high rise, nonprofit project. First such FHA-insured 231 project to be completed in Oregon, outside of Metropolitan Portland, Friendsview Manor represents the successful culmination of many, many months' hard work and effort by the sponsoring group's mortgagee representative, State Finance Co. in nearby Salem. It shows it can be done—and, certainly, it makes an interesting case study.

Currently, State Finance has three other projects on the boards, for a total of $5½ million, with each in a different stage of planning. Friendsview Manor, however, was the firm's first experience with this type of project.

"It all began," recalls Vice President Ernest H. Miller, "approximately 3 years ago, when a group sponsored by the Friends Church of Oregon decided to construct a retirement home at Newberg, the site of the Quaker-sponsored George Fox College and the rather informally recognized center of Friends Church activities in the Northwest area.

"The project had been under development for a considerable period of time and had had a rather large amount of publicity. Following the announcement of the creation of FHA section 231, we contacted the sponsors," says Miller. "We described the provisions of the new section to them and we were appointed their contact representative with FHA and their financing agency for the completion of the project."

From their experience with the Quakers and the Friendsview Manor project, and from discussions with numerous later sponsors, Miller and his firm learned a great deal about the problems associated with the promotion of projects of this type.

One of the first—and possibly one of the most important—points to be reckoned with, according to Miller, is that of the 100 percent maximum loan ratio based on the FHA-estimated replacement cost when construction is new, or on the FHA-estimated value when it is a case of rehabilitating existing construction. Theoretically, this is true. A nonprofit group can borrow out at 100 percent, but there is a catch.

"While FHA does have available a 100 percent loan," Miller points out, "the loan is not necessarily 100 percent of the cost of the project—and, most certainly, it is not 100 percent of all expenses involved in its promotion, construction and completion. We have found," she emphasizes, "that only the most Spartan-like project is likely to have even a nearly 100 percent loan and that as the quality of the living units is enhanced, the amount of equity required by FHA increases."

This aspect of 100 percent mortgage insured financing, while it might very well be the heart of the whole 231 program, does not—as some sponsor's agents would make it seem—practically eliminate equity requirements altogether. It does not, in a word, pay the bills.

Sponsors also encounter unsuspected cash requirements, not only in the form of the demanded equity, but in the very large amount of FNMA fees which, until just now, have amounted to 2½ percent of the amount of the mortgage and have now been reduced to 1½ percent of the mortgage amount. Also to be considered is a 2 percent operating capital deposit and the large amount of cash required for furnishings not included or allowable under the mortgage.

This all means, of course, that the sponsor of a $1-million project will find that it has an actual nonrecoverable cash requirement of somewhere in the neighborhood of $100,000 to $150,000. Most of the sponsors are people of religious affiliation and with limited business experience, and the prospect of having to provide this substantial block of cash often turns out to be an extremely discouraging factor.

Admittedly, in projects of this type, the profit potential for the mortgage banker is not great. But, incentive or not, this is work which private enterprise is going to have to do—and be prepared, if necessary, to take a smaller profit in so doing.

Strategy for Survival

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following forthright analysis of the perils in which our country stands and a realistic prescription for us to follow. It was written by Gen. Clyde J. Watts, retired, now practicing law in Oklahoma City. If Americans would only read such a document and face up to the realities of the situations into which our drift and Communist guile have led us, we would not be unprepared for the defeats we have sustained and the worse ones still to come unless we quickly arouse ourselves and rally all the will and resources of the whole Nation. The article follows:

STRATEGY FOR SURVIVAL

(By Gen. Clyde J. Watts)

We are at war. A space age type of war, a protracted conflict in which our enemy has promised a materialistic god * * * his all powerful state * * * our utter annihilation.

In this all-out war, we are making less than a halfhearted effort.

We sporadically demand of our scientists and military the security they are powerless to provide, because it is not their war * * * it is our war * * * a personal war made more sinister and more protracted by our inability to comprehend its objectives, its strategies, its tactics, or even our enemy, who has been charting its course behind barriers of land, sea, and air that have lulled us into a sense of false security.

With the present compression of these barriers from days and miles into minutes and seconds (Oklahoma is now as close to Moscow as Berlin to Paris in 1940), we begin to recognize this enemy * * * powerful, brutal, determined, arrogant in his military might and scientific accomplishment, contemptuous in his cloak of invincibility.

Through the mist of his propaganda, he becomes more obvious; from his initial pronouncement of global objectives:

"We shall first dominate eastern Europe, then the masses of Asia. Finally, we shall encircle the United States, as the last bastion of capitalism. We shall not have to fight. It will fall like an overripe fruit into our waiting hands" (Lenin, 1918).

down to his confident boasting of present accomplishment.

"Victory is now in sight" (Khrushchev, January 1961).

It may be later than we know; but it is also earlier than they think. The weakness of power-mad dictators has ever been to underestimate the latent forces of freedom. Our survival is still within reach, but the time to reach is desperately short.

Our first reluctant awakening must comprehend the nature of the war our enemies fight—psychological, political, social, economic, industrial, scientific, military—and must include the concept that the nonmilitary phase, though lacking the horror, is the more deadly, for it will set up the military phase as a brief but foregone conclusion, a violent, but final, climax.

We must understand that the terrain of this unconventional warfare transcends land, sea, and air, involves a fourth and new dimension—the mind of all mankind.

We must next study our enemy, his objectives, his strategies, his tactics, as he has been studying us for 40 years; and, with stakes of life or death, we must recognize that our enemy:

1. Has warned that "War to the hilt between communism and capitalism is inevitable and that the democracies, stupid, and decadent, will rejoice to cooperate in their own destruction * * * in return for phony peace overtures."

2. Has through the means of a world revolution, pledged his all to accomplish a Communist utopia after bloody elimination of capitalist opposition.

3. Has mounted a steadily accelerating offensive, to push us into a nuclear corner, where we must choose between surrender or world destruction.

4. Has sold us his concept of peaceful coexistence, with implied promise of easing cold war tensions, which he alone controls, concealing that his concept of peace means only that we will not seriously challenge his goals.

5. Has used the hope of peace itself as an implement of psychological war.

6. Has built up, with Western aid, a colossus 1 billion slaves; a Frankenstein that challenges our very survival.

7. Has extended communism over two-fifths of the land surface of the earth and is reaching for one-third more, including the Carribbean nations to form the boundary of a new Communist lake.

8. Has organized and supports a hard core Communist conspiracy in the United States of America with awesome capabilities, as evidenced by the success of Communist organized, engineered and financed student riots against the House Committee on Un-American Activities, in San Francisco last May (see J. Edgar Hoover report, "Communist Target—Youth").

Finally we must study ourselves, recognizing that we are constantly being weighed in the balance of protracted war, that will change overnight from cold to hot, if and when we are found wanting. We must evaluate our strength and weakness; and resolve to mobilize our vast resources for the awesome conflict, before shifting of the balance of power past the point of no return.

What can we do? If our Government cannot meet the threat, if our leaders be not aware of the stark reality of our peril, how can we? We can. We must. We shall.

We must recognize that our Government is us; and our leaders simply mirror the composite thought and motivation of their people.

We must reject the old truism that the most significant fact of history is man's refusal to learn from history; and avidly do our homework to learn what has produced our present dilemma. This will reveal:

1. In March 1942, our President, expressing the sentiments of the vast majority of his people, wrote to Churchill:

"By the time you receive this, you will have learned of my conference with Litvinov, and I expect a reply from Stalin shortly. * * * I think I can personally handle Stalin better than either your foreign office or my State Department, Stalin hates all of your top people. He thinks he likes me better and I hope he will continue to do so."

2. Believing that Communists could be motivated by humanitarian motives, we made it possible at Teheran, Yalta and Potsdam for communism to extend its dominion over eastern Europe and the millions of China, in the belief we could enlist Soviet cooperation in creation of a new world order.

3. We witnessed the ringing down of an iron curtain over helpless peoples of the captive nations, who would have throttled their Communist enemies, had we been prepared to assure them the benefit of our liberty and justice, for which we had just fought the greatest war in history.

4. We can learn of our rejection of the warning of Churchill, in his 1946 Fulton, Mo., speech that Communist promises and treaties are scraps of paper.

5. We can observe desperate efforts to deter further Communist aggression by a ring of bases and worldwide subsidies.

6. We can even find Americans describing these bases, as "increasing cold war tensions," forgetting that they were installed only for defense, and after the aggressive intent of the enemy became brutally obvious.

7. We can find organized theft of our nuclear and defense secrets by the most highly developed spy organization in peacetime history.

8. We can find our people complacently oblivious to the stark reality of their peril—traditionally devoted to life, liberty, and pursuit of happiness; but so intent upon pursuing happiness that loss of liberty and even life seems imminent.

9. We find ourselves, after bitter disillusionment, still equating the enemy's prime propaganda weapon, "peaceful coexistence," with an expression of a sincere desire to abandon the icon of his fanatic devotion to world revolution, and this so avidly that we have developed the distressing habit of referring to the second greatest butcher of all history by the affectionate appellation of "Nikita."

We must, by a dynamic awakening, as a chain reaction, where the spirit of each will pierce the air conditioned shell of complacency of all, produce a new determination:

1. A determination that our religion will be revitalized as an impenetrable roadblock against the further advance of Godless communism. That we will meet the challenge of our unholy enemy that he is fighting a holy war (Khrushchev, Jan. 17, 1961).

2. A determination that we will know, meet and vanquish this enemy in every field of human endeavor in which he chooses to challenge us; and will select new fields of competition in which we are more adapt than he.

3. A determination to know, appreicate and perpetuate, as the last bastion of Christian civilization, this great country of ours; making an all out effort our first order of business, and relentlessly wiping out those eroding weaknesses with which we no longer can afford to live, particularly the following:

(a) Snobbery which has been classed as the tendency to spend money we don't have to impress people we don't like, and certainly furnishes high octane fuel for expanding the class warfare upon which our enemy thrives.

(b) Glorification of crime in our press, TV, radio, magazines, and movies, which not only impose bad thought habits upon the subconscious minds of our people, especially youth, but steals precious time that should be spent in study of our biggest problem—survival. Consider the time and space that could be made available if no crime were publicized within a radius of more than 100 miles from where it happened.

(c) Sophistication: Where it has made us apologists for Americanism; and replace it with a new birth of simple patriotism based upon sincere gratitude for the God-given privilege of being Americans. Recognizing that this is the only nation that seems to have outgrown a spirit of nationalism, we must foster a return to fundamentals that can be epitomized by the pledging of our lives, our fortunes, and our sacred honor upon the altar of our country.

(d) Graft, corruption, inefficiency in our Government—recognizing that the governmental system of our enemy is staffed by scientists, experts and devoted Communists, we must consider the recent warning "concepts and patterns of a more secure past no longer fit present reality," and recognize that only the best in government can meet the competition we face.

4. A determination to reestablish discipline in our homes, schools, and daily life. The discipline of force employed by our enemy can be met by our discipline of faith only if our people, especially our youth, are trained to voluntarily and cheerfully do the right thing in the right place, at the right time, the classical concept of discipline for the American serviceman. We need a new fad. With our marvelous mass communication media, could we not convince our youngsters that it would be "sharp" to say to elders "Yes, sir" and "No, sir," rather than "Uh, huh" and "Hunh, unh" and "Yeah," as an expression of respect for age and authority, of self-respect, and of the new determinism of which he is a part.

5. A determination simply to go to work; a columnist has recently said, "This is the era of the great 'goof off,' the age of the job half done. We have plumbers that won't 'plumb,' executives that won't 'execute,' businessmen that won't attend to business and workmen that won't work." Either America is going to work or a stronger civilization will put us to work.

In conclusion, the challenge of New Frontiers is gone, with only a faint echo remaining in the gunsmoke of western movies and TV; but we face a new and more demanding challenge, into which our enemy has preceded us, the stratosphere and outer space itself, that can be conquered by the same determinism that will insure our survival.

Our President has well stated, "Let every nation know, whether it wish us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend or oppose any foe to assure the survival and success of liberty."

He cannot do it alone.

Waterways Tolls

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. BARRY. Mr. Speaker, identical bills—S. 78, BEALL, of Maryland; H.R. 2963, VAN ZANDT, of Pennsylvania—have been introduced in the two Houses of the Congress which would create a commission empowered to assess tolls against users of improved national inland waterways. These charges would be designed to recover capital investment in existing waterways, costs of future improvement and current operating costs. An initial charge of about 2 mills per ton-mile is contemplated. These bills, now in the Interstate and Foreign Commerce Committees of the House and Senate, would impose tolls for the first time upon the users of national waterways. Heretofore the general taxpayer has paid for the costs of maintaining our national inland waterways. This legislation proposes that the users should be assessed something to contribute toward the maintenance of the waterways they use. Naturally the waterway users are opposed to the imposition of any tolls.

I have been asked by the National Waterways Conference, which represents the inland and intracoastal waterway users of the country, to place in the RECORD an article from the March issue of Rivers and Harbors, which expresses their views. It contains a recital of various proposals which would impose a user charge on the Nation's waterways and describes the opposition to the legislation.

Since this is a vital matter to an important section of our transportation industry, a thorough examination and complete knowledge of the effects of the proposals should be in hand before any action is taken by the Congress. Consequently I felt it to be in the interest of the Congress and of the Nation that the point of view of the National Waterways Conference be put in the CONGRESSIONAL RECORD:

NO TIME FOR TOLLS

Ask your Congressman, any Congressman, in fact, how he feels just now about a piece of legislation that would further blight depressed areas and put the cost of essential goods and services still further beyond the reach of millions of consumers. After he recovers from the shock, he is apt to be delighted with your question. It's one he can answer with no equivocation whatsoever.

Tell your neighbor you're ringing doorbells to line up support for legislation that will junk some of the Nation's most valuable resources and open the doors even wider to lower cost imports from abroad. He may, as you request, write his Congressman—but he will probably suggest you be hauled up for interrogation by the Un-American Activities Committee.

Yet, ask either your Congressman or your neighbor about bills that would impose tolls on users of federally improved waterways and you may find considerable support for such an idea. Reason—neither Congressmen nor neighbors have been untouched by this year's all-out sky's-the-limit campaign for user charges.

CAN'T KEEP TABS WITHOUT A SCORE CARD

This year there are four separate and distinct toll proposals, all being widely publicized. In order of probable potential for immediate devastation, they are:

(1) Identical bills in the House and Senate (introduced by Representative JAMES E. VAN ZANDT, of Pennsylvania, and Senator J. GLENN BEALL, of Maryland) which would create an Inland Navigation Commission empowered to assess tolls against users of improved inland waterways. Levies would be designed to recover (a) capital expenditures on all existing waterway projects; (b) capital costs of future improvements; and (c) operating and maintenance costs. An initial charge of about 2 mills per ton-mile is contemplated.

(2) The Department of Commerce report on "Federal Transportation Policy and Program" recommended (in March of 1960) tolls to recover Federal costs of new projects, plus operating and maintenance charges. This proposal advocates a fuel tax which, according to reliable estimates using data supplied by the U.S. Engineers, would amount to about 40 cents per gallon. Currently, diesel fuel is about 10 cents per gallon.

(3) The Doyle Transportation Study Group also concludes that waterway users should be charged for all future projects as well as maintenance and operating expenses on existing improvements. The Doyle group takes a somewhat different task, however, in proposing a varety of charges that would gradually increase over a period of years. A further feature is that before the user charge program is placed on an expenditure-revenue balanced basis "cost related tariffs" shall be prescribed by regulatory agencies for all modes of transport.

(4) The Landis report, submitted in December by James M. Landis to then President-elect Kennedy, lists among other long-range objectives "a reconsideration of the field of user charges for Federal facilities, particularly as regards air carriers, trucks and inland waterways." While this is not a specific endorsement of waterway tolls, it nonetheless indicates a possible change in waterways policy.

A COUNTER OFFENSIVE IS LAUNCHED

To combat the relentless and increasingly vigorous agitation for tolls, water carriers, their customers and suppliers, and others interested in the orderly development and preservation of the Nation's water resources, banded together last fall to organize the National Waterways Conference, Inc. With the recent appointment of Mr. Joseph J. Gannon, Jr., as managing director, this organization is now gearing up to wage an effective campaign of its own—an educational campaign designed to alert the publice to the inherent dangers in any waterway toll proposal.

For example, the conference circulated last month some of the basic considerations in support of the established free waterways policy. Some are particularly pertinent in view of today's economic and social probems.

In brief, the conference cited the following injurious effects of waterway user charges on the economic well-being of the American people:

(1) Such charges would wipe out by far the greater portion of the inland waterway commerce of the Nation.

(2) They would leave largely unutilized the navigable channels of our rivers and canals, thus wasting major natural resources and the large public investments in navigation improvements already made.

(3) User charges would increase the prices paid by consumers for a wide variety of products in all sections of the country, contributing to the forces of inflation.

(4) They would seriously damage the competitive position of large industrial communities, retard economic development, add to unemployment in critical areas, and stunt the potentials for economic growth of the Nation as a whole in a period of expanding needs for an explosively growing population.

(5) Finally, waterway user charges would be a shocking breach of faith with the many thousands of communities and the millions of people who have made enormous investments of their savings and who have committed their occupational destinies to water-oriented industries and locations in implicit confidence in the continuing free waterways policy of the Nation.

Full elaboration on these arguments is impossible here, but let's get back to the questions posed to Congressmen and neighbors.

Would tolls further blight depressed areas? According to the National Waterways Conference, tolls would be a crippling blow for the coal mining regions of Pennsylvania, West Virginia, Kentucky, Indiana, and Illinois. The coal industry, historically the principal business activity in some of these districts, has staved off virtual extinction only because low-cost barge transportation has created new far-distant markets for coal. Boost the delivered cost of coal ever so slightly and volume users—utilities and heavy industrial plants—will be compelled to switch over to competitive fuels.

Would tolls further inflate the price consumers pay for essential goods and services? Again the conference comes up with a clear-cut answer. "Products carried on the inland waterways consist primarily of the basic materials and fuels of our industrial civilization—steel, chemicals, alumina, coal, oil, gasoline, agricultural commodities, etc. User charges would add to the cost of these materials and fuels, leading inevitably to price increases of almost every manufactured product throughout the United States. Higher transportation costs will trigger chain reactions. In the case of grain, for exemple, not only will the consumer pay more for bread and other cereal products, but because grain is an essential feedstuff, he will find prices rising on meat and dairy product too.

Would tolls lead to the junking of some of the Nation's most valuable resources? The conference points out that for well over a century the Federal Government has been making improvements in the waterways system that represent an accumulated public investment of hundreds of millions of dollars. These works are now in place, delivering benefits to the American people in the form of lower cost transportation on continuously growing tonnages of water-born freight. This freight will rapidly be taken over by higher cost modes of transportation if tolls are enacted.

The bills before Congress, for example, are pegged at a toll levy of 2 mills per ton-mile. This would approximately double the transportation cost of petroleum products now being carried by barge. Petroleum, which accounts for 35 percent of the total barge traffic, would disappear from the rivers as fast as pipelines could be built to provide the same service. This would mean that the remaining 65 percent of the traffic would have to be charged at a rate of about 3.3 mills per ton-mile—the amount to be reclaimed by tolls remains constant regardless of the volume of traffic. If another 15 percent of the freight is lost because of the 3.3 miles per ton-mile charge, the toll jumps to a rate of 4 mills per ton-mile. The process continues, with less and less traffic being burdened with heavier and heavier tolls until freight on the rivers dies.

Tolls therefore are not only self-defeating from the standpoint of reclaiming expenditures for waterway improvements—they deprive the public of all possible benefits from these experiments. The great locks, dams, and harbor projects would stand as sterile monuments to the defeated hopes and unfilled expectations of the millions of Americans who helped develop one of the most efficient transport systems the world has ever known.

Proposals for initially "small" and "relatively painless" user charges are equally dangerous. The idea here is that tolls start out at low levels and gradually build up to the point of full recovery of Federal expenditures for waterways improvements. Such proposals implicitly concede the ultimate consequences of user charges and merely substitute a gradual strangulation of water-borne commerce in place of immediate destruction.

Would tolls encourage still more penetration of domestic markets by lower cost imports? No doubt about it. Petroleum products from the Southwest compete in northern and eastern markets with imports from Venezuela, the Near East and elsewhere. Iron ore from Minnesota and Michigan contends in domestic markets with ore from Labrador, Venezuela, and other sources. In recent years, American steel producers have found it increasingly difficult to compete with imports from Europe. Efficient water transportation has helped immeasurably to maintain the cost advantage of these and other American industries in the domestic market. To remove this vital support would seriously impair the ability of American producers to compete with the mounting volume of imports from abroad.

A RAY OF HOPE—A WORD OF CAUTION

Offsetting to a large degree the current anxiety over tolls, President Kennedy has made crystal clear his opposition to any deviation from the established free waterways policy in a strongly worded statement recently released by the Kennedy-Johnson Natural Resources Advisory Committee further spelling out the administration's views. Typical quotes are:

"Availability of low-cost water transportation provides a foundation for economic growth which could not occur on a comparable scale in its absence."

"Navigation improvements have exhibited their values most strikingly in stimulating development of resources in regions of the country where growth has heretofore lagged through lack of economic access to markets and sources of raw materials."

"The emerging problems of the future urgently demand a vigorous rededication to the philosophy of free waterways improvement. Considerations of national security, involving encouragement to dispersion of strategic industry, capabilities for low-cost mass transportation of basic industrial commodities and fuels, economy in the consumption of fuels and scarce materials and optimum recuperative power following heavy nuclear attack, also counsel an expanded program of waterways improvement."

But, warns the National Waterways Conference, "President Kennedy's stand is both a blessing and a danger. Some people inevitably are going to say we have nothing to worry about." The statement goes on to say that should Congress pass a toll bill, there'll be plenty to worry about. In such an eventuality, the President might be forced to reconsider his position.

In conclusion, the NWC declares "the Conference has its work cut out for it. We have to see that no such bill passes the Congress. That's why the Conference so urgently needs well-informed public support."

Use of Arkansas River for Navigation

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mr. MONRONEY. Mr. President, because of the very real progress being made along the Arkansas River to make it navigable and useful to several States, I ask unanimous consent to place in the Appendix of the RECORD an article from the spring "American Scene" on the history of the river's use for navigational advantage. The description of a trip down the Ohio and Mississippi and up the Arkansas of the *City of Muskogee*, a 125-foot steamboat bearing a huge sign "Bound for Oklahoma," was especially interesting. The article was written by Glen R. Ames, museum director of the Gilcrease Institute in Tulsa, Okla., which publishes the magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOUND FOR OKLAHOMA—THE FRONTIER DREAM OF A NAVIGATIONAL ARKANSAS RIVER WILL SOON BECOME A REALITY

(By Glen R. Ames)

When Oklahoma entered the Union in 1907 Muskogee was a thriving city of more than 14,000 population. It had been founded in 1872 when the Kansas, Missouri & Texas Railroad was constructed through Oklahoma along a route closely paralleling the old Texas Road. But even in 1872 the region around Muskogee had long been a center of commercial, military, and Government activity. The first trader is said to have settled here in 1806 and before the Civil War riverboats regularly made their way to Fort Gibson with freight and passengers.

The real expansion and growth of the city came however after the turn of the century when Charles N. Haskell moved there from Ohio to spearhead a development program that turned the little town into a bustling city. His promotions led to the construction of a fine modern hotel, of the Midland Valley Railroad, the interurban line from Fort Gibson to Muskogee, and other businesses. An oil pool was discovered within the city limits and the Pioneer Oil and Gas Co. drilled the first well in October of 1903 and by 1905 Charles Madison had organized the Muskogee Oil and Refining Co. to build a refinery. Business was good, bond issues for civic improvements were passed easily, and real estate sales flourished.

Now one of the things which was pretty evident to the alert and able businessmen of Muskogee was the fact that the Arkansas River was no longer being utilized to its navigational advantage. It was indeed river transportation that had made this Three Forks region the hub of eastern Oklahoma and the supply depot for the military operations of Texas and the Southwestern frontier for many years. Why not put it to use again? True there was the railroad, but then there was the high railroad rate, too. Thinking along these lines, seven prominent Muskogee businessmen were inspired to raise a fund of $3,000 for the purchase of a little steamboat at Fort Smith called the *Mary D*. These men organized the Arkansas Navigation Co. and put the *Mary D* into service plying the river between Fort Smith and Muskogee.

By comparing the freight rates on merchandise brought up the river on the *Mary D* and similar loads that arrived by train it was discovered that the goods could be delivered in Muskogee by boat for about half the railroad cost. This set the men to thinking and being good businessmen they decided to do something about it. The Muskogee Commercial Club published a study entitled "Commercial Value of the Arkansas River Improvement" by Theodore Gulick. Then A. C. Trumbo and John R. Dudding were authorized by the club to go to Jeffersonville, Ind., and enter into a contract for the construction of a large steamboat that would engage in the riverboat business on a grander scale.

A steamboat 125 feet long with a 25-foot beam and a draft of three and a half feet was now constructed at cost of $15,000 and named the *City of Muskogee*. On July 2 a group of Muskogee boosters went aboard and it made its maiden voyage down the Ohio and Mississippi and up the Arkansas Rivers. When the *City of Muskogee* arrived at Muskogee July 18, a large banner with the words "Bound for Oklahoma," hung from its upper deck. Blaring bands and a large crowd in festive mood were on hand to watch it dock. On this trip it had carried a cargo of 41 tons of nails and barbed wire. Commercial navigation on the Arkansas was a fact.

But not for long. The *City of Muskogee* made only one other long trip and then limited its travel to as far as Fort Smith. Some 4 years later even those irregular runs were ended. The difficulties of the river proved too much for the boat and it was transferred to the White River where it ended its days as a gravel barge.

Yet the experiment was not a failure; neither for the people of that day nor for us today. The placing of the *City of Muskogee* into actual operation on the Arkansas caused the railroad company to lower its freight rates substantially. The Arkansas Navigation Co. did prove that river navigation was possible, that it could be economically feasible and attractive, and that there were only certain engineering problems which prevented the dream from becoming a fact.

Nothing more was done in behalf of commercial travel on the Arkansas until about 30 years ago. Then the idea of making the river truly navigable began to be considered. At first it received little encouragement but under the leadership of such men as Newton Graham, P. H. Stephens, John Dunkin, and Gary Vandever the idea caught on and a feasibility study was made. The report was gratifying and the formation of the Arkansas Basin Development Association followed.

After the Arkansas River leaves Kansas conditions are favorable for navigation provided three engineering feats could be accomplished. The first was the construction of reservoirs to permit a steady and ample supply of water, the second was the construction of locks to raise the loads to the proper elevation level, and the third was the construction of jetties and revetments to control the vagaries of the channel of the old and meandering stream. The association, composed of leading businessmen, civic leaders, and legislators of Arkansas, Oklahoma, and Kansas, publicized the program and its goals. It made technical studies and in general undertook such actions that would overcome the obstacles and established the financing required to get the project underway. It was of course a long-range program requiring vision and faith on the part of the people actively concerned with it. The program has now moved forward by the construction of reservoirs and locks to the point where there is now a good possibility that Catoosa, 15 miles from Tulsa, will be a navigation port by 1970.

This will be the realization of the long-time dream of citizens of Oklahoma, Kansas, and Arkansas. It provides the means for unlimited industrial growth for Tulsa and the entire Arkansas Valley. But commercial advantages are not the only values offered by the Arkansas Basin development program. In addition, great values will be achieved by flood control, waterpower, improved soil conservation conditions, and by recreational opportunities for everyone. Indeed the value of this latter service is now recognized as a very important reason for the program. Grand Lake, Fort Gibson Lake, and Sequoyah State Park are only three examples of how this project has already given Oklahoma recreational benefits not previously known to us. The many beautiful resorts already developed indicate something of what is yet to come.

The vision of the Muskogee citizens of an earlier day was a clearsighted one but the engineering requirements were too tremendous for the economic resources of those times. Today, however, we have those resources and we are making use of them in such a manner that the time will come when the frontier dream of a navigable river will become a reality. Such legislative leaders as Senator Bob Kerr and Mike Monroney and Representatives Page Belcher, Ed Edmondson, Karl Albert, and Tom Steed, together with the earlier work of Senator Elmer Thomas and Representative Wesley Disney, are to be honored and remembered for the invaluable work they have done in behalf of this project. The Gilcrease Institute salutes the pioneers in this project and all the people now engaged in this great effort to get the project completed. If the Muskogeans of a previous generation could look upon us now they would see that river commerce is bound for Oklahoma after all.

Meddling Points Up School Aid Dangers

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. SIKES. Mr. Speaker, I submit for printing in the CONGRESSIONAL RECORD a very timely editorial from the Mobile Register of May 2. It deserves very careful reading:

[From the Mobile Register, May 2, 1961]

MEDDLING POINTS UP SCHOOL AID DANGERS

A current piece of Federal meddling in Virginia may help prove that Shakespeare was right: "Ill blows the wind that profits nobody."

If Congress reacts to this piece of meddling as it should, the whole country will be better off, for the result will be to lessen the danger of Federal aid to education being put across as an entering wedge to Federal control of the schools from stem to stern.

In another extreme act of blackjack wielding, the Washington Government is attempting to force Prince Edward County, Va., to reopen the public schools it closed in the racial integration fight.

William F. Arbogast, Associated Press correspondent in Washington, reports that so-called aid to education is one of the bills facing serious congressional trouble because of the Government's move in Virginia.

He quotes one of the backers of school aid legislation as saying, "We don't stand much chance now. It would have been much better if the administration had waited a while before jumping into the Virginia fight."

That meddling action will forever remain unjustified in any circumstance, but if it contributes to the defeat of manuevers holding Federal control danger for the schools, the country will be able to feel that some good has come from the concern caused by it.

Meanwhile, U.S. Senator FRANK J. LAUSCHE, of Ohio, is performing a timely service by helping keep the spotlight on the fact that the Federal aid clamor is not a people's movement.

"The record will clearly show," he reminded his colleagues in Congress the past week, "that it is not local school boards, not the municipal or county governments, nor even the State governments that are demanding that the Federal Government wedge its way into this field."

The clamor for a massive outpouring of so-called aid to the schools from the Federal treasury comes from a lobby that neither represents popular sentiment nor reflects popular sentiment on this issue.

Mr. LAUSCHE correctly says that "none but the blind will deny that if the Federal Government is going to pay the piper, it is most certainly going to call the tune."

Of course the meaning of this remark is that Federal aid would threaten to operate as a steppingstone to Federal control.

The Ohio Senator did not hesitate to put it in more specific words: "The end result of (Federal aid) will be eventual Federal domination of our system of public education and the absorption by the Federal Govern-

ment of one of the last remaining privileges of home or self-rule and determination."

He also warned:

"For the Congress now to acquiesce to the pressure demands against which it has stood so firmly, and rightly so, for more than a century and a half will mean complete capitulation against the will of a vast majority of the citizenry of our Nation."

Congress should heed this warning, for certainly the aid-to-education lobbyists clamoring so incessantly on Capitol Hill do not symbolize or typify the voice of the American people on this question.

The current meddling act by Washington in the school affairs of a Virginia county is a new example of the lengths to which Federal blackjackers seek to go even now in throwing officious weight around in education.

Community Development Key to Economic Progress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. WILEY. Mr. President, a strong economy provides a foundation upon which to build a dynamic social, political, and military structure to serve and protect the Nation.

This involves:

Strengthening of our free enterprise system;

Smoothing out lines of cooperation between local-State-Federal Governments and free enterprise, in creating jobs and producing commodities for progress;

Putting more "muscle" into our national defense;

Fulfilling the human needs of our people.

In creating such machinery to meet challenges to our security and progress, we must not overlook the potentials of effective leadership and support at the community level.

Recently, I was privileged to publish an article in the County Officer entitled "Community Development—Key to Economic Progress." The article reflects upon the ways in which community action can strengthen our overall economy. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNITY DEVELOPMENT—KEY TO ECONOMIC PROGRESS

(By the Honorable ALEXANDER WILEY, U.S. Senator from Wisconsin)

(Whether you are a prosperous county, merely interested in increasing the economic potential you already have, a growing county seeking new industry, or a depressed area looking for a push to get you off economic dead center, this article, written by a famous and respected member of the U.S. Senate, may prove to be the most profitable piece of reading you will do this year. Senator WILEY, in this exclusive article for County Officer, has outlined a finely detailed, clearly marked blueprint for your county's economic future.)

The progress and security of our Nation and its people depend upon a strong, dynamic, forward-moving economy. A good rate of economic progress, however, can be attained only by full utilization of our human and natural resources.

Today, the challenges to our economic system are manifold, including the need for:

Maximum employment;

A good rate of business, industrial and other commercial activity;

Fulfilling the growing needs of a fast-expanding population;

Competing successfully against the Communist system;

Proving to the world that our free economic system, operated by a free people, can best serve a nation and its citizens.

To attain these objectives requires cooperation among citizens, local government and free enterprise, to creatively tailor plans to the needs of each locality.

By experience, programs have been evolved to provide a framework of action within which communities can move ahead to resolve economic problems and to promote progress. Among the major ones are included:

Encouraging greater industrial development in both urban and rural areas;

Creating a better climate of opportunity for job-creating businesses—large and small;

Expanding rural development programs, particularly in areas of chronically low income;

Exploring for new economic opportunities, such as promoting tourism, to bolster local economies.

Other efforts for maximum utilization of natural and human resources to serve our people are also needed.

Local-State interests—working with, and utilizing services provided by, Federal agencies—also can serve to promote progress in these areas of economic activity.

SPURRING INDUSTRIAL PROGRESS

Now, what can be done, for example, to spur industrial progress? This can be accomplished in two ways:

(1) By attracting new industries:

A community development committee can be formed to:

Determine quantity and skills of available workers;

Study economic trends in area;

Determine likely industrial prospects;

Survey local market needs and opportunities;

Enlist assistance of State engineering schools, bureaus of business research, etc., to assist in specific technical problems;

Discover why in the past, industry may have failed, or moved away;

Survey locally available natural resources and industrial potential;

Set up clearinghouse of information on sources of venture capital;

Examine and utilize applicable methods of successful industrial expansion programs of other communities;

Determine needed civic improvements, i.e., traffic arteries, store fronts, garbage disposal, street paving, etc.

Enlist assistance of Office of Area Development of the Department of Commerce and the Business and Defense Administration;

Review and, as possible, favorably adjust tax system and/or other local government services.

Having made these determinations, projects to remedy weaknesses should be commenced and publication and promotion of area's advantages should be undertaken. Additional steps may include: developing and reserving for industry suitable industrial sites; modernizing old industrial facilities, and building new ones. Financing for such efforts can be raised by contributions or floating bonds.

(2) To expand existing industry:

Steps include efforts to:

Find sources of business expansion loans (banks, individuals, insurance companies, the Small Business Administration);

Initiate local business and industry improvement clinics with assistance of local trade associations, government field officers, university engineering and business schools;

Render where possible, or suggest specialists to render, market and product development assistance.

The Office of Area Development of the Department of Commerce provides technical services to States and local communities; issues publications on area development problems, and assists States and local groups to:

Create new industrial diversification;

Acquire and prepare land for industrial use;

Organize industrial districts;

Develop new products;

Locate new markets;

Locate industrial prospects;

Help manufacturers who are seeking sites for new branch plants on plant location data.

IMPROVING THE OUTLOOK FOR SMALL BUSINESS

Now, how is it possible to brighten the outlook for small business? Nationwide, there are over 4.6 million enterprises, of which about 95 percent are in this category.

To help meet some of the different problems, the Small Business Administration provides a number of services to small businesses and local companies seeking to raise employment or economic development in a community.

The programs include:

(1) Local development company loans:

Companies having a broad base of ownership may borrow funds to buy land and either build a new factory or expand and convert an existing plant, provided the project will aid a small business concern.

(2) Production assistance:

Small businesses are invited to register their facilities at the SBA regional office. The SBA acts as a clearinghouse for services which small firms may offer other small firms or larger firms.

(3) Research and development assistance:

Technical assistance is provided by SBA on—

Product research;

New product potential;

Processing methods;

Product and marketing developments;

New industrial uses for materials; and

Industrial uses for agricultural products.

Assistance is also rendered through—

Advice on problems of plant location and plant space and undertaking the locating of tools or materials needed.

Awarding of a certificate of competency, to the small business is a device to encourage it to bid in competition with larger firms for Government contracts.

Management courses, in conjunction with local educational institutions.

Management counseling with SBA regional office.

Management seminars and 1-day conferences.

Publishing information on available materials, patents, and "how-to" articles.

(4) Financial assistance:

Business loans for financing on reasonable terms when it is not otherwise available through private lending sources;

Disaster loans granted to aid firms stricken by either physical damage or economic injury.

In general, the assistance rendered small business emphasizes efforts to aid areas adversely affected by: Unemployment, economic dislocation, chronic depression, and "natural" economic shifts.

DEVELOPMENT OF SMALL BUSINESS "POOLS"

The development of small business "pools," also, is helping to meet some problems that could not otherwise be resolved, such as programs to:

Collect market and research information related to a particular industry for dissemination to participating members;

Contract, acquire or establish laboratories and other facilities for the conduct of research;

Prosecute applications for patents and render patent services for participating members; as well as

Negotiate and grant licenses under patents held under joint programs.

RURAL DEVEPOPMENT PROGRAM

Today, urban-rural communities are becoming more closely integrated and interdependent. Consequently, greater cooperation is essential to progress. Local business, industry, and services, for example, may depend upon the buying power of the farmers in the surrounding community. The rural development program aims at resolving economic problems in chronically depressed areas in agriculture.

The general objective of the rural development program is to assist in remedying low income on farms and disadvantaged rural families.

The major targets of the program include:

Providing farm families with information and ability to gain tools, land and skills for successful farming;

Education and job training;

Health services and community sanitation;

Expansion of markets for products of small farms, i.e., new processing plants, additional co-ops;

Changes in crops and increased crop production;

Forestry and conservation assistance for small woodlots and timber processing enterprises;

Water resource development;

Industrial development, etc.

About 200 counties in 30 States have been designated for the rural development program.

The accomplishments achieved have been:

New businesses and services activities have added nearly 18,000 full- or part-time jobs;

Market improvement projects started;

Soil mapping completed on farms in rural development areas;

Projects in health services reported;

Rural clubs organized in communities, to exchange ideas on promoting better living;

And other steps that have improved income and farm life.

How can a local county with chronic low-income initiate a rural development program? A county may apply to the State rural development committee. The committee decides which counties and/or areas will be designated, and how extensive the program will be in those areas. Even though the county may not be designated a rural county under the program, it can ask the State extension service for technical assistance. It can, under its own aegis, follow closely the form of the rural development counties. And, if the State rural development committee assents, it can have the help of rural development agents on specific problems.

CUTTING A BIGGER "SLICE" OF THE "TOURIST PIE"

In exploring for new economic opportunities, let's take a look at the development of tourist trade. Tourism is one of the fastest-developing businesses in the United States. Annually, tourists in this country spend between $15 and $20 billion.

By developing tourist attractions, a great many communities can cut for themselves a larger slice of this "economic pie."

Overall, tourism benefits not just a few, but many segments of the community's economy, including services, transportation, accommodations, entertainment, cleaning services, products such as sporting equipment, souvenirs, fashions, etc., utilities (power, water, light). The result: greater economic growth and easing of the local tax burden. A secondary benefit from tourism is that it attracts new industry through increase in population, pleasant locale for plant location, etc.

A great many communities, either by exploiting an existing potential or even by importing one, can probably turn themselves into meccas which will appeal to tourists. Examples of attractions:

A good inn, an historical landmark (battlesite, churches, mill, etc.);

A body of water, an animal preserve;

Hills, mountains, valleys, forests or woods;

Geological formations and other natural or man-made features.

Programs that will develop tourist trade include:

A facelifting program for unsightly areas, refuse, junk; paint and spruce up; encourage clean, comfortable lodging places with well-cooked, well-served meals;

Developing or improving specific tourist attractions; obtain expert advice in restoring historic structures, draining lakes, etc.

Determine from what areas to attract tourists, and then advertise; enlist cooperation of area newspapers, magazines, TV and radio stations to help sell community.

What are basic tourist habits? According to a report by the Department of Commerce:

Eighty percent travel by car;

Sixteen-nine percent stay in motels;

Twenty-six percent stay in hotels and resorts; 27 percent with friends and relatives. (These add up to more than 100 percent because many tourists use more than one type of accommodation on a trip);

Most tourists take two vacation trips a year, totaling 20 or more days;

Seventeen percent go in the winter; 18 percent in spring; 40 percent in summer; 25 percent in fall;

Average annual expenditure per family is $400;

Roughly 1 out of 12 goes abroad each year. The rest stay in the United States, the largest single tourists market in the world.

Tourists development programs can be supported by private or business financing; by group (chamber of commerce, community associations, etc.) contributions; or other ways. Overall expanding tourism promises ever-greater economic opportunity for the years asead. Why? Because of paid and increasingly longer vacations, good roads, more leisure time and money, early retirement, more education—all these portend a fast-growing opportunity for the American to travel.

SUMMARY

This, then, is a brief look at some opportunities to better utilize our human and natural resources for economic progress. Our success is dependent upon forward-looking, hard-working creative leadership, including private citizens, county officials, civic leaders, and others. In facing the future, however, I am confident that—as in the past—such high-quality leaders will continue to emerge to do a successful job of building a stronger economy.

Oregon Dunes National Seashore Park

EXTENSION OF REMARKS

OF

HON. MAURINE B. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mrs. NEUBERGER. Mr. President, I have previously had printed in the Appendix of the RECORD two articles from the Oregon Journal regarding an important conservation issue in Oregon; namely, establishment of a national seashore park.

I ask unanimous consent that the third and final article in this series, written by Mr. Anthony Netboy, be printed in the RECORD, along with an announcement by the Oregon Dunes National Seashore Committee.

There being no objection, the article and announcement were ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Mar. 24, 1961]

(By Anthony Netboy)

The leaders in the movement to place the spectacular Oregon Dunes in the national park system are the Neubergers—the late U.S. Senator and his wife and successor, MAURINE. In an effort to overcome opposition of vociferous local property owners, who call themselves the Valley Voters Association, Mrs. NEUBERGER has incorporated in her bill, S. 992, two provisions that will protect local autonomy: (1) A five-member Oregon Dunes Advisory Board to consult with the Secretary of the Interior on management policies and zoning standards; and (2) a mechanism for local zoning of private property within boundaries of the seashore.

Private ownership of land and water areas would be permitted in the park if they are used in a manner consistent with park purposes. It is expected, said Mrs. NEUBERGER in introducing her bill, that "the Secretary's ability to utilize condemnation (of private property) will be circumscribed by the degree to which the counties wish to use their own authorities for land use zoning."

In redrafting the legislation, Mrs. NEUBERGER says she "endeavored to meet all of the various points of view that have been expressed and, in the process, to make certain that we will protect an important scenic and recreational resource, while at the same time promoting both economic growth and stability in this important area of the Pacific coast."

Despite these assurances and the manifest economic benefits which an additional national park would bring to Oregon, Representative DURNO, leader of the opposition, will have none of it. Indeed, DURNO strengthened his position to do battle against the proposal by getting an assignment to the newly created Subcommittee on Parks of the House Interior Committee. In this position he is in a good position to kill the Oregon Dunes proposal in the House.

DURNO says the dunes area does not have the scenic grandeur to be made part of the national park system, and the proposal is not in the best interests of the people of Oregon. He objects to the Neuberger bill because it would give the Secretary of the Interior the right to condemn private property and thinks the zoning features of S. 992 are meaningless because the board would have only advisory authority. He is also worried that the Secretary would have the power to determine whether any proposed industrial operations would impair the scenic an drecreational values of the park.

DURNO seems satisfied that the recreational potential of the area will be taken care of by the public agencies now in control—the Forest Service, State park department, Bureau of Land Management, and Lane County Park Department. He says: "If you took one-fifth of the money they propose to spend for this park and gave it to the Forest Service and these other agencies, you could do something much more useful and habitable than if they create a national park."

DURNO's stand brought a sharp retort from former Governor Charles A. Sprague, who commented that his "statement has done

more to unify opinion behind the proposal than any of its advocates."

The Coos Bay World, most influential paper in the dunes region, editorialized, "scenic grandeur and natural interest are no doubt a matter of taste. What Representative DURNO's taste is in these matters is his business. But if our coast lacks scenic grandeur, and the dunes lack scenic or natural interest, we wonder how we've managed to defraud the thousands of tourists who do come through here every year in believing the opposite."

Since the President failed to mention the Oregon Dunes in his list of seashore areas recommended to Congress for inclusion in the national park system, Senator NEUBERGER has called upon Oregon residents to rally to her proposal. "It has been apparent," she said, "that if Oregon people turned their back on the seashore park proposal, the development would go elsewhere, possibly to California."

In the long run, it is up to the citizens of the State to determine whether or not they wish to preserve a spectacular scenic area and upgrade the economy of the southern Oregon coast.

Formation of a new statewide organization to promote the Oregon Dunes National Seashore proposal was announced today at a luncheon meeting of the seashore advocates in Portland. The organization, known as the Oregon Dunes National Seashore Committee, will conduct a campaign to inform the people of Oregon, and the Nation, of the outstanding scenic and recreational values of the Oregon Dunes and rally support behind Senator MAURINE NEUBERGER's bill, recently introduced in the Senate, to put the dunes area into the national park system.

An executive committee was formed under the chairmanship of James A. Mount, local advertising man, to launch the new organization. Other members of the executive committee are Marshall N. Dana; Dr. Sanford Tepfer; Don Malarkey; Anthony Netboy, Portland State College; Dr. David Charlton, Izaak Walton League; M. L. Thomson, visitors committee, Portland Chamber of Commerce; Carleton Whitehead, Reed College; John Goss; Ben Fleischman, visitors committee, Portland Chamber of Commerce; William B. Morse; and Charles Collins, director of parks, Douglas County.

The Portland meeting, chaired by Marshall Dana, chairman, recreation subcommittee of the Columbia Basin Interagency Committee, heard various speakers describe the seashore proposal and the benefits that will accrue to the State if Congress passes the Neuberger bill.

Dr. Sanford Tepfer, of the University of Oregon, told the meeting that the Oregon Dunes would become one of the Nation's prime recreational attractions, if incorporated into the national park system, and bring many millions of dollars of additional income to the area. Daniel Burroughs, regional representative of the National Park Service, said there is no conflict of interests in the proposal between the Forest Service and National Park Service but that under Park Service management the 35,000 acres, now under diverse public and private ownership, would be tied together into one unit for maximum recreational development.

William B. Morse, of the Wildlife Management Institute, said that Oregonians must get behind the Neuberger proposal if the dunes park is to become a reality. Don Malarkey, former president of the Oregon Coast Association, made a strong plea for public support to save the unique dunes for development as a recreational area under national park auspices.

A Place for the Cities

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. HUMPHREY. Mr. President, the problems of urban places in our contemporary society have been focused anew by the introduction of S. 1633, by the distinguished senior Senator from Pennsylvania [Mr. CLARK]. Public interest and concern with the problems of all urban places—large and small, incorporated and unincorporated—is gratifying.

An excellent editorial appeared in the Minneapolis Morning Tribune on April 20, 1961, calling particular attention to the need for Federal participation in attempts to devise solutions to these pressing problems, and the necessity for the coordination of efforts if success is to be attained. I recommend this fine editorial to all those concerned with this most modern problem, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PLACE FOR THE CITIES

The President has just asked Congress to create a Cabinet-level Department of Urban Affairs and Housing, a move foreshadowed both by the Democratic Party platform and by Mr. Kennedy's housing message last month.

Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, who introduced the administration's bill implementing this request, explains that "no new programs or operations" are contemplated. It is simply intended that the present housing and home finance agency shall be elevated to Cabinet status "with additional responsibilities for leadership in coordination." The new Department would be concerned not only with the problems of our great metropolitan centers, but with those "of all urban areas, large and small alike, incorporated or unincorporated."

The Kennedy plan would unquestionably dramatize these problems before the Nation. It would impart a proper sense of urgency to the need for attacking what Mr. Kennedy calls "the appalling deterioration" of many of these areas. It might also help to intensify the Nation's efforts to insure adequate housing for its slum-dwellers and others living in the midst of blight and squalor.

We applaud the President's insistence that the Federal Government help in the solution of these urban problems. We feel that their solution requires Federal, as well as local, leadership. The cities cannot bear the financial burden of urban renewal alone; the pressures of rapid growth, with their tremendous impact on the pattern of community living, have made substantial and consistent Federal aid imperative.

Perhaps the drawing together of many programs and activities into a single department of urban affairs and housing would present formidable difficulties. But the need for greater coordination of such efforts, and for increased Federal participation in the attack on urban problems should be fairly plain.

It seems to us, therefore, that Congress should give sympathetic consideration to the President's request. One way or another, the sturdy and well-ordered growth of our exploding urban areas must be assured.

Seventy-fifth Anniversary of Vending Machine Industry

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. SCOTT. Mr. President, this is the 75th anniversary of the vending machine industry, one which provides a useful service for millions of consumers and one which provides employment for many thousands of Americans. I ask unanimous consent to insert in the Appendix of the RECORD a story about that industry which appeared in the Philadelphia Inquirer on April 21, 1961, which calls attention to the role played by two Philadelphia businessmen.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INVESTOR BACKGROUND—VENDING MARKS ANNIVERSARY

Vending, automatic merchandising, is celebrating its 75th anniversary in America. The observance starts this month in some 300 cities and communities from coast to coast and will continue until the annual convention next November.

The industry is rated as one of the fastest moving in the Nation. Total value of U.S. production rose 128 percent between 1946 and 1959 while vended merchandise sales rose 296 percent to $2.3 billion during the same period. Some 6,000 companies are engaged in the vending business. And there are about 4 million machines in operation. It is estimated that within the decade the gross sales figure will exceed $6 billion.

Each day, 1,700,000 Americans buy at least one meal through vending machines. In 40 percent of the U.S. industrial plants, vending machines now are the only source of food and beverage for people on the job. And this is on the increase.

The industry had its beginning in this country with the issuance of the first U.S. patent in 1886 for a postal card-cigarette automatic vending apparatus.

Since then the industry has grown with increasing acceleration. It was during the years following the Second World War that perhaps some of the most significant strides were taken. Most of these were brought about by major technical breakthroughs.

One of these focuses the national spotlight on Philadelphia, for it was here that two young ex-GI's, Lloyd K. Rudd and K. Cyrus Melikian, just returned from the service in 1946, invented and marketed the first automatic coffee vending machine.

Last year the coffee segment of the industry dispensed 1.5 billion cups of coffee through 100,000 machines with gross sales of about $175 million. These figures become extremely meaningful when you consider that prior to 1946 not one cup of coffee was dispensed through vending equipment.

Today inventor-businessmen Rudd and Melikian are the chief officers of their $8

million manufacturing firm in suburban Hatboro.

The spectacular growth of the coffee vending business has led the entire industry to unprecedented progress and success.

There are about 150 vending machine manufacturers in the country. And the situation today can be likened to the automobile industry of a few decades ago. At that time there were numerous auto makers with many brand names. Then came the era of mergers, and acquisitions. Today, as a result, there are a few giants such as General Motors, Chrysler Corp., Ford Motor Co., and American Motors. The same is true today in the vending industry. The trend in vend is to acquire and merge, slimming down the ranks of vending machine manufacturers.

A similar trend is taking place at the operating company level. The people in these companies are the specialists in the industry. They purchase machines, place them in operation, and service and supply them.

There is a major shakeout in this segment of the industry, too. It can be likened to the grocery business of years ago when there were only "moms and pops." Now there are moms and pops, true, but the food business is dominated by national, regional, and local chain operations. The trend in vending is the same. Operating companies are merging to form national, regional, and local operating giants. Three national and two regional chains now serve the Delaware Valley area.

Shepard's Flight Casts Doubt on Yuri's Account

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. PUCINSKI. Mr. Speaker, several days ago I pointed out that the world should indeed have a great deal more scientific proof before it conclusively accepts the Soviet claim of having put a man into space.

I should like to call to the attention of my colleagues the fact that the response to this admonition has been overwhelming from people all over the country.

Last Sunday the aviation editor of Chicago's American, Mr. Peter Reich, wrote an interesting analysis of the experience described by America's spaceman, Commander Shepard, and the Soviet Union's spaceman, Major Gagarin. I should like to call this article to the attention of those who have been discussing this entire subject because I believe it so forthrightly casts an even deeper doubt on the Soviet claim.

Mr. Reich raises two significant discrepancies between the experience of Commander Shepard and the heretofore unsubstantiated experience claimed by Major Gagarin.

Mr. Speaker, Editor Reich's article follows:

SHEPARD'S FLIGHT CASTS DOUBT ON YURI'S ACCOUNT

(By Peter Reich)

CAPE CANAVERAL, FLA.—When Astronaut Alan B. Shepard Jr., zipped through space on his 5,000-mile-per-hour rocket ride, was he able to pierce the thick fog of mystery surrounding the orbital flight of Yuri Gagarin, Russian cosmonaut?

The answer could bolster a suspicion in some quarters that Yuri never made the trip—that he is merely a stand-in for the real cosmonaut who may have been killed or injured on his return from space.

SEVERAL DISCREPANCIES

There are several unexplained discrepancies in Yuri's story. They range from his reported observation of the earth from space (too clear), to his description of weightlessness (too muddled).

Since Commander Shepard remains under observation in a Grand Bahama Island hospital today, reporters have not had a chance to compare his story with that of Russia's spaceman.

DIFFER ON TWO POINTS

However, Shepard's radio reports from space give a clue to at least two points on which the astronaut and the cosmonaut differ.

1. Shepard indicated the smallest object on earth he could see from 115 miles up was Andros Island, an island 10 miles in diameter located northeast of Grand Bahama. Yuri, on the other hand, reported seeing cities, rivers, and even plowed fields during his 109 to 287 miles high orbit.

2. Shepard's voice under the forces of deceleration (at one point he weighed 11 times his normal 180 pounds) was strained. Just talking was difficult. Yet, Yuri reported he sang "The Homeland Knows the Homeland Waits," a Russian song, during his reentry.

DICTATES EXPERIENCES

Although Shepard reportedly is dictating his experiences into a tape recorder at the hospital, reporters will not get a chance to query him about these points until he is interviewed at a news conference in Washington tomorrow or Tuesday.

Interestingly, upon reaching space, Shepard used almost the same words ascribed to Yuri at a similar juncture: "It is beautiful up here."

A Job Well Done

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, while the Nation is praising Astronaut Alan Shepard for his epoch-making flight into space, high commendation is also due the National Aeronautics and Space Administration for a public relations job well done.

NASA had a difficult task cut out for it in seeing to it that the American public was able to see, hear, and read about Shepard's dramatic leap into the unknown. That it did so well is a tribute to the men of NASA who made it possible.

As the Huntsville (Ala.) Times pointed out:

NASA was set up under a precedent-setting clause which provided that its business was going to be the public's business—and that the public has a right to know. In that spirit, NASA operated last week, and the success of its endeavor was as clearcut as Alan Shepard's path across the skies.

I wish to bring to the attention of my colleagues an editorial in the Huntsville Times of May 8, "A Job Well Done."

The editorial follows:

[From the Huntsville Times, May 8, 1961]

A JOB WELL DONE

Among the footnotes which should be added to last Friday's mercurial American venture into space is some tribute to NASA's crew which assisted 600 reporters in putting the event before the people of the world.

It is amazing how close the story of this history-making adventure came to the hearts of people of all classes, sizes and kinds. And most amazing to us has been the constantly repeated remark that the United States put Alan Shepard up in full view of the world—something hardly true of the earlier Yuri Gagarin affair. This pride that America did dare to do it under such a full and searching glare seems to us to justify all the agonies and exasperations which such a full coverage cost the NASA public relations people.

Threescore of foreign reporters were in the record number of newsmen which invaded the Florida beaches. No one yet has the answer as to why Russia chose to ignore having representation there—though if absence were intended to indicate a snub it doubtlessly reacted unfavorably in the eyes of the rest of the world's newsgatherers.

Considering the deadlines and the inherent drama, most news coverage of the Project Mercury story was perhaps acceptable enough.

In candor it must be added that (because of the number attempting to report the affair) there was amazing irresponsibility on the part of a few—for in the news field, as in all others, neither ability nor responsibility are impartially spread. (We recall, for instance, one agency's widely distributed Tuesday night report that any further attempt to launch the Redstone could not come before Tuesday of this week.)

But all the small agonies, all the pitfalls of this reporting job are past now. And the thing that stands out is that NASA's handling of this awe-inspiring descent of the world's reporters was a task well and patiently handled.

Readers, viewers, listeners owe that NASA groups thanks quite as much as do the hundreds of newsmen whom NASA hosted at the cape.

NASA was set up under a precedent-setting clause which provided that its business was going to be the public's business—and that the public has a right to know. In that spirit, NASA operated last week, and the success of its endeavor was as clearcut as Alan Shepard's path across the skies.

Czechoslovak National Council of America Warns Against Coalition Government in Laos

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. PUCINSKI. Mr. Speaker, the executive board of the Czechoslovak National Council of America, which has its headquarters in Chicago, recently adopted a resolution which so properly enumerates the dangers ahead for the free world if a coalition government is established in Laos with a representative of the Communist Party.

It goes without saying that the Czechoslovak people have had a tragic experi-

ence with coalition governments in which the Communists participated, so much so that today this wonderful country, which was once the cradle of democracy in Europe, is forced to exist under Communist rule.

I trust this resolution will find the attention of those who are formulating foreign policy for the free world today.

Mr. Speaker, the resolution follows:

The executive board of the Czechoslovak National Council of America respectfully submits to your attention the resolution passed at its annual meeting on April 16, 1961, in Chicago:

Whereas the Communist guerrilla forces, with the help of Soviet Russia and other Communist countries, are trying to defeat the present Government of Laos by military action, and

Whereas various spokesmen of the United States and her allies have voiced their readiness to settle the present crisis by agreeing to a coalition government in Laos which would include representatives of Communist forces; be it therefore

Resolved, That the Czechoslovak National Council of America voice its grave concern to the President of the United States, the Honorable Dean Rusk, Secretary of State, and the Honorable Adlai Stevenson, U.S. Ambassador to the United Nations, about the proposal to form a coalition government in Laos with Communist participation. The tragic example of countries behind the Iron Curtain, that of Czechoslovakia in particular, serves as a warning against any coalition government which would include Communists. Always in the past Communists have used a coalition or "national front" government as a base to infiltrate parliament and the entire structure and finally to crush any democratic opposition.

The Czechoslovak National Council of America opposes, therefore, any coalition government with Communist participation in Laos or anywhere else. Disasters of the past should serve as a lesson to us in all future decisions.

Very respectfully yours,

CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA.

A Flight To Remember

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. LANKFORD. Mr. Speaker, in these troubled times, when our enemies are daily reviling us and even our friends are often loud in criticism, it is a pleasure to come upon a case where American effort has been expended and American lives risked in a gesture which has received abroad the credit which is its due. I refer to the magnificent rescue flight made by a Navy aircraft to Byrd Station, Antarctica, to evacuate an ailing Russian scientist.

This historymaking aircrew are members of Rear Admiral Tyree's Task Force 43, whose Antarctic operations are mounted from an advanced base in Christchurch, New Zealand. New Zealanders know about the Antarctic, and the risks which are run by those who since the days of Captain Scott at the start of this century have been leaving New Zealand for "the ice," and some of the best of whom have not returned. When the New Zealanders praise an Antarctic exploit, they are speaking from knowledge and experience. I would, therefore, like to enter into this RECORD the following editorial from the Christchurch Star, expressing the reaction of New Zealanders to this American rescue of a Russian from the depths of the Antarctic wastes. It is something which every American must read with pride, and gratitude that this at least of our efforts to do good in a distracted world, has not gone unappreciated.

[From the Christchurch Star, Apr. 12, 1961]

A FLIGHT TO REMEMBER

Gratitude and admiration are the sentiments aroused by the successful completion of the world's most notable mercy flight. When the U.S. Navy's ski-equipped Hercules left Christchurch International Airport manned by a complement of brave men, it was to face something never before encountered by flying men. Little wonder that among those left behind anxiety mingled with pride in what men will attempt to succor other men. Over long miles of water and ice, on a route not previously traversed so late in the season, flew the Hercules, bound for McMurdo Sound, and then for Byrd Station, where lay the sick Russian scientist. Not only did those aboard face the normal hazard of Antarctic weather, they were also heading towards a land where the hours of daylight are few.

Now that it is all over the modest tendency is to regard the flight as more or less routine. But that in no way diminishes the value of this arresting example of the oft-repeated, and several times proved, phrase that among those who face the perils of the polar regions national barriers mean nothing. There maybe other flights like this, but there can never be one quite the same. It is something to remember as a stirring example of the call that humanity can exercise in a world where so much stress is apt to be laid on inhumanity.

Joseph E. Moody Tells of Importance of National Fuels Policy

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mr. BYRD of West Virginia. Mr. President, there has been a growing concern over the present economic situation regarding the fuels of this Nation. So much depends on the exploration, development, and production of fuel, not only for national defense, but for our national economic well-being, that the pending Senate Resolution 105, which I cosponsored along with Senator JENNINGS RANDOLPH, and 63 of our colleagues, becomes of increasing importance with each passing day.

This fact is attested to in a presentation made on May 15, 1961, by Mr. Joseph E. Moody, president of the National Coal Policy Conference, before the 15th annual meeting of the Texas Independent Producers & Royalty Owners Association, in Midland, Tex.

Mr. Moody's position on the need for a national fuels policy is thoroughly sound, and because he represents a large and important segment of the economy of this Nation, his views on the matter must be considered as being of prime importance to all of the people of our country.

Because I feel that Mr. Moody's keen analysis of the situation regarding our basic fuels should be universally read and studied, I ask unanimous consent to have his presentation printed in the Appendix of the RECORD.

There being no objection, the presentation was ordered to be printed in the RECORD, as follows:

A PRESENTATION BY JOSEPH E. MOODY, PRESIDENT, NATIONAL COAL POLICY CONFERENCE, INC., WASHINGTON, D.C., BEFORE THE 15TH ANNUAL MEETING OF TEXAS INDEPENDENT PRODUCERS & ROYALTY OWNERS ASSOCIATION, MIDLAND, TEX., MAY 15, 1961.

Ladies and gentlemen of the great oil-producing community of Texas, to say that it is a pleasure to be here is an understatement. Since the day when my good friend Mr. Earl Turner invited me I have looked forward to this opportunity of talking with you about the problems of the domestic fuels industries. I believe it is fair to say that 6 months ago I would have given some pretty stiff bets that I would never have this opportunity of presenting our thinking—that is, the thinking of the leadership of the coal industry and more particularly the thinking of National Coal Policy Conference—to a group such as the Texas Independent Producers & Royalty Owners Association.

There have been some words of disagreement expressed by some parts of the oil and gas industries concerning some of the purposes of the National Coal Policy Conference. However, I think there is a comparison that can be made which may explain to some extent your willingness to sit with me this afternoon and my anxiety to learn from you so that we can, as Mr. Turner put it in his letter to me "develop the possibility of common ground between these industries." As president of the National Coal Policy Conference I can speak with considerable authority on the matter of common ground between industries. The National Coal Policy Conference is a unique organization, made up of five groups, each one representing an industry or organization that has comon ground with the coal industry. One group is composed of the coal producers; another of coal-carrying railroads—some 32 of the largest railroads in the country; another group is the United Mine Workers of America, a labor union rather well known over the past 20 or 25 years to have had troubles and contention in our industry; another is the builders of the wonderful machinery which is contributing so greatly to the mechanization of our industry and last, but not least, that great broad industry known as the electric utility industry—now the largest single customer which the bituminous coal industry has, and I might say the fastest growing of any of our major customer groups.

The point I would like to make is that all of these groups have spent the past generation in what probably will be recorded in history as the most violent of contention in industry. Certainly the United Mine Workers and the coal producers have not had an easy time; nor the railroads and the coal producers on freight rates; nor the utility companies on coal prices; nor the manufacturers of equipment and the people who use that equipment. Still, when we were backed up against the wall, we all realized that if the coal industry was to be a vibrant, vigorous, growing industry that would con-

tribute most to the welfare of this Nation, and in so doing make it possible for all of these to be profitable, then we were going to have to find a common ground and close ranks in an effort to maintain our industry.

This, the leaders of these industries did, and in my own way I have unbounded respect for them because of this. I say to you gentlemen that any industry that has the leadership with the kind of foresight and courage and respect for the other fellow's point of view so that they can join in a common effort of this kind, will always be in the forefront among the industries with which it competes.

In the fuels industries of this Nation, the competition has been gradually changing from the time when coal was the unchallenged king which represented the fuel producing over 80 percent of our energy requirements. Since then energy demands have increased and the various domestic fuels have undergone a changed relationship until today when we are entering a new era—an era in which the domestic fuels industries are in danger of being completely demoralized by an unrestrained inflow of foreign fuel. And so we find that although there is still the unrestrained competition between domestic coal and oil and gas, I find today there is a new dimension of competition—the competition between all domestic fuels and imported foreign fuel.

What we are talking about here today is whether we are smart enough and have leaders in our industries of sufficiently high caliber to maintain the stiff domestic industry competition which contributes to the ultimate welfare of this nation and its economic growth, and at the same time defend ourselves against the common menace of foreign fuel importation.

Let's review the situation in the short time that I have. By necessity it will be rather sketchy and if in making this presentation I make some statements not fully explained, it is only because of the limited time alloted to me.

On the Eastern Seaboard there has been, over the years, a growing importation of residual oil and with that growing importation a dislocation and erosion of the coal markets in that area. The coal industry, as is natural on the part of any industry, tried to meet that competition in service, supply, in delivered prices and by pointing out the unlimited resources of the coal industry to supply its customers over a long period of time with a very high quality product.

In the last few years the railroads, through massive modernization efforts and rate adjustments worked out with the Interstate Commerce Commission, have given relief wherever they could, so that the ultimate consumer would receive our product at a competitive price.

The producers of coal, by fully mechanizing their mines and with the investment of millions and millions of dollars, have put on one of the greatest productive efforts in any industry at any time in the industrial history of this world.

They have doubled their production per man shift in the last dozen years and at the same time they have actually shown a reduction in price, f.o.b. the mine; we anticipate they will be able to continue this record. So, for those who rather widely proclaim that the coal industry has just cried on the breast of the Government, I point out to you that there is no record to match what we have done to help ourselves by vastly improved productivity, stable prices and a tremendously improved product.

But we are up against a peculiar situation, one that has nothing to do with the free enterprise system or with true industrial competition—two terms which have been so loudly proclaimed by some people during the past few years. We have been fighting desperately for our lives in the eastern seaboard market against excessive residual fuel oil imports. Residual oil has no real cost compared to coal. No matter what price level we reach with coal we find residual oil being offered under contracts at so much per barrel below coal equivalent. We also find that by political clamor and political pressures, even though a system of quotas had been established to act as a restraint on the inflow of this foreign residual oil, their effectiveness has all but been destroyed. In this year alone, established quotas for the first quarter were increased at one time by 9 million barrels, and then a 12-month quota was announced, providing for an increase of an additional 13 million barrels over last year, and 40 million barrels above the 1957 base year established by Presidential proclamation.

I would like to emphasize that that 1957 level was established as a maximum of imports which could be replaced by coal or other domestic fuels in case of political or war emergency.

Since the original Presidential proclamation on March 10, 1959, establishing the oil import control program, there has been a disregard of this defense of the Nation's criterion. We have a desperate fight on our hands to make the present quota system an effective instrument to maintain the coal industry of the United States at a high level of production and efficiency, and thus a major contributor to the safety of our Nation.

The importation of foreign residual oil and the importation of crude oil are inseparable. It has been said of the coal industry that we are complaining about something representing only about 10 percent equivalent of our national annual production. But this 10 percent affects our whole sales and pricing structure. This is also true in the case of crude oil. Imported crude represents only approximately 10 percent of domestic crude production, but it affects every barrel of domestic production regardless of where it is produced.

If I read the reports correctly, and I am not an expert on worldwide petroleum production, there is every reason to believe that any of the majors in the international oil game could put almost unlimited supplies of foreign crude at the head of the ship channel at Houston at well below one-half of the cost of any Texas-produced crude. There is also every reason to believe that these majors are pushing for that day when they can control the entire fuel economy of the United States. There are no doubt some people in the United States, particularly the world do-gooders, who would applaud this innovation of the United States purchasing all of its fuel abroad and abandoning the domestic fuels industries.

The impact of foreign fuel imports on the U.S. economy cannot be measured with complete accuracy. But certainly there is a wide difference between the importation of residual oil, which produces a nominal tariff revenue of 5 cents a barrel, and the production, distribution and sale of its equivalent in coal or other domestic fuels, which would produce local State and national tax revenue, and provide payrolls for the sustenance for American families, while at the same time contributing to the growth and strength of our economy.

This relationship has been recognized by Texas Independent Producers and Royalty Owners Association and I quote from the testimony of Mr. John Hurd, your president, in the May 10 oil import hearings when he was comparing imported crude with domestically produced crude:

"Texas State government is also suffering from the ill effects of oil industry decline. The State anticipates a deficit of at least $63 million by the end of the current fiscal year ending August 31. Most of this deficit is represented by failure of oil tax revenue to maintain pre-1956 growth rates in the past 5 years. Decline in oil production and regulation taxes alone has cost the State $43.4 million this year. Further loss has occurred in revenue from franchise, ad valorum, and related industry levies."

Going a little further there can be no question but that the purchase of residual or crude oil outside of this country, when we have so much on hand domestically, must drain working capital from our economy and we do not know what benefits accrue to the United States from such a transfer of funds to a foreign nation. Although we cannot measure accurately how much the draining of these vast sums of money from American industry increase our international payments deficit, it is fair to assume that it has a major impact.

Up to this point I have avoided elaboration of some of the competitive aspects of domestic fuels which we in the coal industry find so hard to bear. I feel I must, however, at least refer to one major fact of life in the production of domestic oil and gas which is of major importance to us all.

The commercial policy in the past, and this largely still applies, has made oil the major revenue product and priced gas first as a waste product and then as a byproduct as distinct from being a major product or joint product.

The failure of natural gas to make a satisfactory contribution to joint costs is having an adverse affect on the oil industry and hence on the future of royalty owners.

John G. Winger of the Chase Manhattan Bank concludes quite correctly that the crux of the competition between oil and gas is in the matter of cost allocation between the two. I also share his belief that gas should contribute and bear a larger part of the burden than it does. He points out that in household heating, where oil and gas are in stiff competition, the householder on the east coast pays $200 for oil as against $282 for natural gas, but that the oil producer gets $102 to pay for the crude while the gas producer gets only $22 to pay for the gas at the wellhead. His point is that only the portion of the total revenue the producer retains goes for exploration for more reserves.

In the industrial market, gas is competitive with coal and that competition results from the same kind of failure to contribute its proper part to the cost of exploration, development, and production and is the major cause of that awful invention known as the interruptible clause in gas contracts which has been a point of contention to the coal industry over these years.

I know you are working on this problem here in the Permian Basin where you are trying to get a readjustment of gas prices that will eliminate much of the friction that has existed between the coal and gas industries in recent years.

One of the things that the National Coal Policy Conference has advocated from the start is that a very thorough study be made of the fuels of this Nation, looking toward a national fuels policy. Somewhere in the very near future a decision has to be made as to whether we will continue to have strong and vigorous domestic fuels industries, or not. That has to be a Government decision. Left alone, the domestic industries can compete only to a certain limited point, beyond which the imported foreign fuels, having no actual cost relationship with domestic fuels, will overrun our markets. This trend, which is now underway, must be halted or it will eventually destroy us. There have been many things said about the Nation Coal Policy Conference's sponsorship of a fuels policy and a fuels study. In fact, I have with me an ad which appeared in the Houston Chronicle which I think is a good example of the unthoughtful approach to the subject.

I say to you that our proposal of a fuels study by the Congress of the United States has no tricks in it; we have no preconceived ideas of its results; we have only a faith in American people looking at American problems, and that faith extends to a point where we believe that recommendations coming from such a thoughtful study by a special committee of the Congress will be constructively helpful and in the best interests of the United States of America and American industry.

Your organization, to which I have the honor of presenting these remarks, has shown great restraint in its consideration of the proposal before Congress, when I am sure there has been urging from certain quarters to oppose such a study. I believe it is only fair to say that when the original proposal first came before the Congress, opposition from the oil, gas, or domestic energy industries was not anticipated. It was well along the way that we realized that certain groups, mainly affiliated with the international major units, built up an almost fanatical opposition to a study of the fuels industries of this Nation.

We are sincerely hopeful that as times goes on this will change. However, we are reaching a point where we are more or less convinced that the interests of certain of these great international organizations are contrary, basically and fundamentally, to the interests of a well-developed, high productive, and profitable domestic oil, gas, and coal industry.

Therefore, there is common ground for the domestic fuels industries.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of May 13, 1961:

WASHINGTON REPORT—TOWARD DICTATORSHIP?

(By Congressman BRUCE ALGER, Fifth District, Texas, May 13, 1961)

The Constitution, the basis of our limited Federal-State Government, outlines a republic within a democracy to safeguard personal liberty and dignity from Government regulation and control. Checks and balances are stipulated to assure limited government by prevention of the executive, legislative, and judiciary from encroachment on each other through balance of power. Any factor affecting this balance must be resisted. The world has witnessed a series of dictatorships, so it is not surprising that many people are aware of the need for containing the power of the Executive. It is in order, therefore, at any time and particularly now to evaluate the performance of the executive branch since this administration took office 3½ months ago.

Here are a series of actions by the Executive, by officials within the administration following President Kennedy's demands, or by Congress as controlled by the Democrats and following his demands: (1) The President's first Executive order was to declare food surpluses and give them away as a welfare measure for nutritional reasons. This exceeds the Executive's jurisdiction under the law. (2) The Rules Committee membership was increased to expedite legislation programing and to control the ground rules of debate and the amendment of legislation; (3) military speeches must be censored, must go through the executive (Arleigh Burke); (4) newspapers asked to impose self-censorship; (5) television and radio executives told by FCC Chairman Minow, "There is nothing permanent or sacred about a broadcast license. I intend to see that you pay your debt to the public with service." (6) Regulatory agencies, arms of the Congress, not the administration, are the subject of President Kennedy's proposals to reorganize and delegate powers; (7) Congress forced to give up constitutional duty to scrutinize and approve appropriations annually in the depressed areas bill during the House-Senate conference (back-door spending); (8) Congress told to approve $500 million for foreign aid to Latin America, the Executive absolutely refusing to specify countries and projects to receive aid, although Congress was told last year such information would be forthcoming; (9) Peace Corps set up by Executive order not by legislation; (10) House minimum wage replaced by President Kennedy version in House-Senate conference; (11) judgeships, public works, and patronage used to force and keep Congressmen in line to vote as President Kennedy decides on all his many legislative proposals; (12) the agriculture bill proposed by Secretary Freeman would relieve Congress from any future need for action.

When you realize that already the House has given up constitutional control of trade and tariffs, that CIA intelligence information goes to the administration, not Congress, and that the Presidency has already been likened to a benevolent dictatorship through past transfer of power from Congress to the Executive, what does it add up to?

Now let's explore the foreign situation: (1) The Executive is Commander in Chief of our defense forces representing approximately one-half of all Government expenditures; (2) Foreign aid is almost entirely under the control of the Executive and nations, friend or foe, may be subsidized at the will of the Executive. In summary, are we indeed becoming a dictatorship? Can we hope to maintain our individual freedom and free institutions, indeed, our very form of society, if we concentrate the balance of power in one branch of government, dominated by one man? On the contrary, are we not then trying to beat dictatorships (communism) by becoming a dictatorship, while preserving the outward form of constitutional government?

The international scene is no more encouraging at this time: (1) Cuba continues unhampered its warlike buildup; (2) Laos seems scheduled to be added to Communist victories; (3) Pro-Castro sentiment runs rampant in many Latin American countries; (4) No apparent end is in sight for settling the dangerous issues in the Congo; (5) The Soviet Union continues to stall in negotiations for the control of nuclear weapons.

Optimistically, positively and constructively, I say there is a solution to our present troubles at home and abroad. At home, let us reassert constitutional checks and balances—let us keep Federal Government limited, cut welfare spending, reduce debt and taxes—in short, the reassertion of Jeffersonian Democracy now championed by conservatives. Internationally, let us show to the world once again the majesty and power exemplified by our national symbol, the American eagle. Let us demonstrate to all people, and especially the Communist leaders, that we are not the "paper tiger" the Chinese Reds have been able to convince too many uncommitted peoples that we are. The American people are far ahead of the leadership in demonstrating our willingness to show the world that the American eagle will remain a symbol of hope and strength and courage to all who desire to be free. The leadership must let the world know the will of the American people to support with action the magnificent words of President Kennedy in his inaugural address. There can be no further stalling. We must be done with continuous negotiations which are merely used by the Communists to cloak further aggression. We have the will and the means to show clearly that America is not a "paper tiger" but a mighty eagle, soaring into the heavens with strength and ready to defend freedom by backing up our words in Cuba, in southeastern Asia, and wherever the Communists threaten the freedom and liberty of mankind.

Sixty-one Years of "Newspapering"

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. MUNDT. Mr. President, the constitutional guarantee of a "free press" is perhaps all too often something we Americans take for granted. And perhaps too often we also take for granted the achievements of one segment of the press—our weekly newspapers—and the contributions which are made by individuals who have dedicated themselves to the furtherance of our freedoms in a profession which has long held the reputation for perseverance, unstinting effort and devoted hours of work over and above what is considered a normal work week.

It has long been my opinion that our weekly newspapers—and this is no reflection on the metropolitan or city daily press—are in the forefront with respect to accurate and objective representation of "grassroots" thinking.

Today I wish to call attention to one of our weekly newspaper editors in South Dakota who has had a part in the publication of her hometown paper since the turn of the century.

She is Mrs. Jane Black who is the editor and publisher of the Waubay Clipper. Mrs. Black, now 79 years of age, and although assisted in the publication by her son, Bill, still "stands up and speaks her piece" when she feels the occasion warrants such an editorial.

Mr. President, Mrs. Black was the subject of a recent article which appeared in a number of South Dakota newspapers and it seemed to me that this story of Mrs. Black is so representative of the dedication we have come to recognize as one of the stronger traits of our weekly editors, I felt it should be brought to the attention of the Senate. I request permission to place the article in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMAN EDITOR CAN TAKE "CUSSIN"

(By Chuck Cecil)

WAUBAY.—"If I don't get a good 'cussin' one or two times a week, I know there must

not have been any mistakes in the paper," quipped Mrs. Jane Black, longtime editor-publisher of the Waubay Clipper.

But if there is an error in the news columns of the Clipper, Mrs. Black can take the "cussin" with the best of them. She's had a hand in production of the paper since 1900, and has done everything from writing the copy to laying out pages and coaxing the old Clipper press along.

"I can't operate the Linotype machine though, that's Bill's baby," the 79-year-old senior South Dakota woman editor said, smiling as she surveyed the newspaper office that has been her life since the day she was married.

Bill is her son. He assists in the printing of the paper.

Mrs. Black was born in a covered wagon in Douglas County, Minn., April 25, 1881, while her parents were en route from Iowa to a homestead south of Webster.

RODE IN JET

And she's almost as proud of her mobile birthplace as she is of the jet airplane ride she took earlier this month to visit a daughter in Michigan.

But with experience in both extremes of transportation, Mrs. Black still prefers to ride in a car. "You can take your time and see the world," she said.

When Mrs. Black was 9, her parents moved from the farm south of Webster to the city of Webster. Later, the family moved again, this time to a farm east of Waubay.

It was in Waubay that she met her husband, the late Charles F. Black, who was then working for the owner of the Clipper. The Blacks were married in 1900 and from the day of the wedding on, Mrs. Black, too, was an employee of the Clipper. "I've been here ever since," she said.

Three years later in 1903, the Blacks purchased the Clipper, the town's only newspaper. That same year, fire burned the Clipper building to the ground and the Blacks published from a rented office until a new structure could be constructed.

The Clipper still comes out each Thursday from the building the Blacks built. And Mrs. Black still lives in the apartment in the rear of the shop, only a few feet from the cluttered desk where her husband wrote those crackling editorials during the election of 1908.

One of the candidates in that election sued Editor Black for libel. His price was a mere $25,000. Like all editors of that day, Black had written just exactly what he thought—and like most politicians of the same era—the candidate didn't believe Mr. Black's comments helped his election cause any.

But the $25,000 suit wasn't enough. The candidates' lawyer joined the parade and sued Black another $15,000 because he said he had been slandered by the editor.

But Black must not have been too worried about the $40,000 suit. "He used to kid the candidate and the lawyer about how one man's reputation was worth $25,000 and the other's worth only $15,000," Mrs. Black recalled.

Tempers cooled following the election and the suit was dropped.

HUSBAND THREATENED

She also recalls the time her husband threatened—and was consequently dared—to print the names of men who signed a petition which would allow saloons to operate in Waubay.

"The fellows all wanted the saloon but they didn't want their names in the paper," Mrs. Black said, adding that her husband took the dare and printed the names of those signing.

"We lost about 22 subscriptions because of it but they all came back later."

After Mr. Black's death in 1923, Mrs. Black assumed the responsibility of publishing the paper which was so prosperous that work often required hours long into the night.

During World War II Mrs. Black tried to put out the paper with only part-time help from a relative and with type set at the Reporter and Farmer in Webster.

She worked alone in the office for 3 years and finally had to call for help.

Mrs. Black still does most of the writing for the Clipper's news columns, but leaves the heavy work to her son, Bill, "I like meeting people, and wrestling with their problems," she says.

ACTIVE ELSEWHERE

Publishing a newspaper isn't the only activity in which Mrs. Black is engaged. She is a member of the county mental health organization, has been chairman of the county's Indian Welfare organization since 1932, was secretary of the Sunday school for 15 years, and superintendent of the Sunday school for another 8 years.

For 55 years she has been a member of the South Dakota Press Association, and has been active in the city's Commercial Club for as long as there has been one. To relax, she writes poetry.

Does she still stand up and speak her piece when an issue comes along? "I'm not easily swayed," she said, "I still like to bark at them once in a while."

But folks in Waubay wouldn't have it any other way. They think too much of her to do much "cussin'" anymore.

Solid Rock or Sinking Sand

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. TOLLEFSON. Mr. Speaker, a month ago I inserted in the CONGRESSIONAL RECORD the Easter message of Dr. Frank N. D. Buchman, the initiator of Moral Re-Armament, entitled "All the Moral Fences Are Down." In his message Dr. Buchman recounted some of the advances of Moral Re-Armament through which an answer to conflict and moral decay is being brought by that great ideological force for freedom.

In the past month a further heartening advance has taken place in our own hemisphere. A great assembly for Moral Re-Armament was held in Miami in April, where leading figures from many nations of Latin America joined with men from Europe, Africa, Asia, and the United States in planning an ideological offensive for the hemisphere.

From that assembly a force of Moral Re-Armament, spearheaded by the Japanese Zengakuren students with their play "The Tiger," has gone forth to South America. Led by Gen. Hugo Bethlem, of Brazil, they have been received with acclaim in the great industrial city of Sao Paulo, initiating what the newspaper El Pais of Montevideo called "The greatest ideological offensive undertaken on the Latin American continent."

In his latest message to the world entitled "Solid Rock or Sinking Sand," Dr. Buchman gives the amazing story of the impact in Brazil of this offensive as well as further news of MRA's global advance in Asia and Africa.

This June a Moral Re-Armament World Assembly will be held at Caux, Switzerland. Dr. Buchman, who will be celebrating his 83d birthday on June 4, will be taking part. Gathering with him will be leaders from every continent to plan the global ideological thrust that will be needed in the months following.

From the Congo, Cyprus, Kerala, Japan, the German Ruhr, north Africa, Latin America, and other focal points of the ideological struggle, will be coming men with evidence of the significant action of Moral Re-Armament in those areas. Their experience will assist the Assembly in planning a global strategy to answer corruption, communism, and war.

Dr. Buchman's message which appeared in many publications throughout the Nation is included herewith:

SOLID ROCK OR SINKING SAND

(By Dr. Frank N. D. Buchman)

A month ago I sent an Easter message to the world, "All the Moral Fences Are Down." There was an instant response. From the statesmen and the ordinary man in country after country came the word, "That is the problem. Help us to rebuild those moral fences for our nations and the world."

General Bethlem, of Brazil, is a man who is doing just that. In Miami, Fla., he dropped down on a group of leaders from all the hemispheres. There was the general commanding the Army of Peru. There was the President of Parliament from Uruguay. There was the representative of the Minister of War from Argentina, the wife of the Minister of Reconstruction of Chile, dockers' leaders and industrialists from Brazil. There was the man who founded the Communist Party in Peru and brought in the first popular front government in Chile.

There General Bethlem also met General Inoue from Japan and with him the force of Japanese youth with "The Tiger," their play about the answer to the Tokyo riots. He met Chief Walking Buffalo from Canada with his braves and councilors. He met businessmen from Switzerland, labor leaders from France and Germany. He met Philip Vundla, the elected leader of 600,000 Africans, whom the police once described as the most dangerous man in South Africa; and Vaitheswaran, 6 years a dedicated Communist in South India, whose change has helped give Kerala the solid rock of an answer to communism. He met William Pawley, son of a former U.S. Ambassador to Peru and Brazil. From Britain he met Peter Howard, the author, and Adm. Sir Edward Cochrane, great-great-nephew of the famous Lord Cochrane who helped liberate Chile and Brazil. He met a Jamaican leader who said, "You men have the only hope for the Caribbean. We must mobilize now for this answer, otherwise we shall quickly go the way of Cuba."

ANSWER FOR THE HEMISPHERE

General Bethlem had held two diplomatic posts as Ambassador of Brazil to Bolivia and Pakistan, but now he was on a trip with his wife for a holiday in New York. As he listened to these men speak, he was gripped by their unity that was like a rock because God was in command. This was the answer for the hemisphere. Within a week he had turned around and was leading an advance force of these very men to Brazil, which was followed a few days later by a plane-load of 129 from 25 countries, to initiate what the newspaper, "El Pais," of Montevideo called the greatest ideological offen-

sive undertaken on the Latin American continent. The general eagerly went back to give Brazil the solid foundation for world leadership that he had longed for for his nation. As his advance-guard he took with him Rajmohan Gandhi, grandson of Mahatma Gandhi, Admiral Cochrane, Vaitheswaran, and Takasumi Mitsui of the great Japanese industrial family. They prepared the way.

When the main international force arrived they were met by radio, press, and television. In fact, one enthusiastic television cameraman got on the plane before the visitors could get off. It was national news.

Immediately they spoke at a lunch to 400 leading industrialists and businessmen, including the representatives of Ford, General Electric, Goodyear Rubber, and Swift. General Bethlem said, "Both North and South America are at the most critical points of our history. Against the background of Cuba, Venezuela and Bolivia where I have been Ambassador, and the new Russian offensive starting in Mexico on May Day, the inescapable choice for Latin America is Moral Re-Armament or communism. I know you businessmen, because I was like you. We ask our wives to live purity, but we are not pure. We ask our workers to be honest, but we are dishonest. I have changed and committed my whole life to this fight."

To General Bethlem's surprise and astonishment these businessmen three times halted his presentation at that lunch with standing ovations. Some people may say this is an incredible response, but here is the fact. Immediately General Bethlem and his force were invited to speak to a meeting of 600 leaders of the industrial and business life of Brazil and to take an hour and a half television program.

Chief Walking Buffalo of the Stony Indians and his party created such a stir coming to this luncheon that hundreds of schoolchildren crowded into the lobby to meet him. For half an hour he told them how, in the previous year, 100 million people had seen and heard him on the warpath in his 90th year in a 62,000-mile tour for moral rearmament. He spoke of the time he made me a blood bother 28 years ago, when he gave me the name of "A Wo Zan Zan Tonga—Great Light in Darkness." While the chief was speaking, there came a message from across the street from the mother superior of Sao Paulo's most famous convent school for 700 hundred children from leading families, asking him to come with his friends to speak to a quickly convened school assembly. The response was electric. Said the mother superior, "This will be a marking day in the annals of this college." Said another Sister, "This is the work of the Holy Spirit." After a television program that reached a 4 million audience on the No. 1 program of the week, a mother superior said, "This is a very profound message. We must work together. You must go to all the Catholic schools. They will respond."

This can be the normal life of these countries, for which people have been saying there is not much hope. Otherwise these businessmen and their families with all their money and social life will lead to an absence of God, spelling the breakdown of the moral fences of democracy and, eventually, to communism.

"THE TIGER"

On May Day the Japanese launched their ideological weapon, "The Tiger," in Latin America. Crowds outside the municipal theater in Sao Paulo were so great that the traffic was stopped. General Bethlem introduced on the stage a force of 150 people from 25 countries, and read cables from Italian and French Socialist leaders, from 17 mineworkers of Britain, from the dockers of Holland, India, United States and Brazil, and from Hollywood stars. Former Prime Minister Kishi of Japan cabled: "Tonight is being followed by millions of Japanese who are joining this fight to root out communism, exploitation and slavery all around the world. Your fire and passion for a way which is not left nor right but straight will give the South American Republics their true destiny."

Mrs. Dorothea Buck of Virginia, former president of the General Federation of Women's Clubs with a membership of 11 million women, received a rousing ovation when she challenged the women of North and South America to "lay down their comforts and complacency, and to unite to take up this ideology without which our children and grandchildren will live behind the Iron Curtain." Dr. Raul Migone, former Minister of Labor in Argentina, summed up his convictions when he said, "Moral Re-Armament is the chosen weapon for humanity not only to overcome communism, which I am absolutely convinced it will do, but also to show the way for mankind as a whole."

A CURRENT IN THE AIR

These men of action and responsibility like General Bethlem get this message on the move. It is like a current in the air. Take the story of that remarkable man U-nu of Burma. He visited Moscow and being attracted by their concern for Asia said they should be invited to the next Afro-Asian conference. But then he came to Finland. There he found the ideological plays of Moral Re-Armament. He knew the effect they had had in his own country. He came at 9 o'clock in the morning with the foreign minister of Finland. What he saw in that theater changed his policy. On his next stop in Stockholm he called in the press and apologized for the hasty statement which had suggested the inclusion of the Soviets in the conference.

U-nu knew that Burma was a nation deeply influenced by MRA. U Tin-tut, former foreign minister who had been to Caux, spoke of it "as the one unfailing light"; and Aung San, the first Prime Minister, whose widow as Ambassador in India closely follows this work, said, "This is what I want for the whole country." U Narada, the abbot who is the secretary to the Presiding Abbots' Association, responsible for 75,840 Buddhist Monks, has mobilized these monks throughout the country who believe in the validity of this message for Burma. He says, "My colleagues in the all-Burma Presiding Abbots' Association and myself have accepted the responsibility of rebuilding the moral fences in our country. Then we will have new men, new nations and a new world."

These monks are enthusiastically at work, and have shown the MRA film, "The Crowning Experience," in the presence of the Prime Minister at the national celebration at the Peace Pagoda in the open air to crowds so large that they had to sit on both sides of the screen. The speaker of the Chamber of Deputies said, "This film is tailor made for Burma. It exactly fits the need of the country."

The last time U Nu came to America he told reporters in New York that he was coming especially to Arizona to see me because of the urgent need for this message for his country. He had already sent his daughter to be with us at our assemblies. His word on leaving me was simply, "Come soon, come soon to Burma."

Meanwhile U Narada and five abbots are coming to Europe for the assembly at Caux, Switzerland, and will celebrate with me my 83d birthday in June. These worthies are welcome here and the highest in the land, also, who long to come and find in the quiet of these mountains the key to their country's destiny.

In Japan it is the former Prime Minister Kishi and his chief adviser, Mr. Saburo Chiba, who are planning the delegation for this assembly, with Senator Ohtani, a director of the World Buddhist Federation, and adviser to a 5-million-strong Buddhist group in Japan. Senator Ohtani says, "What Asian Buddhism now needs is moral rearmament. We in Japan have been given the light of MRA. Now we must sweep the whole world with this light."

"YOU SAY WHAT IS STRAIGHT AND RIGHT"

It is just a year now since a force of Moral Re-Armament left from Caux to work in the Congo. What is the battle they are fighting? It is a difficult task. But they are meeting with such a response that the Minister for Information and National Defense in Leopoldville says that "Moral Re-Armament has saved the Congo from a far greater catastrophe."

The other day they were invited to the controlled area of the lower Congo, in which are the ports of Matadi, Boma, and Banana. En route they encountered several Congo Army roadblocks. At one the sergeant said, "Moral Re-Armament. We listen all the time to your radio broadcasts," and he began to sing one of the songs. He was overjoyed to meet the Colwell brothers from Hollywood, who had put these songs twice a day on the radio in the languages of his people. At every roadblock, as the soldiers realized the MR-A men were in the car, they crowded enthusiastically around, and at the last block before entering Matadi, the soldiers cheered them for bringing the answer to communism.

At the end of the road in Boma the square was a sea of faces as 10,000 people crammed into the civic center to see the MR-A films and hear these men speak. That crowd stood for 4 hours and when asked if they wanted more, roared their approval and said, "We want the MR-A force to stay for a month right here to spread this idea."

The Bishop of Matadi said after the film, "You say what is straight and right. This is the good and only way, the way of MR-A which we all need. I congratulate and thank you. I will give you my fullest support so that the masses will follow this idea."

Africa can be lost in the sinking sands of the materialism of East and West. Leaders of Africa welcome Moral Re-Armament because it is the solid ground on which a hate-free, fear-free, greed-free continent can be built. Marking the independence of their country the Government of Sierra Leone invited the representatives of 66 nations to see "The Crowning Experience." The Deputy Prime Minister, presenting the film said, "I have decided to throw my whole weight into this work of Moral Re-Armament," Humphrey Wood, officially representing Moral Re-Armament at the independence celebration, presented my message: "Sierra Leone's destiny is to be a nation guided, not by the will of others but by the will of God to follow what is right. Strong as a lion she will be among the nations. The whole world is anxiously waiting to see what God can do through one nation wholly given to Him. Sierra Leone can be that nation. My heartiest congratulations."

Introducing "The Crowning Experience," which was repeatedly interrupted by applause, Manasseh Moerane, Vice President of the thousands of African teachers of south Africa, said, "Political independence is important: economic stability is important, but above all a new nation needs an ideology. We in Africa cannot afford neutralism. We have got to stand for what is right."

Bremer Hofmeyr, whose family have held six Cabinet posts in south Africa, said, "Moral Re-Armament is the ideology that sets men and nations free, that keeps men

and nations free, and unites free men to win the world."

President Tubman of Liberia has also asked for the men of Moral Re-Armament to present "The Crowning Experience" to the Pan-African Conference which opens this week in Monrovia. He says, "I invite the leaders and people of Africa to join in this supreme task and to give priority to the moral rearmament of our nations."

THE FUNDAMENTAL ANSWER

This African statesman echoes the convictions of Eudocio Ravines of Peru, former Latin American delegate to the Comintern, who spoke at the Moral Re-Armament Hemisphere Assembly in Miami. He said, "The fundamental answer to communism in Latin America is moral and spiritual. Events in Cuba are happening because the Americas have not lived an ideology superior to communism. That is where we Latin Americans are responsible. But neither has the United States exported moral values to Cuba. It has exported dollars and tourists and those things which made Latin Americans cynically call Havana the cabaret of North America. Moral decadence opens the door to Communist penetration. Many people say that communism is the product of poverty, hunger, and underdevelopment. However, I say with the authority of having successfully conducted one of the greatest Communist movements in creating the popular front in Chile, the cause of the penetration of communism is corruption and moral decadence. Now the Government of the United States is offering millions of dollars to solve the economic problems of Latin America. But military aid and dollars alone are not enough. This is the moment for America to export a moral ideology to Latin America. Therefore, the mission of Moral Re-Armament is of fundamental and particular importance."

From this assembly in Miami returned two Swiss businessmen who had given evidence of the striking response to this answer from industry, politics, and press in Catholic central Switzerland. One said, "I came back from America with the deep conviction that my job was to be ready to pack my bags and travel to bring this answer. In a world crisis like today the old style businessman simply doesn't make sense." Businessmen without a superior ideology only help communism. I think of the industrialists who gave Castro $30 million and have lost it all. And of the corruption that has become a way of life for businessmen in many Western lands and brought us to the edge of the abyss. We need men and women who will pay the full price and change, honesty, and fearless leadership in our nations if the world is to be saved.

SOLID GROUND FOR STATESMANSHIP

The Moral Re-Armament Assembly at Caux in June will be the focus for leaders from every continent who are seeking solid ground for statesmanship. His Excellency Bernard Hardion, a senior diplomatic adviser to the French Foreign Office and former ambassador in Brazil, said, "Moral Re-Armament is a modern chivalry. Chivalry was inspired by faith and belief in God. It was not a substitute for religion. We must once and for all end this defense of a past forever dead. We must take the offensive in the battle for the future and for the submission of men to the divine voice."

Dr. Azikiwe, the first African Governor-General of Nigeria, who architected his country's freedom, told how he discovered in Caux the idea of "Not who is right, but what is right," which "proved to be a pearl of great price at a time when we were on the threshold of a great political awakening."

The Catholic Philosopher Gabriel Marcel spoke to the foreign press in Geneva. He said that in Caux he had seen a power that brought "a radical and lasting transformation in people. It is magnificent, and cannot be gainsaid."

Robert Schuman said of his experience at Caux, "I am accustomed to conferences, but they are very different from this. Normally they end with great disappointment. Here we find nothing but satisfaction and hope."

Gen. Marcel Carpentier, who commanded the ground forces of NATO of central Europe, sounded a challenge at the most recent assembly in Caux, "We need a floodtide of Moral Re-Armament to sweep across the world. Then men in government will be forced to make the right decisions that spring not just from the intellect, but from our hearts and faith."

Like a mighty army moves this force across the world. Men and women of all races and nations united with a common commitment. The world is on the knife edge of decision. We must go all out to save our nations. When men change and are gripped by the fire and passion, the purity and honesty of a moral ideology, miracles happen. The foundation is laid of a new world, not on the shifting sand of corruption and compromise, but on the rocklike character of God-directed men and nations.

Encouragement of Travel to the United States

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16, 1961

Mr. HUMPHREY. Mr. President, the Senate has wisely and favorably acted upon a bill sponsored by the distinguished chairman of the Commerce Committee, Mr. MAGNUSON, S. 610, which provides for the establishment of an International Travel Office in the Department of Commerce to promote foreign tourism in the United States. I am pleased to note that the House is scheduled today to consider similar legislation. However, the establishment of this office is only the first step—private organizations and businesses as well as the private individual have much to contribute to the impetus of foreign tourism in the United States.

Mr. President, with this in mind I wish to call attention to a most interesting editorial on this subject which appeared on April 20 in the Minneapolis Star and Tribune. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELCOME TO UNITED STATES OF AMERICA

The plan to encourage more travelers from other countries to visit the United States is gaining strength, and if Congress appropriates money for the purpose a worldwide promotional campaign will be launched.

But advertising, travel-poster appeal, and cutting the redtape of Government procedures for visitors are not enough. Some practical problems, long since solved in most big cities of other well-traveled countries, have yet to be faced in America.

Information service for foreign visitors is scarce. Few adequately staffed information centers exist in our port cities where visitors who do not speak English can learn easily where to go and how to proceed and what is interesting to see in the area. Few hotels have staff people who can speak other languages. Practically no restaurants have menus printed in any language beside English. Few taxi drivers, bus drivers, policemen, and shop clerks have had much experience in helping travelers from other countries.

Even Government immigration and customs authorities have been more carefully taught to take the suspicious approach to visitors than to welcome them and help them on their way.

Prices are usually a shock to foreign visitors used to both lower income and lower costs than their American counterparts—and they don't have the American natives' knowledge of where to find hotels, restaurants, and stores with a moderate price range.

These problems are not insurmountable. The Departments of State and Commerce are working on them. Travel agencies, hotel associations, and transportation firms are beginning to think in terms of what would make travel easier for the visitors from elsewhere.

The possibilities are infinite, and range from the firms directly involved in the travel business to the individual American called upon for extra courtesy if he encounters a stranger asking directions. All sorts of organizations, public and private, might well get into the project of welcoming foreign travelers and helping them see America.

The dividends will extend beyond the dollars the Government is concerned about to some valuable international good will and some interesting experiences for Americans.

Role of Cuba in Inter-American Affairs

SPEECH

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, of course, I am very much in favor of a strong, vigorous, and decisive action against the Cuban Communists and their leader, Fidel Castro. From the very moment this man began to come to power, I felt the need for a strong policy against this Communist leader. In fact, I believe everywhere communism rears its ugly head, it should be fought. "Faint heart never won fair lady," they say, and certainly a faint heart is not going to win confidence, support, and the conquest of the minds of men—freemen—all over the world in our fight against communism.

It is true that Cuba was ruled by a dictator when Batista was in power. I did not like Batista then. Batista, however, was our friend, and certainly it is better to have a dictator opposed to communism than to have the present pro-Communist dictator.

It is obvious Fidel Castro has taken advantage of the interim since his rise to power to build up his armament. The fiasco resulting from the premature invasion of Cuba by exiled patriots shows only too well the fact that the Communists have furnished leadership, military organization, equipment of an ad-

vanced design and large amounts of materiel and supplies to Castro. All of these things under skilled direction made it relatively easy for the Cuban dictator to crush the last spark of opposition of the freedom-loving invading patriots.

With this invasion threat out of the way, the bearded Castro is working to make his island even more of a military bastion. He is now building more military roads, unpacking Russian Mig planes shipped to him from behind the Iron Curtain, unloading more tanks and stocking up his arsenals of arms and ammunition.

Our people sit aloof, 90 miles from the coast of Cuba, waiting for something favorable to develop. During all of this time, the "bearded one" goes about his business of extending the tentacles of communism into every nook of Cuban life. Our people may appear patient at present, but they are greatly disturbed. Should Castro's plans encompass the building of a launching pad for ballistic missiles, our people will not seem so patient. On the contrary, they will reach the point that they will not tolerate communism in this offshore island. The beginning of the actual construction of a missile base in Cuba will demand immediate action from us.

I do not believe anything we have done denies us the right today to apply and enforce the Monroe Doctrine. The time for colonization by the European powers in the New World has ceased. Our Nation first announced over 100 years ago the principle of the Monroe Doctrine and now we should step in and affirmatively show the world that communism is going to be stamped out in the Western Hemisphere as many years ago were the European efforts to colonize Central and South America.

Mr. Speaker, we need a blockade of the ports of Cuba. We need to give active support to the freedom-loving elements operating against Castro. We need to move forward on a line that will show the Cuban people clearly what a monster they have in Fidel Castro as dictator of their country, and we should give support, help, and inspiration to those patriotic Cuban people who want to see their land free, wanting to stamp out the last vestige of communism in the island which America freed from the Old World in 1898.

Shortage of Physicians and How To Solve It

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I am inserting into the RECORD the text of an address by Dr. Dominick F. Maurillo, entitled "A National Emergency—Ways of Meeting the Physician Shortage," as well as a copy of a letter I am this day addressing to the Honorable OREN HARRIS, chairman of the House Interstate and Foreign Commerce Committee, calling his attention to the address.

Dr. Maurillo is a member of the board of regents of the University of the State of New York. He has headed several committees of the board of regents in studying medical education in Europe and has made several notable recommendations which have since been adopted. In this address, delivered on May 16, 1961, before the International Congress of Surgeons in Chicago, he makes some very interesting observations on medical education in the United States and suggests way to solve the problem of physician shortage.

His address is as follows:

A NATIONAL EMERGENCY—WAYS OF MEETING THE PHYSICIAN SHORTAGE

(An address by Dr. Dominick F. Maurillo)

For the past 13 years I have been trying my best to prove to medical educators that there really is a shortage of doctors in the United States and something must be done about it.

The Board of Regents of New York State has accepted one important suggestion that was made: they have approved medical education given in Italy, Switzerland, France, Holland, Belgium, and Ireland. Now 400 to 500 American doctors are being graduated every year from the institutions in those countries. I was the chairman of each of the committees which made the study of European medical education and which made the recommendations to the board of regents.

On May 8, 1956, I gave an address before the 150th annual meeting of the New York State Medical Society in which I emphasized the critical need for more doctors. The New York Times, in an excellent editorial on the following day, quoted important parts of my speech and my conclusions.

Congressman FRANCIS E. DORN, of Brooklyn, N.Y., presented to his fellow Congressmen the entire New York Times editorial and a résumé of my speech. This was repeated in the U.S. Senate and recorded in the CONGRESSIONAL RECORD.

On May 29, 1956, Congressman DORN introduced a bill (H.R. 11518) which incorporated all of my conclusions with particular emphasis on the part which suggested that an impartial, disinterested congressional committee be appointed to study the reasons for the shortage of doctors in the United States. This bill has been pigeonholed every year since its introduction as a result of the action of lobbyists.

On March 28, 1957, I delivered a major address on the same subject before the New York State Board of Regents. Copies were sent to all the medical college deans of New York, to all college and university presidents, to all assemblymen and senators, and to the Congressmen and two U.S. Senators from New York State. In that speech, I also stated that specialization in medicine was getting out of control and that 80 percent or more of the graduates of medical colleges wanted to specialize. I then suggested that all specialty education should be controlled by the medical colleges and that a Ph.D. degree should be awarded to each specialist.

In July 1959, I was summoned to Washington to testify in connection with a bill concerning the grant of $50 million a year for international health research. The Congressmen were alerted by my talk to the peril to national health caused by the shortage of doctors and they were urged to amend the bill by adding $50 million a year for medical education. This bill was kept in committee with no chance of passing.

The need for more physicians is common knowledge today. Even the AMA and the deans of the medical colleges admit that our country needs more medical faculty doctors, more research doctors, more full-time doctors for our independent hospital centers, more doctors for public health and mental hospitals and for industrial clinics, more interns and residents, and—most important—more general practitioners for our 180 million people. A very conservative estimate of the shortage of doctors would be 35,000 and this could easily be stretched to 50,000.

Now let us look at the reason behind this critical shortage. Many experts concede that the United States had enough doctors in 1935 for its 125 million people. You must bear in mind that 75 percent of the total number of doctors were doing general practice in that year. Today the percentage of doctors doing general practice is less than 30 percent.

In 1935, 77 medical colleges graduated 5,183 doctors.

In 1950, 79 medical colleges graduated 6,135 doctors.

In 1955, 82 medical colleges graduated 6,845 doctors.

In 1960, 85 medical colleges graduated 7,081 doctors.

I mention these figures to show that in a period of 25 years—and even with the addition of eight new medical colleges—there was an increase of only 27 percent or fewer than 1,900 doctors. This small, inadequate increase does not compensate for the more than 3,500 doctors who die each year.

In 1935, the medical colleges and other agencies doing medical research spent about $1 million of Federal, State, and private money; in 1940, about $5 million; in 1948, approximately $90 million; and in 1960, approximately $730 million. The last sum, $730 million, is more than the total amount of money spent for medical research in the rest of the world.

The Federal Government gave the following amounts to medical colleges in 1960: Harvard, $7,130,919; Columbia, $4,427,285; New York University, $4,772,755; University of Michigan, $4,025,157; the two New York State Medical Colleges, $2,069,087. Each medical college in the United States received upwards of $500,000 in 1960.

The figures are not available, but I doubt that the entire cost of undergraduate medical education in the 85 medical colleges can be more than $125 million a year.

Should there exist such a great discrepancy—$730 million for medical research versus $125 million for medical education? I am not against research work for I am convinced that it is absolutely necessary in our very competitive world. Let us be reasonable. We should not spend such a large amount of money for research without first producing more doctors. Let us not put the cart before the horse. If we want to get full value for the money spent, we should have research doctors who are really dedicated individuals.

Recently we have been reading in the daily newspapers that there are not enough college graduates available for medical education. Here is the record on this score:

Last year, the 85 medical colleges selected about 8,100 students from a list of more than 15,000 students who had been recommended by the premedical faculty committee in each of the colleges and universities in the United States. All these students had been screened during each year of college work and only those with the highest averages were recommended. If the medical colleges want more students, why don't they take more female students? Why this discrimination? Why do females constitute only 5 percent of the total number of medical students? It isn't that way in other countries, 50 percent or more of the doctors in Russia are females. Why are more than 2,300 Americans studying medicine in foreign coun-

tries? It seems to me that the medical colleges should be grateful for the fact that they have a fine selection of students to choose from. I am absolutely sure that more students would want to become doctors if some of the existing barriers were removed.

Russia, with 68 medical colleges, graduates more than 14,000 doctors a year. In 1960, 1,000 doctors were graduated from the University of Paris Medical College. This is about one-seventh of the total number of doctors who were graduated from the 85 medical colleges in the United States in the same year. Let me emphasize this point: these graduates from the University of Paris are well-trained doctors. They are ready to practice immediately after graduation without internship training and I would trust any one of them to do good general practice of medicine in any country in the world.

The Japanese tried our system of medical education. They built 80 medical colleges with an average capacity similar to ours. They have learned their lesson. Today they have centralized and have only 44 colleges. They expect to have only 40 by 1965. Their doctors are better trained today in the larger medical centers. Why? Because the cost of operating small medical centers is tremendous and uneconomical.

What is the best treatment to combat this very critical shortage of doctors in the United States? I suggest two practical solutions.

My first plan:

Congress should pass a bill at this 1961 session and incorporate the following:

(a) Allocate to the 45 private medical colleges $50 million with no strings attached other than the guarantee mentioned below. Beginning with the freshman class of 1962 and at a rate of $4,000 per student for each of 4 years, this money is to be paid to the colleges for the undergraduate medical education of each additional student admitted beyond the total of the 1961 freshman enrollment. The colleges must guarantee the acceptance of 3,125 students above their 1961 enrollment, otherwise the Federal Government will not grant any research money. In this manner, the colleges will produce 3,000 doctors by 1966.

(b) Allocate another $35 million to the 41 State medical colleges on a matching-plan basis; $2,000 of Federal money for $2,000 of State money for each additional student admitted beyond the total of the 1961 freshman enrollment. Likewise, this is to begin with the 1962 freshman class. As for the private colleges, no research money will be given unless additional students are accepted.

(c) Allocate $10 million for medical scholarships on the basis of need and at a minimum of $300 and a maximum of $1,500. This will increase the number of scholarships each year by 2,500.

(d) Set up a fund of $5 million for medical student aid. This fund will guarantee the payment of loans made to students by the banks of the United States and will pay the interest of 6 percent on the loans for 6 years.

This bill will not cost more than $90 million a year after 1966. In 4 years time, it will have produced 6,000 more doctors a year. By means of the scholarship and student-aid plans, it will stimulate college students to enter the profession of medicine. This bill can be financed from the money saved by the Federal Government since it will not add, until 1966, $1 to the present allowance for medical research.

My second plan:

Congress should pass a bill at this 1961 session and incorporate the following:

(a) Allocate $50 million a year to the 85 medical colleges for trisemester undergraduate medical education in 1962. The formula for the best method in which to divide the money among the colleges can be worked out either on the basis of student population, or on the size of the medical college or on the number of doctors to be graduated. This plan was used during World War II and, to the best of my knowledge, it was successful.

(b) Allocate $10 million for scholarship money as in plan I.

(c) Allocate $5 million for student aid as in plan I.

The number of doctors graduating under this plan will depend on whether a new class is admitted each semester or only every other semester. I can assure you that the increase in the number of doctors will be greater than 50 percent.

Now, what would be the cost of adding 30 medical college centers with the capacity to graduate 150 doctors yearly in each college—a total of 4,500 doctors. The money required would be $1½ billion for capital costs and between $150 million to $300 million per year for operating expenses. Isn't this a tremendous and fantastic amount of money to pay for the education of an additional 4,500 doctors a year? It would take 8 years before the first doctor is graduated. Thirty thousand doctors will be needed to operate the 30 medical centers. By 1970, the population of the United States will be 210 million. Where are the doctors to come from who are needed to take care of that population?

My conclusion is that there is no need to study this problem further. We have reached the emergency point. Congress must act now and not next year. I firmly believe that the deans of the medical colleges will accept the first plan. At any rate, either plan is much better than building 30 more medical college centers. It is especially better for the taxpayers who must pay the bill.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 16, 1961.

Hon. OREN HARRIS,
Chairman, Interstate and Foreign Commerce Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I have the pleasure of transmitting to you a copy of an address by Dr. Dominick F. Maurillo, which he delivered today at the International Congress of Surgeons now being held in Chicago. The title of his address is "A National Emergency—Ways of Meeting the Physician Shortage."

Dr. Maurillo is a member of the board of regents of the University of the State of New York. He has been for many years interested in the field of medical education and the problem of the shortage of physicians in the United States.

His address contains some very interesting information on the problem, as well as statistics explaining the critical shortage. In particular, however, I want to call your attention to his proposals to Congress, beginning at the bottom of page 5 of his address and continuing until the end.

I shall appreciate having your comments regarding his proposals. Do you think that legislation along the lines he suggests should be introduced? Is there such legislation before your committee now? Do you have any other suggestions or ideas in connection with Dr. Maurillo's letter and the proposals he makes? I feel that this is a serious problem which should not be ignored or neglected. Your views in the matter will be of prime importance to me.

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

Luxury Taxes Must Go

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, as the cogent editorial below, from the Livingston County Press, Howell, Mich., argues, the wartime excise taxes on luxuries such as essential toiletries and women's handbags should be allowed to die their natural death. In addition, there should not be a further extension of the 10-percent excise tax on automobiles.

The automobile tax, originally designed during World War II to curb the purchase of passenger cars by pricing them outside the reach of the average consumer has succeeded only too effectively—as the recession demonstrated recently. The monthly unemployment statistics indicate the excise tax on automobiles has been viciously efficient. But, as we all know, these are not times when it is desirable to have efficient production curbs; rather, all barriers to full use of our manufacturing potential should be removed. I am convinced that removal of the excise barrier to automobile sales would be a greater stimulus to our economy than would any artificial measure which has been proposed.

The editorial follows:

LUXURY TAXES MUST GO

Fourteen years ago, come June 30, those wartime excise taxes on luxuries such as toiletries and women's handbags were to have expired. But, as every woman knows, and most men have heard about, these taxes are still with us. In 1954, the tax on these items was reduced from 20 to 10 percent, but if you think this has soothed the gentler sex, just ask one of 'em.

Wherever they gather, in their community groups, the PTA, the women's business and professional clubs, social clubs, the corner drug store and the grocery, one woman tells another and both of them tell their Congressmen. They are bearing down especially on the lady members—2 Senators and 15 Representatives—and on the mere men who constitute the House Ways and Means Committee.

The theory is that the lady members will understand that a woman needs a handbag like a man needs pockets; that you can't get very far in business or social life with a shiny nose and that there's no luxury involved in keeping a bunch of kids clean and polished up. And the committee is getting its come-uppance for repeated failure to clear repeal legislation. But you may be sure no member will be spared the pointed advice of his lady constituents.

The girls are also pointing out that while Congress is so disturbed over "distressed areas" it might give a thought to the "distressed" homemakers, secretaries, career girls and the little girls with their school bags who are still being penalized by a war that was officially over on December 31, 1946. The luxury taxes, they observe, were imposed to choke off sales and production in order to divert the utmost in manpower, machines, and raw materials to the war effort.

While reading his mail, the Congressman might reflect on the probability that more women than men voted in 1960, since there are 3 million more of them who are eligible. Nor should he think that the men, who pay the bills in most households, are disinterested. And now that the women are on the warpath, the men are going to follow.

At least, we always have.

Truth or Most Gigantic Hoax in History?

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. PUCINSKI. Mr. Speaker, shortly after the Soviet Union claimed to have launched Major Gagarin into an orbital space flight on April 12, I urged that an international committee of scientists be permitted to investigate all the facts regarding this Soviet claim. At that time I said it was not my purpose to in any way negate the Russian claim, but I felt an event of such historic importance certainly should be reviewed by some international body before it is accepted by the world as a fact.

I am absolutely amazed at the response my suggestion received not only throughout the United States, but throughout the world. I have in my files editorials which have appeared in many countries suggesting extreme caution in accepting the Soviet claim at face value.

Many of America's outstanding journalists have taken a similar position, and I should like to call to the attention of my colleagues the column of Mr. John C. O'Brien, which appeared in the New World in Chicago, Ill., on May 5. I believe Mr. O'Brien raises some extremely interesting questions that will indeed have to be resolved before we can accept as certain the Russian claim that Major Gagarin actually made the space flight on April 12.

Mr. O'Briens' editorial follows:

TRUTH OR MOST GIGANTIC HOAX IN HISTORY?

(By John C. O'Brien)

Did the Soviet Union actually put a man in orbit, as Premier Nikita Khrushchev claims?

This is a question that has been raised by Averell Harriman, former U.S. Ambassador to Russia and by two or three Members of Congress. Harriman stated recently that he did not believe American scientists ought to accept the Soviet story about its cosmonaut without scientific proof.

But no official spokesman for the Government and no responsible space scientist has questioned the veracity of the Soviet Premier. President Kennedy promptly sent Premier Khrushchev a warmly worded message of congratulation. The director of the siesmological laboratory at the California Institute of Technology, who is a member of the President's Science Advisory Commission, told a convention of newspaper editors recently that "there is no doubt in the mind of any knowledgeable person in this field that the Russians did what they said they did."

But there are knowledgeable space scientists in the Government who are not as convinced as the California scientist seems to be. They say that no one in the Government has any scientific or intelligence evidence as to whether or not the story is true, false, or partly both. All they know for certain is that the Soviet Union had the capability to orbit a vehicle of sufficient weight to contain a man and that U.S. tracking stations did track a vehicle of some sort in orbit, presumably launched by the Soviet Union, on April 10.

The Russians had plenty of reasons for inventing the story about the orbiting cosmonaut. It is common knowledge that they have been laboring mightily to put a man in orbit so as to capitalize on the obvious propaganda advantage such an achievement would give them. They know the United States was working on its Mercury project. They needed some kind of propaganda victory to offset the good impression the Kennedy administration was making among NATO and uncommitted countries until the failure of the ill-starred invasion of Cuba.

To have rigged a so-called man-in-space exploit would have been well within the capabilities of as shrewd and unprincipled a propagandist as the Soviet Premier. He was well aware that to lay a foundation for such a hoax all that he needed to do was put a vehicle in orbit.

The presence of the vehicle in space was the only element of the Soviet claim that could be checked by other countries. The reported return to earth (staged in an area out of bounds for foreign observers) could not be checked by intelligence agents of any foreign power.

The creation of a synthetic cosmonaut and his elevation to the rank of a national hero in a well-staged, emotion-packed, widely publicized demonstration would be child's play for the Soviet propaganda machine. With a controlled press and radio and subservient scientists, it would have been just as easy to fool the Russian people as those of other nations.

The skepticism that has been expressed in this country about the cosmonaut exploit is based mainly on the discrepancies in the stories told by the supposed cosmonaut about his experiences in orbit and in the reports in the Soviet press and on the Soviet radio about the return to earth.

Maj. Yuri A. Gagarin told about observing the strange and startling brilliance of the heavens and sighting coastlines and other configurations of the earth, including arable fields green with crops. A Soviet scientist in Italy said the vehicle which carried Gagarin into space had no openings or portholes. A later version said the scenes described by Gagarin were visible on television. Just how this was done was not explained.

The question therefore arises, why, in view of the known cupidity of the Soviet leaders, the lack of any evidence to support the Soviet claim and the discrepancies in the Soviet accounts of the exploit, the Government has not challenged the Soviet story.

Th answer is that U.S. officials are afraid of being mousetrapped. They fear that the discrepancies were deliberate. The Russians may have planted them, hoping the United States would raise a question.

And if a question were raised, U.S. officials suspect the Russians may be in a position to come forward with the positive scientific proof, as they did when the United States tried to get away with the story that the U–2 had flown only a few miles into Soviet airspace. The Russians, it will be remembered, produced photographs and other proof that the U–2 had flown over the heart of Russia.

American scientists have expressed the hope that the Soviet Government will share scientific information gained on the reported man-in-space exploit. It is possible they may do this and thus remove all doubt about Soviet claims. But if they do not, it may be a long time before we know whether Yuri A. Gagarin was the first man to orbit the earth or whether Premier Khrushchev staged the most gigantic hoax in history.

Man in Today's World

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. ZABLOCKI. Mr. Speaker, on Friday, May 5, Sister Marie Therese, of the Order of the Sisters of Notre Dame de Namur, addressed the Capitol Hill First Friday Club.

Sister Marie Therese is the daughter of the late Anthony J. Dimond, Delegate to Congress from Alaska during the years 1933 to 1944. She is a professor of biology at Trinity College in Washington.

Sister Marie Therese's address, entitled "Man in Today's World," was very timely and provocative. I am certain that it will prove of interest to many Members of Congress, and I wish to place it in the RECORD under leave to extend my remarks:

MAN IN TODAY'S WORLD

(Address by Sister Marie Therese)

No one can deny that our age is critical, probably one of the most critical in Christian times. Father Teilhard de Chardin in his inspiring and controversial book "The Phenomenon of Man" states: "In every epoch man has thought himself at a 'turning-point of history.' And to a certain extent, if he be thought to be on a mountain spiral, he has not been wrong. But there are moments when this impression of transformation becomes accentuated and is thus particularly justified. And we are certainly not exaggerating the importance of our contemporary existences in estimating that pivoted upon them, a turn of profound importance is taking place in the world which may even crush them."

The famous anthropologist, the late Abbé Henry Breuil, is quoted by Father Teilhard as saying: "We have only just cast off the last moorings which held us to the Neolithic Age." Such a statement may seem surprising when we look back at centuries of civilization, but let us examine it. What characterized the Neolithic Age that we are now said to be leaving behind? Again Father Teilhard: "First of all come the incessant advances of multiplication. With the rapidly growing number of individuals the available land diminished. The groups pressed against one another. As a result migrations were on a smaller scale. The problem now was how to get the most out of ever more diminishing land, and we can well imagine that under pressure of this necessity the idea was born of conserving and reproducing on the spot what had hitherto been sought for and pursued far and wide. Agriculture and stock-breeding, the husbandman and the herdsman, replaced mere gathering and hunting.

"From that fundamental change all the rest followed. In the growing agglomerations the complex of rights and duties began to appear, leading to the invention of all sorts of communal and juridical structures whose vestiges we can still see today in the shadow of the great civilizations

among the least progressive populations of the world. In regard to property, morals and marriage, every possible social form seems to have been tried.

"Simultaneously, in the more stable and more densely populated environment created by the first farms, the need and the taste for research were stimulated and became more methodical. It was a marvellous period of investigation and invention."

Such being the case, how does our age differ from the Neolithic? Is it not also an age of socialization and of science? Is it not therefore only a specialization of what was part and parcel of the Neolithic Age? Does not the future hold the almost certain prospect of a further and fuller development of both socialization and science? How than can we agree with Abbé Breuil and Père Teilhard that we have left behind the Neolithic Age?

Perhaps an analogy with our growth and development would be pertinent. One might compare the Neolithic Age to childhood and the last few centuries to the period of adolescence, with its external and internal changes, with its process of physical and spiritual metamorphosis. The adult speaks the same language, eats the same food, offers the same worship to God as does the child, but there is a great difference nonetheless. Language can now express thought and reflection rather than mere observation and logic; food is no longer used for growth, but for consolidation; worship becomes in one sense less personal, in another sense, more personal, for one seems more clearly the absolute transcendence of God, and at the same time realizes more fully the ineffable love of God for man as revealed in Christ.

The socialization and science which characterized the Neolithic Age, out of which Abbé Breuil says we have only recently passed, are certainly the source of what we have today and of what we shall have tomorrow. But there has been a metamorphosis, and we are in the stage of consolidation, of confirmation, of intensification. The adult just out of adolescence has by no means reached his full potentiality: all is not settled by one choice. There are further crises, perhaps externally not so dramatic as that of adolescence, but real and deep and vital nonetheless. One must continue to choose and choose and choose again the same ideal. And as time goes on, if the right choices are made, the ideal becomes clearer, the will becomes more fixed in good, and suffering of any kind seems a small price to pay.

Our period in history, I suggest, is one of early adult crisis.

To summarize Père Teilhard, the whole world has been peopled, and not only that, but the whole world has been brought into communication. Man can no longer be alone physically. We are not alone in our nature, and we are now not alone in our habitation. Father Hans Urs von Balthasar says in his recent book, "Science, Religion, and Christianty": "There is someone else, who is not God, and who has come nearer to (man) than ever before. This is his brother." The crisis of our time is how to love our brother, for in order to live with him, we must love him, and in order to love him truly, we must meet God in him."

At the end of the section of St. Matthew's Gospel on the Univeralism of the Kingdom of God, our Lord describes the last judgment, which He himself will pronounce: "Then the King will say to those on his right hand, 'Come, blessed of my Father, take possession of the kingdom prepared for you from the foundation of the world; for I was hungry and you gave me to eat; I was thirsty and you gave me to drink; I was a stranger and you took me in; naked and you covered me; sick and you visited me.' Then the just will answer him, saying, 'Lord, when did we see Thee hungry, and feed Thee; or thirsty, and give Thee drink? And when did we see Thee a stranger, and take Thee in; or naked, and clothe Thee? Or when did we see Thee sick, or in prison, and come to Thee?' And answering the king will say to them, 'Amen I say to you, as long as you did it for one of these, the least of my brethren, you did it for me.'"

Now it is impossible to do what God wants us to do, to love our brother in deed, without technological development. There can be no doubt that the advance of science is in his divine plan. I should like to consider that aspect of charity in our age.

I think of the story about the old lady who was asked whether she would fly when she went to California to visit her daughter. "Of course not," she replied, "I'll travel the way the good Lord intended us to travel, by train." And I remember a few years ago when cloud-seeding was first being tried for rain production hearing a woman say, "It is almost blasphemous." Well then, so is ploughing a field and planting it; so is digging up coal and drilling for oil; so is practically anything we do.

Technology, of course, is only one aspect of science; the other is intellectual apprehension. One sometimes hears about a rivalry between basic or pure science and applied science. There is no such thing, for far from being antagonistic, they are synergistic. One cannot flourish without the support of the other. Trial and error by itself is a very slow and expensive way to make progress. Concepts, principles—these are the bases of scientific advance. And, on the other hand, there is nothing so effective in demonstrating the truth or falsity of a concept as a concrete application. An absurd example is that of the theoretical physicist (of some years ago) who calculated from the laws of mechanics then known that the wings of a bumblebee are not sufficiently strong to support the weight of the body, and therefore the bumblebee cannot fly.

Now, the primary aim of a research scientist is to know God's creation, to know what is. He wants to know, for example, what the gaseous envelope of Jupiter consists of, what means the bees use for informing the hive of the location of a good field for nectar and pollen. He does not necessarily, however, look for a practical application of his discoveries and may well leave that to someone else.

If I may speak of my own work, which I know best, I want to find out how thyroid activity is controlled in the turtle embryo. As you may know, turtles lay eggs which are like bird eggs. Or rather bird eggs are like turtle eggs, for turtles have been on earth since Permian days, over 200 million years ago, and birds, justly termed "glorified reptiles," are about 50 million years younger. Now the thyroid gland is very active during the last half of the incubation period of the turtle, and apparently it is necessary not only for normal growth but also for hatching. Baby turtles whose thyroids have been inhibited by drugs shortly before hatching time cannot make their way out of the eggshell. I should like to know if there is the same relationship between thyroid and pituitary gland as exists in amphibians, birds, and mammals. Has this any bearing on medicine? I do not know. I cannot see any. But facts of medical importance are found in the most unlikely places: witness the discovery of one of the most revolutionary drugs, viz, penicillin, in a weed in a bacteria culture.

And from a practical point of view, there must be advance in basic research. We cannot love our brother effectively, i.e., we cannot provide food, clothing, and shelter for mankind today without both pure and applied science. For example, increased and more efficient production of foodstuffs requires improved conservation practices, and these in turn depend on knowledge of the life histories of organisms and of the environmental factors which affect them. Not only biology but also the physical sciences must be developed to take care of transportation and preservation of food and safe disposal of radioactive wastes. And then we have opening up before us space exploration with who knows what marvelous discoveries.

There is a danger in the service of our brother, however, as there is in anything man sets his mind and hands to—to be overanxious, to make this thing the exclusive object of our endeavors, to lose sight of other—and at times more important—values.

Our purpose in improving living conditions, in encouraging freedom and respect for human dignity, is not to form a paradise on earth. That is the Communist dream, and only a dream. It can never become a reality because of sin and death. Nevertheless, to quote Father Louis Bouyer in "Liturgical Piety": "The vast misery of war, of starvation, displacement, unrest that afflict so much of mankind today positively prevents great numbers of human beings from hearing the message of the Gospel. And, also, the materialistic spirit of our age, whether in countries primarily capitalistic or communistic, is in its own way at least as effective as misery itself in preventing people from taking the message of the Gospel seriously. One aspect of the work of Christians in witnessing to the mystery in the world is, therefore, the task of trying to alleviate the misery on the one hand, of trying to change the organizations, institutions and ways of life on the other hand, which prevent people from even beginning to face the true problems of human and Christian living."

In addition, the conquest of the universe is a task given by God to man at the time of his creation. "Let us make mankind in our image and likeness: and let them have dominion over the fish of the sea, the birds of the air, the cattle, over all the wild animals, and every creature that crawls upon the earth." The power to do so was terribly weakened by original sin, but we are living now in the days of redemption, and the conquest of space as well as of this planet can be considered part of the "restoration of all things in Christ."

There is another danger we must be prepared to meet, and that is discouragement arising from temporary failure, for frustration in our endeavors to help others is to be expected, and expected as an integral part of the whole. That does not mean that we should give up all effort; rather, we should accept the immediate failure not as a true failure but as a means par excellence of extending the kingdom of God. Father Balthasar says: "The present and future of Christendom depend on this, whether an Escorial (or monastery-palace) of silent obedience rises again in individuals. The action in a wider sphere as represented by the church's call to the laity will avoid being frittered away in irrelevancies only if the interior spires of invisible cathedrals rise always equally high into the mystery of God. For the Son has not redeemed the world by humanitarian and social works, but by the blood of His obedience shed in apparent frustration on the cross, by which he penetrated beyond the sphere of the social as well as of the personal factors into the nameless and faceless silence of the Godhead which, being three-personal, transcends the personal."

We do not comprehend God—if we did He would not be God—and our knowledge of His will in particular instances is not always clear. He means us to trust Him, whether or not we see. Even the Blessed Virgin, the holiest of all creatures, did not always understand. When the angel announced to her the glorious news that she had been chosen and from the beginning of her existence prepared to become the Mother of the Messiah,

she asked a question, "How shall this happen, for I know not man?" She suffered anxiety at the time of the loss of the child in the temple, and did not understand what Jesus meant by his reply to her complaint: " 'Son, why hast thou done so to us? Behold, in sorrow thy father and I have been seeking thee.' And he said to them, 'How is it that you sought me? Did you not know that I must be in my father's house?' And they did not understand the word that He spoke to them."

But her response to all situations whether she understood or not was "Fiat: let it be done." And the Mother of mankind gives us as directive for our life what she practiced and what she said to the serving men at the wedding feast: "Do whatever He tells you."

What God tells us can be expressed in two words: Love God. Love your brother. And for us today, our brother is not only potentially but actually everybody.

Tshombe Should Be Freed

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. DERWINSKI. Mr. Speaker, despite the fact that our State Department seems to be completely ignoring or else is in complete ignorance of the situation in the Congo, it is refreshing to note that our free press, despite the pressures of the administration, still speaks in a firm, forthright manner on problems of foreign affairs. The Wednesday, May 10, Chicago Sun-Times article "Tshombe Should Be Freed," is a good example of American newspaper reaction to the latest developments in the Congo:

[From the Chicago Sun-Times, May 10, 1961]

TSHOMBE SHOULD BE FREED

There can be no excuse for the highhanded arrest of President Moise Tshombe of Katanga Province by the Congolese Government. The announced plans to try Tshombe for the murder of Patrice Lumumba smack of the revenge long demanded by the Soviet Union for Lumumba's death.

Tshombe is openly anti-Communist and a friend of the West. His death, by any pretext whatever, would suit the Kremlin perfectly. And only Russia, feeding on strife and subversion of hopes for a peaceful settlement in the Congo, would profit from the disorders certain to follow harm to Tshombe.

Unhappily, this latest controversy has disrupted a period of relative calm in Central Africa. Ever since the Tananarive Conference, there has been increasing optimism that the feuding Congolese leaders might reach an amicable settlement of their differences.

President Kasavubu, of the Congo State, has been making his peace with the United Nations, accepting U.N. demands for withdrawal for foreign troops and opening the port of Matadi for U.N. supplies. Meanwhile, talks have been going on among the Congolese leaders, including the military, seeking grounds for establishing a federation of Congo States in lieu of a central government.

The steps admittedly have been slow but the signs have been hopeful.

Against this background, it is impossible to understand why Kasavubu has now precipitated a new conflict by ordering Tshombe's arrest and trial for high treason.

Tshombe was attending a conference in Kasavubu-controlled territory and, according to every common law consideration, had a right to safe conduct.

And if the seizure of the Katanga leader was not enough, Congolese Foreign Minister Justin Bomboko poured gasoline on the rekindled embers by announcing that Katanga would be "liberated" from its present leadership. By this, it is supposed he means attempts will be made to force the province back under the Congo Government.

As was to be expected, the reaction from Katanga was ominous. The Elizabethville government bluntly served notice that violence would follow interference in Katanga affairs.

It is true, Tshombe has been at odds with the rest of the Congo hierarchy since he led Katanga out of the central African state last July, and he has been quarreling with the United Nations since as he tried in vain to keep its forces out of Katanga after the dissolution of the Congo Republic. Also, he has not been a strong supporter of a Congo federation, preferring instead, his autonomy at the head of the Congo's richest province.

But these circumstances do not answer for Kasavubu's rash irresponsibility in the present episode, raising the prospect of renewed strife and promising liquidation of a foe of communism.

Before the grim situation is compounded by further foolhardy action, the United Nations should move to secure Tshombe's freedom and his early return to Elisabethville. After a cooling-off period, the Congolese leaders can try to get together again to try to work out the form of a future government.

A delay in positive action at this point by the United Nations could be as damaging to its own prestige as it could be fatal to long-range peace prospects in the Congo.

Memorial by Menominee Indian Tribe

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. LAIRD. Mr. Speaker, last week the House of Representatives passed legislation to aid the Menominee Indian Tribe of Wisconsin. This legislation was designed to ease the effects of termination of Federal supervision over the Menominee Indian Reservation which became a reality on April 30, 1961.

The elected tribal delegates who represented the tribe here in Washington during this first session of the 87th Congress have forwarded to you as Speaker of the House of Representatives and to me as their Representative in the U.S. Congress the following signed memorial expressing gratitude on behalf of the Menominee Indian people for the action taken by the House of Representatives.

I wish to express at this time my appreciation to my colleagues on both sides of the aisle for supporting H.R. 4130 which was introduced by me to aid the Menominee Indian people. Under unanimous consent, I include the memorial from the Menominee Indian people in the Appendix of the RECORD:

MEMORIAL OF GRATITUDE TO THE HOUSE OF REPRESENTATIVES IN CONNECTION WITH THE MENOMINEE TERMINATION ACT

The Honorable SAM RAYBURN and
The Honorable MELVIN R. LAIRD:

The undersigned, delegates of the Menominee Indian Tribe of Wisconsin, presently undergoing termination of Federal trusteeship under the Menominee Termination Act, out of a sense of gratitude for the work and efforts of the House of Representatives, express to you, and through you to the membership of the Committee on Interior and Insular Affairs and Members of the House, gratitude for the efforts which have been made to bring about passage of H.R. 4130, as reported in Report No. 272, 87th Congress, 1st session, under date of April 24, 1961. This act, vitally needed to give termination a chance to be successful with the Menominee Indian people, has been brought about through the great care and attention of the sponsor, Hon. MELVIN R. LAIRD, and of the membership of the committee; and it is the purpose of this memorial to accord appropriate recognition on behalf of the Menominee Indian people.

JEROME GRIGNON.
AL M. DODGE.

MAY 12, 1961.

Italian Team Launches Jupiter Missile

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I want to insert into the RECORD a brief article, "New Link in the Missile Chain," by Bob Considine, published in a recent issue of the New York Journal American.

The interesting part about this article is the story about a 10-man team from Italy, who were trained by the United States and recently executed a successful test of a Jupiter missile at Cape Canaveral. The team has since returned to Italy where it will help man a Jupiter missile base as a part of NATO activities. Thus, Italy is fully cooperating with the United States in the defense of the free world and is one of our greatest allies.

The article reads as follows:

NEW LINK IN MISSILE CHAIN

(By Bob Considine)

CAPE CANAVERAL.—In the excitement attending the preparation for America's first manned suborbital lob, sight was lost of the fact that we gained a valuable ally in our spreading network of missile bases.

A 10-man Italian team, trained first in Italy and then given postgraduate work here at this crossroads of the future, planned and recently executed a perfect test of a Jupiter intermediate range ballistic missile. Italians were in every position of control during the fueling of the bird, the incredibly complicated countdown, and the launch. The Jupiter sped 1,500 nautical miles down the test range and hit the proper target area.

The team returned to Italy last week and will be the prime operations group manning a Jupiter base which is already in existence there. The base is part of NATO, and the agreement between this country and Italy is similar to the United States-British and United States-Turkish pacts in respect to missiles. Under this newest pact, the deci-

sion to launch missiles would be made by Saceur—the Supreme European Commander, after due consultation with Washington, Rome, and NATO.

Italian crews will be trained by Americans until such time as Italians can take over the program. All must know or learn to speak English. All are Italian Air Force people.

Despite all the wonders one sees at Canaveral, we still haven't arrived at the stage where a button will take care of our defense problems.

President Kennedy's decision to cut back the B–70 program to the development of a few prototypes is a cause for alarm in many an Air Force general's heart. This 2,000-miles-per-hour manned bomber would be a natural next and perhaps last step in our conventional bomber program, just as B–29's gave way to B–36's and 36's to 47's and 47's to 52's and 52's, in a sense, to 58's.

The blunt truth is that the Air Force believes it is perilous to depend on the reliability of the missiles we now have in being or on the drawing boards. It believes a mix of weapons, some manned, some unmanned, is our best insurance for the foreseeable future.

"I am deeply concerned with the need to maintain a proper mix of weapon systems in our future aerospace forces," Gen. Thomas D. White, USAF Chief of Staff, said before the Senate Armed Forces Committee recently.

"There is no question, for example, that this country's defense posture will be greatly improved by the phase-in of effective and reliable intercontinental ballistic missiles. They are exceptional weapons. Nevertheless, they cannot perform all essential combat tasks. We will have to rely upon manned weapon systems to perform vital war functions which require on the spot, trained human judgment."

Homo sapiens still have a place in this space age. General White put it this way, in his plea for a full B–70 program:

"There are two incontestable overriding mandates for the continuation of manned systems. The first concerns the simple but awesome decision to commit the force. Bomber aircraft can be launched with orders to proceed to and loiter at a prearranged line from which they subsequently can be ordered to attack—or to return. Their operations do not pose the problem of finality of decision which must inevitably accompany the launching of ballistic missiles.

"A second mandate for the manned system concerns the perpetual requirement for operational flexibility. There will be a tremendous premium on systems which can look, and find, and report, and attack, and return, and attack again."

Law of Rightness

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. RHODES of Arizona. Mr. Speaker, one of the country's greatest and most widely read authors today is Clarence Budington Kelland. His articles, stories, and novels have been read by people all over the world for almost 60 years. The warm, homespun philosophy of his most famous literary creation, Scattergood Baines, reflects the sound commonsense and resolute character of the ideal American. Clarence Budington Kelland is still writing his vigorous, action-packed stories, and they are being enjoyed by millions of devoted Kelland fans in a way that reminds us of Charles Dickens and his following in the early 19th century.

In a special article written for the Arizona Republic, Mr. Kelland has given us one of the finest expressions of good judgment and commonsense for the times in which we live that I have read anywhere. Under permission previously granted, I am inserting his article as follows:

[From the Arizona Republic, May 7, 1961]

LAW OF RIGHTNESS ALWAYS INTERVENES FOR HUMANITY

(By Clarence Budington Kelland)

Let us not succumb to terror or despair.

Since Noah's Ark came to ground on Mount Ararat, thus continuing the existence of human life on earth, there have been many threats of calamity. Again and again malign powers have threatened to engulf the world and to destroy all that makes life precious to mankind.

Again and again terrible men and terrible forces have arisen whose march seemed irresistible and whose powers of destruction seemed to spell ultimate doom. History's tragic pages tell us of dark days when what existed of promise in the world had been shouldered to the brink of disaster, and one more push would hurl it into the gulf.

But always, just as ultimate disaster seemed about to darken the earth, something happened.

The careful perusal of hundreds of books relating the happenings of the past convinces of a great and wonderful truth. That truth made manifest by repetition down the ages is that there exists some law, natural or Divine, which intervenes and confronts every such threat of debacle and says to it, "Thus far shalt thou go and no farther."

This is not mysticism or some eggheaded form of metaphysics; it is fact arrived at by cold logic. It is not a mere groping for solace or hope in a world frightened, bewildered, praying for something to cling to in the darkness.

How does one find truth? He finds verity by experiment, by collecting provable facts, by adding separate facts together until they form a true conclusion.

When the earth came into being there accompanied its birth certain immutable laws. With these laws like the law of gravity, we are familiar. With other physical laws we are acquainted. They are accepted as existing and indispensible. In our laboratories we are discovering new laws of nature every day. Who, then, dares deny that there are laws, imponderable, potent, which are as necessary and is immutable as gravity?

In this piece we wish to propound a very real law, as real as any law of mathematics of physics. And that is the law of the indestructibility of rightness. And the powerlessness of wrongness to do more than threaten for a time until it suffers defeat.

Communism, as exemplified by the military might of Russia and China and their satellites, is such a menace today. The law of the indestructibility of rightness will be the rock upon which these enemies of humanity dash themselves to destruction.

Now to our proofs.

The greatest proof is that we still survive. And what have we survived down the centuries? More dire dangers have threatened us than communism. Out of Asia erupted that great conqueror Genghis Khan with his golden horde. He overran Russia, reached Austria, bade fair to inundate the world. But the Law said to him, "No farther shalt thou go." And he went no farther. He receded, disappeared.

Tamerlane conquered all of Asia, Constantinople, southern Europe, and was but a step away from the conquest of the world. But the Law intervened and he is only a memory today.

The forces of Islam erupted, mastered Africa, poured its armies into Spain. It was on the point of mastering the world when Charles Martel, less potent than the armies of Islam, stopped it at Tours and the world was saved again.

We study Napolean, greatest military genius of all. He had the world all but conquered when madness seized him, and he overreached himself and was halted and destroyed by the working of the law.

And we come to Adolf Hitler, commanding the mightiest military forces on land and in the air that ever have been amassed. Victory after victory perched upon his banners. But he, too, went mad. England miraculously held out until the United States intervened. And this man, crushed, humiliated, took his own life and vanished. The Law had asserted itself again.

Today we face once more the crucial hours. The idealism, the science, the military potency of communism are arrayed against us. They seem to surpass us in science and in production and in the subtle arts of propaganda. They shoot a man into space and win the plaudits of most of the world. The answer to this man into space will not be spoken save by some feeble voice. That answer is "What of it?"

So let us, in this awesome day, remember what has come to pass again and again, and never has failed. Let us be comforted by what thousands of years of history give as ample proof. And that is that there exists a law, natural or divine, which guarantees to us ultimate safety, which guarantees to us and our children and our children's children that rightness shall prevail and that wrongness, sooner or later, shall be hurled down to destruction.

Resolution of Michigan Counties

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD a letter dated May 12, 1961, from Mr. Gerard H. Coleman, executive secretary, supervisors intercounty committee:

SUPERVISORS INTERCOUNTY COMMITTEE,
Detroit, Mich., May 12, 1961.

Re S. 986, H.R. 6441, and H.R. 2403.

Hon. JOHN D. DINGELL,
Member of Congress, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DINGELL: In considering S. 986, H.R. 6441, and H.R. 2403 before the 88th Congress, the purpose of which is to make available loans, grants, and Federal faith and credit to further the planning and construction of public facilities in urban areas, thereby increasing the ability of local government to help itself in a properly financed and orderly planned manner in solving urban problems, the supervisors intercounty committee, which represents the six Michigan counties of Macomb, Monroe, Oakland, St. Clair, Washtenaw, and Wayne, respectfully presents the following

resolution for your consideration and whatever action you deem advisable:

"Whereas the supervisors intercounty committee composed of representatives from the boards of supervisors of the Michigan counties of Macomb, Monroe, Oakland, St. Clair, Washtenaw, and Wayne, has been vitally concerned with the inability of local government to finance the planning and construction of public facilities; and

"Whereas there have been introduced into the U.S. Congress S. 986, H.R. 6441, and H.R. 2403, which would make available loans, grants, and Federal faith and credit to further the planning and construction of public facilities; and

"Whereas such facilities are needed for the orderly development and growth of urban areas and are beyond the ability of local government to finance; and

"Whereas these three bills, S. 986, H.R. 6441, and H.R. 2403, will also aid in creating employment in an area in which unemployment is reaching distressing levels; and

"Whereas the supervisors intercounty committee has already developed a partial list of projects which would solve some of these problems, and which would benefit from passage of these bills: Now, therefore, be it

"*Resolved*, That the supervisors intercounty committee heartily endorses and supports Senate bill 986, House of Representatives bill 6441, and House of Representatives bill 2403, as being vitally needed measures which should be enacted, thereby increasing the ability of local government to help itself in a properly financed and orderly planned manner, in solving urban area problems; and be it further

"*Resolved*, That copies of this resolution be sent to the Senators and Representatives from Michigan and the National Association of County Officials for their information and use."

Very truly yours,

GERARD H. COLEMAN,
Executive Secretary, Supervisors Intercounty Committee.

The $50 Dividend Credit

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. KUCHEL. Mr. President, among the tax change recommendations which the administration sent to Congress is one recommending the repealing of the so-called dividend exclusion. I object to that recommendation. The Santa Paula Chronicle of August 24, 1961, contains an excellent editorial, in which it discusses this proposal and points out its fallacies. I commend the editorial to the attention of Senators, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A TAX ON SAVINGS

President Kennedy has asked Congress to repeal the 4-percent dividend credit and the $50 dividend exclusion. What's wrong with that? In our opinion, it would remove important incentives for American investors to provide the equity capital so necessary for the sound growth of our economy.

Corporate earnings are subject to taxation before being available for distribution as dividends. And then these dividends are taxed again. This is known as double taxation. The present 4-percent credit offers only a partial relief from this unfair double taxation. Shareowners are therefore being discriminated against taxwise. Many of these investors are saving for their own rainy day, retirement, or other family purposes. They have put their savings in stock of American enterprises.

How well does the average person understand this double taxation? Let's see how it works. Profits of most corporations are taxed by the Federal Government at rates up to 52 percent. The Government again taxes the shareholder at rates from 20 to 91 percent for corporate earnings distributed in the form of dividends. Prior to 1936 this double taxation did not exist for most owners of companies.

In 1954, Congress granted modest relief from this double taxation by excluding the first $50 of dividend income from taxation at the individual level and permitting the tax on the balance to be reduced by 4 percent of dividends from qualifying corporations.

Since enactment of that relief, the number of shareholders has approximately doubled. Today, over 15 million people who own corporation equities benefit from this present partial relief from seeing their earnings pay taxes twice. Repeal of the credit and exclusion would not only be unfair to these 15 million taxpayers, but it could well discourage further equity investment necessary for the sound growth of our economy.

Corporations provide the only means whereby everyone, instead of a few, can readily participate in a growing America. In view of this, it is unfortunate that our present laws discriminate against the corporate form of doing business by taxing company profits and then taxing them again when the net profit is distributed to shareholders, while other forms of business are taxed only once.

The credit and exclusion should be continued to provide modest relief from double taxation for these 15 million owners of corporations. In fact, both should be increased to encourage even broader ownership.

What are your views on this important tax question? If you wish to make known your thinking there is a way. Senators KUCHEL and ENGLE, Senate Office Building, and Congressman TEAGUE, House Office Building, Washington, D.C., are always glad to hear from the folks back home on pending legislation.

American International Academy Fosters Pan Americanism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following speeches delivered April 18, 1961, in Panama City, Panama, at the investiture ceremony of the American International Academy. This fine organization is playing an important role in fostering understanding and cooperation between the peoples of the Western Hemisphere.

Those presented with diplomas as fellows of the Academy were Mr. Nathan A. Reid and Mr. Walter C. Watson—the former a citizen of Panama and the latter of the United States. Our Ambassador to the Republic of Panama, the Honorable Joseph S. Farland, made the presentations to these two distinguished representatives of pan-American friendship.

The speeches follow:

ADDRESS DELIVERED BY GEO. W. WESTERMAN, INTERNATIONAL SECRETARY, AMERICAN INTERNATIONAL ACADEMY, ON OCCASION OF INVESTITURE CEREMONY AT KOL SHEARITH ISRAEL, PANAMA CITY, APRIL 18, 1961

His Excellency, the U.S. Ambassador to Panama, members of the diplomatic corps, members of the clergy, representatives of the Governments of Panama and the United States, military and civilian officials of the Canal Zone, distinguished friends, it is especially pleasing to greet, both effusively and cordially, the distinguished friends who have come here this evening to witness a simple ceremony such as the conferring of membership upon two Americans tried and proved in the spirit and ideals of pan-Americanism.

We are conducting this act just outside the week set aside annually for observance of pan-Americanism. Of special significance is the fact that it is being carrier out in the historic city in which the ideal of continental unity, first conceived by the liberator, Simón Bolivar, found its expression in the Treaty of Union signed at the Congress of Panama in 1826.

The purpose of pan-Americanism is to promote friendly relations and mutual understanding among the American peoples, in order to strengthen the peaceful sentiments that have characterized the evolution of this hemisphere.

A principal aim of the American International Academy since its creation in 1898, is ti help in fostering pan-American cooperation and solidarity through membership of persons devoted to the principles of political liberty and human progress. This devotion is what is needed today to give new strength and vigor to the democratic way of life, and it is symbolized in the membership being conferred upon such upstanding citizens as Mr. Walter C. Watson and Mr. Nathan A. Reid.

We are in the midst of a period in which the democratic way of life is being severely tested. An active communism and a sometimes misguided nationalism are competing for the allegiance of the underprivileged, the disgruntled, the weakminded, or the merely dissatisfied. The threat of a third world war and the grim spector of atomic weapons as well as intercontinental ballistic missiles hang over us. Now, man's successes in rocketry and space explorations tend to confound many who are not anchored in their political beliefs or convictions.

In such a world the attainment of the democratic ideal is not something which can await our leisure. Democracy's greatest hope lies in a progressive realization of James Truslow Adams' dream: "That dream of a land in which life should be better and richer and fuller for every man, with opportunities for each according to ability and achievement."

In these days of discord, conflict, and tension we would do well to apply the principles of Pan-Americanism in finding solutions for the tremendous problems of Latin America. Over half of the people of this region are undernourished; nearly half are illiterate. The overwhelming majority are propertyless, both land and natural resources being concentrated in the hands of a few. Over half the working population lives and toils under semifeudal conditions which retard health, welfare, and education. Until the new, more broadly based social, economic, and political equilibrium is achieved,

Latin America will remain an area of turmoil.

The responsibility of what is happening throughout this hemisphere is mine and yours. It involves the abandonment of indifference. It means a closer adherence to the spirit of Pan-Americanism which bids us to dedicate ourselves to the collective achievement of political liberty, social security, and economic prosperity. We must strive to strengthen the imperfections of democracy, by continuing our collaboration on matters of mutual concern both directly and through international organizations, as befits neighboring republics sharing a common faith in freedom, social justice, and Christian belief. We must find a way to live happily together according to the principles of Pan-Americanism, or continue definitely to have within our lives all the agonies of war, hatred, frustration, and desperation.

In order to preserve our democratic way of life we must prove that it is capable of resolving the urgent and undelayable socio-economic problems and political disorders of this second half of our century. No democracy will be able to endure if it is not capable of liberating man from misery, ignorance, and injustice; no democracy will survive if it is unable to satisfy the vital needs of a growing population; no democracy can remain triumphant if it fails to raise living standards to reasonable human levels.

The world today is divided by two great ideological forces. On one side there is the force that thrives on the ills of mankind such as poverty, hunger, disease, illiteracy, unrest; on the other side is the force which seeks to promote man's natural desires for individual liberty, human dignity, personal well-being. It is contrary to all reasonable supposition to conceive that the voters of this hemisphere, in any considerable number, would ever willingly enslave themselves to a system which demands the surrender of individual freedom, renunciation of whatever religion they may hold, or abject subjection to any state.

But the great majority of the voting and nonvoting population of Latin America has already awakened and is definitely on the march. These people demand more active participation in the destinies of their respective countries. They welcome international cooperation but without arrogance and without prejudice. What yesterday was resignation among them is today nonconformity and protest. All of us, then, find ourselves living through the anguish and the urgency of dissatisfied aspirations. To satisfy these aspirations is the task of democracy of our day; or, as President Kennedy said in his Pan American Day talk last Friday: "Our task is to build a society of men and women conscious of their individual identity, of their national aspirations and also of their common hemisphere interests."

Pan-Americanism holds us together not merely because of geographic bonds, but through a system of representative governments dedicated to serve both the desires and interests of their own peoples as well as those of the inter-American community.

I realize that for the continuing vitality of the inter-American system the spiritual, social, political, cultural, and economic progress of all the peoples of the hemisphere is necessary. I share, then, with all of you present the conviction that free peoples who respect human rights, the dignity of the individual, and the equality of nations can, through cooperation, not only preserve their liberties, traditions and cultures but also build a better and fuller life for themselves and their children.

May I take this opportunity on behalf of the Academy to express our thanks to His Excellency, the Ambassador of the United States to Panama, for his participation in this evening's activity. His presence here has once again demonstrated his genuine desire to promote the highest degree of good will among the peoples of the Americas. In direct contrast to the characters portrayed in the novel, "The Ugly American," Ambassador Farland has undoubtedly earned himself the title of "The Handsome American," by using his many talents to win friends and influence people to the glory of the country he represents.

Our sincere thanks to—

Mr. Ralph de Lima, president of Congregation Kol Shearith Israel, for the privilege of using this hall;

The gracious Miss Emily Butcher who seemingly has not yet learned to say "No" when it comes to cooperating with her gifted musical groups;

Pfc. Bertram L. Monroe and his accompanist, Sgt. William Johnson III, both of the 79th U.S. Army Band, for their willing instrumental contribution;

Rabbi Nathan Witkins and the Reverend E. S. Alphonse for their spiritual offerings;

Col. John K. Eney for the spontaneous cooperation of his USACarib office;

Members of the diplomatic corps accredited to Panama; officials from this country as well as the Canal Zone and military command; and to all our distinguished friends.

This evening in the name of the American International Academy we assemble here in this sacred edifice to bear witness to an expressive act of mutual understanding and good neighborliness. May we all reaffirm our faith in the eternal truths upon which pan-Americanism is founded, and from which flows all the strength and the greatness of our inter-American community. May we also keep shining and unsullied before us the essential value of being good neighbors.

REMARKS OF WALTER C. WATSON ON BEING MADE A FELLOW OF THE AMERICAN INTERNATIONAL ACADEMY, APRIL 18, 1961

The Honorable Dr. Westerman, Your Excellency Ambassador Farland, distinguished guests, ladies and gentlemen, the honor of accepting the awards presented to Mr. Nathan Reid and myself this evening has been given me. Though I sincerely believe that this task should have been entrusted to my fellow honoree whose qualifications as a public speaker excel mine by far, at his insistence I shall attempt to carry out this assignment and I plead for your indulgence.

Dr. Harry Cohen, of New York City, provost of the American International Academy, is personally known to me. He is a man in public life who holds that it is the duty of all citizens of the United States to help strengthen the links which join our country to the Republic of Panama. And, in practice, he does everything in his power to foster good will toward Panama and its citizens. I feel sure, you all agree with me, that his organization has done the cause of pan-Americanism a great good by the appointment of a Panamanian of the distinction and merit of Dr. George W. Westerman as its international secretary. On behalf of my fellow honoree and myself, we most heartily congratulate Dr. Westerman on this additional honor which has come to him and of which he is most deserving.

The last person from this Isthmus of Panama to have been made a fellow of the academy was Doña Ester Neira de Calvo, of the Pan American Union, in Washington. She followed into this organization such distinguished Isthmianites as Second Vice President Heraclio Barletta, Ambassador Eusebio Morales, Eduardo Ritter Aislan, Miss Isabel Mendoza, former vice minister of education, and Don Hugo C. Bycroft, well-known civic worker.

We are proud to follow in this line and to be associated with the men and women of this hemisphere identified with the American International Academy because of their adherence to the ideals of Pan-Americanism. This list includes such dignitaries as ex-President Harry Truman; ex-President Manuel A. Odria of Peru; Mrs. Eleanor Roosevelt; Gen. Ulysses S. Grant, grandson of President U. S. Grant; Gen. Lewis H. Hershey, U.S. Director of Selective Service; Gen. Carlos Quintanilla Quiroga, Bolivian Ambassador to the Holy See; Dean Eudore Dubeau of the University of Montreal; Bishop Benjamin Eckhardt of Canada, Rector Luis Garrido of the University of Mexico; Chancellor Rufus B. Van Kleinsmid, University of Southern California; Ambassador Jose Gabriel Navarro of Chile; Congressman George A. Dondero, Senator William H. King, and numerous others.

We are grateful to you, Dr. Westerman, for having made this momentous occasion in our lives possible. Your recommendation that we be honored in this way invokes within us great pride and profound gratitude. Through you we extend our heartfelt thanks to that eminent citizen of the world, Provost Harry Cohen, and to the academic council for the confidence they repose in us. We shall always strive to be worthy of this trust and shall endeavor to live up to the high and noble ideals of the Academy of which we are now proudly a part.

A wise woman once wrote that gratitude is much more than a verbal expression of thanks. "Action," she said, "expresses more gratitude than speech." In other words she implied advice was that we let our gratitude be known by what we do.

By continuing in our circumscribed and unspectacular way to foster good will and human brotherhood we hope to prove worthy of this tribute to ourselves and our respective communities.

May I here observe that our great American President, John F. Kennedy, who is following in the footsteps of the immortal F.D.R., has given new meaning to the words of F.D.R. who in 1933 gave birth to the good neighbor policy, stating:

"In the field of the world policy I would dedicate this Nation to the policy of the good neighbor."

Years of bitter trial have proven that this is the only policy which can bring peace and harmony to our relations with each other. But, this policy must be the result of actions and not words. We must commit ourselves, all of us—Americans from North, South, and Central regions—to dedicate all of our time, energy, and effort to making it a reality.

As Dr. Westerman so eloquently stated in his opening address, the human race is now passing through one of its greatest crises. Never before have we passed through a period of greater challenge to our democratic way of life. It is a challenge to those of us who recognize democracy as a force to be used and not a form to be served.

Despite the claims of those who would impose their totalitarian ideology of communism upon us, no existing form of government is better equipped than democracy to build bridges of understanding between man and man, and between one people and another, without regard to race or creed.

The ideological struggle has become critical as a result of the unparalleled progress during the past 40 years in controlling man's relations to the physical world. The tragedy of this tremendous progress in the control of the physical world is that no corresponding progress has been made in the understanding of human relations. This tragedy has brought us to a crisis. The accelerated progress during the past 40 years in understanding and applying the physical sciences has brought about a shrinking of the world, whereby we are living next door to peoples who do not understand us and whom we do not understand;

and it has brought us also a strain upon the capacity of the individual citizen to evaluate world events.

This strain stems from the increased velocity in the change of public opinion. Never before in the world's history has the individual citizen been given so little time in which to reappraise his relationships to other peoples in the light of changing events. No longer does he have an appreciable time lag between the reporting of one news event and another in which to reflect and come to a deliberate conclusion. The increased velocity in the dissemination of news has inevitably brought with it an increased velocity in the change of public opinion.

Because of all this I repeat that our only hope lies in the fulfillment of the good neighbor policy. We owe it to ourselves and the world at large to unite in bonds of common brotherhood and properly to present a united front against those who would, by force or intrigue, impose their totalitarian ideologies upon us. We must build bridges of understanding between man and man, between people and people.

How shall we build these bridges of comprehension so essential to our democratic way of life? I readily admit my limitations to speak authoritatively on the subject but it is obvious, even to my layman's mind, that the avenues immediately at hand are the approaches of government to government and people to people. We build bridges of understanding when we act with reasonable deliberation in appraising our neighbors.

We who are members of the free democracies must approach the problem of this troubled world with an inspired hope and a determined courage, not with the pessimism of Diogenes. It is said that when he was about to die, he asked to be buried face downward because the world would soon be upside down anyway. We, with an inspired hope and faith in our heritage, must convert the problems of today into opportunities for human service.

How shall we build bridges of human understanding between man and man? By a ready acknowledgment that although contemporary values and goals shift and change with changing conditions, there is a set of universal standards by which we must govern our conduct and which include: justice and fair dealing, honesty, truthfulness, observance of covenants, recognition of regularly constituted authority, due regard for the rights and feelings of others, cooperation and mutual assistance, disposition to carry one's load, tolerance, respect for individuality and mutual respect.

How shall we build bridges of understanding? By being imbued with the spirit of being our brother's keeper, regardless of his race, creed, or color, and by not restricting or isolating man from man by walls of prejudice, bigotry, or intolerance.

AMERICAN INTERNATIONAL ACADEMY INVESTITURE CEREMONY, SALON ABRAHAM D. MELHADO (KOL SHEARITH ISRAEL), APRIL 18, 1961

CITATION

Nathan A. Reid

Supervisor of a vital U.S. naval installation in the Canal Zone; a citizen of the Republic of Panama who, through his years of social contribution, has been helping to achieve for the Isthmian community the abundant life in things material and the noble life in things spiritual; a man of conviction without bigotry; courage without pugnacity; self-respect without vanity; regard for human dignity without bombast; a crusader for the democratic ideals embodied in Pan-Americanism.

It is my pleasure to present you with a diploma as a Fellow in the American International Academy, and to confer upon you the Star and Cross of Academic Honor of that organization.

AMBASSADOR FARLAND.

Walter C. Watson

Supervisor of a vital U.S. naval installation in the Canal Zone; a citizen of the United States who, through his years of social contribution, has been helping to achieve for the isthmian community the abundant life in things material and the noble life in things spiritual; a man of conviction without bigotry; courage without pugnacity; self-respect without vanity; regard for human dignity without bombast; a crusader for the democratic ideals embodied in Pan-Americanism.

It is my pleasure to present you with a diploma as a Fellow in the American International Academy, and to confer upon you the Star and Cross of Academic Honor of that organization.

AMBASSADOR FARLAND.

The New York Mirror Series on Italian-Americans

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wsh to insert into the RECORD the concluding two articles in the series on eminent Americans of Italian origin as published by the New York Mirror. The article in the issue of Sunday, May 14, 1961, is about John F. Cuneo, head of the well-known Cuneo Press, one of the largest printing and book publishing companies in the world. The article in the issue of Monday, May 15, is about the Nobel Prize-winning physicist Dr. Emilio Segre.

The series thus described highlights in the lives of eminent Italian-Americans in various fields, such as the judiciary, education, politics, literature, science, the business world, and others. It merely proves once again that no group has a monopoly on good, or evil. All groups in this country have made notable contributions to the growth and development of America, and it is the contributions that are important not the misdeeds of the few in each group which give it a bad name.

The New York Mirror and the authors of the series, Miss Ara Piastro and Harry Atlshuler, deserve to be commended for helping to dispel prejudice. The articles referred to above are as follows:

[From the New York Mirror, May 14, 1961]

THE CUNEOS: EMPIRE BUILDERS

(By Ara Piastro and Harry Altshuler)

When Mrs. O'Leary's cow kicked over the celebrated lantern on October 8, 1871, starting the Chicago fire, there already was another less spectacular flame burning high in that city. It was the Cuneo family, blazing with energy.

The first of them in this country, Giovanni Batista Cuneo, came from Genoa in 1847 and settled in Chicago, while his brother Andrew trekked on with the pioneers to California. Giovanni was a successful businessman, and his son, Frank, in his turn built up a large wholesale fruit business and developed real estate interests also. He is remembered as the founder of Chicago's Cuneo Memorial Hospital.

The third generation appeared to take another turn. John F. Cuneo, born to Frank and his wife Amelia on December 24, 1885, was a bookish lad—with an unsuspected gift for salesmanship. He went to the private University School in Chicago, then tackled an engineering course at Yale, but his real interest was in books, particularly those with fine bindings. He didn't want to go into his father's business.

Engineering, he decided, held no genuine lure for him unless it was connected with making books, preferably beautiful ones. He went back to Chicago and started a small bookbinding firm. Then he had to fling himself into the business world, to get contracts to keep the plant going.

He did it so successfully that Cuneo Press, Inc., now is one of the world's largest printing and book manufacturing establishments. Recent volume has been at the rate of $60 million a year. The company occupies almost 3 million square feet of space in Chicago, besides large plants in Philadelphia, Milwaukee, Los Angeles, Kokomo, Ind., and Weehawken, N.J.

It has 6,200 employees. It prints and binds practically every type of printed matter. Each month its presses roll out more than 32 million copies of magazines for various publishers, and more than 83 million rotogravure newspaper supplements.

Besides books and magazines, the company prints millions of catalogs, trade publications, labels, and even railroad timetables. It is also one of the major producers of Bibles.

Cuneo never let his growing interest in business distract him from his first love, fine bindings. He still collects them, as well as rare first editions and Italian primitive and renaissance paintings. His painting collection has been exhibited at the galleries of Notre Dame University.

After his marriage in 1930 to the former Julia Sheppard, he established a farmhome at Libertyville, Ill., as a place to relax. But Cuneo's idea of relaxation was to stock the place with purebred cattle, and before long he was involved in a dairy business, Hawthorn-Mellody Farms, which has grown almost as large as his printing business. It now runs dairies and ice cream plants across the country from Kansas City to Buffalo, and Cuneo permits himself one joyous boast: "we make the best ice cream in the world."

In both World Wars, the country called on his services, putting his wide knowledge of the graphic arts to work, in the first one as associate chief of the Labor Department's poster division, and in the second as a member of the War Labor Board's advertising section.

He and his wife have two children, John Jr. and Mrs. J. C. Bowes, and two grandchildren.

In both Chicago and Libertyville, the indefatigable Cuneo is active in community affairs. In a self-effacing way, too, he has devoted much help to charitable organizations. One of them is a foundation he established which gives scholarships for educational and scientific purposes.

He has received Papal decorations as a Commander of St. Sylvester of the Grand Cross, Knight of Malta, and Knight of the Equestrian Order of the Holy Sepulchre.

He is a director of a big Chicago bank, the Continental Commercial, and chairman of the executive committee of National Food Stores. But this emphasis on the worldly and bodily needs of man has never made him lose sight of his prime interest: the printed word, which feeds the mind.

[From the New York Mirror, May 15, 1961]

THE NOBLEMAN IL DUCE OUSTED

(By Ara Piastro and Harry Altshuler)

When he stood before the august Swedish Academy to accept the Nobel Prize in physics for 1959, Prof. Emilio Segre quoted a line from Dante:

"Tu se' lo mio maestro e il mio autore."

"Thou art my master and my author," he said of the late great physicist Enrico Fermi, under whom he had studied. "I learned from him not only a good part of the physics I know but above all, an attitude of constant devotion to science which has affected all my work," Segre explained.

No one could ever doubt Segre's devotion to science and the questing, questioning spirit of man.

In other sorts of circumstances, his devotion has been less wholehearted. Mussolini, for instance, could never get the man to knuckle under. He was director of the physics laboratory at the University of Palermo, and already a famous man in 1938, when the Duce kicked him out of the job.

Segre sailed for America, a new life, a new career, and greater triumphs.

He was born in Tivoli, a suburb of Rome, on Feb. 1, 1905, and attended schools in Tivoli and Rome. Entering the University of Rome as an engineering student in 1922 he soon transferred to physics and took his doctor's degree as Fermi's first doctoral student in 1928. After 2 years of compulsory service in the Italian Army, he returned to his studies, teaching and working closely with Fermi.

Then came the abrupt shift of scene in 1938. Dr. Segre went to the University of California at Berkeley, first as a research associate in the radiation laboratory and then as a lecturer in the physics department. From 1943 to 1946—the crucial years in the development of atomic energy—he was a group leader in the Los Alamos Laboratory of the super-secret Manhattan District. In 1946 he returned to the University of California as professor of physics and still holds that post. He became a U.S. citizen in 1944.

To scientists, the bibliography of his more than 120 published papers on such topics as "Quantum Theory of Fluorescence" or "Nuclear Radii from Antiproton Measurements," is vastly exciting.

Some of his scattered paragraphs, however, are in simple powerfully beautiful language that gives the average man a glimpse of the measure of his mind.

Comparing the roles of theory and experiment, he wrote recently: "We know the human mind is less imaginative and fertile than nature; that experimental confirmation is a prime necessity in the physical sciences."

And again: "The postwar years have seen the opening of the purposeful study, experimental and theoretical, of the 'elementary' particles and the beginning of the exploration of the subnuclear world. Theory and experiment in strong and continuous interplay have both contributed to the at least partial elucidation of the new domain. But the same thing that happened to Columbus, who, when seeking the route to India predicted by the geographers, discovered America instead, has repeated itself several times in the subnuclear world. Continuing this figure of speech, I may say that the continents discovered by the explorers considerably outnumber the predictions of the geographers."

Together with other scientists, Dr. Segre discovered the elements technetium and astatine, and plutonium 239 with its fissionable properties.

His recent work has been on the antiproton, which was only a theory of the English physicist Paul Dirac until Dr. Segre and his California colleague, Owen Chamberlain, actually discovered it. It was for this work that Segre and Chamberlain shared the Nobel Prize. It has vast implications concerning the symmetry of the universe, what matter is really like, and even what strange things may be in store for men if they ever go out amid the stars.

Dr. Segre and his wife, the former Elfriede Spiro, have a son Claudio, and two daughters, Amelia and Fausta.

His work in his laboratory, his teaching not only at Berkeley but also in New York, Illinois, Rio de Janeiro and elsewhere, has furthered man's eternal quest into the nature of the universe and the elements that compose it.

Commuter and Other Passenger Services on the New Haven Railroad

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16, 1961

Mr. BUSH. Mr. President, one of the major problems facing the people of Connecticut, and especially residents of Fairfield County, is the deterioration of service by the New Haven Railroad. This problem is an urgent one to some 30,000 people who must use the railroad to commute to their jobs each day.

The Honorable ABNER W. SIBAL, of the Fourth Connecticut District, which embraces all of Fairfield County, has introduced in the House of Representatives a bill proposing an interstate compact in which Connecticut, New York, and other affected States would unite to bring about an improvement in commuter and other passenger services by the New Haven Railroad. I hope that Representative SIBAL's excellent suggestion will be given serious consideration by the States concerned and by the Congress, which must give its consent to the proposed compact.

Mr. President, I ask unanimous consent that Mr. SIBAL's bill, H.R. 6705, may be printed in the Appendix of the RECORD, together with an editorial from the Westport Town Crier entitled "Unsolved Problem," which comments favorably upon it, following these remarks.

There being no objection, the bill (H.R. 6705) to grant the consent of Congress to the States of Connecticut and New York, and other affected States, to enter into a compact relating to the taking of action to bring about improvement in commuter and other passenger services of the New York, New Haven & Hartford Railroad, and editorial were ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to the States of Connecticut and New York, and any other State affected by the commuter and other passenger services of the New York, New Haven, and Hartford Railroad, to enter into a compact designed to aid in the maintenance and improvement of such services of such railroad in the States which are parties to such compact, and such compact, among other things—

(1) shall provide machinery necessary for the determination of the need of such railroad for public funds and the uses to which such funds should be put;

(2) shall contain provisions to insure that any public funds made available would be used to improve commuter and other passenger services;

(3) shall provide for financial participation by each State which is a party to the compact; and

(4) shall provide for giving the public a voice in the policies of such railroad insofar as they relate to commuter and other passenger services.

SEC. 2. No such compact shall be binding or obligatory on any party thereto unless it shall have been ratified by the legislature of each State which is a party thereto and shall have been approved by the Congress of the United States.

SEC. 3. The right to alter, amend, or repeal this Act is hereby expressly reserved.

UNSOLVED PROBLEM

Congressman SIBAL'S proposal for an interstate authority as a further step toward solution of the commuter problem in States served by the New Haven Railroad comes as a timely reminder that the matter of the New Haven is by no means finished business.

It is true that the legislatures of three out of four States have approved multimillion-dollar tax concessions designed to aid the railroad. The commuters have coughed up with still another 10-percent fare increase. Not only, however, do a number of the other points in the agreed-upon program await implementation, but the overall economic climate assures that the emergency program itself will not be enough.

It will be recalled that the four-State emergency project involved State aid, which is partially arranged for; commuter contribution, which was first to come; Federal aid in the form of repeal of the tax on passenger transportation, for which the Kennedy administration has shown no enthusiasm; and a program of improvement of service on the part of the railroad, which is hardly visible as yet.

Even these, however, do not strike at the heart of the problem. Thanks largely to the system of super highways that has been developed—and is still being developed—the New Haven's freight revenues are not likely to rise to the former level. Even with the tax concessions, it is not at all certain that carrying commuters is not, per se, a losing proposition. This combination can only mean continued financial distress for the railroad and continued pressure on commuter service.

It was all to the good that our lawmakers, finally and belatedly, stepped in and performed an emergency bailout for the New Haven. The fact is, however, that they did so without adequate background information and with no real plan for the future. They failed entirely to answer the really basic questions: Will it be possible to continue commuter operations under private management, or should the public take a hand? Is the present operating management adequate? How feasible are plans for complete operating reorganization, such as the Baldwin-Towers proposal?

These are just a few of the questions that must be answered. The time to look for those answers is now, not when the next severe crisis raises its ugly head. Connecticut has suffered from Ex-Governor Ribicoff's 6-year neglect of this problem. It is encouraging to see freshman Congressman SIBAL urging a look ahead. He deserves the Legislature's support.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Massachusetts Lauds National Commander John E. Erickson, Veterans of World War I, U.S.A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include part of my remarks delivered at a dinner in honor of John E. Erickson, national commander of the Veterans of World War I of the U.S.A., held under the auspices of the Department of Massachusetts in the town hall in Stoneham, Mass., on Sunday evening, May 14, 1961. Department Commander Edwin Hayden Lombard was toastmaster of the evening:

REMARKS OF THE HONORABLE THOMAS J. LANE, OF MASSACHUSETTS

Greetings, in my travels—from barracks to barracks—I have noticed a special spirit that distinguishes the Veterans of World War I of the U.S.A., from other veterans' groups.

Like them, we are united by shared memories.

And we have our own legislative program.

But more important than these—in some respects—are the strong social ties that transform comradeship into friendship.

This closer relationship is evidenced by the warm welcome that we give to our national commander, John E. Erickson, here in the hometown of Department Commander Edwin H. Lombard.

Stoneham sent many volunteers to serve with the famous 26th Yankee Division. That was one of the first to fight in 1917, and earned one of the best combat records in the American Expeditionary Force.

Stoneham has a long tradition of service for freedom, beginning with the farmers and tradesmen who fought a short distance from here, at Bunker Hill, and Concord and Lexington.

This area is rich in patriotic traditions.

That spirit was exemplified on May 5 of this year. Our neighbor from Derry, N.H., less than 40 miles north of Stoneham, became the world's first true astronaut as he operated the manual controls of the space capsule named "Freedom 7" 115 miles above the earth.

What inspired Comdr. Alan B. Shepard, Jr., with pioneering courage?

It was the example of his parents and his community.

His father served in World War I, and World War II.

In the years between and since, he made it a daily custom to fly the American flag outside his home, and outside his downtown business office.

His son grew up as a participant in this moving ritual. Patriotic reverence for the flag, and the ideals that it symbolizes, developed the courage and the faith in freedom that we admire in Commander Shepard.

As veterans of World War I, we feel that we are related in spirit to this brave young officer of the U.S. Navy.

Our active service ended long ago but from that experience we learned a continuing devotion to what is best for our country.

There are some people with no faith in anything but themselves who seize upon the slightest pretext to discredit the veterans and the organizations that represent them.

It was our turn to be the target a short time ago when some newspapers carried the report that the veterans of World War I had spent over $200,000 in lobbying for a separate monthly pension for all veterans of the First World War. This made us out to be "Mr. Big" among all the lobbies.

Our guest of honor, National Commander Erickson, promptly exposed the false charge that our organization had spent more money on lobbying efforts in 1960, than any other of the 283 groups who must report on these activities to the Congress.

As a matter of fact, we had only spent $31,000, including items that did not have to be reported, such as the purchase of office equipment and miscellaneous outlays.

We knew that our organization was growing rapidly, but we also knew that it was not so prosperous that it could spend more money on influencing legislation than the National Association of Manufacturers, for example, or any of the other powerful lobbies.

Although the truth is that we spent $31,000 instead of $200,000 for this purpose, the charge that was subsequently disproved shows that some people on the outside are "jumping the gun" and are apprehensive about the actual progress we are making.

For this growth we give credit to the energetic leadership of Comdr. John E. Erickson.

Last year we had a membership of 170,000.

It is expected that the total will pass the 200,000 mark, by the time of the national convention in September.

In the name of the 67 barracks in Massachusetts with returns still coming in we thank our national commander for his hard work and his success in building up the Veterans of World War I of the U.S.A.

I think that some of his ancestors must have come from Massachusetts, because Commander Erickson typifies the patriotism, the courage, and the determination of the Massachusetts officer of World War I who gave us this battle cry: "The command is forward."

One Hundred and Seventieth Anniversary of Polish Constitution of 1791

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Wednesday, May 17, 1961

Mr. BUSH. Mr. President, on May 7, 1961, the Polish American Congress, district of Connecticut, passed a resolution in conjunction with the commemoration of the 170th anniversary of the great Polish Constitution of 1791. The resolution reaffirms the deep patriotism of the membership of the Polish American Congress and outlines certain views on our relations with Poland which is now suffering under Communist tyranny but whose people still long for freedom.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas 170 years ago, a handful of Polish patriots gave Poland its great constitution of the 3d of May 1791.

We today, bowing to the past, resolve as follows:

1. Aware of the danger confronting the United States from the international Communist conspiracy, we raise our voice in concern and alarm. The time for appeasement at the expense of the freedom of other nations is over, as well as coexistence of wishful thinking by free world politicians with Soviet duplicity and a cold-blooded policy of aggression.

The new frontiers of the United States are the boundaries of the free world. Let us make sure they do not shrink. Let the grave words coming from the Nation's Capital find understanding in our hearts, and let us inspire those at the helm of government by our attitude of firmness and readiness to endure the sacrifices which the time ahead may require of us. It is time for reappraisal, and for a policy of boldness carried into the Communist-dominated world.

The recognition de jure by the United States of Polish western territories and the Polish western borders on the Oder and Nysa is necessary. It would be a strong blow at the link of delusion forged by Communist propaganda, which is scaring Eastern European nations, chained to Soviet Russia by fears of a rebirth of German imperialism, that would be fostered by an unthinking American policy.

2. We are reaching the millenium of the Polish nation. In captive Poland, this will be the occasion for mass propaganda that will distort the Polish past and glorify the Communist present. It is to us here in the free United States to show to the world the true face of Polish history and of Polish culture.

We call on Polish-American organizations and the clergy of Polish descent to join us in this task, and work for the rebirth of the Polish language and culture among Polish-American youth.

Let us not be misled by Communist propaganda smuggled into the United States under the cloak of cultural exchanges. We call on the Government of the United States to close Communist agencies which spread Communist literature and broadcast news inspired by these agencies under a cultural cover.

Those ruling Poland on behalf of the Kremlin, by their unfriendly attitude toward the United States, are endangering the future of American aid to Poland.

We understand the concern of American legislators willing to help the Polish nation but not its regime. We must remind public opinion in this country that the Communist regime in Poland is not the legal Government of the Polish Republic. The test of legality is the same on both sides of the Atlantic Ocean; it is the will of the people expressed by free elections and not the will of the Soviet Politbureau sanctioned by the

concessions given Russia at Teheran and Yalta.

A nation which lost millions in the last war fighting for freedom does not need to be reminded what freedom is. A nation experiencing 16 years of Communist rule does not need to be lectured about the evils of communism. Let us save this kind of talk for those in this country who watch Communist inroads into the free world with indifference.

The Poznan uprising of 1956 proved that Poles are willing to fight againt all odds for ideals they cherish. Yet nobody has the right to call for bloodshed behind the Iron Curtain who is not ready to back eventual uprising by armed intervention. Let us remember that the gallant Hungarian nation received no other help than words of sympathy.

We hail the Polish nation that is resisting Communist oppression under her spiritual leader, a great Pole and a great Prince of the Church, Prince Primate Cardinal Wyszynski.

4. We send greetings to our friends, the captive nations. Let us forget about what divided us in the past and look to the future.

We do not recognize any territorial change or annexation brought about forcibly in Eastern Europe. We are sure that freed from communism, Poland and its neighbors will be able to solve their problems peacefully.

5. We greet the Cuban nation and express our sorrow that events have postponed her liberation from the Communist yoke. In the end justice will prevail, and Cuba will be free from its Communist-selected masters.

6. We hail the great American victory in space flight. The achievements of freedom are on behalf of freedom, and for the glory of mankind. We warn that Soviet Russia is reaching for outerspace for warlike purposes.

In adopting this resolution, we call on all Polish-Americans to dedicate themselves to the high principles and ideals expressed in the Constitution of the United States and the Polish Constitution of the 3d of May 1791, and to be ready to bear all the sacrifices they may require of us.

So, may God help us.

Long livè the United States.

Long live free and independent Poland.

Proposed by the Polish-American Congress, District of Connecticut, at Hartford, the 7th of May 1961.

Germany Teaches The U.S.A.

EXTENSION OF REMARKS

OF

HON. JOHN KYL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. KYL. Mr. Speaker on Wednesday, May 17, the Washington Daily News carried an eloquent editorial of tremendous impact:

GERMANY TEACHES THE U.S.A.

U.S. economic advisers increasingly are embarrassed by contrasts between America and West Germany—persistent unemployment here as against a labor shortage there.

Scripps-Howard Writer Roger Stuart has dug up a long-secret report which helps explain the embarrassment.

The report was made by a team of U.S. economists and submitted to the West German Government September 24, 1951. On the U.S. team was Prof. Walter Heller, now chairman of President Kennedy's Council of Economic Advisers.

Some of the recommendations:

West Germany was told it couldn't achieve the necessary rate of industrial expansion if it kept on worrying about inflation. The government was chided for an "excessive concern for price stability."

However Dr. Ludwig Erhard, West German Finance Minister, knew something about inflation. He had seen his parents' life savings lost when the mark went to pot. He rejected this advice.

Dr. Erhard also was told by the U.S. advisers that "a rate of interest high enough to stimulate any large volume of personal savings would seriously curtail investment." But German interest rates were left to find their own high level and so were savings and investment. Today West Germany is investing up to a quarter of its national output annually in the most modern industrial plant in the world.

Dr. Erhard was cautioned against liberal depreciation policies and advised instead to adopt a "compulsory investment program." But liberal depreciation policies helped the German economy grow last year at the rate of 10.8 percent. The U.S. rate was less than 3 percent.

Just 15 years ago West Germany was a defeated and demoralized nation, its resources squandered by Hitler, its factories and homes flattened by bombs. Since then it has taken in more than 12 million refugees. It has imported nearly half a million more and still has a labor shortage.

Average wages have doubled in 10 years and still are climbing. And increases mostly are in true values because of effective measures against inflation.

West Germany last year lost fewer than 40,000 man-days thru strikes. We lost twice that many on missile bases alone. German wage raises have come out of increased productivity—8 percent last year. German prices have been kept competitive in world markets, thus rapidly expanding foreign commerce.

The Germans, in short, have followed the historic principles of free enterprise—despite the advice they got from the United States. Even the West German Socialist Party has repudiated socialism.

The general theories of the 1951 report, rejected by the Germans, are the general theories now being urged on America by Professor Heller and other Adminisration economists: big spending and even budget-busting tax cuts, which breed inflation; artificial restraints on interest rates, which discourage saving and encourage Americans to export jobs by investing abroad; gimmicks in the form of tax "incentives," instead of adequate depreciation allowances.

Somewhere in all this may be found a clue to our "creeping rate of growth," so roundly deplored in the campaign. Now Professor Heller wants us to follow some more of our own bad advice.

The Monroe Doctrine and the Situation in Cuba

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is the Monroe Doctrine Dead?" from the Palladium-Item, Richmond, Ind., of April 28, 1961. The editorial deals with the relation of the Monroe Doctrine to the Cuban situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Palladium-Item and Sun-Telegram, Apr. 28, 1961]

IS THE MONROE DOCTRINE DEAD?

Indiana's U.S. Senator HOMER CAPEHART has come forth with the kind of spunk that often is found in Hoosier citizens.

He has taken the position that our Government has absorbed about all the nonsense it should swallow in connection with the Cuban situation.

The Senator favors sending our troops into Cuba to throw out the Communists if that is necessary to free the Cuban people of a Red dictatorship and to provide greater protection for our own people.

He points out the Monroe Doctrine has been violated by the Soviet Union. And the Senator declares that our country has all of the evidence it needs to show that Cuba now has become a satellite of Red Moscow.

He cites the millions of dollars in war materials which has been sent into Cuba by Communist countries to enable pro-Communist Fidel Castro to keep his people in bondage and at the same time be prepared against an attack by the United States.

Castro forces have been trained in Red Czechoslovakia, which country also has shipped in arms to bolster Communist forces in Cuba.

The time has come for action if our hemisphere is to be kept free. We should put up or shut up in the case of Cuba and its practice of communism within 90 miles of our coast.

Castro's government supported by Russian Dictator Khrushchev has adopted the firing squad to eliminate those who oppose him.

He has become the counterpart of Adolph Hitler, the Nazi leader in Germany who murdered by the millions those he chose to wipe out. Castro also recalls to mind Benito Mussolini, the Fascist dictator of Italy.

Hitler ended his own life hiding out from allied troops in World War II, and Mussolini was caught by the Italian people he betrayed, and as a result was hanged by his heels by those who destroyed him.

Our Monroe Doctrine has been scrapped by former President Eisenhower and President Kennedy.

That doctrine voiced by James Monroe, our fifth President, stated that our country would regard as an unfriendly act any move by a European nation to interfere in the affaires of, or increase its possessions in the Americas.

The wishy-washy modern leadership we have found in the White House has rightly won for us insults and contempts. We have put into mothballs principles vital to the preservation of our republic.

The question today is how long we can follow this course and still remain a free people.

Chicago Regional Port

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by Nick Poulos, of the Chicago Tribune, in the issue of May 4, 1961, and an editorial

appearing in the May 6, 1961, edition of the Chicago Tribune:

CALUMET HARBOR SITE PICKED

(By Nick Poulos)

Union Tank Car Co. will invest $17 million to build a huge bulk liquid terminal at Lake Calumet harbor, the port of Chicago's main ocean shipping facility, it was announced yesterday.

The terminal will be built on a 177-acre site at the harbor entrance and will handle such products as petroleum, animal fats, vegetable oils, and chemicals carried by ocean and lake ships, inland waterway barges, rail tank cars, and tank trucks.

The project, a giant step in the development of the port as a world shipping center, was announced at a city hall press conference by Mayor Daley, Edwin A. Locke, Jr., president of Union Tank Car, and Floyd G. Dana, chairman of the Chicago regional port district.

WORK STARTS MAY 15

Locke said work on the terminal project will begin May 15 and predicted that the first storage tanks will be ready for use by the end of the current shipping season which ends in late November. Union Tank Car plans to spend $6 million in the next 12 months. The entire project, Locke said, will take 10 years to complete.

Daley said the terminal will mean additional trade, commerce, and employment for the city.

INCLUDES PACKAGING PLANT

The terminal, he added, will permit oversea steamship lines to establish express freighter service between Chicago and Europe with voyage time cut down to about 10½ days. Availability of the bulk liquid facility will guarantee return cargoes for incoming ships, he said.

The ultimate capacity of the storage facility will be 200 million gallons. The terminal also will include a plant for packaging liquids.

The first stage of the development will include preparation of the site, most of which is now under water. The channel area will be dredged, land filled in, and bulkheads and docks built to handle both ships and barges.

DEVELOPED BY SUBSIDIARY

The bulk liquid terminal will be developed by a new Union Tank Car subsidiary, Bulk Terminals Co. Union Tank Car, which owns and operates the largest fleet of rail tank cars in the country, recently acquired Bulk Terminals for cash. The new subsidiary held a long term lease with the port district for the site.

The port district has developed the existing dry cargo facilities at Lake Calumet at a cost of $24 million and plans a $30 million expansion program.

BEST EQUIPPED PORT

The attractiveness of Chicago as a port will be greatly enhanced by the building of a bulk liquid terminal costing $17 million at Lake Calumet Harbor. No tax funds will be used for the project; it will be built by the Union Tank Car Co. on 177 acres leased from the Chicago regional port district. When fully developed the new facility is expected to pay the district $75,000 to $100,000 a year in fees.

Ever since the opening of the St. Lawrence Seaway, Chicago's port has been handicapped by the lack of a terminal where petroleum, animal fats, vegetable oils, and chemicals could be loaded and unloaded by ships, barges, and railway tank cars. Such products were taken aboard by vessels in the oversea trade but the makeshift facilities made loading slow and expensive. With the new terminal, Lake Calumet will be the best integrated port on the Great Lakes, equipped for handling all kinds of cargo efficiently.

The willingness to commit $17 million in private capital to this development should make it easier for port district officials to float another revenue bond issue for harbor works. The district gets no money from the taxpayers. A $24 million revenue bond issue was sold to build the first group of facilities. Arrangements now are being made for a new $30 million bond issue which will provide for doubling the wharves and cargo sheds and erecting another huge grain elevator.

Lake Calumet is the only place on the Great Lakes where ships from the lakes and seaway can exchange cargoes with the barges of the Mississippi Valley waterways. It cannot fail to become a great center of world commerce.

George Norris Centennial Celebration

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17, 1961

Mr. KEFAUVER. Madam President, at noon today before the George Norris centennial celebration luncheon held at the Willard Hotel, a very excellent address was delivered by George Meany, the president of the AFL–CIO, which deserves the consideration of all Members of Congress and readers of the CONGRESSIONAL RECORD. I ask unanimous consent that his speech be printed in the Appendix of the RECORD at a separate place from that of Mr. Sorenson.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a very great privilege, and one that I appreciate, not only personally, but as a spokesman for the labor movement—to take part in this centennial tribute to Senator George Norris.

In the last day or so, you have heard a great deal about Senator Norris and his contributions to American life as we know it today. You have gotten most of the history of his battle for natural resources, and especially the TVA. You have gotten some insight into his character and his principles.

I cannot improve on the points made by Secretary Udall and Mr. Sorenson, among others. I want to take as my theme—in the broadest sense—a few words from a statement by Senator Norris himself, spoken to a staff meeting of TVA people in Norris, Tenn.

The Senator was then near the end of his career—and his life. He saw, at long last, the realization of his dream; he saw the dawn of a new day just as his days, as he knew, were nearly over.

So he told those TVA people, "You are working for a new world."

That's what he wanted; a new world; a better world.

That's what we want, too. And I think we can take heart from the story of George Norris.

As he himself says in his autobiography, we are talking about a man who began his political life as a McKinley Republican.

However, the record shows McKinley Republican or no, that Norris quickly responded to Theodore Roosevelt's challenge to the Nation on conserving our resources; and once aroused, he never lost faith, he never quit, he never let the issue drop during all the years of drought that followed.

I want to take a long leap in time, now, from the newly educated McKinley Republican of, say, 1904 to the silver-haired statesman who cosponsored the Norris-LaGuardia Act of 1932.

What a leap that was for George Norris, the McKinley Republican. For that matter, what a leap it would have been at that time for a Cleveland Democrat.

But at that time, it seemed to be no real leap at all. It was the logical outcome of more than 30 years in the people's service; 30 years in which George Norris had learned much, not only about forests and water and electric power, but also about the greatest natural resource of all, the American workers.

You have already heard about the dams, the power projects and all the other monuments to George Norris. You have heard about the power trusts, the big businessmen, the private profiteers that he—a McKinley Republican, mind you—fought and defeated.

Let me tell you something about injunctions.

We had injunctions—granted by the Federal courts without hearings, that flatly violated the first amendment to the Constitution.

They not only told pickets where and when and how to picket. The told strikers when and if they could meet; they told preachers what they could preach; they decided everything before the union ever had a day, or an hour, in court.

Under these injunctions, the employer was always right. The strikebreaker was the respectable citizen; the striker, though he might have been fourth generation in the community, was always wrong.

What led George Norris of Nebraska, even at that time a living legend, champion of the small farmer, to join with a brilliant but erratic Congressman from New York, in a measure to end such injunctions for a purpose that had nothing to do with farming and very little to do with Nebraska?

There is only one answer, conscience.

This, I think, offers a lesson to all of us.

We bring into the world each year, and into Congress every 2 years, a substantial quantity of McKinley Republicans—good people, three generations behind the times, who sincerely believe that diligence, thrift, rectitude, and respectful worship are of themselves a guarantee of individual prosperity.

They also believe, as young George Norris believed, that the rich and powerful can be relied upon to do the right thing to uplift the unfortunate and protect the weak.

George Norris learned it just wasn't so.

George Norris learned that the rich and powerful did indeed oppress the poor—that the rich wanted to control power sources, mineral rights, mining claims, and all the rest for their own benefit, regardless of the public interest.

Against this background it was much easier for George Norris to understand the motives of those who sought injunctions against trade unions. They were cutting down people instead of trees; they were draining away men and women instead of watersheds; but the purpose was the same—private profit at the people's expense.

It seems to me this offers an example for us today. In the case of George Norris, the old saying proved itself: "Truth is mighty and will prevail." But it's not an automatic process.

People can be educated to see the light.

We, and I speak of the liberal community as a whole, have a tendency to be defensive these days. We who are older, we who survived the great depression, realize that the new generation cannot possibly appreciate our experiences.

They're sure it can't happen to them; and they are right. They are right—because we planned it that way. That's our contribution to society; and I think we can be proud of it.

But we can't sit back and be content. We are the victims of our own success; and George Norris would be the first to tell us so.

The great struggles for human progress are never really won. They must be fought over and over again—not just at intervals, but all the time.

Certainly there appeared to be good reason to believe, in the thirties, that TVA and the principles it represents were permanently established in our country.

Yet only 20 years later, TVA was under siege by a conservative administration; not a frontal attack, but an encirclement, aimed at strangling it.

Happily, TVA survived. But let us keep in mind that the motto of the last administration was, "Let's never do anything like TVA again."

I say we can't be content with a victory that barely preserves something we already have. We can't set our sights on maintaining the status quo. Just trying to stand pat is a formula for defeat.

A moment ago I drew a parallel between Norris' fight for public power and his sponsorship of the Norris-LaGuardia Act. Just as the forces of reaction tried to throttle TVA, and have blocked efforts to duplicate it elsewhere, so have they hacked away at the Norris-LaGuardia Act.

The antiunion injunction is not dead, not by any means. In some parts of the country, injunctions are issued by State courts that match anything we suffered before 1932. The ingenuity of management lawyers has circumvented the established policy of the United States as set forth in Norris-LaGuardia.

My point is that in the two great areas identified with George Norris, we have not moved ahead; we have not built upon the foundations he created; we have been pushed back.

And what is our answer? Too often it is simply an effort to regain the lost ground, to get back to where we were.

All over the country, and in this city, perhaps more than others, there are hundreds, and indeed thousands, of good people who look back to the heady days of the New Deal; who wish for a return of the Wagner Act, the PWA, the CCC.

There were giants in those days, they say. If we could only go back to that atmosphere, everything would be all right.

It's a temptation to think in those terms, especially as we grow older. But it's a mistake; the kind of mistake that is holding us back right now.

We ought to be looking ahead, not back. We ought to be looking at the jobs that were still left unfinished by Franklin Roosevelt, George Norris, and others who did so much.

Let me give you a small but specific example.

In 1920, more than 40 years ago, George Norris was taking an active part in the debate on the Federal Water Power Act. One of his special interests was the Potomac River.

It would be illuminating to all of you to read what Senator Norris said at that time.

He was proposing an amendment to the bill to authorize the construction of a dam at Great Falls, both for water supply and the generation of hydroelectric power.

As usual, he had done his homework. He told the Senate that the water power possibilities of Great Falls had first been explored by George Washington. More than a century then passed. Then there was a whole succession of studies, in 1894, 1903, 1904, 1907, 1909, 1911, 1913, and 1916.

As Norris told the Senate, "I presume it has been investigated more in detail than any other water proposition in the whole world and as far as I know, without exception, where an investigation was through, the result was favorable and a recommendation was made that the waterpower at the falls should be developed."

I wonder what George Norris would say about the Potomac River now? How much water has flowed under the 14th Street bridge since he made that speech in 1920? And what kind of water is it?

George Norris would be ashamed of us, and disappointed in us; not just because of the Potomac, but because of the Missouri, the Connecticut, the Colorado, and many more.

He would be disappointed in us on other issues, too.

He would be shocked that in 1961, a liberal—or, to use a word more common in his day, a progressive—could be defined as a fellow who was trying to protect the achievements of George Norris.

What is progressive, he might ask—about the issues of 30 years ago?

What is progressive in an effort to turn the clock back?

I am afraid George Norris would find it hard to understand us. Thanks to him and to others, we have a base to build on. Thanks to him and to others, we have political strength far beyond that of the little band of dedicated liberals who fought a rearguard action against the reactionary forces of 1920.

Yet how are we using this legacy? How are we exerting our strength?

We are not raising a standard for men of good will to follow. We are full of good will ourselves; we are full of good intentions; we are motivated by high principles. But we have lost some of the boldness that is the very essence of progress.

I think I know as well as anyone the reasons why this is so. We have our daily problems—troublesome, important, time consuming. They have to be resolved.

So it is hard to be a visionary, a man who looks a hundred years ahead, at 5 o'clock in the afternoon, when you have spent all day on problems that came up yesterday or the day before, and must be settled by tomorrow.

Regardless of that, all of us, in Government, in labor, or wherever we may be, have to make that extra effort.

Let us think about our country and our society, not as it is; not as it might have been if George Norris, Franklin Roosevelt, and the rest had been as immortal in body as they will be in history; not as something to be restored, but as something to be created.

The remedies of yesterday have little meaning for tomorrow. They will not enlist the minds and hearts of the new generation. By today's standards, going back to Roosevelt—either one—is little different than going back to McKinley; and if that's the direction we're heading, it can well be argued that McKinley's era was a more tranquil and a happier one.

No, we must do better than that. We whose struggles began just as those of George Norris were nearly over must maintain our own tradition as well as his.

We must look to the Nation and the world as they ought to be—peaceful, prosperous, and free; with nature's bounty harnessed for the good of all; with an ample living for all men, and with all men able to rise unhindered according to their talents; a world of justice, order, and law; a world of charity and human kindness.

You may say "Utopia"; but so was TVA to George Norris a scant 40 years ago.

We need more such Utopias; and more people who are determined to give them reality. We can offer no other meaningful tribute to the man we are honoring today.

Business Freedom and Prosperity

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Roger Stuart, as it appeared in the May 16 issue of the Washington Daily News, shows how government economic meddlers can be wrong. By not following the advice of the U.S. economists, headed by Dr. Walter W. Heller, President Kennedy's Chief Economic Adviser, in 1951, the Bonn Government, with liberal depreciation policies, built up a firm prosperity remarkably free of inflation.

The Committee on Ways and Means is now conducting hearings on the President's tax message. Weaved in, throughout the message, are these same false trumpets of the economic planners headed by the same Dr. Heller. I feel that, as in the case of Germany, if sensible depreciation policies are allowed to American businessmen, with their ingenuity and without governmental direction, they can raise this country to new and lofty economic heights.

The article follows:

EMBARRASSED ECONOMIC PHILOSOPHERS—GERMANS PROSPERED WHEN THEY REJECTED U.S. ADVICE

(By Roger Stuart)

A 10-year-old report and analysis of the West German economy is the "button" in a childish game of concealment now being played by the State Department.

The 446-page document was prepared by a Marshall plan team of U.S. economists in 1951 and was submitted to the German Minister of Finance with recommendations for action.

When the State Department was first asked about the report officials said they could not find their copy. Later they admitted it was in the files, but said it couldn't be released because its classification was uncertain. (It was recently declassified from "secret.") However, information about the advice was readily available from other sources.

Why do State Department officials trying, despite the reports' declassification, oppose disclosure of its contents? The answer apparently is twofold:

First, because it would reveal how poorly advised were the Germans by the team of American economists, since the extraordinary prosperity that has been achieved under practices which were precisely the reverse of what the report advised.

Second, because those who prepared the report include economists now helping to shape the Kennedy administration's multibillion-dollar program of Federal action and controls.

The Marshall plan team of 1951, whose prophecies were to prove so wrong in the case of West Germany, included Prof. Walter Wolfgang Heller, now serving as chairman of President Kennedy's three-member Council of Economic Advisers.

Mr. Kennedy made it clear before his inauguration last January that the council would become "a key element within the Presidential Office".

The President-elect said the CEA would "deal not only with the state of the econ-

omy but with our goals for economic progress." And he was leaving it to the chairman, he said, to find ways and means "of providing us with the best possible staff assistance and advice in the major fields of economic and social policy with which the administration will be concerned."

Among other things, Dr. Heller and his 1951 teammates told Dr. Ludwig Erhard and his Finance Ministry that West Germany couldn't achieve the necessary rate of industrial expansion if it kept worrying about inflation.

A certain amount of inflation wouldn't hurt, it was suggested, and the Germans shouldn't "confuse war time inflation with the normal operations of peacetime credit."

Moreover, the newly organized ministry was told that it had an "excessive concern for price stability" and was "overly timid" in allowing the creation of new credit.

But Dr. Erhard knew from bitter experience in the catastrophic days following the First World War what terrible things might occur as a result of runaway inflation.

"We shall continue to resist inflation," he declared. And West Germany, to its great good fortune, did.

The report, calling for easy money, said that "a rate of interest high enough to stimulate any large volume of personal savings would seriously curtail investment."

Nevertheless, West Germany maintained its high rate of interest—and watched both personal savings and investments grow.

Rather than grant industry liberal depreciation allowances, a compulsory investment program should be put in force, said the American fiscal advisers, adding that "the nostalgic hopes * * * looking toward a revival of the 19th century role of the capital market plays no such role in any modern country and there is no prospect that it will."

Dr. Erhard, who had studied his economics under a professor whose slogan was "free enterprise is the essence," saw to it that West Germany kept its liberal depreciation policy. Industry expanded rapidly, and the country prospered.

By the end of 1951, John J. McCloy, U.S. High Commissioner for Germany, was able to report that already a transformation had occurred which might almost be called a miracle, and he added:

"West Germany has largely reestablished itself as a solid, productive country. Its production has increased from 1947 threefold, until it has become the second largest industrial producing country in Western Europe."

The steady growth and development since then provide one of the brightest pages in the history of free enterprise—anywhere and in any age.

Honor for Mr. McGowen

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I call to the attention of the Congress a fine article from the Shreveport Times, Shreveport, La., paying tribute to a great American, Mr. N. C. McGowen, chairman of the board of directors of the United Gas Co.:

HONOR FOR MR. MCGOWEN

Support of youth activities is the measure of a man's faith in the future of his country. Few Louisianians have given such practical expression of that faith as has N. C. McGowen, chairman of the board of directors of United Gas.

Mr. McGowen's 20 years of quiet absorption with 4–H leadership programs—not only in Louisiana, but in Mississippi and Texas as well—was capped with national honors at the recent 4–H conference in Washington. With six other Americans, he was named "Partner in 4–H," the highest recognition the clubs can bestow.

His encouragement of 4–H leadership as well as active financing of attendance at State and National training programs, were cited by American 4–H leaders. Back of the citation lie 500 paid trips for "4–H'ers" of 3 States since 1948, and a 20-year program of raising the rewards of youths investing in livestock competition.

Mr. McGowen's lifelong interest in youth activities was transformed into constructive concern when he attended a junior livestock show at the Louisiana State Fair in the early 1940's. That concern was carried over into the community activities of United Gas, and the 4–H activities of Mr. McGowen and the company intertwined in a program which has grown steadily since 1942.

That year, Mr. McGowen instituted United's vigorous program of bidding up also-ran junior livestock entries at the State fair.

Since 1948, "4–H'ers" from Louisiana, 328 from Mississippi, and 84 from Texas have been given expense-paid trips to conferences aimed at preparing them to be better farmers.

The many 4–H clubs of the tri-State area have just reason to rejoice in the recognition of their benefactor for his many years' support of their cash enterprises and farm training. The Times joins them in paying tribute to the humanitarian and civic concern which inspired the United Gas 4–H program.

J. Edgar Hoover, Guardian of Internal Security

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I want to include an editorial from the Nashville Banner, Nashville, Tenn., entitled "J. Edgar Hoover, Guardian of Internal Security."

Mr. Hoover began his 38th year as Director of the Federal Bureau of Investigation on May 10, 1961. No other citizen has contributed more to law enforcement and public security than this dedicated American and I hope the entire membership will take time to read this splendid tribute to this great public servant.

The editorial follows:

J. EDGAR HOOVER, GUARDIAN OF INTERNAL SECURITY

For more years than the average American—being under 37 years of age—can remember, a basic agency of internal security has been under one great public servant. He is John Edgar Hoover, director of the Federal Bureau of Investigation.

Wednesday he began his 38th year in that capacity—in which he has served, note it, under six Presidents.

A remarkable tenure, yes. In far more ways than one. Significant for its length, that in itself attests to the quality of service which has led these Chief Executives one by one to retain him at this helm.

It was on May 10, 1924, that Mr. Hoover accepted the assignment at the urgent request of the late Harlan Fiske Stone, who had just been named Attorney General. He stepped from the ranks to that position, and immediately began the overhaul from which emerged an FBI of standards commanding confidence and respect. He rebuilt it from the ground up.

Whether it was the hoodlum element of professional gangsterism preying on society, or subversives, boring from within to overthrow this Government, the Nation's public enemies have found in J. Edgar Hoover and his organization an uncompromising instrument of law and public security. He has defined them, identified them, hunted them down, and brought them to book.

The Nation breathes easier, with the FBI on guard.

He has avoided political pitfalls, and kept the operation of this primary arm of law enforcement within the legal limits. Dedicated to that, he has blocked all idea suggestive of creating in it a national police force. He has, indeed, helped train local police, the Nation over, for their own jobs of law enforcement, through a police academy that is the best in the world.

By and large, those who are enemies of J. Edgar Hoover are elements with designs upon the United States of America.

At the age of 66, he still bears with distinction—and heroic devotion to duty—an unsurpassed burden of responsibility. The finest tribute is the public knowledge of a job superbly done; the continuing call for his stewardship, and the pattern of a service to guide any successor when the time comes, as eventually it will, to entrust this key security assignment to other hands.

Farmers Home Administration Operating Loan Program

EXTENSION OF REMARKS
OF
HON. FRANK A. STUBBLEFIELD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. STUBBLEFIELD. Mr. Speaker, I share with all of my fellow Members of both parties, those representing urban districts as well as those of us representing predominantly rural areas, a deep feeling of concern about the cost-price squeeze in which our farm families are caught. As a result of rising costs on the one hand and declining prices of farm products on the other, many farm families have exhausted their capital and credit.

The Farmers Home Administration operating loan program has provided the credit to stave off bankruptcy for many thousands of farm families but the unprecedented demand for this type of credit, which is available only when other normal credit resources are exhausted,

has depleted the funds available to the Farmers Home Administration for making these loans.

Recently, I addressed a letter to Mr. John Baker, Director, Agricultural Credit Services, U.S. Department of Agriculture, to inquire as to the status of the funds available for this purpose. In order that my colleagues may have the benefit of the reply to this inquiry, I would like to include as part of these remarks, my letter to Mr. Baker and Secretary of Agriculture Freeman's reply thereto:

Mr. JOHN BAKER,
Director, Agricultural Credit Services, U.S. Department of Agriculture, Washington, D.C.

DEAR MR. BAKER: I am concerned about the possibility that the very heavy demand by farmers for operating credit from the Farmers Home Administration may exceed the funds available.

Since FHA operating loans are available only to growers who are unable to obtain needed credit elsewhere it would be most unfortunate if farmers were forced into bankruptcy because of unavailability of this kind of credit. This would be even more distressing in view of the hope that the income from farming is on the uptrend.

In this connection I noted Secretary Freeman's recent statement that to the extent that farm loan policies and available funds can prevent it, no qualified farmer will be required to give up farming because of his inability to finance his 1961 operations.

I am concerned, however, about the phrase "to the extent that farm loan policies and available funds can prevent." I would appreciate it, therefore, if you will advise me as to the amount of operating loan funds now available for loans to new applicants, and also your best estimate as to when these funds will be exhausted. If your estimate is that the funds will be inadequate, I would also appreciate being advised the amount of additional funds that you estimate will be required to meet the needs for this kind of credit during the remainder of this fiscal year.

In addition, I would appreciate being advised as to the amount of funds which you estimate will be needed to meet this type of credit need for fiscal 1962, and how that amount compares with the amount requested in the administration's budget.

Relative to the phrase "farm loan policies" in Secretary Freeman's statement, I would appreciate your comment on any anticipated changes in the lending policies which have a bearing on the operating loan funds which will be needed for 1962.

Sincerely yours,

FRANK A. STUBBLEFIELD,
Member of Congress.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., May 11, 1961.

Hon. FRANK A. STUBBLEFIELD,
House of Representatives.

DEAR CONGRESSMAN STUBBLEFIELD: This will acknowledge your letter of April 11 concerning the Farmers Home Administration operating loan program.

In the fourth paragraph of your letter you requested us to advise you as to the present status of operating loan funds and the amount of additional funds that would be needed for the remainder of the fiscal year. As you know, the Department made available in February an additional $35 million for operating loans from the contingency fund authorized by the Congress. This was the full amount remaining in that fund for the 1961 fiscal year. As a result of this increase, the amount available for operating loans for the 1961 fiscal year totaled $232,100,000. During the 1960 fiscal year $197,100,000 was used for operating loans.

Even though additional funds have been made available for operating loans this year, the funds for initial loans are now nearly exhausted. Thirty-four States have already discontinued processing initial operating loans due to the lack of funds. The remaining States also will find it necessary to discontinue processing initial loans in the near future. A limited amount of operating loan funds has been reserved to meet the subsequent loan needs of indebted borrowers for the remainder of this fiscal year. This is necessary in order to protect the interests of both the borrower and the Government by enabling the borrower to continue with his farming operations.

There has been a substantial increase in the applications for initial operating loans during the 1961 fiscal year. Such applications were up approximately 21 percent for the fiscal year by the end of March as compared to last year. Applications received during the month of March in 1961 were 70 percent greater than during March of 1960. Many other agricultural lenders also have experienced a similar increase in demand for credit from farmers this year. Many factors are involved in this increased demand. The major ones seem to be the high cost of farm inputs, the narrow margin between income and expenses, the increased mechanization required on farms, and the need for making major adjustments and improvements in farm operations in order to assure a profitable return.

With respect to your question concerning expanded credit policies, we wish to advise you that one of the factors in the increased demand for Farmers Home Administration operating loans was the expansion of the agency's credit policies in March of 1961. This was done to make credit available to more small farmers who needed such assistance to continue their farming operations in 1961. This policy should be continued next year and will further increase the demand for operating loans during the 1962 fiscal year.

The substantial increase in applications for operating loans and the recent estimates received from field offices indicate that it might require up to $20 million in additional funds to meet the demand for these loans during the remainder of the 1961 fiscal year.

You raised a question in your letter with respect to the amount of operating loan funds which will be needed for the 1962 fiscal year. The estimates referred to above, along with the accelerated trend in applications, indicate that it may require $300 million or more to meet the need for operating loans during the 1962 fiscal year The budget of the previous administration had recommended a total of only $160 million for operating loans for 1962. When the present administration took office, a thorough review was made of the need for loan funds for Farmers Home Administration programs as well as the need for funds for other programs of the Government. The President submitted a budget amendment on March 20, 1961, in House Document No. 112, recommending an additional $72,100,000 for operating loans for 1962, or a total of $232,100,000. In view of the needs of other high priority programs, and the competition for limited budgetary resources, the President did not consider it possible to request all the funds proposed by the Farmers Home Administration. However, budgetary needs and resources are under frequent review, and I am sure that if the President finds it possible to recommend additional funds for loans he will do so.

We appreciate your interest in the activities of the Farmers Home Administration. Please be assured that we are interested in meeting the credit needs of qualified applicants to the maximum extent possible under the authorities and resources available through the Department.

Sincerely yours,

ORVILLE L. FREEMAN.
Secretary.

Proposed Presidential Citation for Oskar J. W. Hansen for Accomplishments in the Field of Sculpture and Art

---

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17, 1961

Mr. BYRD of Virginia. Mr. President, on January 23, 1961, Representative BEN F. JENSEN wrote a letter to the President of the United States, praising Mr. Oskar J. W. Hansen now of Charlottesville, Va., as the sculpture of Liberty, and requesting that he be given a Presidential citation and the Medal of Merit for his accomplishments in the field of sculpture and art.

Fifty-two Members of the U.S. Senate, and 12 Members of the House of Representatives joined with Mr. JENSEN in this communication, and I ask unanimous consent that the body of this letter, with the signatures and my remarks, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 23, 1961.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: In 1910 Oskar J. W. Hansen was 18. He wanted to become an American. In a rough sea and the dark of night he dived over the side from a foreign ship and lived to make the beach on the Carolina Banks "By the Dawn's Early Light."

The United States has come into being through attrition of folks who preceded Oskar onto those self-same beaches. These in time collected their forces at Yorktown. When the news of October 19, 1781, reached Philadelphia, our First Congress authorized a monument in commemoration of the alliance and victory which had given to our country both hope and a future. It is this very monument which Oskar restored and completed with his magnificent sculpture of Liberty in order that, the will and obligation of the First Congress could be dedicated at long last on behalf of the President, by the Secretary of the Army, on October 19, 1957.

I have known Oskar many years. His renown as a sculptor and person both at home and abroad, has advanced with the growth and prestige of our country. Secretary Harold Ickes wrote about his sculptures at Hoover Dam that he had "completed the most difficult task ever assigned to an artist." There Oskar built a monument which is competent, imaginative and unique. He won this Government commission in a national competition with all his peers. The astrophysical data and star diagram preserve a basic thesis for projecting our national skill into space. Kindly note the abstracts in the pictorial record which may be had on request from the sculptor.

The Constitution covers all Americans like a seamless robe. It heals our inadequacies and adds luster to our defense of right. It was available to Oskar when he regained consciousness on that beach. At Yorktown we have written into the granite after his name a noble phrase: "Sculptor of Liberty." This is what he did: This, above all, is the sum of his life.

I now wish for myself and my fellow Americans a pause to consider the strong

bond that binds us together as we face the future. For that reason, and because it is proper, I urge that you, Mr. President, give a Presidential citation and the Medal of Merit to the Sculptor of Liberty.

Respectfully and sincerely yours,

BEN F. JENSEN.

I concur in what BEN JENSEN has written.

CARL HAYDEN, U.S. Senator; SPESSARD L. HOLLAND, U.S. Senator; ALAN BIBLE, U.S. Senator; HARRY F. BYRD, U.S. Senator; J. W. FULBRIGHT, U.S. Senator; EVERETT M. DIRKSEN, U.S. Senator; KARL E. MUNDT, U.S. Senator; PAUL H. DOUGLAS, U.S. Senator; A. WILLIS ROBERTSON, U.S. Senator; HENRY M. JACKSON, U.S. Senator; HOWARD W. CANNON, U.S. Senator; LISTER HILL, U.S. Senator; GEORGE A. SMATHERS, U.S. Senator; FRANK E. MOSS, U.S. Senator; JOHN A. CARROLL, U.S. Senator; WARREN G. MAGNUSON, U.S. Senator; FRANK CHURCH, U.S. Senator; STEPHEN M. YOUNG, U.S. Senator; ERNEST GRUENING, U.S. Senator; LYNDON B. JOHNSON, President, U.S. Senate; HUBERT H. HUMPHREY, U.S. Senator; MAURINE NEUBERGER, U.S. Senator; NORRIS COTTON, U.S. Senator; B. EVERETT JORDAN, U.S. Senator; H. E. TALMADGE, U.S. Senator; STUART SYMINGTON, U.S. Senator; THOMAS H. KUCHEL, U.S. Senator; CLAIR ENGLE, U.S. Senator; GALE W. MCGEE, U.S. Senator; JACK R. MILLER, U.S. Senator; JENNINGS RANDOLPH, U.S. Senator; HOMER E. CAPEHART, U.S. Senator; LEE METCALF, U.S. Senator; OREN E. LONG, U.S. Senator; STYLES BRIDGES, U.S. Senator; FRANK CARLSON, U.S. Senator; LEVERETT SALTONSTALL, U.S. Senator; HIRAM L. FONG, U.S. Senator; E. L. BARTLETT, U.S. Senator; RALPH W. YARBOROUGH, U.S. Senator; ESTES KEFAUVER, U.S. Senator; ALEXANDER WILEY, U.S. Senator; WAYNE MORSE, U.S. Senator; PAT MCNAMARA, U.S. Senator; ALLEN J. ELLENDER, U.S. Senator; HUGH SCOTT, U.S. Senator; JOSEPH S. CLARK, U.S. Senator; SAM J. ERVIN, JR., U.S. Senator; JOHN L. MCCLELLAN, U.S. Senator; JAMES O. EASTLAND, U.S. Senator; ROBERT S. KERR, U.S. Senator; JOHN SPARKMAN, U.S. Senator; SAM RAYBURN, Representative in Congress; JOHN W. MCCORMACK, Representative in Congress; CHARLES A. HALLECK, Representative in Congress; HOWARD W. SMITH, Representative in Congress; HAROLD D. COOLEY, Representative in Congress; EMANUEL CELLER, Representative in Congress; THOMAS E. MORGAN, Representative in Congress; BRENT SPENCE, Representative in Congress; CLARENCE CANNON, Representative in Congress; W. D. MILLS, Representative in Congress; OVERTON BROOKS, Representative in Congress; EDWARD P. BOLAND, Representative in Congress.

Forty-third Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. SANTANGELO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Lithuanian American Council of Greater New York:

RESOLUTION ADOPTED BY THE LITHUANIAN RALLY ON FEBRUARY 19, 1961

We, Lithuanian-Americans of Greater New York, citizens and residents of the United States, gathered on February 19 of this year of grace 1961, at Webster Hall in New York, to commemorate the 43d anniversary of the restoration of the Independent Lithuanian State after a prolonged eclipse of its liberty;

Voicing once again our indignation and our protest against the brutal suppression by the Government of Soviet Russia of Lithuania's independence and freedom and her subjugation to ruthless Soviet colonial exploitation, perpetrated at a time when Lithuania was living in peace with the U.S.S.R. and was bound to her by a peace treaty and a nonaggression pact;

Pointing out that the global surge toward self-determination and national independence poses a particular challenge to the West to press for application of the principles of self-determination in Lithuania and the entire captive part of Europe;

Stating that the present Soviet diplomatic overtures and coexistence offers are aimed at the settlement on Soviet terms of the political problems resulting from World War II, namely, at the legalization and consolidation of Soviet criminal conquests in Europe and at creating conditions for further Communist expansion in Europe and elsewhere;

Considering that the present abnormal and dangerous situation in Europe, characterized by the division of Germany, the subjugation of nine formerly sovereign states of central and eastern Europe, including Lithuania, and by the division of the Continent is the major cause of the present international tension and requires an urgent and global settlement in conformity with the wartime and postwar commitments and pledges of the Great Powers.

Resolve,

1. To appeal to the President, the Secretary of State, and the Congress of the United States firmly to restate and vigorously to promote permanent U.S. policy of the restoration of the independence and freedom of Lithuania and other captive countries of central and eastern Europe through free and unfettered elections after the withdrawal of Soviet armed forces and agents, and to reaffirm the determination of the Government of this great country not to be party to any agreement or treaty which would confirm or prolong the subjugation of Lithuania, now help in bondage by the U.S.S.R.;

2. To request the President of the United States that, in line with the pledges and principles enumerated above, and to the advantage of both the United States and captive Lithuania, the issue of Lithuania's subjugation be raised at any forthcoming negotiations with the rulers of the Kremlin and international conferences;

3. To express our complete agreement with the determination of the President of the United States, as expressed by him to give "permanent instructions" to the U.S. delegates at the United Nations "to press for the restoration of free elections wherever Communist imperialism has denied them";

4. To ask the President of the United States to designate the third week of July 1961, as Captive Nations Week;

5. To insist that the Free Europe Radio initiate broadcasts to occupied Lithuania;

6. To rededicate ourselves to the just cause of Lithuania's independence and freedom and to combat Communist aggression and Soviet-Russian imperialism;

7. To assure the Lithuanian people under Soviet occupation of the indissolubility of our ties and of our unswerving determination to spare no efforts and sacrifices for the attainment of the sacred goal of the Lithuanian nation—its independence and freedom.

8. Actively to support the policy of the U.S. Government aiming at the establishment in Europe and elsewhere of a just and durable peace based on the inalienable right of the respective peoples to governments of their own choosing.

DR. ANTANAS SKERYS,
President, Povilas Alisauskas, Secretary.

Federal Aid to Education: A Virginia View

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. HARRISON of Virginia. Mr. Speaker, the citizens of Warren County, Va., have demonstrated notably their ability to deal effectively on the local level with problems of public education.

In this connection I include, under leave to extend my remarks in the Appendix, a resolution of the Warren County School Board.

The resolution follows:

RESOLUTION PASSED BY THE SCHOOL BOARD OF THE COUNTY OF WARREN, VA., AT ITS REGULAR MEETING HELD ON MAY 11, 1961

Whereas the Federal revenues have been inadequate to meet Federal expenditures in 26 out of the last 30 years; and

Whereas Federal aid to education does not represent a new source of revenue; and

Whereas three-fourths of all personal income goes to wage earners, the cost of Federal aid to education will not be borne by the rich and large corporations as the public is led to believe; and

Whereas the Federal Government now takes 64 percent of all public revenue and will have to demand more if it attempts financial support of public education; and

Whereas the Supreme Court of the United States has in effect ruled on several occasions that the Federal Government can regulate that which it subsidizes; and

Whereas Federal involvement in public education is contrary to the 10th amendment to the Constitution of the United States which provides that "powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people"; and

Whereas financial dependence on the Federal Government for support of public education will at best reduce local control over our public educational system: Now, therefore, be it

Resolved, That the School Board of the County of Warren, Va., publicly announce that it is opposed to Federal aid to education and does feel that such assistance is not needed; and be it further

Resolved, That this board pronounce its opposition to any movement which will give the Federal Government one scintilla of control over any local school system and any attempt to standardize or to destroy the flexibility of public education throughout the local school divisions or districts in the United States; and be it further

Resolved, That a copy of these resolutions be furnished to the Senators and Members of the House who represent the Commonwealth of Virginia and its political subdivisions in the Congress of the United States of America.

Results of a Poll

EXTENSION OF REMARKS
OF

HON. JOHN S. MONAGAN
OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MONAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of my colleagues to a questionnaire on nine important legislative matters which I have recently completed and tabulated.

The questionnaire was sent to approximately 7,350 residents of the Fifth Congressional District and drew a response of more than 1,373 replies. This response of more than 18.5 percent was highly gratifying to me and indicates a responsible interest in Federal legislation on the part of Conecticut Fifth District residents. In many instances, those who completed the questionnaire supplemented the form with lengthy letters and commentaries.

The questionnaire was not printed at Government expense and those who returned it affixed their own postage. One resident of Winsted, Conn., who remained anonymous sent me $2 with his questionnaire making the offering as "my mite toward sharing the expense" and asking for more opinion surveys.

A New Milford resident sent me a check to help share the cost of the survey which I returned with a note of thanks.

The nine questions included in the questionnaire were concerned with issues that touch on the lives of all of us and it was because of this that I sought a representative cross-section of opinion from the people of the Fifth Congressional District.

After the initial mailing, there were many requests received for the questionnaire and actually returns are still coming into my office. The survey included questions concerning Federal aid to education, health protection for people over 65 years of age, import tariffs, regulation of drug prices, Federal aid to depressed areas, nuclear weapon testing, foreign aid appropriation, recognition of Red China, and the length and cost of presidential election campaigns.

While overwhelming support was shown in favor of Federal aid to education, and for school construction, there was a division of opinion on the question of aid for increasing teachers' salaries; and the score was almost 3 to 1 in opposition to aid for private schools.

A heavy vote was registered in favor of legislation to provide health protection for people over 65 years old, under social security protection from low-cost imports was advocated, either by quota or by higher tariffs, in preference to the present system. Government control or regulation of drug prices drew a 2 to 1 affirmative vote, and there was an even stronger expression of opinion in favor of Federal aid to depressed areas, which has recently been enacted into law.

By a score of more than 2 to 1, Fifth District residents would support the resumption of nuclear weapons testing, with or without agreement on effective inspection and control. And while they would favor reductions in foreign aid appropriations, they placed higher emphasis on the curtailment of military aid and split about even on the question of economic aid.

I have introduced legislation to curtail the cost and time of presidential campaigns. Fifth District residents agreed by a vote of 1,096 to 232, with 45 uncommitted, that presidential campaigns "are too long and too costly in time, money, and human energy."

In many instances comments on other pending legislation were written in the margins of the questionnaire. Among these were: "I favor withholdings on savings, and so forth. There is too much money being spent." One who identified himself as "just an old vet" urged $150 pension a month for all veterans at 65 and no less than 50-percent disability allowance for all World War I service-connected compensation claimants. There was a request for more Government curbs on unions. One wrote, "May God give you strength to do the right."

Other quotes from letters returned with questionnaires:

Goshen:

I do not think that Government can increasingly relieve the individual of his responsibilities and his self-reliance without also relieving him of his self-respect and his worth to himself and to others.

Waterbury:

I think the less we depend on Federal help the better we will be. I disagree with levying taxes to send things over to foreign countries. It is my experience that if you start helping or supporting someone and then you cease doing so, all you have done becomes a waster.

Watertown:

So far the Government seems to be hamstrung in its struggle to cope with Mr. Hoffa; I hope it will find some way to reverse the trend effectively.

Naugatuck:

I hope Congress will support the President on the proposals he has made to date.

Thomaston:

I am sure these questionnaires will remind more people as to their duty as Americans.

New Milford:

Perhaps if we applied some commonsense approaches to our problems, this country of ours would not be in the dire straits it is. We have spent billions all over the world and all over the world people are taking our dollars and stabbing us at the same time.

Derby:

If "low-cost imports" means materials may be bought inexpensively from foreign nations and in turn sold inexpensively to our own public we must have much to gain by low-cost imports.

Bridgewater:

Your questionnaire is a good idea. I'd been intending to write to you anyway, so I'll enclose it in this letter.

Canaan:

Federal control of drug prices as such seems to me hardly proper. But proceedings could be taken against collusive pricing under antitrust laws. Some drug prices seem to me much too high.

Waterbury:

I hope you will consider the results of this questionnaire merely as a guide to your thinking and continue to exercise your own good judgment on what is good for the district.

Warren:

In addition to my answers on the enclosed card I am opposed to all forms of paternalism in government, and the age 65 rather young to become a charge on the Government for aid of any kind.

Derby:

I, for one, as a citizen of this country, would like to see a more forceful attitude taken toward any would-be aggressor. Also to stop apologizing to the world for every move we make. We need a positive attitude. For myself, this is my country, right or wrong.

Seymour:

The strength of this Nation lies in the ability of its people to care for themselves. Don't penalize those who would and do care for themselves by taxing them to support others who will not meet their own responsibilities.

Ansonia:

Foreign labor costs are presently undermining our economy in many lines of industry. I work for a heavy machinery manufacturer who has suffered from loss of orders to West German manufacturers. The present system is inadequate and I feel a higher tariff would not be the solution.

Warren:

The big change needed on the New Frontier is the change in social security first. Amend our present social security law or scrap it and start with an up-to-date pension system. Enact a pension law which would cover every American citizen of retirement age, regardless of the amount of money they have paid into the fund.

Watertown:

We both favor continued economic aid to the underdeveloped countries. I do think we should be more careful to see the aid reaches those we want to help rather than line the pockets of the few. I wish we might give in a more generous spirit. We seem to haggle so over things.

Thomaston:

I would be presumptuous, indeed, to express an opinion on the resumption of testing of nuclear weapons. There is no question facing humanity today that transcends control of nuclear power. I believe that this is a decision that will have to be made by more knowledgeable and wiser heads than mine.

Bridgewater:

Your questionnaire impresses this writer as an extremely worthwhile method for making democracy work. It is, I think the first such communication I have ever received from one of my Representatives.

Wolcott:

Since the need for schools is so great, nothing should impede the construction and expansion of same. Private and parochial school assistance should not be considered presently since the subject is too controversial. However, we should consider the latters' needs later.

Torringford:

Since we are virtually supporting the free world, might we propose a world tax on these

nations and then disperse payments for their support. Those that don't pay—no support, i.e., Yugoslavia, etc.

The survey report has been given wide coverage by the newspapers and the radio stations in my district and I call it to the attention of my colleagues with my own comment that it will be of great assistance to me in the consideration of major legislative measures pending in the Congress. I was genuinely impressed with the interest and knowledge in legislative matters displayed by so many residents of my district. Their reaction to the questionnaire and to my report on its results has been so favorable and receptive that I am making preparations for a future endeavor to organize similar public opinion surveys on an even larger scale.

The following is a breakdown of the results of the questionnaire:

Results of questionnaire

	Yes	No	Uncommitted
1. Do you favor Federal aid to elementary education?	900	405	68
For school construction?	954	315	104
For increasing teachers' salaries?	581	573	219
For private schools?	277	966	30
2. Do you favor legislation which would provide health protection for people over 65 years of age?	1,160	178	35
If so, should it be under social security system?	859	260	254
3. Do you favor protection from low-cost imports?	1,069	173	131
By higher tariff?	381	272	-------
By quota?	505	233	-------
By present system?	137	392	-------
4. Do you favor Government control or regulation of drug prices?	919	436	18
5. Do you favor temporary Federal aid to depressed areas?	1,001	298	74

Joint Statement to the House Agricultural Subcommittee on Equipment, Supplies, and Manpower

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. NELSEN. Mr. Speaker, the Subcommittee on Equipment, Supplies, and Manpower of the House Agriculture Committee is presently holding hearings on the farm cost-price squeeze problem. The committee is hearing testimony from various individuals and organizations to determine the nature and extent of this problem and I hope that out of these hearings will come some possible solutions. This cost-price squeeze is one of the most difficult situations that confronts the farmer in our Nation today.

Yesterday Mr. Buren Watland, an implement dealer from Jackson, Minn., and Kenneth Austin, the managing director of the Minnesota Implement Dealers' Association, appeared before the subcommittee to present testimony concerning the nature of this cost-price squeeze and its effect on implement dealers who provide the farmer with his working tools. I ask that the prepared statements of Mr. Watland and Mr. Austin be included at this point of the RECORD, as part of my remarks:

JOINT STATEMENT TO THE HOUSE AGRICULTURAL SUBCOMMITTEE ON EQUIPMENT, SUPPLIES AND MANPOWER

(Presented by Buren Watland, an implement dealer from Jackson, Minn., and Kenneth Austin, managing director of the Minnesota Implement Dealers' Association, with offices in Owatonna, Minn.)

My name is Buren Watland. I am an IHC dealer from Jackson, Minn. Our firm was originally started by my father in 1910 and, personally, I have been active in the management of the business since 1934. It has been my privilege to serve as a director and as the president of the Minnesota Implement Dealers' Association. At the present time, I am the director from Minnesota on the Board of the National Retail Farm Equipment Association. The managing director of our State association is here with me and we will share our allotted time.

You may rest assured that implement dealers do not like to see increases in the price of farm equipment. When we talk about the cost-price squeeze, remember that the implement dealer is in it, too, along with our friends, the farmers. In 27 years as an implement dealer, I have never seen price competition between farm equipment dealers as keen as it is today. Excessive price-cutting is sending and has sent many fellow dealers right out of this business. Many new $5,000 to $6,000 tractors in our area are being delivered by dealers with as little gross profit as $50. We know that dealers will not stay in business long with this cut-price selling pattern.

There are countless farmers in our area of southern Minnesota who need and would buy a new tractor and the accompanying working tools that they need to reduce their unit cost if their farm income was adequate. Many of our farmers today are farming with obsolete, outmoded, and under-powered equipment. To emphasize this, we have sold two used tractors during the past week that are 25 years old and the farmers who bought them are expecting these antiques, which we had intended to junk and probably should have, to do some of their field work this spring. Had these farmers been able to afford a newer and better unit, I know they would have bought it. Since the first of January, our dealership has sold 24 used farm tractors and only three new ones. These used tractors are being put back to work on good Jackson County farms that have a market value of anywhere from $250 to $400 an acre. The need for better equipment is there, but the money to purchase it isn't.

The implement dealers are concerned over this low level of farm income. As farm equipment dealers, we are an integral part of agriculture and rural life in America. The only customers we have are farmers. A large majority of our dealers have had past experience as farm operators and as dealers, we are probably closer to the farmers and know his problems better than any other group of people.

In my own business and in contacts with other dealers in my area, I know that our profit patterns have been deteriorating for the past 5 years. According to the National Retail Farm Equipment Association's 1960 cost-of-doing-business survey, the average Minnesota dealer had an annual sales volume of $284,190 and only a 1.54 percent net operating profit before taxes. The dealerships in our part of the country are small. The owner is nearly always a working partner in the business and I can assure you that dealers are not profiteering at the expense of the farmer. Since the mechanization of the farm, the servicing farm equipment dealer has become an indispensable part of agriculture. The dealer and the farmer need each other. I have faith in our future. As long as people eat, we will need to produce food and this will be done on farms by farmers with equipment sold and serviced by farm equipment dealers.

I am proud to be an implement dealer. I know that we have contributed much toward making our American agriculture the greatest productive machine in the world. Sometimes we overlook the fact that we are blessed as is no other country with ample food supplies. Consider the prices that our American housewife would have to pay if we were plagued by a food scarcity. Compare, if you will, the cost of any of our food commodities at the producer's level with the cost of food in other countries.

Not long ago a good friend of mine made a trip to Russia. While there, he took the time to shop and compare prices in a food market in Kiev. In arriving at what the Russian housewife would have to pay in American money he used the regular rate of exchange of four rubles to the dollar. A Russian housewife pays 25 cents a piece for eggs as compared to 35 cents a dozen for large grade A eggs in a supermarket in Minneapolis. Here are a few more comparative prices. Oranges in Russia, 50 cents a piece; in a Minnesota supermarket, 59 cents a dozen for the best oranges available. Flour in Russia, 50 cents a pound; in Minnesota, $3.69 for a 50-pound sack, or less than 8 cents a pound. Pork in Russia is $1.75 a pound and in Minnesota, 49 cents a pound. Sugar, 24 cents a pound in Russia compared to 11 cents here in Minnesota. The Russian lemons were over $1 a piece and in Minnesota you can buy the very finest lemons for 69 cents a dozen. From this comparison it is easy to see what country's farm program is costing the consumer the most. The fact is that our American consumer purchases more and better food for less money than do consumers anywhere else in the world. For this agriculture can be proud and certainly doesn't deserve to be the perpetual stepchild of our economy.

Incidentally, a 1-cylinder, 14 horsepower tractor from the Kharkov Tractor Works in Russia had a price tag of $3,000. Rubles again were converted to American money at the 4 to 1 exchange. Compare this with a Farmall 340 that I sell. It has a suggested list price of $2,425. It has a 4-cylinder engine and has 32.68 horsepower at the drawbar.

I have faith and confidence in the people and the Congress of the United States of America and believe that together we will see that agriculture in the future will be given a more just share of our national income.

I am convinced that we cannot afford to go back to farming with horses, and the back-breaking drudgery that our farmers have known in past generations. We must continue to mechanize and to continue to im-

prove the high standard of living that our country enjoys today.

Thank you for the opportunity to visit with you. Kenneth Austin, will conclude our joint statement.

My name is Kenneth Austin. I am the manager of the Minnesota Implement Dealers' Association. I have been with the Implement Dealers' Association since 1949. Our association was founded in 1904. We are the largest in membership of the State or regional implement dealer associations in the country. We are affiliated with the National Retail Farm Equipment Association. There are 1,017 franchised farm equipment dealers in Minnesota. This past year 993 of these dealers were members of the Minnesota association.

In the past 10 years over 500 dealers in our State have quit the implement business and have not been replaced. In 1959, 32 dealers closed their doors and 60 more did the same thing in 1960. There are numerous farming communities in Minnesota that do not have any servicing farm equipment dealers left. If the farm equipment business were a lucrative one, I can assure you that there would be a waiting line for a franchise. Several of the farm equipment manufacturers have lost dealers in good farming communities and though they have tried to get a new dealer, they have been unable to do so. These companies have found it necessary to establish company-owned stores in order to service the farmers using their products. There are eight such company-owned retail stores now in Minnesota.

In the trade we know there is a problem to attract new dealers with risk capital. We also observe that the same problem seems to exist with the wholesalers and manufacturers of farm equipment. I don't know of any new companies who have gone into these fields in recent years either. Apparently they have problems too.

In comparison with other manufacturers' products, I don't believe that the price of farm equipment is out of line. However, it is evident that the price a farmer gets for what he has to sell is out of line with nearly all manufactured items. This could and must stand some improvements.

Occasionally, we hear the criticism that the price of farm equipment is up because of the unnecessary gadgets on today's equipment. It is distressing to find out that these so-called gadgets are often the needed improvements such as wider, safer, more comfortable seats and power steering. It is true that these improvements cost money but I don't believe we can begrudge the farmer these conveniences. Anyone who has sat all day on an old steel-wheeled, hard-metal-seated tractor knows what I am talking about. Farmers want heater cabs, platform steps and fenders. I am confident that the farm equipment industry will continue to come up with even better labor-and life-saving equipment.

We can't compare today's tractor with the old "wrist breaking" cranking type of 20 years ago. Today's tractor is bigger, better, faster, and does more things for a farmer than was even dreamt of just a few short years ago.

Accounts receivable for dealers has been a severe problem. This is a direct result of the money shortage of our farmer customers. It is not uncommon for a small dealer to have $40,000 to $50,000 out on open account. Farmers are inherently honest and they pay these bills when they can but, in the meantime, it really puts a strain on all the operating capital that a dealer can put his hands on. If he doesn't have it, he borrows from the bank at going rates of interest.

In my work with implement dealers, I have observed that one of the serious problems confronting small business is the lack of operating and expansion capital and I know of only one implement dealership in Minnesota that has been successful in securing an SBA loan. Our people are optimistically hopeful that the Congress will act favorably on the reinvestment of earning principle as encompassed in the Curtis-Ikard Bill, H.R. 2. This we feel would be a big help to our type of small business.

We believe that good equipment makes a good farmer better. The farm equipment dealers will continue to do their part in keeping our farmers the best in the world.

Thank you for the opportunity of being here. If there are any questions that either Mr. Watland or myself could answer, we would be happy to do so.

Respectfully submitted.

BUREN WATLAND.
KENNETH AUSTIN.

Delaware River Basin Compact

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. FLOOD. Mr. Speaker, the Governor's conference which is an association made up of the 50 Governors wholeheartedly supports our distinguished colleague's Delaware River compact House Joint Resolution 225. This compact, introduced by Representative FRANCIS E. WALTER, will permit the States with the aid and participation of the Federal Government to coordinate and develop the vast resources of the Delaware River Basin.

The accompanying letter speaks for itself, but I wish to point out the unanimity of opinion that is shared by the report of the House Committee on the Judiciary, the Governor's conference, the report of the House Public Works Committee of last year.

At its most recent meeting, held in Washington, April 26, the Governors' Conference Committee on Federal-State Relations considered the Delaware River Basin compact and the Northeastern Water and Related Land Resources compact. Following an extended discussion, the committee requested me to write to the President, the Attorney General, the Secretary of the Interior and the Chairmen of the House Committee on the Judiciary and the House and Senate Committees on Public Works urging that early and favorable consideration be given the legislation to grant congressional consent to the compacts. Copy of such letters is being sent to Members of Congress who sponsored the consent legislation and the Governors of the States that are parties to the two compacts.

The House Committee on the Judiciary in its report on House Joint Resolution 225 (the Senate bill is S. 856) described very well the need and purpose of the proposed Delaware River Basin compact. The committee report, House Report No. 310, discussed the constitutional questions that have been raised, questions which concerned the Governors in their deliberations. The Committee on the Judiciary reached the same conclusion that the Governors reached, that ample precedent exists for an interstate-Federal compact such as is proposed. On the policy question, the Governors concur in the committee's conclusion that it is logical to create a single agency to coordinate functions of Federal, State, and local agencies and to effect unified solutions to problems of the river basin.

In the view of the Governors, the conclusions and recommendations of the House Committee on the Judiciary have equal validity with respect to the proposed Northeastern Water and Related Land Resources compact. The same view was expressed by the House Committee on Public Works last year when it reported H.R. 12467 (H. Rept. No. 1767, 86th Cong., 2d sess.), a bill identical to the pending bills, S. 374, H.R. 30, H.R. 2437, H.R. 3457, and H.R. 6066.

There is little that the Committee on Federal-State Relations can add to the persuasive arguments of the two house committees. We concur in them most heartily. We feel that the compacts add a new dimension to Federal-State relations which may have application in other geographical areas or with respect to other problems shared by governments of different levels. Finally, we believe that the two proposed compacts, in their respective areas, would help in attaining the goal of coordinated water resources policies called for by President Kennedy in his special message on natural resources.

Yours very truly,

ROBERT E. SMYLIE,
Chairman, Committee on Federal-State Relations

Needed: A Wave of Americanism

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. HALEY. Mr. Speaker, I have long been concerned about our faltering national spirit and the casual attitude with which we look upon our freedoms. My good friend, Mr. Harris Sims, editor of the Lakeland (Fla.) Ledger, has been concerned also about the fact that a regeneration of Americanism is badly needed.

I have asked permission to insert in the RECORD an editorial, entitled "needed: A Wave of Americanism," which appeared in the Lakeland Ledger on Sunday, May 14, 1961. Mr. Sims deals in a very forthright manner with this problem and the farreaching effect it has had upon not only the American people but also upon nations of the free world. I hope my colleagues and all people who read the RECORD will give attention to the recommendations made in this editorial.

The editorial follows:

[From the Lakeland (Fla.) Ledger, May 14, 1961]

NEEDED: A WAVE OF AMERICANISM

We Americans are no longer a nation of cocky people.

Communistic aggression has spread a feeling of anxiety among us.

We are now soberly aware that our way of life is seriously threatened by forces committed to a sinister, vicious ideology.

We do not know what lies ahead. We know we cannot trust Russia's leader to be either honest or reasonable. Plain enough it is to all that the scope of Russia's ambitious program of aggression and conquest is worldwide.

Our anxiety is all the more pronounced because we know our Nation does not have the great number of warm friends across the world that it ought to have.

We have given away billions of dollars to help the less fortunate but the hostility toward us increases.

We know the American way of life is a good way. We cherish our freedom. But we have become casual about our freedom and we have failed to make the merits of our way of life apparent to the world.

As a people feeling anxiety, we are now in a mood to take action. The hour is late. But we know we not only have a good way of life but also the potential with which to preserve it.

Our national spirit needs new vigor. It is drooping.

We need a great, dynamic wave of Americanism.

We cannot survive merely by being anti-Communist.

We need to be gloriously, enthusiastically, shoutingly pro-American. We need to salute our flag with new vigor and gratitude. We need to sing our national anthem with new fervor.

In short, we must now be emphatically American, put the accent on the positive, not the negative.

We need to shake off lethargy spawned by prosperity and to be anti-Communist by being pro-American.

If this be nationalism, then let it be nationalism, but not in the narrow, exclusive sense. We need to generate among ourselves a spirit of Americanism that will vibrate across the world.

Such a spirit would leave no room for communism in the United States.

Russia is boldly and shrewdly selling communism to nation after nation. But the United States is not selling democracy, freedom.

For several years the United States has been waiting to see what Russia was going to do next. We need to reverse this situation. Let Russia wait to see what the United States is going to do next. And let us do what will convince the world that ours is the valid way, that the environment of freedom which prevails in the United States is the kind in which man can realize his fullest potential of productive, civilized, happy living.

We need a great tidal wave of American enthusiasm. It cannot be imposed from Washington. Our President and the other leaders in Washington can give it impetus. But it is something that must well up from the people and roll across the land.

Such a tidal wave could sweep from our shores the last vestige of communism and impress the world that we Americans have something very special that other nations could well afford to emulate.

Such a regeneration of Americanism would give our Nation new strength and command greater respect over the world.

Ours is a nation of supersalesmanship. We can sell anything. But we have been so preoccupied with the selling of visible, tangible products we have neglected to sell democracy.

We have sold a great array of American products to Cuba. But we have let Russia come over here within 90 miles of us and sell communism to Cuba and thereby establish a stronghold from which to sell communism to other Latin American countries.

A tidal wave of our magnificent Americanism was never more urgently needed. It could bring magical, miraculous results. It could make our treasured freedom secure.

We tired, soft, sophisticated, bored Americans had better pull ourselves out of our inertia with all haste or we may find the cycle of history repeating itself.

A great tidal wave of Americanism could shake the earth and provide new security of freedom for millions of peoples in other lands.

May the spirit of Americanism roll soon and mightily.

Reformatory Head Middle-of-the-Road Penologist

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. MORSE. Mr. Speaker, one of the great domestic problems of this era has been the upsurge of crime. Often, unhappily, it breeds in the very institutions designed for its correction. We in the Fifth District are proud to have Edward Grennan as superintendent of Concord Reformatory. The following article from the Lowell Sun describes the excellent work he is doing there:

REFORMATORY HEAD MIDDLE-OF-THE-ROAD PENOLOGIST

(By William Fripp)

CONCORD.—The old Hollywood fostered concept of prison—a snarling Cagney breaking out of the "Rock" with brave Chaplain O'Brien as his hostage—has fortunately changed, as have prisons themselves.

While in actuality some correctional institutions were stark bastions of oppression and cruelty, the last century has witnessed prison reforms characteristized by the philosophy that the rehabilitation of the inmate is as important as his punishment.

The Concord Reformatory on Route 2 is an example of a modern institution, and its superintendent, Edward S. Grennan, a spokesman for current penological practices.

In rejecting both ultramodern and archaic reform philosophy, Grennan stands as a self-confessed middle of the roader. He is not enthusiastic about the proposal that prison walls should be completely torn down and the atmosphere be made as homelike as possible. While "walls do not a prison make," he recognizes that they are necessary if only to remind the inmate that he is, after all being punished. Nor does he agree with those who maintain that prisoners are mentally ill and should be treated as patients. At Concord only 5 percent of the inmates are mentally ill, and none of these are legally insane.

Grennan realizes that it is the responsibility of the institution to meet the emotional and psychological needs of the inmates and to prepare them for the time they will be released. The majority of the Concord inmates are serving only a 14-months them, and before they are returned to the outside world they must be equipped to face the demands of society.

To prepare them for their release, Concord offers traditional courses in auto mechanics and trade skills in addition to high and post high school extension courses. A more ambitious liberal arts program which includes musical appreciation, current events, and "great books" discussions is also offered. Grennan admits that if he can only interest a handful of inmates in this heady curriculum he is gratified. But he is not without hope; at the Norfolk prison, where he previously served as superintendent, the debating team consistently defeated such stalwart opponents as Oxford, Cambridge, and MIT.

Grennan, who points to the fact that the great majority of prisoners come from broken homes, is interested in starting an A.A. type of group therapy session for the inmates, an approach which for alcoholics has been practical and successful. Right now he is working on a new program aimed at relieving the impact of incarceration for new groups and which will at the same time improve the training of correction officers.

The famous reformatory riot of 2 years ago is just one indication of why a superintendent is always on duty and must live on the grounds. This uprising, which was led by the sociopathological "Bull" Martin, a 20-year man, involved only a small core of the inmates. Although the men were holding guards as hostages and negotiating for a getaway car, at no time did Grennan consider meeting their demands. Martin incidentally, later committed suicide. As interested in the prevention of crime as he is in the rehabilitation of prisoners, Grennan advocates home, school, and church as the bulwarks of character formation.

The Ill-Considered Treatment of Farmer Byler

EXTENSION OF REMARKS
OF
HON. RICHARD L. ROUDEBUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. ROUDEBUSH. Mr. Speaker, I was shocked and appalled at the recent arbitrary and confiscatory act of the Internal Revenue Service in seizing three horses of an Amish farmer in Pennsylvania just at spring planting time.

I am referring to the case of Valentine Y. Byler, of New Wilmington, Pa., who was about to start his plowing when the Government took his horses and sold them at an auction to satisfy his delinquent social security payments.

Taking this man's horses at plowing time is tantamount to removing his means of livelihood. The cruelty of the act is further compounded by the fact that Farmer Byler's net annual income is reported at only $1,864 and he supports his wife, four children, and 83-year-old mother.

We still have freedom of religion in this country, and the Amish sect does not believe in insurance of any kind. By merely following his religious beliefs that social security is a form of insurance, this frugal, peace-loving farmer has been deprived of his ability to provide for himself and his family.

Only through the generosity of his neighbors and friends, who have donated from their meager savings to buy him new horses, has Byler been able to continue his farming pursuits.

I am not alone in my indignation over this harsh treatment. Letters from my friends in the Sixth District of Indiana indicate a strong public repugnance for the Internal Revenue Service's act.

One letter stated, in part—

Why can't they let these (Amish) people alone? They are the only ones in the world

who don't have their hands held out for a handout from our Government. They want to get along on their own and we should certainly help them.

The letter continues—

This is the most picayune, despicable thing our Government has ever done. Can't you find someone who will crack down on the Internal Revenue Service and make them use a little commonsense?

One of the most respected jurists in Indiana protested the IRS action. He wrote, in part—

I demand the conscience of Congress and the President awaken. Pass a law exempting men and women from social security if they please. Likewise, get busy and amend the law so that Federal hatchetmen will have to go into court and get an order before confiscating 100 percent of a person's property or salary.

I join with these and other outraged Hoosiers in protesting this ill-considered, oppressive, and stringent treatment of Farmer Byler.

Let Earned Bread Replace the Doled

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LOSER. Mr. Speaker, I ask unanimous consent to place in the RECORD an excellent editorial from the Nashville Tennessean, Nashville, Tenn., emphasizing the importance of putting first things first and focusing attention on the opportunities rather than the problems that beset the Appalachian and surrounding region. This editorial provides sound advice to every section of the country vitally interested in development and progress.

The editorial follows:

LET EARNED BREAD REPLACE THE DOLED

Secretary of the Interior Stewart Udall pays his first official visit to middle Tennessee today, to address members of the Elk River Development Association at Fayetteville.

The Secretary probably knows it already, but in case he doesn't he should be informed that he is about to be introduced to vigorous grassroots, an articulate organization which has already had a hand in shaping regional development policy.

In a sense, the Elk River Basin's needs are akin to those discussed Monday by President Kennedy during a conference with eight governors from the Appalachian region, among them Gov. Buford Ellington.

The so-called Depressed Area Act recently approved by Congress is designed to attack these problems on a broad, but rather short-ranged basis. Elk River Basin can hardly be termed distressed, but its need for industry is reflected in regional migration and it has a water problem in the instability of mid-state streamflow.

President Kennedy, following the Monday meeting, said he had directed that the new Area Redevelopment Administration focus attention upon the opportunities as well as the problems of Appalachia; that the worker retraining program be stepped up; and that the Defense Department review its policies with regard to placement of contracts in areas of substantial unemployment.

This is all well and good, but we believe the first order of business for the administration is to busy itself with the suggestion of the governors that there be a speedup in Federal programs on highway construction, water resources, forestry development, etc. And this would apply in the Elk River Basin, too.

This, we believe, would be in the nature of putting first things first, and the rest would follow. Focusing attention on opportunities instead of problems has its psychological advantages. But creating those opportunities where few exist is more important than the power of positive thinking. Hardheaded private investors are not apt to sink their money in an area without adequate water supply or flood protection and the poorest sort of transport. Who could blame them?

Retraining workers, while essential, would be of little value if the workers had no place to apply their training without migrating to industrial centers outside the region.

Knowing this region as we do, our advice would be that of the Governors: Build. In distressed Appalachia, build decent roads to replace the winding, narrow threads that ill serve so much of this region. Build dams—multipurpose dams. Build the kind that will stop recurrences of the disastrous flood that all but wiped Hazard, Ky., from the map a few seasons back.

Build them at Carthage and Celina with navigable locks so that the main stream leading into this region can be put back to work in the service of private commerce. And build tributary dams, as on Elk River, capable of saving the soil and the forests; of creating recreational-business opportunities; of providing reservoirs of industrial water.

Then the job will replace welfare; bread will be earned, not doled.

Green County, Wis., Governmental Affairs Committee Votes "No" on Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. SCHADEBERG. Mr. Speaker, on May 11, the Green County Governmental Affairs Committee met at Monroe, Wis., and after considerable discussion, the members of this committee who come from all the surrounding communities in Green County, adopted a public statement urging strong opposition to the Federal aid-to-education proposals.

I heartily endorse their statement, and insert it at this point in the CONGRESSIONAL RECORD:

MAY 11, 1961.

PUBLIC STATEMENT

Federal-aid-to-education proposals now before Congress would prove a costly mistake if enacted into law. It is estimated that Wisconsin taxpayers would have to provide $13.5 million of the $665.2 million the proposed program would cost. Wisconsin would receive in aids some $11.6 million or $1.9 million less than the tax cost.

Since this is a net loss there can be no aid for the Wisconsin taxpayer with Federal support of public schools. Federal control of our system, which would be assured, is thus achieved at a cost of nearly $2 million. The subsidy provided by Wisconsin is for the taxpayers of other areas that have failed to provide adequately for their own school responsibilities. Therefore, the Green County Governmental Affairs Committee is urging that Congress defeat Federal-aid-to-education proposals and that Wisconsin citizens and taxpayers urge their Congressmen to vote against these measures.

In addition, Federal aid to education is not needed in Wisconsin. In the past decade enough schoolrooms have been constructed by the districts in this State so that with an average of 30 children per class more than 60 percent of Wisconsin's public school enrollment could be housed in rooms not more than 10 years old. This was accomplished at a cost of $536.7 million and without either Federal or State aid. Wisconsin has done a better job of providing classrooms for its children than any State in the Union.

Federal-aid-to-education will mean that Wisconsin taxpayers will enable other States to provide classrooms for their children as has been done here but at the expense of the Wisconsin taxpayer. Is it any wonder that other States can offer lower tax rates and inducements to take our industry that provides essential jobs? The Green County Governmental Affairs Committee urges strong opposition to Federal-aid-to-education proposals.

We Are Being Suckered

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. DERWINSKI. Mr. Speaker, now that President Kennedy is being pressured by the State Department to submit to a summit conference with Mr. Khrushchev, which will result, no doubt, in concessions on our part, one matter that ought to be discussed is the nuclear test conference at Geneva. An editorial in the Thursday, May 11, edition of Chicago's American, entitled "We Are Being Suckered," should be directed to the attention of our President and his advisers so that they may avoid being further outmaneuvered by Soviet Union deceit:

WE ARE BEING SUCKERED

The most encouraging thing we have heard lately about the Nuclear Test Conference at Geneva is the announcement by the American delegate, Arthur H. Dean, that President Kennedy has instructed him to size up and report on the future prospects of the Conference.

This shows that our Government is at least beginning to understand that this Conference has no future. The Russians have turned the discussions into a device for keeping the United States from making any atomic tests while they go forward secretly with their own.

There is authoritative evidence that the Russians are regularly setting off nuclear explosions which they do not report. But the United States, having made a promise to suspend nuclear firings while an effort is made to end them permanently by negotiation, keeps the promise.

By stalling the talks at Geneva, the Russians have managed to maintain this situation for 30 months, and the advantage they may have gained by continuing their own development of nuclear explosives while we do nothing about ours is terrifying to think about.

The task of the Russian delegate, Semyon Tsarapkin, is to keep the conversation going by continually devising "compromise" plans which he knows the United States cannot accept. It is obvious, and has been for 2½ years, that he is making no actual effort to reach an agreement.

American Delegate Dean should now officially report this fact to the President. Then President Kennedy should give the Russians a reasonable time—a week, say—to agree to an honest nuclear test ban, warning them that otherwise the United States would renew its own tests at once.

Let us not go on playing chump for the Russians at the risk of losing the nuclear arms race.

Americans Have Lost Ability To Get Mad

EXTENSION OF REMARKS
OF
HON. JAMES HARVEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. HARVEY of Michigan. Mr. Speaker, under leave to extend my remarks, I am inserting into the RECORD an editorial written by Dale Stafford, editor and publisher of the Daily News, Greenville, Mich., in the May, 9, 1961, edition of that newspaper. I believe the editorial pinpoints a current trend that we in Congress are and should be most aware of in our work:

[From the Daily News, May 9, 1961]

AN EDITORIAL—WE DON'T KNOW HOW TO GET MAD

Americans shouldn't be blamed.

Blamed, that is, for looking to a Federal Government to provide an abundance of money for any and all enterprises in good times and bad.

This editorial is inspired by a news item from Lake Delton, Wis. It describes the naming of officers of the North American Ski Area Operators' Association.

Fred Bocks, one time chamber of commerce secretary in Greenville, was reelected president. He runs the successful Caberfae ski operation near Cadillac.

The article goes on to say:

"About 60 ski area operators from Wisconsin, Michigan, Minnesota, and Illinois attended the meeting to discuss the possibility of obtaining Federal aid to offset business downturns caused by lack of snow."

Now skiing is a luxury business, not a necessity item. And many of the resorts have made big money from the growth in the sport's popularity. In most instances they have poured profits in their enterprises to increase volume.

Federal aid to prevent cycles in the business volume for ski resort operators?

We'd like to hear the reaction of the applegrowers out on Peach Ridge who accept the fact of life that a bad year is certain to occur every so often.

With little snow, the ski boys have had a long winter and plenty of time to read. No doubt they have noticed the results of the pouring of millions of American dollars into Laos and other distant spots in the world.

And probably they have read about the labor shenanigans at Cape Canaveral where an apprentice electrician drew $748 a week (an electricians' foreman at Cape Canaveral earned $26,843 last year).

Senator JOHN MCCLELLAN unearthed the fact that unskilled laborers at Vandenberg Air Force Base collect as much as $287 weekly and elevator operators get up to $360.

Compare the largess of your money with what the brave astronauts get paid.

Unfortunately, the American public has lost its ability to get mad. Otherwise it would be fuming at this wastage of taxpayer money and any suggestion that ski resorts should get U.S. help when it doesn't snow on schedule.

Trend of the Economy

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two articles by Mr. Nate White, business and financial editor of the Christian Science Monitor. The articles appeared in the Monitor on May 11 and 13.

Penetrating, stimulating, and thought provoking, the articles go into detail on some recent analyses of our economy by the eminent Dr. Arthur F. Burns, one of America's most respected and unpolitical economists.

I believe that we may all profit by reading and studying these articles, and the far-reaching implications of the content:

[From the Christian Science Monitor, May 11, 1961]

BUSINESS AND FINANCE—"ECONOMIC NEGATIVISM" IN WASHINGTON SCORED BY BURNS

(By Nate White)

Mr. Business Cycle himself has taken a look at the Kennedy economists and their "neostagnation theory" of the economy and pronounced it as unfounded in fact, unsound in principle, and based on negativism instead of expansion.

No greater condemnation of the economic theories or economists of the Kennedy administration could be made than that which was leveled recently at them by Dr. Arthur F. Burns, John Bates Clark, professor of economics at Columbia University and president of the National Bureau of Economic Research which is the fountainhead of knowledge on the subject of business cycles.

Dr. Burns is a gentle man, but his respect for facts and for the results of scientifically arrived at knowledge is such that no other voice can be heard when he is speaking. He inherited the mantle of Mr. Business Cycle from the late Wesley Mitchell who founded the Bureau of Economic Research, and he, with Dr. Solomon Fabricant, the bureau's research director, and Dr. Geoffrey Moore, the assistant research director, have done more than any two dozen other individuals in the world to find out just what makes an economy tick and what are the ingredients of recessions, inflations, cyclical causes, cyclical effects.

Dr. Burns, in a quiet, unheralded address at the University of Chicago in April, took a cool look at the economics of President Kennedy's Council of Economic Advisers, under the chairmanship of Dr. Walter W. Heller, and found it wanting. Dr. Burns was Chairman of the Council under President Eisenhower, but he resigned and returned to his academic chair when he thought he had done his job. He never became politically minded in his job, but constantly strove for a scientific approach.

Dr. Heller, a noted economist, with a high respect for economic facts but obviously a different interpretation of them, is to speak at the Loeb Awards luncheon in New York May 18. Undoubtedly he will feel called upon to defend his position, and that of the administration.

Dr. Burns took as his text for present CEA economic philosophy the statement from its March 6 policy position before the Joint Economic Committee of the Congress: "The American economy today is beset not only with a recession * * * but with persistent slack in production and employment, a slowdown in our rate of growth.

"Economic recovery in 1961 is far more than a cyclical problem. It is also a problem of chronic slack in the economy—the growing gap between what we can produce and what we do produce. * * * Especially since 1955, the gap has shown a distressing upward trend."

Dr. Burns then interpolated: "The essential point of this theory is that, quite apart from the recession, there is increasing slack in our economy; there is a growing disparity between actual and potential output; in short, America faces a problem of secular stagnation."

This is the theory which Dr. Burns labeled the theory of "neostagnation," saying that it was "gentler and less pessimistic than the Keynes-Hansen theories which dominated the thinking of the 1930's and 1940's," and "gay and optimistic in the light of still older stagnation theories such as Friedrich Engels' or Thorstein Veblen's."

Fortunately the present "neostagnationists" do not reflect the "morbid pessimism of earlier stagnation theories," Dr. Burns notes.

Mr. Business Cycle then examines the CEA arguments, agrees with some of them on facts, and adds, "I hope I have not left the impression that the new theory of secular stagnation is utterly without foundation. That would not be true. This theory is tied to some actual experience. But when the evidence is examined, it turns out to rest fundamentally on one fact, namely, that the business-cycle expansion of 1958–60 was exceptionally short and incomplete. When the expansion ended, our economy was still some distance from full employment.

"I do not question the importance of this fact. Nor do I question its disturbing character. But I do question what inference can properly be drawn from this solitary fact.

"I would urge two things. First, a theory which has such a slender foundation in experience must be viewed somewhat skeptically. Second, there is a better explanation of what happened between 1958 and 1960 than is offered by the neostagnation theory which of late has become quite fashionable."

Dr. Burns then offered three developments which he said were decisive in the "unsatisfactory character of the business-cycle expansion from 1958 to 1960":

1. A violent shift in Federal finances. Between the first quarter of 1959 and the third quarter of 1959 the Federal cash deficit allowing for seasonal factors fell from an annual rate of $17 billion to $2 billion. By the second quarter of 1960 the rate had changed to a surplus of $7 billion.

Thus, in a period of little more than a year, we had a turnaround in Federal finances of about $24 billion, undoubtedly one of the very sharpest shifts of Federal finance in our Nation's history.

2. Fiscal restraint on general economic expansion was accompanied, indeed preceded, by a tightening of credit conditions.

By mid-1959, commercial banks were already in debt at the Federal Reserve to the tune of $1 billion. The money supply stopped growing. Demand deposits diminished by nearly $4 billion between July 1959, and May 1960. Interest rates rose sharply, both on short-term and long-term loans. Indeed, long-term rates advanced faster than during a comparable stage of any business cycle during the past 100 years.

3. The protracted steel strike in the second half of 1959.

The strike led to a buildup of inventories in steel; it caused uncertainty in the business community and delayed orders on investment goods, and confused Government circles on the magnitude of the restraints they were imposing on expansion, and after the strike businesses practiced new inventory economies.

The steel strike thus looms as a major factor in Dr. Burns' thinking in the early end of the expansion which commenced in the spring of 1958.

Dr. Burns did not say so, but those with fairly quick memories remember that Arthur J. Goldberg, present Secretary of Labor, was generally credited as being the architect and engineer of the 1959 steel strike.

The Burns conclusion:

"On my reading of recent history, the neostagnationist theory which now is being widely used to explain the incompleteness of the expansion of 1958–60 is, therefore, quite unconvincing."

Dr. Burns then goes on to the affirmative statements of his own economic beliefs:

"There is no chronic slack in the economy.

"Full employment is not a remote possibility. On the contrary, it may well be reached some 15 or 18 months from now.

"The underlying forces of economic expansion are strong and have of late been only temporarily suppressed.

"We would be courting inflation and a gold crisis if we now arranged new governmental spending programs so that they would mature when the economy was already advancing without them."

Dr. Burns makes the point that Kennedy programs for medical care for the aged, liberalized social security and other social welfare programs, while humane, do not promote real economic growth. He added that he doubted the wisdom of increasing the minimum wage at a time of recession as a "useful antirecession device."

Dr. Burns listed restrictive practices that abound in construction work, railroading, agriculture, and in many manufacturing firms as impediments to efficiency and economic growth, "whether they arise from careless business management, or from coercive power of trade unions, or from governmental legislation itself."

Dr. Burns regretted that he felt compelled to criticize economic policies promulgated by some of his colleagues in the economic profession, and concluded as follows:

"I deem it only proper to conclude by saying that the administration has avoided extreme economic views, that it has in no way shown hostility to business enterprise, and that the economic moves actually taken by the administration have been more prudent than some of its economic rhetoric has at times suggested."

[From the Christian Science Monitor, May 13, 1961]

TREND OF THE ECONOMY—THE BURNS MEGATON BOMB

(By Nate White)

Dr. Arthur F. Burns, the dean of American economists, has taken issue with the theories of stagnation which the present official economists of the Kennedy administration have been advancing.

The words of Dr. Burns ring with a background of factual clarity. Here is a man who has devoted his professional life to finding out what are the ingredients of business cycles, recessions, booms. He has no political ax to grind, and he has no commitments to the Republican Party or any other party to develop a theory of political economics.

Dr. Burns is not a political economist. He is a man dedicated to scientific fact-finding and analysis. He is president of the National Bureau of Economic Research, which is a private, nongovernmental, objective organization for factual analysis of economic movements.

Dr. Burns worked with the bureau's founder, the late Wesley Mitchell, in developing the early series on business cycles. He is the Einstein of the economics profession. He carried this valuable research work much further along, and his writings on the subject are the textbooks used throughout the world as source material on business cycles. His associates, Dr. Solomon Fabricant and Dr. Geoffrey Moore, together with Dr. Burns, constitute a triumvirate of fact and analysis which is grounded on bedrock facts.

Dr. Burns has dropped a megaton bomb. When he calls the economic theories of the Kennedy economic team "neostagnationist," it is time to listen.

He agrees with the thoughts advanced by Dr. Paul A. Samuelson, professor of economics at Massachusetts Institute of Technology, who did the early spade work for Mr. Kennedy's economic analysis, Dr. Walter W. Heller, chairman of the President's Council of Economic Advisers, the other CEA members, and Labor Secretary Arthur J. Goldberg that unemployment is disturbing, that the lag in the economy is disturbing, but he thoroughly disagrees on the interpretations, either of the causes or the trend.

Furthermore, Dr. Burns finds that the Kennedy group deliberately chose a point of departure for their growth rate which gives, as he sees it, an incorrect view of the economy—one of slow growth. If they had chosen a different departure point, the growth rate would be greater.

Washington journalists have accepted the Kennedy economic analysis and as a result a theory has been effectively spread through America and the world that the United States is in a posture of economic stagnation.

To an economic scientists such as Dr. Burns, especially the economic scientist who knows more about business cycles than any other, this use of facts and their resulting interpretation is a disservice to the economics profession. Even more serious, when such an analysis is used as the foundation of national policies it becomes dangerous.

Dr. Burns does not spare the Eisenhower administration, in which he served, the responsibility for its part in the recession now ending. He puts the blame on the sudden change in Federal finances from an annual deficit rate in 1958 of $17 billion to an annual surplus rate of $7 billion—a swing of $24 billion in little more than a year; the Government's restraints on expansion, including Federal Reserve action to raise interest rates; and the steel strike.

These factors stopped an expansion from the 1958 recession, Dr. Burns reasons, but he also argues that they were artificial factors, superimposed by decisions, and were not basic problems with the growth process.

Dr. Burns thinks the "neostagnationists" have wrongly reasoned and have based their conclusions on a too narrow period of time.

In answer to the CEA's conclusion that "we face a stubborn problem of chronic slack, and the road to recovery is a long one," Dr. Burns says, "there is no chronic slack of our economy. Full employment is not a remote possibility. The underlying forces of economic expansion are strong. We would be courting inflation and a gold crisis if we now arranged new governmental spending programs so that they would mature when the economy is already advancing without them."

The issue between the economic schools of thought is thus joined. The Samuelson-Heller-Goldberg school will be heard from without question. They have been challenged by the dean of their profession, and they cannot remain quiet.

What will be even more interesting, however, will be the trend of events. Time is rushing on. The pace of the American economy is proceeding much more rapidly than seemed possible from the January forecasts.

Facts will soon catch up with theory, in other words, and the sooner the better.

Western Association of State Highway Officials Pledge Cooperation to Federal Highway Administrator

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and the attention of my other distinguished colleagues, a letter I have received from the Secretary-Treasurer of the Western Association of State Highway Officials, Salem, Oreg., Mr. Forrest Cooper, enclosing a resolution which was adopted by that association and which the secretary "was instructed to furnish a copy to you as a Member of the Congressional Delegation of the State of California."

This resolution pledges full support and cooperation to the Federal Highway Administrator, Mr. Rex M. Whitton.

WESTERN ASSOCIATION OF
STATE HIGHWAY OFFICIALS,
Salem, Oreg., May 15, 1961.

Hon. CLYDE DOYLE,
Member of Congress, House Office Building, Washington, D.C.

DEAR MR. DOYLE: At the 40th annual conference of the Western Association of State Highway Officials held in Las Vegas, Nev., April 23–28, the attached resolution was adopted and the secretary was instructed to furnish a copy to you as a Member of the congressional delegation of the State of California.

Very truly yours,

FORREST COOPER,
Secretary-Treasurer.

RESOLUTION NO. 2—ADOPTED BY THE WESTERN ASSOCIATION OF STATE HIGHWAY OFFICIALS AT LAS VEGAS, NEV., APRIL 28, 1961

Whereas the 40th annual meeting of the Western Association of State Highway Officials at Las Vegas, Nev., on April 23–28, 1961, was honored by the presence of Federal Highway Administrator Rex M. Whitton, upon his being invited to speak to our Conference; and

Whereas the position of Federal Highway Administrator, as head of the U.S. Bureau of Public Roads, calls for full cooperation and respect between the Administrator and the various State governments; and

Whereas we are highly pleased by the presence of Mr. Whitton in this position of ex-

treme importance and trust, since he is a recognized engineer of outstanding ability, with many years of experience in State highway matters, a man of integrity, honesty and with a personal character above reproach: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials pledge full cooperation and support to Mr. Whitton in performing the duties associated with his new position and wish him Godspeed and good luck; be it further

Resolved, That the Secretary furnish copies of this action to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, Secretary of Commerce Luther H. Hodges, and to all committee chairmen in the National Congress having to do with highway legislation and to the congressional delegations of the States of the Western Association of State Highway Officials.

Faith and the Fourth of July

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LOSER. Mr. Speaker, I have just read a most interesting article in Classmate, a Methodist Church publication for teenage youth which is published in my congressional district, entitled "Faith and the Fourth of July." Mr. Fred Cloud, associate editor, board of education, the Methodist Church, wrote the article as a devotional for the July 1961 issue of the publication.

The article points out most vividly the part religion played in the lives of those persons who gave America its heritage of liberty, and I hope the Members of this great body will find the time to read the inspiring message. It follows:

FAITH AND THE FOURTH OF JULY
(By Fred Cloud)

The freedom which you and I enjoy did not come about as a mere accident of history. It was bought by our forefathers with their blood, sweat, and tears. The American brand of democracy is the end result of a vision of freedom, equality, and human dignity held by the Founding Fathers of our Nation. For the most part, they caught this vision from the Christian view of man. Thus the signing of the Declaration of Independence on July 4, 1776, had religious meaning as well as political significance. It was a latter-day parallel of the exodus of the Hebrew people from slavery in Egypt.

Daniel L. Marsh sees in the early political documents of American history a large degree of inspiration. He would have us compare them with the Bible as an interpretation of Americanism. For example, the beginnings of American democracy were seen in the Mayflower Compact, comparable to Genesis. The "American exodus" was the Declaration of Independence. The "book of laws," or Leviticus, is the Constitution of the United States, with the Bill of Rights constituting the "American 10 commandments."

The greatest of the American "prophets" was George Washington; while the "gospel" of Americanism was voiced by Abraham Lincoln, especially in his second inaugural address. "The Star-Spangled Banner" is one of the great "American psalms."

This does not mean that Americanism or democracy is in any measure a substitute for the Christian religion. It does mean that those persons who gave America its precious heritage of liberty were unashamedly religious. Further, it means that without the Christian beliefs in the spiritual nature of man and the equality before God of all men, our particular type of democracy could not have arisen.

The roots of American freedom are faith in God and respect for one's fellow man. If we care for the "roots," we can be sure of gathering the "fruits."

Liberal Myth Needs Unmasking

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. WILLIAMS. Mr. Speaker, we have witnessed recently increased interest in the conservative viewpoint by the youth of our Republic. It is very encouraging to see young men and women becoming aware of the dangers of the welfare state and related evils which would level humanity into one common mass where individuality, independence, initiative, and self-discipline are unknown.

The conservative youth of today are vocal, intelligent and able. Representative of this enlightened group are the collegians who edit and publish the Campus Conservative at Jackson, Miss.

The May issue of Campus Conservative contained several fine articles and editorials. It is my desire to call two to the attention of the House. One was written by John Perkins and the other by Jere Real, the executive editors of Campus Conservative.

Under leave to extend my remarks I include these two articles: "Liberal Myth Needs Unmasking," by John Perkins; "Real Thinking," by Jere Real:

LIBERAL MYTH NEEDS UNMASKING
(By John Perkins)

Liberal soothsayers and apologists have been perpetrating a great myth concerning the philosophies of liberalism and conservatism during the past few decades.

First, they bleat and cry that the conservative principles which helped make this Nation the greatest in the world are out of date and should be relegated to the political graveyard.

WELFARE PROGRAMS

Second, that only by adopting the programs of welfare statism and centralized bureaucracy based on lavish Government spending and a weakening of individual responsibility—glossed over by the liberals, of course—can out Nation survive the threat of modern, technological society problems and international communism.

For years this facade of mythology has been palmed off on the American people as the gospel of truth, with the result that many of our people, particularly in the younger generation, have become brainwashed of the reality constituting the essential facts of American history, development, and age-old truths that cannot be denied.

The liberal contention that conservative governmental philosophy is archaic and a thing of the long ago eras at the dawn of man's history is a myth of such preposterous absurdity that consciensious conservatives cannot remain silent.

LIBERAL THEME ARCHAIC

History reveals that it is the liberal theme of greater centralization in Government and unbridled spending programs that reaches back into the first eons of man's organized existence. The conservative philosophy, on the other hand, firmly endorses the republic-type government, with the cornerstones of individual freedom and initiative—a philosophical position that is much newer in history than the liberal doctrine.

Another facet of the liberal mythology that needs scrutinizing is the attempt by the prophets of doom to stampede the populace into accepting their "cures" for alleged ills in our society, economy, and international policy. What may not be obvious to many is that the liberals and leftwingers botch up situation after situation and then piously weep—seeking to blame it all on conservatives, and suggesting their own schemes as remedies. We strongly deplore such two-faced whitewashing of actuality.

DECLINE AND FALL?

Conservatives of this new generation are making a strong revival in an all-out offensive against the disillusioned liberal forces and their mossbacked, illogical philosophy.

After 30 years of idleness and defensive retreating the conservative ranks are being encouraged and reinforced by an upsurge of youthful enthusiasm over neoconservatism.

The 1960's will see, we are confident, a continuation of this political phenomenon; and, with the rising upsurge of conservatism among the new generation, the decline and fall of the liberal mythology and the leftwing manifestos will only be a matter of time.

REAL THINKING
(By Jere Real)

Conservatives are charged with many offenses by their liberal counterparts, but one of the most recurring criticisms is that "the conservative has no respect for the dignity of man."

Although this idealistic catch phrase seems to convince many persons, a study of the real philosophy of the conservative will reveal the fallacy of the accusation.

Conservatism is most certainly concerned with the dignity of man. It is not concerned, however, with the dignity of every man. It is concerned only with the dignity of the individual. And it is this concern that separates the conservative from the idealistic liberal.

In an age that has been termed the "age of the common man," too many persons have come to accept the idea that every man must exist to share the profit of his own labor for the common good of all those in society.

The conservative, believing as he does in the total independence of the individual, cannot accept this view.

Individual human dignity ceases to exist when any man is forced, either by law or custom, to sacrifice what he has created and what he has earned for the common good.

Everything of value in the history of civilization has been produced not by the collective efforts of common men but by the individual efforts of a very uncommon man, a man of vision, ability, and creative power.

And in almost every instance, the creative individual has been looked upon as wrong because he broke with the established traditions of practical mediocrity.

Man must live for himself first. If he concerns himself with the so-called humanitarian aspects of our modern society, he will soon become nothing more than a very productive slave for a parasitic society that seeks only to benefit from someone else's

creative abilities. There are many indications that our society is approaching such a state.

We are confronted daily with new programs and utopian plans to make life easier for various unfortunates and unemployed. Our society moves ever closer to establish norms and averages to which everyone must conform.

Such a leveling process will only destroy a society that was once creative and vital. What America needs is not more welfare programs with increasing dependence of all its people on someone else.

America needs a revival of independence, a new creative energy in which a man can profit for what he does and succeed or fail in proportion to his abilities, not in accord with an established norm dictated by the masses.

It is as Ayn Rand pointed out in her novel "The Fountainhead": "Degrees of ability vary, but the basic principle remains the same: the degree of a man's independence, initiative, and personal love for his work determines his talent as a worker and his worth as a man. Independence is the only gage of human virtue and value. What a man is and makes of himself; not what he has or hasn't done for others. There is no substitute for personal dignity. There is no standard personal dignity except independence."

We Boast, but What Do We Believe?

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MADDEN. Mr. Speaker, the following editorial by Attorney Richard S. Kaplan, past first district commander, department of Indiana, and chairman of the Indiana Department Counter-Subversive Committee of the American Legion, is deserving of national attention.

Mr. Kaplan has been a stanch worker for the veterans not only in his district, but throughout Indiana and the Nation. He has also contributed greatly in exposing the international Communist conspiracy:

WE BOAST, BUT WHAT DO WE BELIEVE?

(By Richard S. Kaplan)

We have heard countless speakers boast of the greatness of America, our great power, our economic strength, our military prowess, our industrial wealth, but we have never heard any speaker answer the question, "What is our soul?"

This crazy, anxious, turbulent world is looking at the United States and is asking us a question which we must answer if our prestige is to be great among nations, and that question is, "What do you, Americans, believe?"

Do we honestly believe in Mammon, the god of wealth? Is our industrial might, our inventiveness, our desire for wealth and more wealth, more cars, more mink coats, more and better homes, more leisure time, more wages all we believe in?

Are we a people interested only in the material things of life? Apparently that is the picture the world is beginning to see although in our humble opinion the picture is not a true one and is distorted.

We shall attempt to aswer that question.

WE BELIEVE IN GOD

That is our basic belief. There are more churches in the United States than anywhere else in the world. Never before has attendance in church been so great as it is today proving, at least, one thing, that our people are making an effort to get closer to God.

WE BELIEVE IN HUMANITY

The admonition, "Love ye one another," is best exemplified by the outpouring of our wealth and our love upon people of the world whenever a need for help is present. No matter what the cause, when disaster strikes, whether it be an earthquake, a flood or pestilence of one kind or other, we respond quickly and eagerly to help those in need. Our yearly charity drives for polio, muscular dystrophy, heart disease, tuberculosis and funds for a multitude of other similar purposes attest to the basic desire of our people to help one another. The desire to help, assist, aid one another clearly depicts the kindliness and generosity of our people.

WE BELIEVE IN EQUALITY

Our very Constitution, under which we live, sets out the great truth that all men are created equal and that they are endowed with the unalienable right to life, liberty and the pursuit of happiness. True, there are bigots everywhere who would violate this truth, but as a government, as a nation, as a people we believe in this great truth and we practice it.

WE BELIEVE IN FREEDOM

From the very beginning of this great Nation, when our forefathers pledged their "lives, their fortunes and their sacred honor" in their fight for freedom, this has been our great treasure and for this one great cause we have fought several wars and many of our bravest young men have died in the effort to preserve freedom not only for ourselves but for the peoples of the world.

WE BELIEVE IN PEACE

Being a peace-loving people, we want peace but not at the price of giving up our right to worship God in our own way, our freedom, our love of humanity, our belief in equality and freedom. That's why we have, many times, turned the other cheek when other nations have goaded us to the brink of war. We have fought only when war was absolutely necessary to preserve our sacred ideals and beliefs.

Oh, yes, we have juvenile delinquency; many people are thoughtless, selfish, greedy and filled with hate. But, that is not the picture of our people as a whole.

What do we believe in? The divinity of man who was created in God's image. We believe in the sanctity of life. We believe in doing unto others as we would have them do unto us. We believe in remaining wrapped in the spirit of God.

We believe in the dignity of man.

A nation possessing this belief simply cannot perish. But we must spread this belief among all people, even unto the least of us, so that every man, woman and child sees, feels and lives this belief, for no chain is stronger than its weakest link and we cannot afford weak links in this churning world where dictators and madmen are struggling for power.

In conclusion may we point out that the American Legion is a symbol of all we believe for the American Legion stands for a firm belief in God and the brotherhood of man.

All this and even more we, as a people, believe.

Santa Fe Trail Caravan

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following narrative of the activities of the Santa Fe Trail Caravan which is presently in progress as part of the Kansas Centennial Observance.

Taking part in the caravan are two very fine young people, Mr. and Mrs. Dick Janes, constituents of mine from Mission, Kans. I have asked Mr. and Mrs. Janes to be my reporters on the caravan, so that I, in turn, may inform the Congress about the progress of the wagon train. Mr. and Mrs. Janes are going to report every 2 days, and I will put their reports into the RECORD periodically.

The account of the first few days follows:

After months and months of planning 29 entries assembled on May 7, 1961, in Shawnee Mission, Kans., to begin the Sante Fe Trail Caravan.

May 8 was the first day on the trail, taking us through Mission, Merriam, Shawnee, and Overland Park, Kans. Down the trail came the 7th Cavalry from Mission, the Territorial Governor from Merriam, a horse-drawn black hearse from Shawnee and the Overland Stage from Overland Park, plus all the other entries. In the evening the people in the caravan participated in the frontier days celebration, consisting of a gaslight tent show held in Mission, and a buffalo barbeque.

May 9 found us on our way to Olathe and the first leg of our journey. Quantrill's Raiders were the entry from Olathe, bringing back the memory of the many raids Quantrill made in this area.

A circuit rider was the entry from Baldwin, our next stop. Upon arriving we were served a nice box lunch and we then had a parade through the town.

At dawn the trail was Overbrook, with the horse and buggy doctor as their entry. It was to commemorate the mode of transportation of doctors during that era. After a barbeque supper we then traveled on to Burlingame for the night, where we were received with much hospitality. Our horses were well taken care of while we stayed in homes. Entertainment was plentiful and varied, with a carnival, horse show, square dancing, and a huge fire to gather around. Bright and early the next morning breakfast was served to us at the high school before the parade. Two dragoon soldiers were the featured entry from Burlingame. The town's hospitality was again shown with a delicious lunch prepared at the barbeque area.

Things were pretty windy and dusty as we came into Council Grove, but the show did go on. We paraded before the largest crowd so far. Everyone had turned out to see the chuck wagon pulled by oxen and the trail scout which was their entry. Council Grove was the last place to buy supplies for the trek across the plains.

Before we knew it, we were on our way to Herington, however, not without a couple of mishaps. One horse got tangled in barbed wire and fell, and another tried jumping out of his trailer.

Upon arriving in Herington we fed and bedded the horses down for the night and we were fed a delicious supper there at the camping grounds. Then we were free to join the entertainment of the evening, consisting of a street square dance. The next morning breakfast was served at the camp grounds and then preparations for the parade got underway. Wild Bill Hickock and Calamity Jane were the historical characters represented from Herington.

Barbecued chicken was the specialty for lunch when we arrived in Marion. General Francis Marion, the "Swamp Fox" was the entry from Marion, for whom the town was named.

An immigrant grain wagon commemorating a Mennonite settlement was the entry from Hillsboro. After the parade we toured the sod house which is a memorial to the Mennonite colonization of the area. The townspeople had prepared a delicious Dutch-German supper for us. While we ate we were entertained by music and singing.

Traveling on to McPherson where we stayed the night, we were free to participate in the evening's festivities. Gen. James B. McPherson is remembered in this area with a statue in the park, so he is the natural entry from here in the caravan.

We are now heading down the trail to Lyons, Kans.

Justice Above Spoils

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks I include the following editorial from the Christian Science Monitor of May 11, 1961:

JUSTICE ABOVE SPOILS

Last year Congress did not feel that any new Federal judgeships were needed. Now it has voted for 73.

The key to this sudden reversal? Partisan politics. For several years the courts have been disgracefully clogged. Last year the Judicial Conference urged 59 new judgeships to take care of increased business. But the Democrats controlling Congress didn't want President Eisenhower to have the appointments—even though he offered to name Democrats to half the new posts.

That looked like a very good opportunity to get justice out of the Federal spoils system—where both parties had too largely kept it for many years. It was lost. But President Kennedy has a chance to repair the position. In his campaign he said qualifications should be the first test for judicial appointments. Undoubtedly party leaders will put forward many deserving Democrats who also possess some qualifications for the bench. But undoubtedly also in a good percentage of districts the best qualified man will not be a Democrat.

The partisan pressures, which caused Congress so long to neglect the needs of the courts and then to add extra judges to satisfy demands for patronage plums, will now focus on the Attorney General's office where nominations will originate.

The Attorney General happens to be both the President's brother and his campaign manager. He does not appear to be in the happiest position to satisfy at the same time political creditors and the President's qualifications-first criterion.

This is unfortunate. It underscores the need for both parties to drop the practice of placing campaign managers in the Cabinet.

But even now the final responsibility—and opportunity—rests with the White House. Congress has given John Kennedy an unprecedent opportunity to influence the Federal judiciary for good or ill. Appointments made now can decisively affect national affairs for many decades.

The President faces a major test. How he meets it can be estimated by the caliber, character—and party affiliations—of the judges he selects.

Dr. Thomas Anthony Dooley III Medal

SPEECH
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. GREEN of Oregon. Mr. Speaker, I rise to support House Joint Resolution 306, a bill which calls upon the Nation to award, posthumously, to Dr. Thomas Anthony Dooley III, a token of the affection, the esteem and the admiration which his fellow citizens hold for him. Last session when I introduced H.R. 9404 and at the beginning of this session, when I introduced a joint resolution similar to that being considered, to make an award to Dr. Dooley, a number of people asked me just why I wanted to see this man singled out among the other brave and dedicated people who are serving humanity in faraway places. Frankly, I found it a little difficult to enunciate my precise sentiments. I have been trying, in the months since, to put into words just why I felt this gallant doctor should be an object of special consideration.

The reasons for my admiration for Dr. Dooley—for the Nation's admiration and respect for him—are manifold.

First, it is customary and proper for a grateful country to decorate those men who have, at the risk of their lives and safety, gone forth to do battle against our enemies. We most often give medals to men who do this in the uniform of their country. Dr. Dooley wore that uniform with distinction, when he served as medical officer during the evacuation of the thousands of freedom-loving Vietnamese who fled south after the partition of that unhappy country. I suspect most of the Members of this House have read with incredulous wonder of the harrowing experiencies which that young man underwent during that evacuation. This, in itself, would be ample excuse for some token of his country's esteem. In helping give to thousands of Vietnamese relief from pain and sickness—in helping men, women, and children to escape from the encroachments of the unfree world, Dr. Dooley adequately and more than adequately performed his duty to his country, and to mankind.

But for this young man it wasn't enough to put in his years in the Navy, do his work creditably and courageously, and retire to a civilian life in which, judging by the prophecies of his medical professors, he could have had a remunerative and not particularly wearing medical practice as a "society doctor." Tom Dooley was not content to count his years in the Navy as the payoff to his country and to the spark of love of humanity which illumined him so brilliantly. Like most other great men, Tom Dooley was a little unreasonable, a little impractical, somewhat unused to balancing credits against debts and closing the books as soon as possible. Tom Dooley had to go back, because he had looked upon the naked face of pain and disease and found it unbearable. He was not content with returning to the United States and telling people about what he had seen, hoping to inspire other young men to go forth and emulate what he had done. Instead he had to go himself. He had to throw his own not-very-sturdy body and his steel-tough soul into the fight against mankind's oldest and most implacable enemy—disease. Tom Dooley had to go back to the steaming and disease-ridden jungles of Southeast Asia, to the border settlement of Nam Tha. Why? He had to do it, I think, for the same reason mountain climbers have to climb mountains—for the same reasons country doctors have to answer 2 a.m. calls at homes where they know they won't get paid—for the same reason saints have to march singing into the arenas and the concentration camps. Tom Dooley had to do what he did because he believed in the highest of religious dictates—"That Ye Love One Another." To Tom Dooley this was not a once-a-week text, to be trotted out on Sunday, admired, and put back in its case until next Sunday. It is a commandment—a requirement—a price we must pay, in a way, for being human beings. Tom Dooley, like a few other outstanding human beings in every country and every age, did not begrudge that price, or try to keep his bill low, or to pay it in easy installments.

So, for his devotion to his duty—to a higher and more difficult duty than simply serving his Nation in its uniform, Tom Dooley deserves our respect and our appreciation.

But mere devotion to duty is not enough, I suspect, to merit the medal which we are about to give to Dr. Dooley. What else was there in this man's life and work that merits such an accolade?

Tom Dooley was a dedicated fighter against disease and against pain. In his own books, he quoted the great Albert Schweitzer to the effect that there is a worldwide brotherhood of those who have known pain—that there is an empathy possible among those whose lives and health have been threatened. Tom Dooley belonged to this brotherhood—to this international conspiracy against death. In the course of his own selfless work, Tom Dooley incurred a dangerous cancer. He returned to the United States to have it removed, and then, without knowing whether he had

creative abilities. There are many indications that our society is approaching such a state.

We are confronted daily with new programs and utopian plans to make life easier for various unfortunates and unemployed. Our society moves ever closer to establish norms and averages to which everyone must conform.

Such a leveling process will only destroy a society that was once creative and vital. What America needs is not more welfare programs with increasing dependence of all its people on someone else.

America needs a revival of independence, a new creative energy in which a man can profit for what he does and succeed or fail in proportion to his abilities, not in accord with an established norm dictated by the masses.

It is as Ayn Rand pointed out in her novel "The Fountainhead": "Degrees of ability vary, but the basic principle remains the same: the degree of a man's independence, initiative, and personal love for his work determines his talent as a worker and his worth as a man. Independence is the only gage of human virtue and value. What a man is and makes of himself; not what he has or hasn't done for others. There is no substitute for personal dignity. There is no standard personal dignity except independence."

We Boast, but What Do We Believe?

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MADDEN. Mr. Speaker, the following editorial by Attorney Richard S. Kaplan, past first district commander, department of Indiana, and chairman of the Indiana Department Counter-Subversive Committee of the American Legion, is deserving of national attention.

Mr. Kaplan has been a stanch worker for the veterans not only in his district, but throughout Indiana and the Nation. He has also contributed greatly in exposing the international Communist conspiracy:

WE BOAST, BUT WHAT DO WE BELIEVE?

(By Richard S. Kaplan)

We have heard countless speakers boast of the greatness of America, our great power, our economic strength, our military prowess, our industrial wealth, but we have never heard any speaker answer the question, "What is our soul?"

This crazy, anxious, turbulent world is looking at the United States and is asking us a question which we must answer if our prestige is to be great among nations, and that question is, "What do you, Americans, believe?"

Do we honestly believe in Mammon, the god of wealth? Is our industrial might, our inventiveness, our desire for wealth and more wealth, more cars, more mink coats, more and better homes, more leisure time, more wages all we believe in?

Are we a people interested only in the material things of life? Apparently that is the picture the world is beginning to see although in our humble opinion the picture is not a true one and is distorted.

We shall attempt to aswer that question.

WE BELIEVE IN GOD

That is our basic belief. There are more churches in the United States than anywhere else in the world. Never before has attendance in church been so great as it is today proving, at least, one thing, that our people are making an effort to get closer to God.

WE BELIEVE IN HUMANITY

The admonition, "Love ye one another," is best exemplified by the outpouring of our wealth and our love upon people of the world whenever a need for help is present. No matter what the cause, when disaster strikes, whether it be an earthquake, a flood or pestilence of one kind or other, we respond quickly and eagerly to help those in need. Our yearly charity drives for polio, muscular dystrophy, heart disease, tuberculosis and funds for a multitude of other similar purposes attest to the basic desire of our people to help one another. The desire to help, assist, aid one another clearly depicts the kindliness and generosity of our people.

WE BELIEVE IN EQUALITY

Our very Constitution, under which we live, sets out the great truth that all men are created equal and that they are endowed with the unalienable right to life, liberty and the pursuit of happiness. True, there are bigots everywhere who would violate this truth, but as a government, as a nation, as a people we believe in this great truth and we practice it.

WE BELIEVE IN FREEDOM

From the very beginning of this great Nation, when our forefathers pledged their "lives, their fortunes and their sacred honor" in their fight for freedom, this has been our great treasure and for this one great cause we have fought several wars and many of our bravest young men have died in the effort to preserve freedom not only for ourselves but for the peoples of the world.

WE BELIEVE IN PEACE

Being a peace-loving people, we want peace but not at the price of giving up our right to worship God in our own way, our freedom, our love of humanity, our belief in equality and freedom. That's why we have, many times, turned the other cheek when other nations have goaded us to the brink of war. We have fought only when war was absolutely necessary to preserve our sacred ideals and beliefs.

Oh, yes, we have juvenile delinquency; many people are thoughtless, selfish, greedy and filled with hate. But, that is not the picture of our people as a whole.

What do we believe in? The divinity of man who was created in God's image. We believe in the sanctity of life. We believe in doing unto others as we would have them do unto us. We believe in remaining wrapped in the spirit of God.

We believe in the dignity of man.

A nation possessing this belief simply cannot perish. But we must spread this belief among all people, even unto the least of us, so that every man, woman and child sees, feels and lives this belief, for no chain is stronger than its weakest link and we cannot afford weak links in this churning world where dictators and madmen are struggling for power.

In conclusion may we point out that the American Legion is a symbol of all we believe for the American Legion stands for a firm belief in God and the brotherhood of man.

All this and even more we, as a people, believe.

Santa Fe Trail Caravan

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following narrative of the activities of the Santa Fe Trail Caravan which is presently in progress as part of the Kansas Centennial Observance.

Taking part in the caravan are two very fine young people, Mr. and Mrs. Dick Janes, constituents of mine from Mission, Kans. I have asked Mr. and Mrs. Janes to be my reporters on the caravan, so that I, in turn, may inform the Congress about the progress of the wagon train. Mr. and Mrs. Janes are going to report every 2 days, and I will put their reports into the RECORD periodically.

The account of the first few days follows:

After months and months of planning 29 entries assembled on May 7, 1961, in Shawnee Mission, Kans., to begin the Sante Fe Trail Caravan.

May 8 was the first day on the trail, taking us through Mission, Merriam, Shawnee, and Overland Park, Kans. Down the trail came the 7th Cavalry from Mission, the Territorial Governor from Merriam, a horse-drawn black hearse from Shawnee and the Overland Stage from Overland Park, plus all the other entries. In the evening the people in the caravan participated in the frontier days celebration, consisting of a gaslight tent show held in Mission, and a buffalo barbeque.

May 9 found us on our way to Olathe and the first leg of our journey. Quantrill's Raiders were the entry from Olathe, bringing back the memory of the many raids Quantrill made in this area.

A circuit rider was the entry from Baldwin, our next stop. Upon arriving we were served a nice box lunch and we then had a parade through the town.

At dawn the trail was Overbrook, with the horse and buggy doctor as their entry. It was to commemorate the mode of transportation of doctors during that era. After a barbeque supper we then traveled on to Burlingame for the night, where we were received with much hospitality. Our horses were well taken care of while we stayed in homes. Entertainment was plentiful and varied, with a carnival, horse show, square dancing, and a huge fire to gather around. Bright and early the next morning breakfast was served to us at the high school before the parade. Two dragoon soldiers were the featured entry from Burlingame. The town's hospitality was again shown with a delicious lunch prepared at the barbeque area.

Things were pretty windy and dusty as we came into Council Grove, but the show did go on. We paraded before the largest crowd so far. Everyone had turned out to see the chuck wagon pulled by oxen and the trail scout which was their entry. Council Grove was the last place to buy supplies for the trek across the plains.

Before we knew it, we were on our way to Herington, however, not without a couple of mishaps. One horse got tangled in barbed wire and fell, and another tried jumping out of his trailer.

Upon arriving in Herington we fed and bedded the horses down for the night and we were fed a delicious supper there at the camping grounds. Then we were free to join the entertainment of the evening, consisting of a street square dance. The next morning breakfast was served at the camp grounds and then preparations for the parade got underway. Wild Bill Hickock and Calamity Jane were the historical characters represented from Herington.

Barbecued chicken was the specialty for lunch when we arrived in Marion. General Francis Marion, the "Swamp Fox" was the entry from Marion, for whom the town was named.

An immigrant grain wagon commemorating a Mennonite settlement was the entry from Hillsboro. After the parade we toured the sod house which is a memorial to the Mennonite colonization of the area. The townspeople had prepared a delicious Dutch-German supper for us. While we ate we were entertained by music and singing.

Traveling on to McPherson where we stayed the night, we were free to participate in the evening's festivities. Gen. James B. McPherson is remembered in this area with a statue in the park, so he is the natural entry from here in the caravan.

We are now heading down the trail to Lyons, Kans.

Justice Above Spoils

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks I include the following editorial from the Christian Science Monitor of May 11, 1961:

JUSTICE ABOVE SPOILS

Last year Congress did not feel that any new Federal judgeships were needed. Now it has voted for 73.

The key to this sudden reversal? Partisan politics. For several years the courts have been disgracefully clogged. Last year the Judicial Conference urged 59 new judgeships to take care of increased business. But the Democrats controlling Congress didn't want President Eisenhower to have the appointments—even though he offered to name Democrats to half the new posts.

That looked like a very good opportunity to get justice out of the Federal spoils system—where both parties had too largely kept it for many years. It was lost. But President Kennedy has a chance to repair the position. In his campaign he said qualifications should be the first test for judicial appointments. Undoubtedly party leaders will put forward many deserving Democrats who also possess some qualifications for the bench. But undoubtedly also in a good percentage of districts the best qualified man will not be a Democrat.

The partisan pressures, which caused Congress so long to neglect the needs of the courts and then to add extra judges to satisfy demands for patronage plums, will now focus on the Attorney General's office where nominations will originate.

The Attorney General happens to be both the President's brother and his campaign manager. He does not appear to be in the happiest position to satisfy at the same time political creditors and the President's qualifications-first criterion.

This is unfortunate. It underscores the need for both parties to drop the practice of placing campaign managers in the Cabinet.

But even now the final responsibility—and opportunity—rests with the White House. Congress has given John Kennedy an unprecedent opportunity to influence the Federal judiciary for good or ill. Appointments made now can decisively affect national affairs for many decades.

The President faces a major test. How he meets it can be estimated by the caliber, character—and party affiliations—of the judges he selects.

Dr. Thomas Anthony Dooley III Medal

SPEECH
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. GREEN of Oregon. Mr. Speaker, I rise to support House Joint Resolution 306, a bill which calls upon the Nation to award, posthumously, to Dr. Thomas Anthony Dooley III, a token of the affection, the esteem and the admiration which his fellow citizens hold for him. Last session when I introduced H.R. 9404 and at the beginning of this session, when I introduced a joint resolution similar to that being considered, to make an award to Dr. Dooley, a number of people asked me just why I wanted to see this man singled out among the other brave and dedicated people who are serving humanity in faraway places. Frankly, I found it a little difficult to enunciate my precise sentiments. I have been trying, in the months since, to put into words just why I felt this gallant doctor should be an object of special consideration.

The reasons for my admiration for Dr. Dooley—for the Nation's admiration and respect for him—are manifold.

First, it is customary and proper for a grateful country to decorate those men who have, at the risk of their lives and safety, gone forth to do battle against our enemies. We most often give medals to men who do this in the uniform of their country. Dr. Dooley wore that uniform with distinction, when he served as medical officer during the evacuation of the thousands of freedom-loving Vietnamese who fled south after the partition of that unhappy country. I suspect most of the Members of this House have read with incredulous wonder of the harrowing experiencies which that young man underwent during that evacuation. This, in itself, would be ample excuse for some token of his country's esteem. In helping give to thousands of Vietnamese relief from pain and sickness—in helping men, women, and children to escape from the encroachments of the unfree world, Dr. Dooley adequately and more than adequately performed his duty to his country, and to mankind.

But for this young man it wasn't enough to put in his years in the Navy, do his work creditably and courageously, and retire to a civilian life in which, judging by the prophecies of his medical professors, he could have had a remunerative and not particularly wearing medical practice as a "society doctor." Tom Dooley was not content to count his years in the Navy as the payoff to his country and to the spark of love of humanity which illumined him so brilliantly. Like most other great men, Tom Dooley was a little unreasonable, a little impractical, somewhat unused to balancing credits against debts and closing the books as soon as possible. Tom Dooley had to go back, because he had looked upon the naked face of pain and disease and found it unbearable. He was not content with returning to the United States and telling people about what he had seen, hoping to inspire other young men to go forth and emulate what he had done. Instead he had to go himself. He had to throw his own not-very-sturdy body and his steel-tough soul into the fight against mankind's oldest and most implacable enemy—disease. Tom Dooley had to go back to the steaming and disease-ridden jungles of Southeast Asia, to the border settlement of Nam Tha. Why? He had to do it, I think, for the same reason mountain climbers have to climb mountains—for the same reasons country doctors have to answer 2 a.m. calls at homes where they know they won't get paid—for the same reason saints have to march singing into the arenas and the concentration camps. Tom Dooley had to do what he did because he believed in the highest of religious dictates—"That Ye Love One Another." To Tom Dooley this was not a once-a-week text, to be trotted out on Sunday, admired, and put back in its case until next Sunday. It is a commandment—a requirement—a price we must pay, in a way, for being human beings. Tom Dooley, like a few other outstanding human beings in every country and every age, did not begrudge that price, or try to keep his bill low, or to pay it in easy installments.

So, for his devotion to his duty—to a higher and more difficult duty than simply serving his Nation in its uniform, Tom Dooley deserves our respect and our appreciation.

But mere devotion to duty is not enough, I suspect, to merit the medal which we are about to give to Dr. Dooley. What else was there in this man's life and work that merits such an accolade?

Tom Dooley was a dedicated fighter against disease and against pain. In his own books, he quoted the great Albert Schweitzer to the effect that there is a worldwide brotherhood of those who have known pain—that there is an empathy possible among those whose lives and health have been threatened. Tom Dooley belonged to this brotherhood—to this international conspiracy against death. In the course of his own selfless work, Tom Dooley incurred a dangerous cancer. He returned to the United States to have it removed, and then, without knowing whether he had

five decades or 5 months to live, he returned to Laos, to give whatever time his Maker had allotted to him, to the continuing fight. At the risk of his life, in sublimed disregard for his own pain and his own welfare, Tom Dooley returned to the task which his own compulsions drove him to. We all know the story—and the ending. Here, indeed, was devotion to duty, above and beyond the call of duty, at the risk of life and limb.

But what, Mr. Speaker, does this all add up to? Does the fact that a human being may be dying of cancer earn for him anything beyond the sympathy of us all? Does the simple fact of physical courage entitled a man to special recognition by the Congress? Perhaps not. But, Mr. Speaker, there is more meaning than this to Tom Dooley.

In going into Laos, this dedicated physician was not acting as a symbol of American foreign policy. He didn't go to Laos to convert the heathen, or to make good little pro-Americans out of them. Tod Dooley went back to Laos, up to the border village of Nam Tha, a few miles from Communist China, in country where few white men had ever gone, and fewer still were wanted, to heal the sick. He went there, not as one American spreading a newfangled kind of foreign aid, but as a man seeking to serve his brothers in God's family. Tom Dooley's medicine has been criticized as 19th century medicine. It has been defended, on that very basis, as a vast improvement over the 14th century medicine available, and as the kind of thing the people of the area could most effectively utilize and continue when Dooley was gone.

In doing this, Tom Dooley has done something for us all. He has, no doubt, made friends for America in Laos. That is very desirable, and very laudable. But he has done more—and for his fellow-Americans. He has shown them a vision of the kind of faith that moves mountains and conquers worlds. He has shown us a better way to win men's hearts than by giving them bombs and bullets to shoot at our enemies. He has shown us a new glimpse into an old reality—into the kind of power that brotherhood can have.

But let me say it in Tom Dooley's own words:

Let us stop all this blather and bleat about the beatitudes of democracy. Let us get out and show, with simple spontaneity and love, our ability to work at the level of the people we aim to aid. Let us stop proclaiming ourselves as the world standard. Democracy, as championed by the United States, does not translate well into Lao. Not yet. We evolved it from 1776 to 1958. Let us be patient with the Asian. The Lao need only time, education, and stimulation.

I believe that we would gain more for our own country (and this is certainly part of the incentive behind our foreign aid) if we emphasized the connections that exist between peoples. Let us show that we believe these connections to be greater than the differences. The cables binding humanity around the world are stronger than national rivalries. Let us reaffirm, and then live, our belief in the family of man. Let us prove again that America understands that "God hath made of one blood all men for to dwell upon the earth."

For his personal courage, for his devotion to his duty, for the gift, not the loss of his life, for the lesson in the stimulation of humility and the power of love that he has given to all the world, but mostly to us, Tom Dooley deserves the gratitude of our Nation.

Route 8: A Joint Operation

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. MONAGAN. Mr. Speaker, I ask permission to extend my remarks in the RECORD to include an editorial printed on page 1 of the Winsted (Conn.) Evening Citizen endorsing a proposal by Gov. John N. Dempsey for a $150 million State bond issue for the very commendable State highway construction program.

A public hearing on the proposal will be held Thursday in the Connecticut Senate Chamber and I am confident that public support such as that expressed in the Winsted Citizen and in the other newspapers of Connecticut, particularly in the Fifth Congressional District which I represent, will play an important role in bringing this desirable program to fruition.

Unless immediate steps are taken to improve the Naugatuck Valley Highway System, this great industrial center is faced with economic strangulation.

Governor Dempsey has taken a bold, forceful, and imperative step in his recommendation which I believe merits the support and endorsement so eloquently expressed by the Winsted Citizen editorial which follows:

ROUTE 8: A JOINT OPERATION

With yesterday's announcement by Gov. John N. Dempsey that a public hearing on his $150 million State road construction program will be held Thursday at 1 p.m. in the senate chamber, Route 8 supporters started planning today for another assault on Capitol Hill.

At the Route 8 public hearing held recently in the house of representatives, other towns in the Naugatuck Valley turned out great numbers of supporters but Winsted missed the boat. Let's hope the turnout is appreciably greater for this one.

Governor Dempsey made it apparent only last night, that if we want the roads, we must sacrifice. He advised 85 newspaper executives at a meeting in Bristol that Route 8 hasn't chance unless Routes 9, 12, and 72 are also considered. It is evident that unless the entire Dempsey program is endorsed we won't get the roads.

Winsted needs an improved Route 8, as much as Torrington, Thomaston, Waterbury, or any other of the towns down through the Naugatuck Valley. The $150 million bonding program as proopsed by the Governor appears the only answer.

To junk the program would mean that future Route 8 improvements would be done on a piecemeal basis, taking years to complete. Even under the present program it will be 2 or 3 years before new concrete slabs are available for transportation. But this is due to the giant proportions of the program.

Governor Dempsey said last night that were the $150 million program approved by the General Assembly, he could visualize a crash program being instituted to bring about as quick results as possible.

The Naugatuck Valley road program has long been overlooked by both political parties and it is high time that these same politicians toss aside their battle axes and join forces to bring about this necessary improvement.

But, as the Governor reiterated, we won't get Route 8 without granting Routes 9, 12, and 72, so the battle goes on.

It is a gigantic program and one that will cost money. The $150 million being asked will cost somewhere between $50 and and $75 million in interest over the next 30 years. If we want the roads, we'll have to pay but in this case paying appears justified.

New industry, and old industry too, demand decent roads. This is proven by the numbers of new plants which have located along the recently completed Connecticut Turnpike. If Winsted, like Torrington, Waterbury, etc., is to prosper in the future, these roads must be provided.

Governor Dempsey takes no personal credit for the program. Rather he credits the individuals who came to his office in great numbers, appealing that something be done. He says, "It's not my program—it's yours."

In this issue Democrats and Republicans should unite behind our legislators, Representative John G. Groppo and James P. Walsh, for the one common interest—the completion of the program as proposed—with the knowledge that what is good for the town is good for its people, and Route 8 to Winsted is a must.

No Meat in Moscow

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks I would like to insert in the Appendix of the RECORD a timely editorial in the May 9 edition of the Muncie, Ind., Star commenting on proposed new farm legislation. The editorial is entitled "No Meat in Moscow," and it merits thoughtful attention:

NO MEAT IN MOSCOW

Congressman RALPH HARVEY, as a member of the House Committe on Agriculture, has questioned Secretary of Agriculture Orville Freeman closely and specifically about the proposed new farm law. He was most particularly concerned to know whether "it would be possible for hogs or cattle, or even sheep, or poultry, to be put under Government marketing orders" if the Kennedy plan for farmers is adopted. Freeman replied that it would although he stated that he did not think such a step would be practical at this time.

HARVEY pointed out that once one type of meat product is put under Government control "then * * * all livestock products would eventually wind up under Government control." He added that there are many reasons why he did not think it a good idea. Some of those reasons include the complexity and size of the livstock industry, the general satisfaction of farmers with a free livestock market and the fact that this country exports only a small amount of meat products.

Perhaps HARVEY did not see the Associated Press news story from Moscow which appeared about the same time he was talking

to Freeman. He would have found additional reasons to oppose the Freeman-Cochrane-Kennedy plan for controlled farming.

An acute meat shortage has hit Moscow, according to the news report of April 28. The Government in Russia, operating in accordance with the Communist theory of national planning, sets the amount of meat which Soviet citizens need to consume and which Red farmers are to produce. An AP correspondent who toured the state-run butcher shops in Moscow failed to find a single scrap of fresh meat, not even sausages. Canned meat from Bulgaria and dried fish were available.

Meat could be bought in the central market where the peasants bring produce grown on their private plots of land. But the peasants set their own prices in that market, and chunks of beef including the bone were being sold for 4.75 rubles per kilogram, or more than $2 per pound. The peasants were selling eggs for 16 cents each.

Pravda, the official news outlet for the Communist government, made some vague allusion to the fact that public control had not forced the fulfillment of meat quotas. Other Soviet newspapers offered no explanation. Apparently it isn't good form to point out that Red agriculture has failed under the direction of Nikita S. Khrushchev.

If an American farmer, or any American Congressman, wants to know how a controlled agriculture operates, all he has to do is look to Russia. Government control of supply, which is exactly what Freeman wants and what the Communists have in Russia, will bring meatless days to Washington.

The United States doesn't need to adopt any plan of this kind.

We Can Defeat Communism

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include an essay on the subject of "Communism," written as an English assignment by one of my young constituents, Willard M. Hanzlik. It is always encouraging to find our youth of today so cognizant of the necessity to heed the teachings of our forefathers and the laws of the Constitution with which we have been endowed, in order to preserve our country and our way of life. I feel this essay has set forth quite well, the basic ideals of all loyal American citizens:

WE CAN DEFEAT COMMUNISM

Communism can be defeated by our having more confidence in our own Government, and by each person trying harder to make the system work. American citizens who develop a love for their country will not be influenced by outside political forces. Good American citizens will be alert to the evils of the atheist communism. The Government of the United States was founded in 1776 by earnest God-loving men. These men had a surging power behind them—this was faith. If faith had not been so strong as it was, America would not be America as we know it today. Men like Benjamin Franklin and Thomas Jefferson had great faith in America. We cannot afford to let these Founding Fathers down; America must be kept strong. By supporting America's democratic ways, we, as citizens, can help to make America stronger. Communism is completely contrary to all of our basic standards; therefore by allowing communism to enter America, we are actually denouncing our democracy. Is America to allow foreign aggression, or are we to stand up and fight for what we believe? Certainly an atheist society cannot spread to a God-loving society of freedom. Above all else, remember this: Jesus said: "Ye shall know the truth, and the truth shall make you free." J. Edgar Hoover says at the conclusion of his book, "Masters of Deceit," "In communism we see what happens when freedom is extinguished. This must give us renewed zeal to work untiringly to uphold the ideals of justice and liberty which have made this Nation great."

Address by Secretary of Labor Arthur J. Goldberg

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. ANFUSO. Mr. Speaker, at the testimonial luncheon given in his honor by the mayor and city of New York on Monday, May 15, 1961, Secretary of Labor Arthur J. Goldberg presented a most interesting and thought-provoking address in which he touched on several important problems of national interest. His views and thoughts deserve wider attention, and I am therefore pleased to insert his address into the RECORD.

Secretary Goldberg deserves to be commended for demonstrating that his approach to problems is not one-sided. He gave sound advice to both labor and industry, and I hope and trust they will take his advice in a spirit of cooperation for the Nation's interest. He asked both of them to observe "a simple rule of mortality" by eliminating discrimination in housing and employment. Laws alone will not end such discrimination, but it can be accomplished through fair practices and unprejudiced policies.

Significantly, Secretary Goldberg spoke about the work stoppage at our missile bases in which we are all so deeply concerned. In speaking of the remedies to this situation, he said:

It has been suggested that the quickest way to attain the goal we seek is to adopt a law, to compel a solution.

But I have learned from long experience that the adoption of laws does not necessarily solve the problem. Whether a law could or could not is beside the point. Labor and management, without a law to compel them, can on their own volition agree on these principles:

That the program is one of urgent priority;

That the work should be performed economically, at decent wage levels, under fair conditions;

That, as during the war, free labor and free management can outproduce the regimented and compelled work force of the totalitarian countries;

That, therefore, no interruption of work should take place.

I consider these proposals by the Secretary of Labor as very sage advice and I sincerely hope that both sides will agree to it. As a member of the House Science and Astronautics Committee, I was extremely perturbed when I learned about these work stoppages and how much it is hurting our progress in scientific research and development, especially in space research.

The text of Secretary Goldberg's address is as follows:

I am greatly honored by this affair tendered to me by the mayor and the city of New York. It is, I think, characteristic of this city that you have so honored two members of President Kennedy's Cabinet, and that those members are the Secretary of Commerce and the Secretary of Labor.

I am sure my distinguished colleague, Luther Hodges, was as gratified at the luncheon given for him as I am today.

These affairs show an awareness—by your great mayor and the citizens of New York—of the interrelationship of industry and commerce and labor in the life of this city, and indeed in the life of the country.

Gestures of this sort are indications of the truly progressive character of your city. It is that progressive tradition, dating back many years, that has helped New York attain the eminence it enjoys in this Nation and throughout the world.

I would like this afternoon to address myself to a provocative concept advanced by our President, one that has been the subject of much discussion and soul searching, both in our press and in our own individual minds.

In his inaugural address, the President said: "Ask not what your country can do for you, but ask what you can do for your country."

The question has been raised as to why the country was not furnished with a bill of particulars. This desire of people to be told specifically how to make their contribution to the national effort is quite understandable. Yet, I would like to raise the counterquestion with you as to whether this uncertainty does not in itself reflect a lack of awareness on the part of the people of their responsibilities to our society.

We pride ourselves for our dependence upon free enterprise, a free economy and personal decision to provide us with the goods and services for a good life. We are justifiably proud of our free institutions and the contributions they make. The managers of our vast industries, the leaders of our great labor unions, the important citizens who direct community affairs—all are among the prime movers of our national life.

At the same time, while Government has important responsibilities which it must exercise responsibility in our society, we ought not let Government dominate our lives. I am sure that most of us agree with that concept.

Given that general frame of mind, then, I would like to pose this question: Why is there any lack of awareness of what these tremendous groups, and the individuals in these groups, can do to advance the national interest?

I would like to suggest some answers, by way of specific examples in fields closely related to my own responsibilities as Secretary of Labor. I am, for example, the Vice Chairman of the President's Committee on Equal Employment Opportunity. The problem of discrimination exists in our national life.

That problem is not geographic in character. It is not, as those of us who live in the large, northern industrial cities would sometimes like to believe, strictly a southern

XUM

problem. It exists here in New York, for example, in housing and employment practices.

Of course, the National Government is very much concerned with this problem, and is taking what are hoped to be effective steps to discharge its own obligations in this area. I believe that the beginning that has been made is extremely promising. President Kennedy's forceful leadership in this field has been reinvigorating. Under it, this administration has been able to create what I believe is a new and better climate for opportunity to flourish.

And here in New York, under your Governor and your distinguished mayor, much has been done. In this enlightened State and city, statutory protections exist to insure fair employment practices, for example.

Thus far government; but what of our private groups?

In reply to the question—what can I do for my country?—I say to the members of the business and management and labor communities of America: stop discriminating.

No individual or group needs a law or an Executive order to coax or command them to observe a simple rule of morality.

That would be a genuine contribution to the national welfare. Businessmen can follow fair employment and promotional practices and policies on their own volition, in their own businesses. Labor unions can end discriminatory habits using their own means and powers.

I might add a corollary thought here, as a visitor to this greatest of all western metropolises. As hosts to the world, and especially to the United Nations, the citizens of New York can make a real contribution to our welfare by pursuing the open and unprejudiced policy of the civilized host—as I am sure you try to do.

This should be true not only for first rank Ambassadors and diplomats but for the entire world community that lives and works here within your city limits.

My hometown, the Nation's Capital, faces the same responsibility.

What can you do for your country?

Let me give another example. I am, of course, very much concerned with labor-management relations. We have lately been engaged in an effort to insure regularity and stability in the work going on at our missile bases. This, in fact, is one of the things that brings me to New York today.

It has been suggested that the quickest way to attain the goal we seek is to adopt a law, to compel a solution.

But I have learned from long experience that the adoption of laws does not necessarily solve the problem. Whether a law could or could not is beside the point. Labor and management, without a law to compel them, can on their own volition agree on these principles:

That the program is one of urgent priority;

That the work should be performed economically, at decent wage levels, under fair conditions;

That, as during the war, free labor and free management can outproduce the regimented and compelled work force of the totalitarian countries;

That, therefore, no interruption of work should take place.

Now this attitude, and this remark, are not necessarily limited to the organizations working at missile bases.

My experience has convinced me that if labor and management are awaiting a bill of particulars on what they can do for their country, they don't have to look far.

There is no Government policy that prevents labor and management from developing, by mutual effort, better machinery for the settlement of disputes in vital matters—and in other matters as well. I would and do encourage such an effort. When labor and management ask: What can we do for our country?—an obvious answer is: Keep the peace. Keep the industrial peace not because a law compels you to but because of the welfare of the country and because it is to your own enlightened self-interest to do so.

I mentioned civil rights and labor-management relations as examples where voluntary effort in the public interest is self-suggesting.

Let me give you a third, based upon an interest inherent in the Secretary of Labor's job. Last week, the President issued an Executive order creating a Committee on Juvenile Delinquency and Youth Crime. I have the honor to serve with Attorney General Kennedy and Secretary of Health, Education, and Welfare Ribicoff on that committee.

The President's Committee will, of course, enlist the aid and seek the cooperation of governments and private organizations in this fight against the waste of delinquency.

In this important area, with $10 million authorized for Federal grants, it is obvious that if the President's Committee is to succeed it must depend upon the cooperation and aid of States and private organizations.

In commenting on this Executive order, the Washington Post remarked: "Juvenile delinquency is essentially a local problem which must be dealt with through local agencies—schools, churches, settlement houses, community welfare agencies—operating together to bring hostile and rebellious youth into participation in the community's life. The real need is to put what is now known into use and to prod responsible private and public agencies at the local level into more effective operation."

I agree with that sentiment. The Federal Government can perform good and needed service in this field. It is also true that long before the Executive order was issued, manifesting Presidential concern and intention to appropriate action, the question of what you could do for your country provided its own answer to men and women already at work on delinquency.

I have given you three instances of areas where individual and group response to the President's concept should be clear. There are many others, both inside and outside my own responsibility.

In the singular world of today, a world of troubled neighborhoods rather than separate nations, our Government undertakes aid programs that are of vital and paramount importance for the peace and security of the world.

These programs do not exclude voluntary efforts by groups and individuals.

A religious group near Washington, D.C., for example, has been sending cows to areas in the world where a cow is a treasure, and where fresh milk is a luxury.

Large programs like CARE are effective expressions of private American concern. They are examples of what persons in private capacities can do for their country and the world—for in leading the world toward greater well-being they also strengthen the United States.

This is a great metropolitan area, a huge complex of people and activity.

You know that as social problems arise, as the daily business of living becomes more and more demanding and challenging, the powers that can be brought to bear upon solutions need to be more effective. Responsible government must be an instrument for progress when the means at hand to private groups are not adequate to the problem they face. At the same time, government cannot be responsible unless our people make it so, unless they view their own actions in the light of the interest of all.

I would paraphrase the words of the President this way: All of us know what our country has done for us, and all of us know, in our heart and conscience, what we should do for our country. The resolution to act, to move forward, to seek the path of good conscience, is the only decision that remains.

The John Birch Society

EXTENSION OF REMARKS
OF

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. ROUSSELOT. Mr. Speaker, an article by George Todt which appeared in the April 28, 1961, issue of the Los Angeles Herald-Express, a newspaper published in Los Angeles, Calif., helps to clarify the objectives of the John Birch Society. Mr. Todt's observations stem from an interview he recently had with Mr. Welch. Under unanimous consent I include the article in the Appendix of the RECORD:

GEORGE TODT'S OPINION—WHY WELCH IS ATTACKED

"Neither cast yet your pearls before swine."—Matthew XIII: 6.

Not long ago I had a private interview with stormy petrel Robert Welch of the much-publicized John Birch Society and asked him what he was up to in these modern times.

"Do you intend to form a third party?" I asked him.

"Not at all," he replied. "The real purpose of the John Birch Society is to act as a positive force for moral rearmament in our Republic. We wish to rejuvenate the Nation with the spirit of the Founding Fathers and the American Revolution of 1776. It has been sadly lacking in recent years. What could be more important now?"

Welch appears to be anything except the Fascist ogre he has been represented to be in the so-called liberal comunications media from here to New York City and points in between.

HIS SECRET?

When one talks to this sincere and dedicated person at close range, it is hard to imagine valid reasons for the hysterical hatchet work from so many sides.

Why does this mild-mannered little man panic the "liberals" more than all of Nikita Khrushchev's armored divisions, submarines and his Communist fifth column now operating with near-impunity and untold impudence in our country today?

What is his secret, anyway? Perhaps, I have a hunch that might explain it. It's only a guess—but here goes.

I think Bob Welch may have pricked the moral conscience of all too many Americans who have had their head much too far down in the sand ere now. Many of us have been fiddling carelessly while the Republic is burning in more ways than one. Our slogan has been "business as usual."

Frankly, we have been so preoccupied with our materialism that we have pretended the danger which now threatens us with potential destruction unless defeated just did not exist in the past.

Or if we did not go quite that far, we at least minimized the danger of the Communist conspiracy to our national welfare. It was something we kept putting off for "manana"—the tomorrow which never comes.

DID THE BEST

So we really did not do enough of what we ought to have done competently in our own interests. We spent a lot of money as taxpayers, to be sure. But what did it gain us? Where are our friends? Who can we count upon now?

If any were to ask me whether I lacked confidence in the good intentions of previous Presidents regarding our national security vis-a-vis the Communist world government conspiracy, my answer would be an unequivocal "No." I think they did the best they knew how.

But if the question were put to me in the vein of whether I thought they might have done enough to stem the onrushing Red tide, sorrowfully I would have to say "No" to that one, too. Well-intentioned though they might have been, the present day results attest to the fact that not nearly enough actually has been done. Not against the cunning and wily Marxist global strategists.

STUDY HOOVER

The only exception among our Presidents was wise octogenarian Herbert Hoover, Sr., a down-to-earth thinker who called the shots right where world communism was concerned from the beginning.

The smartest thing we could do, it seems to me, is to study again the brilliant counsel this tragically underrated President had to give a heedless people concerning the Red menace from Eurasia.

We have been at fault as a nation because we listened to the wrong advice about the Communist peril. Now we are sorry.

We have traveled down a blind alley until we have reached a swamp of bitter disappointment—and now we must need retrace our steps if we may hope to get out of the deadly morass alive.

FITTING GOAL

We have only ourselves to blame for our numerous troubles today.

And now comes forth Robert Welch to chide us and even to shame us for our inept failures to meet properly the Marxist menace in the past—and many of those with saddened consciences as to their previous roles in the unhappy scheme of things must presently in self-defense feel obliged to strike back at him.

Perhaps Welch has become something of a goad to the national conscience by this time. Is that why his detractors fear him?

At any rate, I think his idea for a bona fide moral rejuvenation of our Nation is a fitting goal to strive for nowadays. We need it.

Maybe the John Birch Society will ultimately help to get a real moral renaissance underway in our country, not a third party. Let's hope so.

Tribute to Arthur Joyal

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MORSE. Mr. Speaker, one of the most inspiring men with whom I have shared friendship, and with whom I was privileged to work closely during the period I was Deputy Administrator of the Veterans' Administration, is Mr. Arthur Joyal of my hometown of Lowell, Mass. The Lowell Sun recently paid well-merited tribute to Mr. Joyal, and under unanimous consent I include this column in the CONGRESSIONAL RECORD:

SKETCHBOOK—HELPING OTHERS IS HIS MAIN PURPOSE IN LIFE

(By Robert Hatem)

DRACUT.—If you are looking for a man with personality and qualifications that make him a man among men, meet Arthur Joyal, medical supervisor of the local Veterans' Administration office.

To find out why our subject works overtime trying to help others one must first consider events that led to a hospital bed; a year of convalescence, and the approach Mr. Joyal decided to take in starting his life all over again.

Born in Lowell, he was educated in local public schools and after completing studies at Lowell High School was employed by a roofing company and a sheet metal firm.

That was before World War II rattled the globe. Then in 1942, he enlisted in the U.S. Navy, and that became his way of life for the next 3 years.

During this period, he became ill and was confined to a naval hospital in California.

While a patient he kept abreast of developments around him by reading as many as five newspapers daily. Good literature, particularly biographies, became his favorite pastime.

This lasted for 8 months. Late in 1945, he was released from the hospital and given an honorable discharge from the military. He was 100 percent disabled.

He returned to Lowell, but he did not readjust immediaetly. Mr. Joyal was ordered to bedrest for 4 months.

However, he refused to sympathize with himself during this period and when he was told he might leave his bed, Mr. Joyal did not waste time telling friends and neighbors of his misfortune.

He was employed by the Veterans' Administration in Boston and commuted from Lowell to the Hub until 1949, when he was appointed a medical supervisor of the Lowell office.

Since that time he has become friend and adviser to almost every disabled veteran in greater Lowell.

However, helping people doesn't end there. Mr. Joyal through the Knights of Columbus, the United Fund, the Community Council, and the Catholic Charitable Bureau has taken it upon himself to help people.

Why? Well, as far as the Sketchbook was able to learn, spending a year in a hospital and seeing firsthand the problems of others, brings out the "I am my brother's keeper" instinct in the man.

A Dream of an Educator, Dr. Peter Sammartino, Becomes a Reality at Fairleigh Dickinson University

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. SANTANGELO. Mr. Speaker, Ralph Waldo Emerson, the sage of Concord, once declared that a man's reach should exceed his grasp, else why are the heavens made? Dr. Peter Sammartino is an educator who built dream castles in his early days, and by dint of stick-to-itiveness and sacrifice finally made his dream castle develop into reality.

As a young college student, I met Dr. Peter Sammartino, who was teaching in the College of the City of New York and also in Columbia University. We were fraternity brothers of Alpha Phi Delta, and while I represented the metropolitan area as the vice consul which included the major colleges of the eastern seaboard, Dr. Sammartino was the consul or president of the national fraternity in the major colleges throughout the country. We knew each other intimately and frequently exchanged our viewpoints as to the best method of developing a full man and an educated man. In those days, Dr. Sammartino indicated his broad perspective and understanding of what made our country great—that all men had equal opportunity to advance themselves to the limit of their ability, sacrifice, and intelligence.
